Sometimes in business, conventional wisdom just doesn't go far enough. New and original solutions are required that not only answer yesterday's questions, but anticipate tomorrow's needs.

Which is why at PeopleSoft we encourage our employees to pursue their outside interests. We think it makes them more creative. And they bring that creativity to the solutions we offer your business. Unlike some other companies that pull their answers out of a box.

In other words, for solutions that are innovative and original, it makes sense to call the people who think that way. PeopleSoft.

For more information call 800-947-7753 or e-mail us at info@peoplesoft.com.

Enterprise-wide client/server business solutions for finance, distribution, and human resources.

Letter From Italy

Frescobaldi has just launched a light, Chianti-style Sangiovese wine that's tailor-made for the U.S. market. And Zonin, a major producer in the northeastern Veneto region, is forging joint ventures to export wine to India and China that could boost its $60 million annual revenues.

Perhaps I should stay away from figures, though. As the sommelier fills up my 51st glass, I gulp down a spicy red number that's simply too good to spit out. I later regret this intemperance as I begin to have problems adding up the points on my form and get told off for getting the arithmetic wrong. I'm also getting deadly glances from my Norwegian neighbor, who occasionally gets sprayed by my attempts at spewing the wine into a bucket. Apparently, I haven't mastered the tongue work needed to spout the wine like a fountain.

BOTTOMLESS CELLAR: *Sommeliers brandishing hooded bottles*

ELISABETH GARVEY

Soon, I'm slinging back the wine at full force, and my senses are buzzing with the taste of everything from exotic flowers to mouthwash. As my first day on the job draws to a close, I adjourn—for a drink with the lads in a local *taverna*.

LINGERING TASTE. At dinner that evening, we are only allowed watered-down house wine in glass jugs. No sponsors must taint our exemplary impartiality. The Irish oenophiles at my table guess that it's a local Valpolicella, a popular, light red wine. After the 10th carafe, the wine has us musing over the virtues of plastic bottle tops—over 6% of wines are ruined by bad corks—and why the top Miss World contenders invariably include one from Venezuela.

In the morning, it's back to the grindstone at the villa. The first wines of the session mingle with the lingering taste of espresso. I inhale the oak-scented fumes of a red potion and hold up my glass to the light. The room's frescoed walls and beamed ceiling are reflected in the halo of wine circling the glass. As I let the wine slip down my throat, I feel the aura of four centuries of the villa's history. But the sensation fades. As the day wears on, from my strategic back-row table, I can chart bald spots turning a darker shade of purple.

DARK DEED. By the third day, I feel more at ease with all the ritual. I even swirl and sniff the mineral water in my glass at lunchtime. Surprisingly, there is very little winespeak going on apart from the odd, otherworldly snippet: "Did you capture the subtle hints of vanilla and soft seductive character of Sample 201?" Mostly, the oenophiles and the sommeliers prefer to talk about sex—which is all very amusing until they attempt turning words into deeds.

Peeling away from the competition in the afternoon to join a tour of the Bertani Estate—a prestigious winery up in the hills outside town—I wind up on a merry canteen crawl with a group of local wine fiends. After hitting a 1928 Amarone in the dark cellars of the villa, I am grabbed by the arm and slurped on the cheek by a mustached reveler.

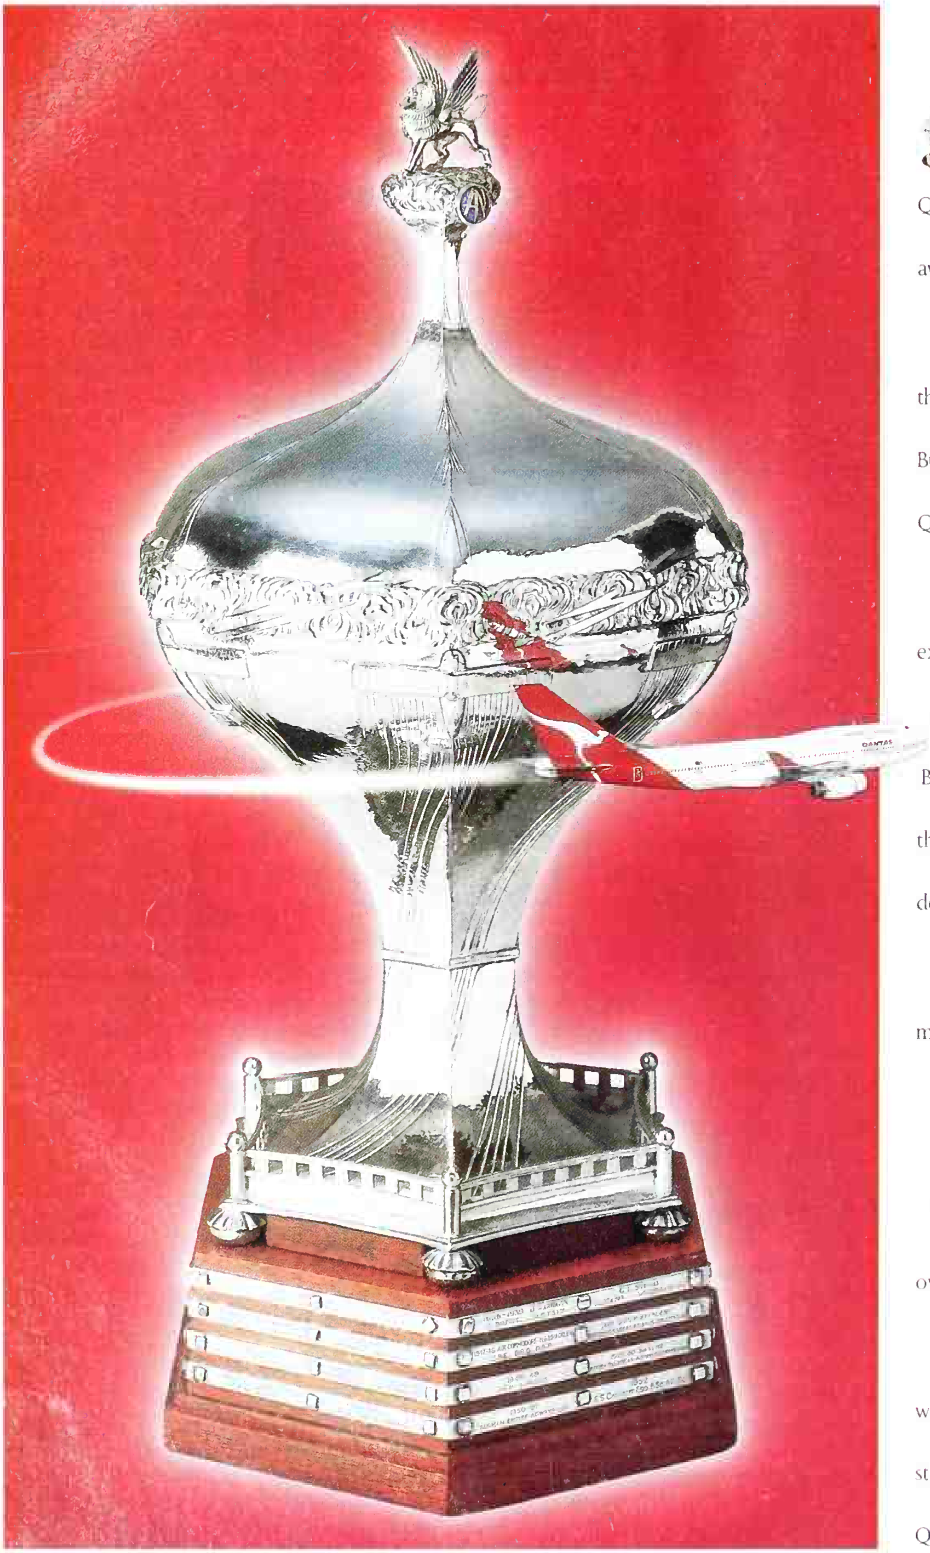
Suffice it to say, all that is history now. Back in Rome, I'm fighting my way through traffic jams to reach the office with a throbbing hangover. Getting down to work is like moving mountains. Vague memories of drunken predators, bulbous red noses, and biblical floods of wine swirl in my head. Subtle hints of vanilla indeed.

SILVIA SANSONI

Sansoni is editorial assistant at BUSINESS WEEK's Rome bureau.

By day three, I even swirl and sniff my lunchtime mineral water

No other airline has landed this twice.



This is the coveted Cumberbatch Tro awarded for "Outstand Contributions to Air Safe Qantas is the only airline to win this presti award. Twice.

Our safety record is the envy of the industry. But then, so are all of the other facets of Qantas experience.

For example, healthy world-class meals exceptional wine list, in-flight entertainmen personal, in-seat video screens in First Business Class, and to add to your com the latest ergonomically designed seats.

When you fly Qantas you can also e mileage on your choice of Alaska Airli American Airlines®, Bri Airways, Canadian Airli Continental Airlines, USAir or own frequent flyer program.*

With all of this going for us, it's wonder we've landed so many awards for standing service too. Call your travel agen Qantas at 1-800-227-4500.

o on sale in late August.
test version of Windows
hat I am running is solid,
it marks a huge improve-
ıt in usability over Win-
s 3.1.

CKER SHOCK. But some
the add-ons that make
ıputing more convenient
reliable have fallen by
wayside. Others have
ed to a "plus pack" that
add $50 to the near-$100
of the main program,
some of the remaining
lets aren't very good. As
sult, Win95 users, like car
ers, will have to pay ex-
for some of the added
ures they want. And at least a small slice of the $7.4 billion U.S. software industry will be able to thrive in the gaps left by mighty Microsoft.

Take, for example, disk-compression software, which allows you to double the amount of data you can pack onto your hard disk. Windows 95, like recent versions of MS-DOS, contains a compression program called DriveSpace. But the Win95 edition provides lousy compression on drives bigger than about 300 megabytes.

The reason, Microsoft developers maintain, is their commitment to allowing the new Windows to run on the millions of existing machines with 386 microprocessors, which are two generations behind today's Pentium chips. State-of-the-art compression software slows these machines to a crawl, so Microsoft dumbed down the program. If you have a 486 or Pentium computer, and want the good stuff, you'll have to buy the plus pack or one of the non-Microsoft products that are sure to sprout.

Microsoft also scrapped plans for a component that would allow you to run your PC from another computer—say, a laptop—via phone lines. Instead, you'll need non-Microsoft software for remote access (BW—May 8). And Schedule+, a time-planning program which was bundled in the last version of Windows 3.1, will become part of Microsoft Office instead.

Unless you have a taste for living dangerously, you'll want to buy programs to keep an eye on your system, warn you of impending problems, and help you recover from a disk crash, loss of setup information, or other catastrophe. When you install Win95, it offers to create an emergency startup disk, but I was not able to figure out what to do after booting up from the emergency disk. Symantec Corp.'s Norton Utilities for Windows 95, now available in a $30 "preview" to Win95 testers, makes the process a whole lot easier.

There are some good features in the Windows 95 package. I found the backup software, which allows you to archive files to floppies or tape, easy to set up and use. And HyperTerminal, licensed from Hilgraeve Inc., may be the only general-purpose telecommunications software that you will need to call bulletin boards.

Getting the extra software necessary to run Windows 95 safely and conveniently at least doubles the initial cost of the operating system—especially since most of the Windows 3.1 versions you may be running won't work unless upgraded. But in the end, consumers may well be thankful that Microsoft couldn't quite chew all it bit off. Even if the software left out of Win95 is only a small slice of the business, innovators will find opportunities—and healthy competition in software benefits us all.

BULLETIN BOARD

PRINTERS

STREAMLINED 'JET

When the OfficeJet combination fax machine and printer came out last year, I criticized Hewlett-Packard Co. for leaving out two things: the ability to fax documents without printing them out first and a way to scan printed material into your computer (BW—Nov. 7). The new OfficeJet LX fixes these shortcomings. And it adds the extra functions without complicating the setup process. The LX has a street price of around $800, about $100 more than the original OfficeJet, which remains on the market. Owners of older OfficeJets can buy an LX upgrade kit directly from HP for $119 (800 772-4329).

SOFTWARE

ONLINE DEBRIS

Some programs, like children, should learn to clean up after themselves. The worst offenders are programs downloaded from online services. For example, America Online subscribers can download a new "preview" version of AOL Windows software that gives you access to the World Wide Web through a nifty browser. But when the program finishes installing itself, it leaves behind a nearly 2-megabyte file called 25instal.exe that has no further use. A better-designed installation routine would at least inform you that the file could be erased safely.

STARTUP
A Silicon Valley Adventure
By Jerry Kaplan
Houghton Mifflin • 322pp • $22.95

A $75 MILLION 'JOYRIDE TO HELL'

When Jerry Kaplan launched computer-software startup GO Corp., he chose the ant as the company mascot. He set up an ant farm near the company kitchen and told his troops the insects captured the right attitude—they were egoless, cooperative, diligent, and, he added, "excellent engineers." Meanwhile, he confided in his top lieutenants that whether GO was a huge success or a huge failure, it would be a "hell of a joyride." Weeks later, the ants were dead, and one of those lieutenants had a new prediction: It could be a "joyride to hell."

Thus begins *Startup*, the story of GO, one of Silicon Valley's hottest outfits gone dead cold. GO was launched in 1987 by Kaplan, then a 35-year-old techno-visionary who could see a day when people would use personal computers like notebooks—scribbling on the screens and having the writing instantly turned into computer text. One key snag: The technology, including translating the quirks of individual handwriting, was not up to the task at an affordable price. Six years later, GO—along with hundreds of jobs and $75 million—had evaporated.

What it left behind is grist for Kaplan, who gives a delectable account of what it's like to try to spin a dream into Silicon Valley gold. Few succeed—the odds are 10 to 1 against. But that fact only makes Kaplan's firsthand glimpse i
one of computerdom's big failures
the more intriguing.

That said, his story is anything bu

THE McGRAW-HILL BOOKSTORE—INFORMATION FOR TODAY'S PROFESSIONAL

Mitchell Kapor, founder of Lotus elopment Corp., where Kaplan had working as a consultant. The two nbled a small team that included e Sakoman of Apple Computer Inc. ull over the idea. At first, it aped everyone was hot to trot. But Sakoman broached the idea of ng Apple, word reached Sculley, pany chairman, who enticed Sakoto stay by setting him up with a ar project of his own. GO had a rival e it even incorporated.

koman left Apple a few years later ay. But his project went on to be the "Great White Hope at Ap- -the Newton," says Kaplan. While Newton is one of the few pen-based es that has reached the market, it ailed to become a commercial hit. the Apple product dogged GO. At point, Kaplan says, Sculley considdropping Apple's software and us-O's Penpoint operating system. But Newton team threatened revolt, and dea was forgotten.

ars later, just as Penpoint was y for market, key partner AT&T y swapped it for Newton technolo part of a possible AT&T-Apple joint ire. But when AT&T's Robert Kav failed to win support among his enants, he stuck with Penpoint.

also had run-ins with Microsoft Corp. In the early days, GO invited hyper-aggressive Microsoft CEO Bill Gates to look over its concept in hopes that Microsoft would write software for Penpoint. Gates expressed interest—but also pointed out he had previously thought of a pen-computer himself. Still, he sent one of his engineers to get a closer look. "All they did," complained Robert Carr, GO's research and development chief, "was beat me up about why we should be using Windows. They insinuated that if we didn't, they might do this themselves." Sure enough, GO wouldn't switch to Windows, and Microsoft started a competing project, Pen Windows—which, incidentally, still has not appeared on the market. Fumed Carr: "They ripped off our stuff!"

Kaplan sifts the ashes of his software startup to spin a good yarn, not to teach a lesson

Did they? While this tale is timely, given Microsoft's fight with a federal judge over its business practices, Kaplan never says Microsoft broke the law. He instead takes us along to the Federal Trade Commission, which called GO for information regarding its inquiry into Microsoft. There, Kaplan tells his story to eager investigators. Afterward, according to Kaplan, an FTC staff economist told him: "This looks like a textbook case of abuse of monopoly power." But in the end, Kaplan says, the FTC decided the GO material was immaterial to its investigation.

If all this sounds like living on the edge, it is. GO's final days were full of more twists than a Hollywood whodunit. GO spun out its hardware into a separate company, EO, in which AT&T took a stake. As funding began to run dry for GO, it merged itself back into EO—and Kaplan and other execs resigned. Just two weeks after the merger was completed, an AT&T exec recommended closing EO entirely. EO fought back, laying off staff and convincing AT&T to hold on. For a short while, there was hope. But on July 29, 1994, about six months after the merger, AT&T pulled the plug.

Did all this sour Kaplan? Not at all. He has launched a new Silicon Valley startup, ONSALE, an electronic shopping service that debuts on the Internet May 29. It's joyride time again.

BY KATHY REBELLO

Rebello covers Silicon Valley for BUSINESS WEEK.

It's not easy improving Gleneagles,
So we're always improving our guests.

Even with 800 acres of spectacular countryside, it's hard finding room for improvement at Gleneagles.

Not that we ever stop trying.

In recent years we've opened The Golf Academy, a falconry school and an off-road driving school.

At The Golf Academy, PGA professionals offer expert tuition and advice, using the latest video aids and computers to iron out any faults in your game.

Next, why not try your hand at falconry, the ancient sport of kings.

The glens are the perfect setting for beginners and experts alike.

Or fly downhill in a four wheel drive vehicle. Our experienced instructors will show you how.

Having mastered these skills, our guests can think of only one improvement. A longer stay.

THE BUSINESS WEEK BEST-SELLER LIST

Evolve, sell, win—and make your fortune. New entries onto BUSINESS WEEK's Best-Seller List of business books provide how-to lessons for all these goals.

Transforming the Organization offers readers a "four Rs" of transformation: reframing your business vision, restructuring the company, revitalizing, and renewing personnel. For inspiration from the playbook of veteran NFL coach Don Shula, there's *Everyone's a Coach*. *The Five Rituals of Wealth* directs you to the pot of gold in the end zone. And *Stop Selling, Start Partnering* says the way to succeed with customers is to help them develop their own prosperous businesses.

The Vandals' Crown is the only new hardback best-seller that's not a "how-to-succeed" account. Instead, author Gregory J. Millman provides disturbing evidence of the edge held by currency traders over the world's central ban

Two new paperback best-seller sequels to other books already on paperback list. *The Reengineering olution*, a paperback original, off nuts-and-bolts supplement to the a found in *Reengineering the Corpora* Similarly, *The Fifth Discipline F book* is a practical guide to implem ing the management approach adva by *The Fifth Discipline*.

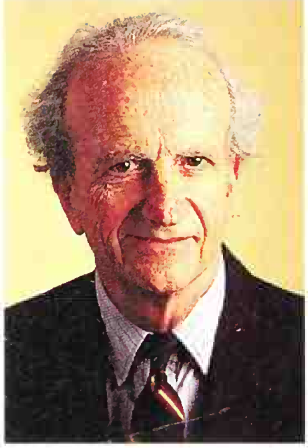
RULE NO. 1 IN SWITCHING TO CAPITALISM: MOVE FAST



Gary S. Becker, the 1992 Nobel laureate, teaches at the University of Chicago and is a Fellow of the Hoover Institution

MICHAEL L. ABRAMSON

FLEET FEAT: Many economists advocate a slow pace, but evidence shows that a quick leap allows market forces to work their magic

The very different paths taken toward market economies by the ex-communist nations provide a remarkable laboratory on how to transform centrally planned economies. The evidence from these experiments is loud and clear: It's best to introduce large changes rapidly without waiting to discover the "right" sequence of reforms. Moving quickly allows the transformation to be guided mainly by the spontaneity of innovative market forces rather than by government planners or technocrats.

Still, many economists advocate a slow, systematic pace. They believe that the ordering of reforms toward a market economy makes an enormous difference to the long-term success of the process. Yet history offers little guidance on what the proper sequence might be, simply because of the unprecedented scale of transformation required by the collapse of communism. Nor does economic theory provide an adequate blueprint. Markets have their own dynamics that are often impossible to anticipate.

Prime Minister Vaclav Klaus of the Czech Republic has led the highly successful transformation of that nation. In a recent book of essays, he emphasizes that an overhaul should be done rapidly and with a "mixture of intentions and spontaneity." Similarly, Adam Smith more than 200 years ago in his *Theory of Moral Sentiments* argued that important public policy changes cannot be planned the way a master chess player moves pieces around on a chess board.

FOOT-DRAGGING. Rapid reform can also prevent interest groups who thrived under communism from organizing effectively to slow and even derail the transition to a market economy. These groups were on the defensive for a while after the old regimes toppled. But now, most of the current leaders in the ex-communist countries are former communists, and these politicians are slowing the pace of change by appealing to the elderly and others hurt by the capitalist upheaval.

Telling evidence that foot-dragging on the road to the free market hurts is not hard to find in Eastern European nations. Take their experience in privatizing state-run companies. Hungary, Poland, Romania, and most other ex-communist nations have held off privatizing thousands of midsize and large enterprises until government "restructures" employment, overhauls accounting practices, and changes the product mix at the vari concerns. Since getting companies "rea takes time and runs into opposition fr management and workers, government rected privatizations have been slow and efficient. In Poland, despite its quick s toward sensible fiscal and monetary polic almost half of its large enterprises rem in government hands. Unemployment is v over 10%, and only a few companies are tr ed on its stock exchange.

BRILLIANT IDEA. In sharp contrast, the Cz Republic acted before political opposition co organize and relied on market forces. Kl and a small team of associates came up w the brilliant idea of selling vouchers at a n inal price to the general public that t could use to bid for stock in different com nies. In just three years, the Czechs u vouchers to privatize over 2,000 enterpri and they have essentially completed this st of the transformation process.

Despite a few scandals and other pr lems, the Czechs succeeded beyond even most optimistic expectations. Many mut funds and other financial intermedia formed to buy vouchers and bid for sha These investors gained a voice in guiding newly privatized enterprises. A sophistica stock market developed where shares in h dreds of companies are traded every day, the few dozen traded on other exchange central Europe. The Czech Republic has lowest unemployment rate in Europe, e though most of its privatized companies h been restructured by their new owners.

The success of the Czech approach enc aged the Russian Republic to introduc slightly modified version of the voucher p in 1992. It took Russia only two years to vatize some 14,000 midsize and large com nies, and by June, 1994, more than 85% of country's industrial labor force was working the private sector. Russia has not achieved macroeconomic stability or a sta currency, but it has managed to quickly s an economy dominated by state-owned com nies to a system of private ownership.

Abundant evidence from the ex-comm nist countries indicates that it is a mist for government bureaucrats to attempt fine-tune the transformation to market ec omies. It is much better to unleash the sp taneous creativity of businesspeople, work and markets.

What is
Lotus
NotesSuite,
and is it right
for you?
(Take this simple quiz.)

esSuite™ is like nothing you've seen before. It's
w way to look at the desktop, combining tradi-
al business applications with the revolutionary
er of Notes® groupware and ten unique
ications designed to make your teams
e productive today. The result is a whole
working environment – as flexible as it is
erful. Take a moment to figure out what
es NotesSuite so different.

**'ou've invested untold amounts of cash in your
puting hardware. There is a PC in front of every
vidual in your company but you're not con-
ed you're getting the best possible return on
investment. What do you do?**

crap the machines, give out slide rules and hire
typing pool.

iet hardware upgrades so the stuff that isn't
etting done still doesn't get done.

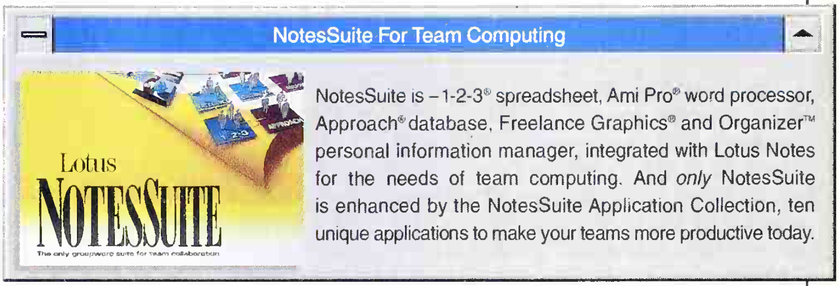
ire a lot of people just to "show 'em who's boss."

iet NotesSuite and begin making the move from
roductive individuals to productive teams.

*otus Notes is already delivering an average
I. of 179%[†] to companies who use it. Couple
power with our five leading desktop applications
you can finally use your computer the way
ve always wanted to.*

**I often work out of the office. I sometimes work
colleagues, sometimes on my own. Am I trading
vidual productivity for workgroup capabilities?"**

*Whether your colleagues are next door or around
world, Notes provides a level of integration that
es NotesSuite more powerful and more effective
than any desktop suite before it. Notes becomes a working environment; SmartSuite® provides the working tools, making you and your teams more productive.*



NotesSuite For Team Computing
Lotus
NOTESSUITE
The only groupware suite for team collaboration

NotesSuite is – 1-2-3® spreadsheet, Ami Pro® word processor, Approach® database, Freelance Graphics® and Organizer™ personal information manager, integrated with Lotus Notes for the needs of team computing. And *only* NotesSuite is enhanced by the NotesSuite Application Collection, ten unique applications to make your teams more productive today.

3. OK, you've heard a lot about this new way to work but you're wondering, "What can NotesSuite actually do for me?"

A. Route, track and approve paperwork automatically.

B. Expedite the budget process by coordinating, tracking and distributing the same budget spreadsheet.

C. Basically streamline workflow, impress my boss and get me a raise.

D. All of the above.

When you recognize that the biggest potential for gains in productivity comes not from boosting individual performance, but from people working together, you begin to understand how broad an effect NotesSuite can have on the work environment.

Right now you can buy NotesSuite for just $299.[††] It puts the value of Microsoft® Office in a whole new light. To find out more about how Lotus NotesSuite is helping successful companies become more competitive, get our FREE video, "Team Computing: The Art and Science of Collaboration," by calling **1-800-TRADE-UP, EXT. A757**,[*] or explore Lotus on the World Wide Web at **www.lotus.com**.

Economic Trends

BY GENE KORETZ

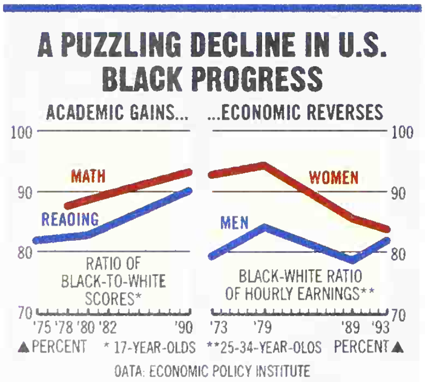
WHAT HELD BLACKS BACK?

Gains in education haven't paid off

Educational achievement is supposed to provide greater rewards in the workplace. Yet, notes economist Jared Bernstein of the Economic Policy Institute in a new study, despite educational progress by blacks in the 1980s, the gap between their wages and those of whites at all education levels (except high school dropouts) widened during the decade—suggesting that job discrimination may actually have increased.

Blacks' educational gains have been significant. Whereas the median years of schooling of black men and women were about two years less than those of whites in 1970, for example, by 1990 the gap was down to just 0.2 to 0.3 years. And while high school dropout rates of blacks and whites of both sexes declined in the 1980s, they fell far more sharply among blacks, almost eliminating the gap between black and white males.

Similarly, nationwide tests of 17-year-olds in reading and math skills show blacks gaining considerable ground on whites between 1975 and 1990 (chart). And the gaps between black and white SAT (Scholastic Aptitude Test) scores in math and verbal ability narrowed by more than 20% from 1976 to 1990. According to a Rand Corp. study, rising parental education levels and fewer children per household helped black youths move ahead despite increases in poverty and single-parent families.



Unfortunately, such progress hasn't produced commensurate economic gains. After narrowing the hourly wage gap during the 1970s, for example, blacks generally lost ground relative to whites in the 1980s (chart). The decline occurred among both younger and older adults, and it was particularly pronounced among college-educated black men. Indeed, Bernstein argues that drops in both college aid for low-income students and in the relative rewards of a college education explain why the percentage of young black adults with college degrees stopped rising in the 1980s.

Why haven't blacks' educational gains paid off? Bernstein thinks blacks have been especially vulnerable to such trends as the shift to white-collar jobs, declining unionization, and widening wage inequality that favors the most highly educated workers. And though the black-white male wage gap may have recently started shrinking again, he also observes that young black males continue to leave the labor force—suggesting that racial discrimination still weighs heavily on their job prospects.

CANADA'S FATE IS IN U.S. HANDS

Its economy is tied to its neighbor's

After growing a spectacular 5.6% in 1994, the Canadian economy is slowing sharply and runs the risk of posting nearly zero growth in the current quarter, reports economist Ian Amstad of Bankers Trust Co. Soaring exports have recently succumbed to the slowdown in U.S. demand, he notes. And draconian monetary tightening by the Bank of Canada around the turn of the year, to support the collapsing Canadian dollar, has pulled the rug out from under interest-rate-sensitive sectors.

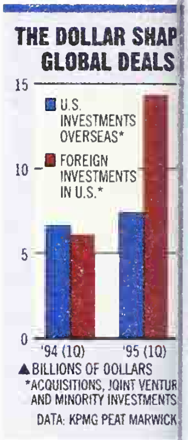
Housing starts, for example, have collapsed below their 1991-recession troughs, and auto sales are off 20% in the past six months. Employment gains have also stalled abruptly in the past six months, after posting nearly a 4% growth rate through most of last year.

With federal and provincial budgets tighter than anticipated, the U.S. Federal Reserve's monetary policy on hold, and the risks of Quebec going it alone apparently receding, Canada may well weather current economic storms. But Amstad notes that its economic fate is precariously tied to a successful soft landing by the U.S. A worsening U.S. slowdown, for example, could undermine Canada's economy and fiscal plans. Conversely, Amstad warns that "a U.S. reacceleration could prompt the Fed to tighten, condemning Canada to an era of high interest rates and/or renewed currency weakness."

WEAK DOLLAR, WEAK HEARTS

The U.S. sits out an equity shuffl

There's little doubt that the doll
gyrations early this year left
stamp on global deals by multinati
companies. As tallied by KPMG Peat M
wick, the value of cross-border acqu
tions, joint ventures, and minority-st
investments announced in the first quarter hit $42.6 billion, up 39% from 1994's first quarter. But rising dollar prices of foreign assets obviously inhibited U.S. companies. The value of their foreign deals rose by just 12%, to $7.43 billion.



In contrast, the spectacle of suddenly cheap U.S.
assets clearly whet the appetites of
eign companies, whose first-quarter U
purchases hit $14.4 billion (chart). E
Japan got into the act, boosting its U
outlays nearly sixfold, to $1.48 billio

A DUBIOUS SURG IN JOB-SEEKERS

This year's pickup may peter out

Something odd is afoot in U.S. la
markets, says Paul Boltz of T. R
Price Associates Inc. One reason the
less rate has climbed is an unexpec
sharp acceleration in labor force grov

So far in 1995, the labor force
jumped by more than 1 million, imply
an annual increase of 3 million. In
history books, notes Boltz, only one y
saw labor-force growth hit 3 mill
1978, when maturing baby boom
were flooding the job market. Si
demographic trends are now less fa
able, the recent acceleration looks o

Boltz also notes that the labor fo
surged in a similar fashion early in 1
To the chagrin of the Bush Adminis
tion, a 1.63 million rise in the first
of that election year pushed up the
employment rate to 7.7%. In the sec
half, however, the labor force grew b
paltry 200,000. If the same pattern
folds this year, the jobless rate may
again even as the economy slows.

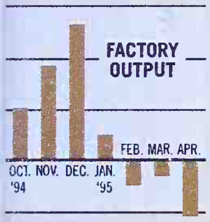
F YOU'RE LOOKING FOR A RATE CUT, OU'LL HAVE TO WAIT

U.S. ECONOMY The Federal Reserve has a lot to ponder at its next policy eting on May 23. Suddenly, the domestic part of economy looks downright sickly in the second quar- , and inflation appears to be accelerating a bit. At the ne time, Capitol Hill seems to be getting its budget- ancing act together—something that has added sup- t to the recent rallies in both bonds and the dollar. at's the Fed's next move?

ORE ASSEMBLY LINES SIT IDLE



ONTHLY PERCENT CHANGE

ATA: FEDERAL RESERVE, BUSINESS WEEK

The economy's paler cast strongly argues that the Fed's next action will be a rate cut. After all, in February, top Fed officials said the central bank will ease policy preemptively in order to avoid recession in much the same way it tightened earlier to nix inflationary pressures.

However, an easing move still seems to be a long way

To be sure, the slowdown signals are increasingly inous. In April, industrial production, real retail es, and housing starts each began the second quarter ll below their first-quarter levels (charts). About only things that began this quarter higher than last rter are new jobless claims, inflation, and probably entories. Not a comforting mix.

OK CLOSER at the economy's weakness and under- ng supports, however, and there is little to indicate t the Fed has overtightened. Excess inventories mostly to blame for the factory sluggishness. Stur- income growth means that consumers have plenty of h to spread around at their local malls. And the ep decline in long-term interest rates of late will pro- e stimulus for housing and other sectors of demand, n without an immediate Fed easing.

The slowdown is fundamentally a midcycle inventory rection. Although many industries are nursing excess entories, the correction is also disproportionately centrated in the auto industry. Removing that log- alone, which should be accomplished by summer's l, will provide a lot of relief.

Moreover, excess inventories in the retail sector lude many imports, which will mitigate the impact fewer retail orders on U.S. manufacturers. Also, S. manufacturers' reaction times to overstocking ve become so rapid in recent years that the output ustment will be much faster, with less chance that a severe inventory problem will develop.

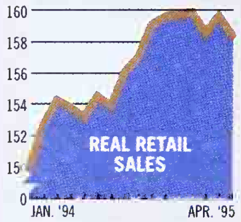
In the meantime, the Fed will have to keep at least one eye on inflation. Both the producer and consumer price indexes in April were a little unruly.

The CPI jumped a defiant 0.4% in the month, as did the core index, which omits energy and food because they often distort the trend. For the past six months, core consumer inflation stands at an annual rate of 3.4%. That's the fastest six-month rate in nearly two years, and it's up from 2.8% in the previous half year.

If monthly increases in the core index alternate between 0.2% and 0.3% for the rest of the year—a likely result—core inflation will end 1995 at 3.5%. Even under that tame scenario, the core rate will accelerate nearly a full percentage point, from 2.6% in 1994.

THE FED has suggested, however, that it will tolerate at least a mild pickup in inflation as long as the economy shows clear signs of slower growth. And does it ever. Retail sales fell 0.4% in April. Even excluding a sharp drop in car-buying, sales elsewhere still managed only a slim 0.1% gain. Demand for durable goods generally was weak, with sales declines in both building materials and furniture as well as autos.

HOW LONG WILL SHOPPERS STAY HOME?



▲BILLIONS OF 1987 DOLLARS

DATA: COMMERCE DEPT, BUSINESS WEEK

Early-bird signs for May, however, indicate that consumers haven't given up shopping for good. Retailers gauged sales in the second week of the month as generally "on or above plan," according to key weekly surveys. The two leading roundups each show that seasonally adjusted sales in the first two weeks of May stood about 0.4% above April's level.

Amid price hikes and still-high financing costs, car sales will be slower to come around. Unit sales of cars and light trucks in April fell to an annual rate of 13.8 million, the fewest since last July. Although Detroit already pared down April output substantially, further cutbacks in May and June will be needed to rein in bulging dealer inventories.

Apr. 30 dealer stocks of U.S.-made vehicles jumped to an 82-days' supply for cars and a 78 days' total for trucks. Both are far above the more desirable 60 days, suggesting that, without stronger demand, planned May and June output reductions may not be enough.

Motown's weakness hit the nation's industrial produc-

ERIC HOFFMANN/BW

tion hard in April. Although output in mining and utilities rose, production in manufacturing dropped 0.5%, the third straight monthly decline, something that hasn't happened since the rough early days of this expansion. About half of the April drop reflected a steep 4.4% plunge in output of motor vehicles and parts. And the weekly BUSINESS WEEK production index indicates output continued to slip in early May (page 101).

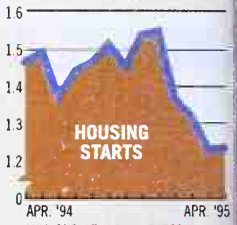
Paralleling the recent retail-sales weakness, output of consumer goods was especially soft in April, including further cutbacks in production of household appliances and furniture. Weak auto and truck output also dragged down production of business equipment. That was the first monthly decline in three years, but output of information equipment continued to rise strongly, providing a key support under production.

THE HOUSING SLOWDOWN continued to hit output of construction supplies. April housing starts did not rebound from their steep 6.7% decline in March, as many analysts had expected. Construction of homes and apartments edged up 0.4% in the month, to an annual rate of 1.24 million. Still, lower mortgage rates are improving the mood of builders, says the National Association of Home Builders.

The trade group's new housing-market index, a measure of market health and builder confidence, rose in May to the highest level since December. Builders said buyer traffic was marginally higher in May after d
clines in previous months, and their expectations
sales in coming months were up. The reason: Mortga
rates averaged a 14-month low of 7.87% in early M
says the Federal Home Loan Mortgage Corp.

For the Fed, the bright spot in the production adjustment is the sharp decline in the rate of capacity use, a sign that markets have more slack and price hikes will be harder to pass on. Operating rates in manufacturing fell 0.8 percentage point, to an average of 83.5% in April. That's down sharply from the recent peak of 85.2% in January.

NO APRIL BOUNCE FOR BUILDERS



▲MILLIONS, AT ANNUAL RATES

DATA: COMMERCE DEPT.

The economic slowdown, combined with prospe
for serious deficit reduction, is paving the way for
eventual easing of Fed policy that will help to exte
this expansion, already four years old. Done over se
en years, budget-cutting will create a minimal fis
drag in any given year that can be offset easily by lo
er interest rates.

But the soft-landing scenario is only now beginning
play out. The Fed will need a lot more evidence th
things are going its way before it's willing to make
major policy shift.

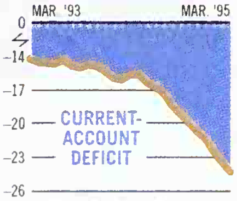
AUSTRALIA

GOOD BUDGET NEWS LEAVES THE MARKETS UNMOVED

Australia's 1995-96 budget contains something rare: a surplus. But financial markets are far more drawn to the record current-account deficit.

The new budget proposed by Prime Minister Paul J. Keating's government promises a small surplus of A$718 million (U.S. $524 million) for the fiscal year starting July 1. The plan depends on a hike in corporate income-tax rates, to 36% from 33%, and asset sales. Rising taxes dimmed consumer confidence, as the Westpac index fell 5.8% in May.

THE AUSSIES TUMBLE INTO A TRADE HOLE



▲12-MONTH MOVING SUM, BILLIONS OF AUSTRALIAN DOLLARS

DATA: DRI/McGRAW-HILL, BUSINESS WEEK

The budget also expects real gross domestic product to grow 3.75% in fiscal 1995-96, but economists already say that forecast may be too optimistic given tighter fiscal and monetary policies.

Members of the ruling Labor Party argue that fiscal restraint will take the pressure off the Reserve Bank of Australia, which has lifted interest rates three times since August. But with the economy still strong, the RBA may have to hike rates again. Employment surged 90,400 in April, more than 10 times the consensus forecast. April's jobless rate fell from 8.7% to a 4½ year low of 8.3%.

What stole attention from the surplus news was the government's forecast of the current-account deficit, which has been worsening since last year (chart). Because of higher interest payments to foreigners, the 1995-96 deficit is likely to remain at this year's record A$27 billion, or 5.5% of GDP. Australia's domestic savings must rise to curtail the need for foreign funds. And to that end, the government proposed a compulsory superannuation, or pension, plan. But it won't kick in until 1997.

By then, Australia's trade position will be hurt by other factors. The 1994 drought means fewer agricultural exports, and Aussie auto-parts makers could be a casualty in the Japanese-U.S. trade dispute. The current labor strife doesn't help, either. And unluckily for Labor, which must call elections by next March, the financial markets may punish Australia for its bigger trade deficit while ignoring the government surplus.

MAN BUYS WORLD

Rupert Murdoch is on the march—and his media rivals are shuddering

Outside Rupert Murdoch's office suite at Twentieth Century-Fox studios in Beverly Hills, the hallway is lined with movie posters from such Fox classics as *The Sound of Music* and *Butch Cassidy and the Sundance Kid*. Inside, though, Hollywood gives way to Murdoch's personal tastes. Australian abstract paintings share wall space with Warhol-esque press plates from Murdoch's racy London tabloid, *The Sun*. "Up Yours Delors" shouts one headline. "Freddie Starr Ate My Hamster" blares another.

Murdoch may spend much of his time in Tinseltown these days, but he has always seemed best suited to the pugnacious world of Fleet Street. As rain spackled the windows of his Fox offices one recent afternoon, he let his mind drift far from Los Angeles and the movies. Standing before a four-foot-wide map of the world, he zeroed in on Europe and Asia, the latest of his many battle zones. "That's where the money is," he said, pointing to Germany, then Japan.

If Rupert Murdoch knows anything, it's where to find the money. And at 64, he has never been better positioned to go mining for it. After a remarkable decade of financial brinkmanship that almost landed him in bankruptcy court, Murdoch is suddenly the one media mogul loaded with resources. While rivals such as Tele-Communications Inc. and Time Warner Inc. wrestle with mounds of debt and other obligations, Murdoch's News Corp. is flush with cash from its global stable of newspapers and broadcast assets. Its $5 billion in debt is half of what it was five years ago.

Plenty of media executives have visions of superhighways dancing in their heads. But during the past few weeks, Murdoch has shored up a media empire focused squarely on nut-and-bolts expansion. Since April, he has rebuked the Federal Communications Commission and its challenge to the financial structure of his seven-year-old Fox Broadcasting Co. network. He also has hooked up with MCI Communications Corp. Chairman Bert C. Roberts Jr. in an interactive-technology deal that is amorphous in all but one respect: It will supply Murdoch with a fresh $2 billion. "We certainly intend it to be an acquisition vehicle," he told BUSINESS WEEK (page 29).

LIGHTNING ROD. Where exactly Murdoch will place his bets is still partly a guessing game. But the News Corp. chairman already is angling to buy the Fininvest TV and advertising empire owned by former Italian Prime Minister Silvio Berlusconi—a deal that would greatly enhance News Corp.'s presence in the rich European market. Murdoch says he also has his eye on distribution assets in Latin America. In the U.S., he hopes to buy more television stations for his feisty Fox network and more cable channels to go with his nascent f/x network.

The most important use of Murdoch's newfound wealth, however, will be to plow it into the projects already at hand—while reining in the more reckless side of his entrepreneurial nature. A close look at what he has on the table—from his Star satellite television operation in Asia to his Vox TV channel in Germany—indicates that the capital investment in front of him runs well into the billions. These are complex businesses, and Murdoch is trying to build them in the face of fierce competi-

tion in Europe and Asia. The latter, says Viacom Inc. Chairman Sumner M. Redstone, "has the biggest potential payoff of any market. But it is also the most expensive."

Murdoch, meanwhile, faces a unique challenge. More than anyone else in business, he is a lightning rod for political and regulatory scrutiny. The FCC battle—though successful—was only the most visible of his recent political entanglements. In the past month, he has battled British politicians over his attempt to win a license for a new TV channel and Chinese authorities over restrictions on the sale of satellite dishes. Governments worldwide are wary of his gaining too much influence.

"GREAT SEDUCER." Murdoch, of course, has made a career of defying odds—financial and political. Two years ago, his $1.6 billion bid to take National Football League games away from CBS Inc. was thought to be reckless. But the payoff in ratings gains and ad revenue at the Fox network has been substantial. As for politics, using both the power of his newspapers and publishing contracts from HarperCollins, his book publishing company, he has cultivated lawmakers masterfully. Says Frank Barlow, managing director of British media giant Pearson PLC: "He's a great seducer."

MCI's Roberts, for one, was captivated. His pledge to buy 13% of News Corp. for $2 billion looks to be more an investment in Murdoch's vision than anything else. The first step of their joint venture will likely be to merge News Corp.'s Delphi online service with MCI's new Internet operations. But despite all the "superhighway" hoopla surrounding the May 10 announcement, Murdoch makes it clear that the vehicle mostly will be used to raise money for bread-and-butter media acquisitions. "I think [interactivity] will happen," he explains. "I'm just very cautious about when." Says Roberts: "I would be the first to tell you that he knows what he is doing and we are going to look to him for expertise."

For now, Murdoch will add MCI's $2 billion to the nearly $3 billion it already has in cash and receivables. The Berlusconi deal, if it happens, would be financed through European operations that can raise money on their own. Otherwise, he will buy opportunistically. "I don't think you'll see him on a buying spree," says one Murdoch intimate. "But he has liquidity and resources now

Murdoch believes in the interactive future, but for now he's putting his eggs into TV stations and satellites

to take advantage of the opportunities that arise."

Murdoch's last big acquisition was the one that brought him into Asia two years ago. He spent $525 million for a 64% stake in Star TV, a struggling satellite network service. Star potentially could beam programming to 220 million households. The problem is nobody really knows for sure how many people receive it. And getting viewers to pay for service is another question altogether.

Murdoch admits his strategy is a high-risk gamble. Generating substantial revenues means starting from scratch in many markets and breaking down political opposition in others. Murdoch has made headway selling the service in India, largely because in 1993 he bought a 49.9% stake in Asia Today Ltd., which broadcasts India's popular ZEE TV. But China and Malaysia have been off-limits. The reason: Murdoch made the mistake early on of saying that satellite delivery of information would topple totalitarian governments. Even India, with its relatively lax political climate, has proved troublesome. Star recently was forced to suspend one of its more popular talk shows when a guest mildly slurred Mahatma Gandhi.

LOCAL FODDER. Unable to meet audience projections, Star has lost advertising revenue. Murdoch says the operation won't be profitable for five years—but even that is probably optimistic. Already, this year's projected $20 million loss has ballooned to $50 million, on estimated sales of $120 million. Winning new viewers will cost bundles more.

Digitization will eventually create hundreds of new channels for the service, and Murdoch plans to use them to customize programming for different markets—say, an offering in Mandarin for China and another one in Cantonese. He is also creating and sponsoring sports leagues to give him local fodder to televise: badminton and basketball in China, cricket in India. The problem, says one rival TV executive in Asia, is that localization of programming "sends your costs through the roof."

Murdoch got a break when a rocket carrying the satellite for a rival service blew up last year, delaying a service sponsored by ESPN, Time Warner, and others. That gives him some breathing room. Still, ESPN has made inroads elsewhere in Asia. And Viacom's MTV, which left Star a year ago because Murdoch wouldn't give up a slice of Star equity, formed its own music station with PolyGram.

Britain, however, shows what can happen when a big satellite investment pays off. British Sky Broadcasting, his satellite service there, may have lost a staggering $1.2 billion between 1989 and 1993. But largely because Murdoch paid $456 million to telecast Premier League soccer games starting in 1992, BSkyB now has 4 million subscribers, and for the first nine months of the current fiscal year, it earned $164 million on $892 million in sales.

Ahead of most of his rivals, Murdoch plans to offer digitally compressed Sky signals sometime next year that will increase the service's 22 channels to 200 almost overnight. With that many ch es, he plans to offer pay-per-view r vies every 15 minutes.

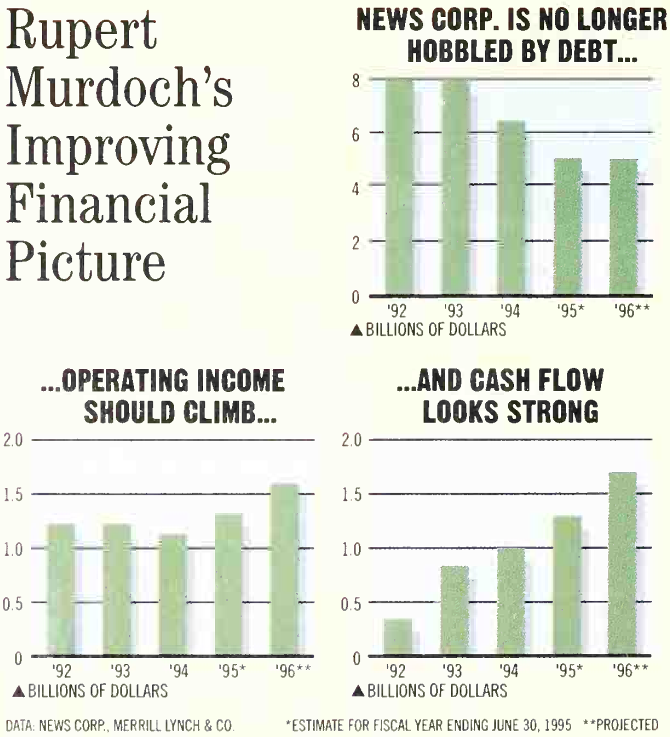
Expanding the News Corp. banner the rest of Europe will be much m difficult. For starters, BSkyB does own the rights to its popular movies o side Britain, and British soccer match won't lure many viewers on the Co nent. Relatively few Italians and Fre own satellite dishes. Competition alrea is heavy from the likes of Viacom, U West and French pay-TV giant Ca Plus. In other areas, state-controlled ble companies aren't likely to welco Murdoch with open arms. "Europe w be an uphill battle," says Pearson's B low, the former chairman of BSkyB.

"WE'VE GOT THE MONEY." Murdoch's r jor beachhead outside Britain is the sta he owns in Vox, the German pay chan News Corp. took control of from B telsmann last year after losses mount to $215 million. But with more than channels in Germany, over 25 of th nationwide, competition is fierce for t $37 billion advertising market. St armed with technical advice from BSky Vox hopes to break even by 1998, cording to Chief Executive Markus T lenbach. Murdoch figures can increase Vox's 3% m ket share to 10%. Rivals, course, aren't so sure.

The source of Murdoc strength at the moment his profitable newspape and his eight Fox-owned stations—which will thr off $300 million in oper ing earnings this year. deed, the seven-year-o Fox network has beco the fulcrum of Murdoc media empire. That's w in the wake of the FCC v tory, News Corp. executi are scurrying for ways expand. In Washington, lo byists have been fighti for telecommunications le islation that would all Murdoch to increase t number of TV stations owns. "If we're able, we going to try to buy som thing out there," says Cha Carey, chairman of t broadcasting unit.

The reason is simp

Rupert Murdoch's Improving Financial Picture



DATA: NEWS CORP., MERRILL LYNCH & CO. *ESTIMATE FOR FISCAL YEAR ENDING JUNE 30, 1995 **PROJECTED

ERIC HOFFMANN/BW

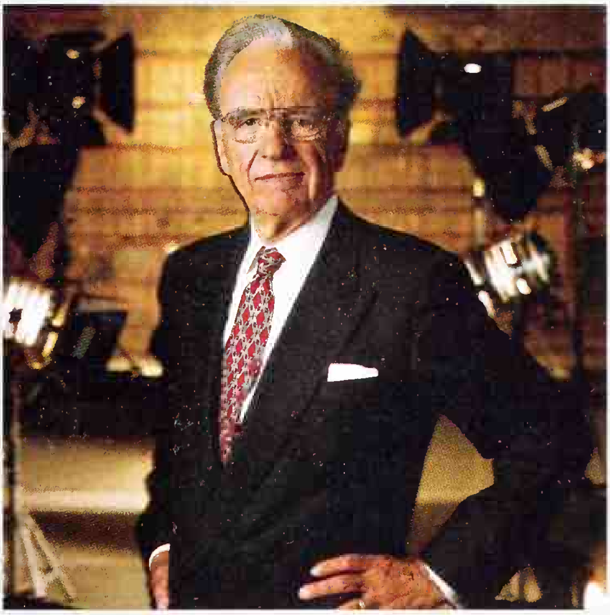
ough. With the hefty costs of the NFL mes, the Fox network barely broke en this year. Additional stations would ow Fox to spread its costs. Moreover, the world goes digital and viewing oices explode, Fox needs the strong- distribution network possible to cut ough the clutter. With racy offerings ch as *Melrose Place* and *Married* *th Children*, Fox appeals to the young viewers advertisers crave. Boosted by football, ratings rose by 7% this year. And Carey hints that Fox will bid on the Sydney Olympics in the year 2000. "We've got the money to be opportunistic," he says.

While opportunism is, in many ways, Murdoch's religion, he insists he has become more cautious in its practice. Time will tell how cautious. Meantime, rivals will watch his every move. "Anyone who bets against Murdoch is making a mistake in my point of view," says Viacom's Redstone. Especially when he has a few billion burning a hole in his pocket.

By Ronald Grover and Michael Oneal in Los Angeles, with Paula Dwyer in London, Dave Lindorff in Hong Kong, and Mark Lewyn in Washington

'I DON'T WANT TO KEEP BETTING THE COMPANY'

On May 15, Rupert Murdoch spoke with Los Angeles Bureau Chief Ronald Grover and Associate Editor Michael Oneal in his Los Angeles office.



ALAN LEVENSON

REGULATION: "Governments... see concentration, but we've been a catalyst at all times for competition" — RUPERT MURDOCH

Q: *Why did MCI come to you?*

A: They've been getting into online services and software. They thought they had to make a major alliance. I think what attracted them was our global nature and obvious global ambitions.

Q: *The investment gives you money to make acquisitions, doesn't it?*

A: We've got about $3 billion that we won't be touching. We'll add this money to that until we buy something. What might we buy? I don't know. I made a joke about CNN just to annoy Ted [Turner] the other day. He gets a bit excited at times. As for the joint venture, we certainly intend it to be an acquisition vehicle. We'd love to—and I can say this because they're not for sale—I think we'd love to have bought [Hughes Aircraft Co.'s] Direct Television. We will [invest in] the media business. It won't be a steel mill.

Q: *Are you interested in buying Seagram's stake in Time Warner? Or Time Warner's stake in Turner?*

A: No. The [Seagram] stake, I don't see what you do with it except hit your head against a brick wall. Time Warner's stake in Ted—they're talking about selling it at a great premium, and all it carries is a blocking veto. It doesn't give you an active role in what goes on there.

Q: *How big a bet will you put on interactive media?*

A: I think it will happen. I'm just very cautious about when. Maybe I'm too old to get it. But if you look at all the tests about interactivity with, say, movies on demand, it suggests that the average home will buy movies by pushing a button. That's not something that changes the world. It's proving more difficult and more expensive, and you have to start with what people will pay for. They'll pay for electronic games.

Q: *How likely is it that you'll buy Fininvest?*

A: Probably about 30%. We're taking a serious look at it, with Fininvest's cooperation. That will go on for three or four more weeks.

Q: *If you buy Fininvest, you're likely to face government scrutiny in Italy, as you did here. Is there something about Rupert Murdoch that scares people?*

A: I haven't had so much opposition in Washington, really. Governments love to regulate, and they love to interfere with media. They see concentration, but we've been a catalyst at all times for competition. The fact is, with digital technology, it's going to be easy to enter [a market], because no one's going to [have] a monopoly.

Q: *Don't you have a virtual monopoly with British Sky Broadcasting?*

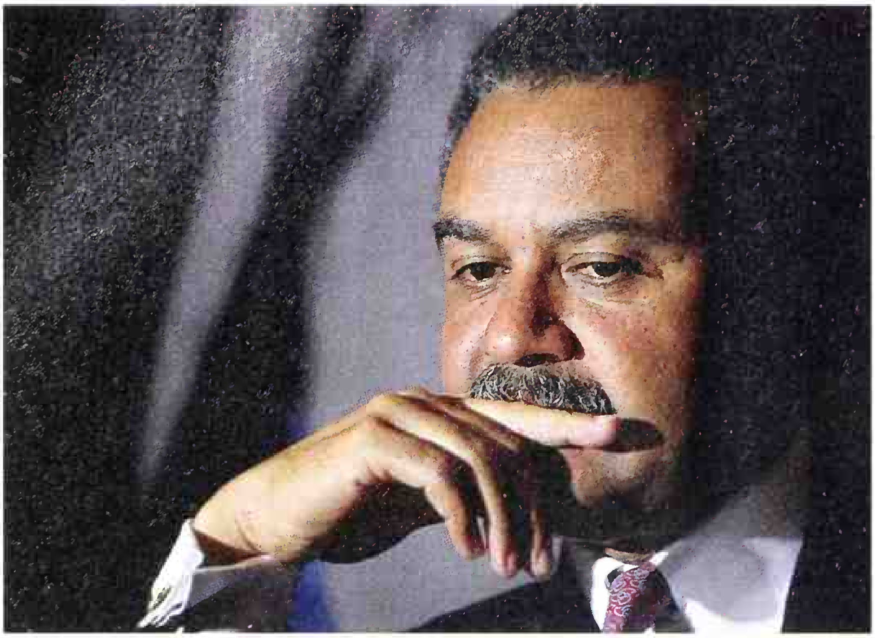
A: Being first helps. What's wrong with that? I mean, why didn't someone else do it? We didn't commit any sin. And others can certainly come in after us.

Q: *Is your view of risk-taking different from that of others?*

A: I don't worry so much about quarterly results. I guess by now I've got a sense of security about taking the long-term view and knowing that the assets will still be there in two years—even if media analysts take different views. We've taken some gambles others might not have. But I don't want to keep betting the company. I'm certainly not going to bet the company again. And I don't believe that we did bet the company.

Q: *Do you feel vindicated after your debt scare in 1990?*

A: Just aged. I don't think about it that way, but we're entitled to [feel vindicated], given what we've put together.... It's all looking pretty good.



MONEY MACHINE: *Brown has clinche multibillion-dollar deals for busine*

VAN DEN BROUCKE/GAMMA-LIAISON

INVESTIGATIONS

RON BROWN MADE COMMERCE. NOW HE MAY BREAK IT

Justice's probe will only amplify GOP calls to scrap the agency

Ask any CEO. Ronald H. Brown will go down in history as one of the best Commerce Secretaries ever. He may also be the last—owing partly to a mushrooming probe of his finances. Almost single-handedly, the Commerce chief has transformed his agency from a backwater into a turbocharged export-promotion machine. But on May 17, Attorney General Janet Reno announced she would ask for an independent counsel to investigate Brown's tangled personal business dealings.

The news couldn't come at a worse time for Commerce, which is the target of a concerted attack by Republican budget hawks who want to kill the $4.2 billion-a-year agency outright. GOP motives don't end there. Republicans are envious of Brown's success in wooing business support for the Administration's policies on trade and technology investment. And Brown is a tempting target because he is a savvy Democratic operator—and close to Clinton.

DYNAMO. Brown's troubles, meanwhile, go beyond the Justice inquiry. On May 16, conservative and legal watchdog groups won a battle in U.S. District Court in Washington forcing the release of 30,000 documents relating to Brown's export-promotion efforts. The activists accuse Brown of using Commerce largesse to spur financial contributions to Democratic coffers from U.S. companies.

At Commerce, aides say they see the independent probe as a far better option than GOP-orchestrated hearings on Capitol Hill. Even so, it will be tough for the Commerce chief to defend his agency against mounting attacks.

SILENT BUSINESS Executives aren't rushing to defend Commerce: Veterans of downsizing think a shakeup is what the bloated department need

Senior White House officials insist they want Brown to stick around. And President Clinton says he backs his Commerce Secretary. That's not surprising: A dynamo in a post that has long been a sinecure for party hacks, Brown has championed policies that have won accolades for Clinton from Big Business, traditionally a Republican stronghold. "They have done more for trade than any prior Administration," says Jerry R. Junkins, CEO of Texas Instruments Inc.

Brown's chief legacy has been beefe up export promotion and support f advanced-technology development. I fought successfully to lift cold-war-e export controls on high-tech goods. A Brown created a high-powered advoca team at Commerce to track juicy infi structure and aerospace contracts spots from Brazil to China. A se aboard the Ron Brown Express, as h trade missions are called, has becor the hottest ticket in Corporate Ameri And with persistence and charm, he h helped clinch multibillion-dollar deals f American business.

KEEN ON CUTS. Even so, executives a not rushing to Commerce's defens They have bigger fish to fry. Their No goal is cutting government spending as to balance the federal budget by 20 "The trade piece is dwarfed by the ec nomic benefits of a balanced budget ov the next seven years," says Willard Workman, head of international affairs the U.S. Chamber of Commerce.

Besides, many execs, particular those who have survived corpora downsizings, think a shakeup is ju what the bloated Commerce Dep needs. "Business reinvents itself eve day. There's no reason why the U. government shouldn't do the same says a manager at an American equi ment maker. Ultimately, business hop that out of the GOP gambit to gut Cor merce, a leaner Trade & Industry Dep will emerge.

As for Brown, the issue is wheth he violated any federal criminal laws accepting questionable payments fro business associate Nolanda Hill whi at Commerce. The counsel also will i vestigate whether Brown filed a fals mortgage application in the purchase a Washington townhouse and whethe he intentionally misled government et ics watchdogs by filing inaccurate fina cial disclosure reports.

In a statement, Brown buttressed h assertions of innocence with a long lis of accomplishments as Secretary. In pressive, yes. But irrelevant to the cas against him. He might save the list f a eulogy at Commerce's funeral.

By Amy Borrus in Washingto

HE BALANCED-BUDGET ACKPEDAL

siness sees the ax fall and cries "not my program"

or 20 years, Corporate America has been demanding that Washington get its fiscal house in order by cut- spending and balancing the federal get. Now, House and Senate Repub- ns are taking steps toward doing that. And the business community acking them, right? Well, sort of.

ompanies are deeply split over ether to endorse the massive spend- cuts proposed by the House and ate Budget Committees. Many com- ies are foursquare ind the budget- ancing plans and willing to endure lest hits for the mise of lower rest rates. Others e lip service to cit-cutting but a menacing ca- t: Don't kill my gram.

SE DIVIDED. It's surprise that busi- s is of two minds ut deficit slashing. mers, hospitals, -tech companies, ractors, and drug- ers, among oth- enjoy federal sub- es or contracts in the bull's-eye. eed, of the $1 tril- in proposed GOP , about one-third would be absorbed business. To liberal interest groups— ies for the elderly, children, and the r—that spells opportunity. By unit- with GOP-connected business groups ry over parts of the new Republican l blueprint, they hope to submarine y of the GOP's proposed cuts.

he biggest GOP fear is that business succeed in protecting so many sub- es that voters will conclude that the r are being made scapegoats to the lthy. "We know the traditional Dem- atic constituencies are out to tank effort," says Susan Tanaka of the nmittee for a Responsible Federal Budget. "The question is whether businesses can hold their immediate self-interests aside for an overall package."

Already, there are signs that many can't. Hospital groups, for instance, are lobbying heavily against $250 billion to $300 billion in proposed Medicare savings over seven years. "We're not obstructionist, but the number is too massive. It's too much too soon," moans Thomas A. Scully, president of the Federation of American Health Systems. Scully says his group, which represents for-profit hospitals, would accept $170 billion in cuts. But that would still leave a $100 billion budget deficit.

Big exporters are preparing for battle, too. Archer-Daniels-Midland Co. is lobbying hard to protect export subsidies, as are manufacturers such as Caterpillar Inc. "Don't fire your [government] salesmen," argues Cat's CFO, Douglas R. Oberhelman.

Other companies are struggling to preserve tax breaks from persistent Democratic attacks on "corporate welfare." They have the support of House Ways & Means Committee Chairman Bill Archer (R-Tex.), who will resist most efforts to close loopholes. But they may be angering House Speaker Newt Gingrich (R-Ga.). Says spokesman Tony Blankley: "It's a bit swinish to focus on tax loopholes when a balanced budget could mean lower interest rates."

THE BREAKS. In the end, some tax subsidies could be closed. Some of the biggest, such as the mortgage interest deduction, are off the table for now. But others are more vulnerable. Among them: special breaks for production and use of alternative fuels, a deduction for dividends companies receive for owning stock in another corporation, and a special credit for farmers who use diesel fuel in their trucks.

Giving up such bennies is what makes it tough for many business interests to support a balanced budget. For instance, members of the American Electronics Assn. would lose Commerce Dept. aid for high-tech research (table). The AEA would give that up for deficit reduction. But it will be less willing to abandon other subsidies, such as the $1.2 billion High-Performance Computing & Communications Initiative, a government research effort to promote development of advanced computers and networks. Contractors also face tradeoffs: They may lose work as government construction is cut back, but could win repeal of the despised Davis-Bacon Act, which fixes wages at high levels.

GOP leaders aren't taking any chances with wavering business backers. The

Targeting Corporate Welfare

The GOP has backed off plans to eliminate some $200 billion in tax breaks to Corporate America. But business still could lose billions in subsidies:

AGRICULTURAL SUBSIDIES With all price supports on the block, farmers may take a $14 billion hit. Some farm groups warn that, as a result, Americans won't be able to compete against subsidized foreign farmers.

EXPORT SUPPORTS Nearly $1 billion in export subsidies could be trimmed by 2002. Much of the aid goes to big companies such as Boeing and General Electric to promote sales of planes, power plants, and other products. But smaller companies gripe that they don't enjoy such largesse.

ADVANCED TECHNOLOGY PROMOTION This $445 million Commerce Dept. program funds research that could lead to new high-tech products. Companies that have benefited range from giant General Motors to tiny Nonvolatile Electronics, a memory chipmaker.

trange bedfellows: The prospect of subsidy reductions as created unlikely alliances between interest groups

ANDY SACKS/TONY STONE

House GOP leadership is assembling a coalition of business and conservative social groups, such as the Christian Coalition, to lean on wavering lawmakers. And the GOP has lined up most of Washington's broadbased business lobbies—including the U.S. Chamber of Commerce, the National Federation of Independent Business, the National Association of Manufacturers, and the American Business Conference—behind a balanced budget. "Any of us that sit here and say, 'This is all terrific but...' ought to be taken out and shot," gripes Barry Rogstad, president of the ABC, which represents growth companies.

Will all this be enough to make deficit reduction a winner? Main Street is already behind the concept. For instance, in Ronald Reagan's hometown of Dixon, Ill., businesses are far more hawkish than their favorite son ever was. Says Donald R. Lovett, chairman of AmCore Bank in Rock River Valley, Ill.: "I'd like to see taxes reduced less and the emphasis placed on spending reductions." And while farmers could lose 40% of their crop subsidies, many seem willing to absorb their share, too. Robert B. Johnson, who raises corn, soybeans, and hogs in DeKalb, Ill., says: "We all win if we do things according to market signals." Besides, he adds, "If we can reduce our cost to borrow funds, that's worth a lot more than our government checks."

"STAND-UP TIME." Business has plenty of other reasons to back deficit reduction. It's getting tort reform and massive regulatory relief from Congress. And companies have done fairly well in the deficit wars. Many vulnerable programs, such as the Small Business Administration, avoided deep cuts. Plus, tens of billions of special tax breaks—more important to most companies than direct spending—have been left largely untouched. And while most of the House tax cuts will die, a capital-gains tax cut may survive. "To tell you the truth, we've gotten so much from them, it's been almost embarrassing," says one Washington rep. "Now, it's stand-up time."

The challenge for congressional Republicans is to keep a business coalition together, at least until overall spending targets are locked in. Once congressional committees start translating them into actual cuts in specific programs, the coalition may splinter. But by then, the war over how much to cut spending will be settled. And the budget will be on its way to being balanced.

EXECUTIVE SUITE

WHO COULD REPLACE JACK WELCH?

GE's chief is on the mend, but the question lingers

On May 14, calls went out to investors and analysts: Less than two weeks after a May 2 angioplasty, General Electric Chief Executive John F. Welch had undergone elective triple bypass surgery to relieve blockage in three arteries.

Welch, the company says, is doing well following the procedure. The 59-year-old executive plans to return to GE's corporate headquarters in Fairfield, Conn., by mid-June and run the $60.1 billion company from home in the interim. He doesn't expect to retire until 2000. But the health problems have exposed a intriguing question at GE, a company he has remade and dominated since taking charge in 1981: What happens when the boss departs? There is no apparent successor to Welch; indeed, there is no clear-cut No. 2 executive.

GE quickly turned away any que tions of succession. Its board has a Ma agement Development and Compen tion Committee, staffed by five outs directors, to address such issues. "Ob ously, in any well-managed compa the board has a plan, but nothing one going to discuss at th time," says a spokeswoman.

STARS ABOUND. With GE, the list of possib successors is long. U der Welch's manda that GE be No. 1 No. 2 in its marke the heads of its doz business units are a ready leaders in their industries, ea running companies over $1 billion. "T people who reach the layer underneat the top at GE have to be outstanding e ecutive talent," says John F. Johnso chairman of headhunters Lamalie A rop International.

GE Capital Services Inc., under C Gary C. Wendt, for example, is th world's most diversified financial-serv es house, bagging a third of GE's opera ing profits. Robert C. Wright has lifte operating income at NBC Inc. to $5 million from $200 million in 1992. James McNerney Jr., head of Asia-Pac ic operations, is seen by many insi and outside GE as a fast-tracker.

Other contenders include Gary Rogers at Plastics. A hero of GE's ma ufacturing ranks, he instituted at App ances many of the low-cost, high-ou put shop-floor techniques now followe throughout GE. Likewise, James W. Ro ers, another up-and-comer, helped r build Motors & Industrial System through cost-cutting and outsourcing.

Given time, though, another genera tion of leaders may come to the fore. I six years, when Welch is slated to r tire, many of GE's current business un leaders will be over 50—at least fiv years older than Welch was when h took over in 1981. For now, few doub that Welch will be as engaged as ever i his company. But that younger genera tion may be speculating a bit mor about succession—even if the boss isn'

N THE FIRING LINE T DOW CORNING

O Hazleton battles creditors, litigants, lawyers, insurers...

or a guy whose company just filed for bankruptcy protec- , Richard A. Hazle- sounds remarkably xed. No matter that luct-liability lawyers t Dow Corning Corp. 'ork over far more 1 the $2 billion it al- ly has promised to le class-action suits, uding claims from ,000 women with ıst implants. Or that nany as 5,000 other nen have filed individ- lawsuits against the ıpany. "I knew this going to be a tough ıe," says Hazleton. 1 not discouraged."

HAZLETON: *It's in no one's "best interests to bleed this company dry"*

PETER YATES/SABA

'he mounting legal aught prompted the Midland (Mich.) ıpany, once the leading maker of silıe-gel breast implants, to seek reorization on May 15 under Chapter 11 he federal bankruptcy code. It also apulted Hazleton, a little-known mical engineer who took Dow Corn-'s helm nearly two years ago, into limelight.

CK STUDY? Until now, the 52-year-old cago native has kept a low profile, ing the company's lawyers fight its tles in the courtroom. Now, Hazleton denly is playing front man, aggresely defending Dow's implants against rges that link them with auto-immune ease. More crucial than polishing Dow ning's tarnished image, though, will Hazleton's tricky balancing act as metor. As Dow Corning wends its way ough reorganization, Hazleton must to placate a bankruptcy judge, disntled creditors, angry breast-implant gants and their lawyers, anxious emyees, and balky insurers.

Such maneuverings "were nothing I er learned about in chemical engiering school," Hazleton admits. He l better be a quick study. A bevy of intiffs' lawyers, including Cincinnati orney Stanley Chesley, packed the irtroom of U.S. Bankruptcy Judge thur J. Spector on May 17 as he ırd the first round of motions on Dow rning's filing. They want to use their ide perch on a creditors' committee to block any reorganization plan that doesn't provide adequate compensation for their clients. Wendell H. Gauthier, a New Orleans plaintiff lawyer involved in the settlement, says their huge legal claims will give implant litigants plenty of clout in bankruptcy court. "We think the victims may fare better from Dow Corning because we'll be involved," he says.

Hazleton also faces intense pressure for Dow Corning to cough up more cash for the so-called global settlement in the class action. U.S. District Court Judge Sam C. Pointer Jr. said May 1 that the $4.2 billion fund, established 14 months ago by Dow Corning, Baxter International, Bristol-Myers Squibb, and other implant manufacturers and distributors, is dramatically underfunded.

Despite the long odds, "we would like to see a global settlement hold together," Hazleton says. Certainly, it's the company's best hope for settling the bulk of the claims against it en masse. But, he insists, "we don't have any more money to contribute." Dow Corning has already pledged $2 billion over 30 years, with a $275 million installment due soon after the settlement is completed. Conceivably, the bankruptcy court could order Dow Corning to pay more, based on the company's recent healthy results: Profits were up 33% in the first quarter, to $49.5 million, on record sales of $612 million. But to keep making payments to plaintiffs, "we have to remain a healthy company," Hazleton says. "It's not in anyone's best interests to bleed this company dry."

All of this is a far cry from what Hazleton expected in 1965, when he joined Dow Corning after graduating from Purdue University. He migrated from engineering into finance jobs, and in 1983 took charge of the company's big Midland factory. In 1991, he went to Europe to streamline the operation. Those were also "uncommonly difficult" economic times there, says Keith R. McKennon, the former Dow Corning chairman who chose Hazleton to be his successor: "Dick has the ability to make the hard decision."

So far, too, Hazleton has effectively negotiated what insiders call a tense relationship with Dow Corning's joint venture owners, Dow Chemical Co. and Corning Inc. Hazleton responded to his board's growing anxiety by quietly building a consensus for a bankruptcy filing. "He responded to us with calm and objectivity—always in short supply in something as contentious as this," says Dow Chemical Chairman Frank P. Popoff. Can Hazleton stay so calm through what is expected to be at least two years of bankruptcy proceedings? "It's not going to be fun or easy," he says. In that, certainly, he is not mistaken.

By Kathleen Kerwin in Detroit, with Linda Himelstein in New York

THE IMPLANT IMPASSE

Claims and lawsuits against Dow Corning:

THE PLAN Dow Corning, Baxter International, and others created a $4.2 billion fund to pay off claims from a class-action settlement. Dow agreed to kick in up to $2 billion over 30 years. Women with implants had the option of skipping the class-action settlement and suing on their own. Dow Corning set aside $241 million as a reserve against such lawsuits.

THE RESULT Of more than 1 million women with silicone breast implants, about 410,000 registered claims against the class action—far more than expected. A Federal judge overseeing the settlement in April declared the fund inadequate. Dow Corning says it also currently faces 3,000 to 5,000 individual lawsuits in the U.S. Its original reserve now looks inadequate as well.

CONTROVERSIES

WHO IS ALICIA MUNNELL? AND WHY IS SHE DRAWING FIRE?

The GOP already is attacking Clinton's probable pick for the Fed

Presidential nominations to the Federal Reserve Board are normally humdrum affairs. In fact, Congress hasn't rejected a central-bank nominee in more than eight decades. But this is the Clinton White House, which seems unable to fill any job easily. And that creates uncertainty for the Clintonites' expected choice for a Fed opening: Alicia H. Munnell.

Munnell, Assistant Treasury Secretary for Economic Policy, hasn't yet been formally nominated to replace Governor John P. LaWare. But Senate Republicans already have launched a preemptive strike against the 52-year-old economist, charging that she is too liberal for the job. On May 10, 10 GOP senators warned Clinton to appoint a candidate who will focus on one issue: price stability. That was a thinly veiled attack on Munnell, whom Republicans believe to be an inflation dove. "It was a wake-up call to the White House," says Senate Banking Committee Chairman Alfonse D'Amato (R-N. Y.), whose panel handles Fed nominations. Republicans are "very concerned that she may not have a proper appreciation for the dangers of inflation," he adds.

Another GOP gripe: Joint Economic Committee Chairman Connie Mack (R-Fla.) blasts Munnell for her past advocacy of taxing pension assets. Given her liberal positions on pensions, taxes, and other issues, he says, "I don't think she can make it" through confirmation.

REVISIONIST HISTORY? Munnell isn't talking, but her Administration backers argue that after 20 years as an economist at the Federal Reserve Bank of Boston, she knows well the evils of inflation. But they're hampered in defending her because as a loyal Fed soldier, she never spelled out her personal views on managing the economy. "There isn't a paper trail of her views on monetary policy," says a Treasury colleague. Charges another: "Some conservatives are doing with her what gun lovers did with Waco. They're creatively rewriting her history."

Munnell made her reputation at the Boston Fed with studies of wealth distribution, savings, and retirement policies. She has criticized private pension plans as tax breaks for "a relatively privileged subset of the population" that don't increase national savings. In a 1992 article, she advocated imposing a tax on both accrued benefits and future contributions—and using that revenue windfall to cut the budget deficit or pay for education or infrastructure projects.

Munnell gained additional notoriety with a groundbreaking 1992 study that found systemic racial discrimination in mortgage lending among Boston banks. After reviewing 4,500 loan applications made in 1990, she and her co-authors concluded that blacks and Hispanics were 60% more likely to be denied mortgage loans than similarly qualified whites. The study served as a catalyst for greater scrutiny of bank lending practices by federal regulators. But it has come under fierce attack from conservatives and bankers, who say that the data used were flawed and that the discrepancies in lending rates may have been caused by other factors. "It troubles me that poor research would be the basis for an all-out attack on an industry," says James Chessen, chief economist for the American Bankers As

Little wonder, then, that banks seem intent on persuading Senate Republicans to block Munnell in favor a banker. After all, they note, LaWare was the only banker on the Fed board, and Chairman Alan Greenspan is said prefer an industry representative.

OPTIONS. Munnell's fate may ride n whether Clinton can stomach another bruising confirmation fight on the heels of the battle over Surgeon General designate Henry Foster. The Administration already has had problems filling the seat: Its first choice, North Carolina banker John G. Medlin Jr., declined personal reasons, leaving Munnell s the only clear candidate. But as the Clintonites drag out their deliberations, conservative attacks on Munnell may give them pause. Officials admit they may have to reconsider the nomination, though they have no backup.

Even if a fight erupts over her nomination, Munnell could yet win out. After all, the GOP raised similar qualms at her 1993 Treasury confirmation hearing and she was approved anyway. But if Senate Republicans make good on their threats to staunchly oppose her, her nomination will embroil the Fed in a rare partisan fight. That could portend even nastier battles next year, when the terms f Greenspan and Vice-Chairman Alan Blinder expire. The Munnell controversy may prove to be only a warmup.

RICHARD BLOOM/SABA

TOO LIBERAL?

GOP gripes about Alicia Munnell:

MORTGAGE DISCRIMINATION Munnell co-authored a 1992 redlining study while at the Boston Fed that used mortgage data to argue that Boston banks were discriminating against minorities. The study resulted in closer federal scrutiny of lending practices and legal action against banks.

TAXING PENSION ASSETS In 1992, Munnell proposed lowering taxes with a one-time tax on pension funds, plus an ongoing tax on future contributions. She argued that private pension programs are a tax shelter for the affluent.

ECONOMICALLY TARGETED INVESTING Republicans charge that Munnell wants the government to force pension funds to invest in projects with social objectives. But Munnell-backers say she always has opposed trading lower returns for social considerations.

COMMENTARY

IMMIGRATION: YOU CAN'T TEST FOR DRIVE AND AMBITION

PLEDGE TIME: *Critics overstate the slide in newcomers' skills*

Huddled masses, beware. Americans are fed up not only with illegal immigrants but with legal ones, too. As Congress revs up the immigration debate again, some would-be reformers are pressing for an overhaul of U. S. admissions criteria. They want to cut down on the number of newcomers to the U. S. on family-unification visas by creating a point system that measures applicants' potential for contributing to the economy. The criteria: education, job skills, and English-language abilities.

At first blush, skills-based admission sounds appealing. After all, today's high-tech economy is a far cry from the turn of the century, when immigrants helped build the nation by manning assembly lines, constructing railroads, and toiling in the mines. These days, the U. S. needs highly trained workers to fuel a globally competitive, knowledge-based economy. "We could create a hundred Silicon Valleys in the U. S. if we had a smarter immigration policy," says Stephen Moore of the libertarian Cato Institute.

Using a similar argument, Alan Simpson (R-Wyo.), chairman of the Senate subcommittee on immigration, plans to introduce a bill this summer that would establish a point system in the U. S. It would mimic procedures employed by two of the world's largest immigrant nations, Canada and Australia, which admit about half of their newcomers using the point system.

ETHNIC SCREENING? But in the U. S., such wholesale change is unnecessary. Today's immigrants aren't lacking skills and education, as detractors claim: By some measures, they're better equipped than U. S. natives. Besides, negotiating the measurements used to gauge potential success in America would hardly be a politically tenable process.

More important, the motivation for skills-based reform seems to have less to do with worries about the employability of newcomers than with their potential for cultural assimilation. "Family reunification has overwhelmed our system," complains Simpson. "We have people in the U. S. without English skills, who don't come out of their enclave."

If the reformers were truly indifferent to national origin, they would address such concerns through programs that encourage Americanization, such as special English classes, rather than screening out non-English-speakers at the door. Says Cecilia Munoz, an immigration advocate at the National Council of La Raza: "In some circles, a skills-based system is a proxy for white vs. nonwhite immigrants."

Economic concerns don't hold much water either. True, about 80% of legal U. S. immigrants now come on family-reunification visas, and 87% come from Latin America and Asia. But family-based immigrants aren't necessarily unskilled. An Urban Institute study, which screened out newcomers from such countries as Mexico and El Salvador because they deliver the most illegal aliens and refugees, found that 74% of remaining adult legal immigrants had high school diplomas, vs. 77% of those born in the U. S. Some 33% had college degrees, vs. 20% of native-born Americans.

ENTREPRENEURS. Despite the handwringing about unassimilable masses, moreover, the evidence shows that today's immigrants aren't so parochial. The 1990 census found only 28% of immigrants arriving that year lived in households where no adults spoke fluent English. And although immigrants start with lower earnings, their median wage growth measured at 6.7% in 1988, compared with 4.4% for workers born in the U. S., according to a study by economists Harriet Orcutt Duleep and Mark C. Regets.

Immigrants still appear to be bringing the immeasurable traits needed for success in the U. S.: drive and ambition. Entrepreneurship rates run as high as 18% for Korean Americans and 15% for Greek Americans. Overall, the 7.2% self-employment rate among immigrants edges the 7% rate for the U. S.-born. "I'm not sure we could hit upon the right proxies for [such ambition] in a point system," says New York University sociologist Guillermina Jasso. Rather, as long as the U. S. can continue to attract highly motivated newcomers who will work hard to reshape themselves into Americans, the nation will gain from their presence—no matter where they come from.

Yang reports on legal issues from Washington.

BARRIERS TO ENTRY

In 1993, almost half of Canada's immigrants entered on a point system, having scored a total of 70 points or more in the following areas:

WHY 'MR. SPUD' IS EYEING MORRISON KNUDSEN

Can J.R. Simplot's billions rescue an Idaho institution?

Retirement doesn't mean much to J.R. Simplot. The 86-year-old Idaho billionaire who made his fortune selling frozen french fries to McDonald's Corp., stepped down from his post as chairman of his $2 billion agribusiness, J.R. Simplot Co., in April, 1994, but he hasn't slowed a whit. Since then, he has agreed to build a luxury hotel, developed a Boise subdivision, and is believed to have engineered a management shakeup at Micron Technology Inc., the Idaho chipmaker in which he has a 21.5% stake. But his biggest feat may be yet to come: rescuing troubled Morrison Knudsen Corp.

On May 15, Simplot met with Morrison Knudsen's new chairman, former Chrysler Corp. Vice-Chairman R. Steve Miller Jr., to discuss a reverse merger plan cooked up in February by former MK executive Jack K. Lemley. Lemley, 60, who headed construction of the Channel Tunnel as chief executive of Transmanche-Link until 1993, proposed that he and Simplot invest in MK and merge it with another publicly traded construction and engineering company, which he won't name. The combined company would keep the name Morrison Knudsen and remain in Boise. Lemley would be CEO, at least initially.

In the confusion after the ouster of William J. Agee as MK's chief executive on Feb. 9, no one responded to the Simplot-Lemley proposal at first. And the May 15 meeting, while upbeat, was inconclusive. But no one doubts that Simplot possesses the cash to rescue Morrison Knudsen and keep it in Boise. The proposed merger, says Lemley, "would preserve a company that has been an institution in Idaho and in the construction-engineering business for many decades." A longtime Boise resident, Lemley has known Simplot for years and is married to Simplot's former daughter-in-law.

Morrison Knudsen could use some strong management. It is on its second chairman and second CEO since the ouster of Agee, and some board members have been pushing for faster execution of its plan to pay off debt by selling assets. "The company would have been better off if it had allowed Agee to be the bridge between the troubled times and bringing in a new chairman. Agee could have been the one to accelerate the asset's sales," says MK board member John W. Rogers Jr., president of Ariel Capital Management Inc. in Chicago.

WHITE KNIGHT?

Simplot aims to invest in MK, merge it with another construction company, and keep it in Boise

Despite a May 31 deadline to repay loans, MK executives believe their banks will give them some breathing room to avoid bankruptcy. But MK nonetheless is starting to sell sets at a discount. May 15, its rema ing stake in MK G went to Leuca National Corp. $22.5 million in ca That's 25% below stock's market va ation and 47% bel a previous offer t fell through. MK is close to inkin deal to sell its W ern Aircraft subsidiary.

But to raise the $150 million it nee to stay afloat, MK may have to dig de er than the "noncore assets" it list for sale in March. Its most press headache is its railcar business, wh caused most of the company's estimat $310 million in losses in 1994. An spokesman says the company aims fix the transit operation through a st tegic partnership. Two of the likeli buyers, Canada's Bombardier and G many's AEC, say they aren't interested the unit.

FAT WALLET. MK also hopes to keep su core assets as its construction, engine ing, and environmental and mining bu nesses, says the spokesman. All are pr itable. "[MK now is] cash flow-posit all around except for transit," says K neth Hackel, president of Systematic nancial Management, a Fort Lee (N. based investment company. "If th never got into the rail-transit busine the stock would be in the 40s now." stead, MK shares trade at about 8. Ha el blames Agee. "Their problems we man-made, and we kn who that man was," says. "They can be solve

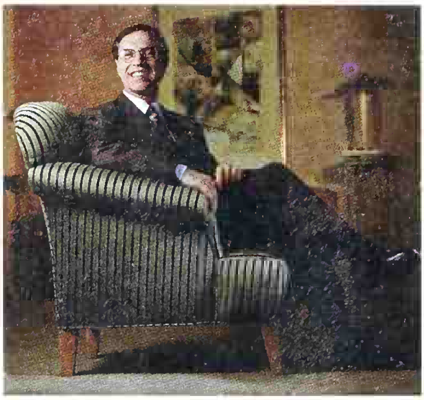
ROOM AT THE TOP FOR WESTIN?

A new CEO and new owners have grand expansion ideas



BARTELS: *The German-born veteran hotelier has "limitless enthusiasm"*

The job search was weeks old when it took a decisive turn at New York's Waldorf-Astoria. As investors looked on, CEO candidate Juergen Bartels dropped to his knees and proffered a rose. The bankers were at first astonished, then listened attentively as Bartels explained how he used the technique to thank travel agents for directing business to Radisson Hotels International Inc. Barry S. Sternlicht, president of Starwood Capital Group, was won over: "He has limitless enthusiasm and knows how to fire up a sales force."

Both assets will be in hot demand as Bartels takes on what one hotelier describes as "one of the toughest jobs in the industry." On May 15, when Starwood, along with Goldman, Sachs & Co. and their partners, closed on the purchase of the 80-unit Westin Hotel Co. chain, they chose Bartels, 54, as its CEO. They appear to be getting Westin at a bargain price: They're paying Japan's Aoki Corp. $537 million for it, less than 18 months after a $708 million deal with another buyer fell through. Aoki itself paid $1.53 billion for Westin in 1988.

TARNISHED. Rivals say Westin's image and profitability have slipped during the two years it has been shopped around. The buyers, who also include the Edward Thomas Cos. and Nomura Asset Capital Corp., have committed $50 million more to the chain. And Goldman Sac Vice-President Stuart M. Rothenbe says future capital from the group m be "fairly limitless." Says Bartels: " want aggressive high-quality growth.'

Bartels, a native of Germany, ai to add 60 hotels to Westin over next five years. He'll use some str gies from his days as CEO of Carls Cos.' Carlson Hospitality Group I where he helped expand Radisson fr 25 hotels to 302 by acquiring new m agement contracts and pushing i franchising, as well as forging clo ties with travel agents. His new boss at Westin also may buy other chains

Still, Westin faces plenty of compe tion in the market for first-class h telry. Occupancy and room rates fina are climbing after years of overbui ing. But revived rivals, such as Hya Marriott, and Sheraton, are on t prowl for new properties and manag ment contracts, too. In a pinch, Bart may have to fall back again on the woo-'em-with-a-rose technique.

MAGAZINES

THE IMPORTANCE OF BEING SOLVENT

After 28 years, *The Advocate* is nearing financial viability

STAR CLOUT Yarbrough and Watters traded newsprint for glossy pages with big-name writers and interviews with top celebrities

It started in 1967 as an underground newsletter, its mimeographed pages dispatched to L.A.'s gay community by a nascent band of journalists who worked together in the mailroom of a local TV station. Since then, *The Advocate* has become a standard-bearer of gay-oriented journalism. And it has consistently lost $1.5 million a year.

Now, *The Advocate* finally may be approaching financial viability. Since five investors, including publisher Sam Watters, bought the ailing publication in 1992, paid circulation has rocketed 50%, to 72,000. Mainstream advertisers such as Virgin Atlantic Airways and Hamilton watches are expected to raise the biweekly's ad revenue fivefold by yearend.

The Advocate is even doing deals. On May 5, its parent, Liberation Publications Inc., announced its purchase of Alyson Publications Inc., a gay and lesbian publisher of 24 to 28 books a year—among them the controversial *Heather Has Two Mommies*. Alyson should produce $15 million in revenue by 1996, Liberation says.

The force behind *The Advocate*'s turnaround is Watters, 41, a Yale-educated art historian. Prior publishing experience: zip. Yet he has moved quickly to remake *The Advocate*. By the end of his second day on the job, Watters had cut his staff to 44 from 78. With editor Jeff Yarbrough, 33, he abandoned *The Advocate*'s newsprint for glossy paper and color and recruited big-gun contributors such as Larry Kramer and Tony Ku ner to author interviews w top stars such as k.d. lang, T Hanks, and Madonna.

FAT WALLETS. Not everyone happy with the chang "They've turned it into more a *People* magazine," says Ri ard Labonté, general manag at A Different Light booksto in San Francisco. But advert ers have welcomed the facel which included spinning off t magazine's racy classified a One big catch was John Walker Black Label scot which bought space in the April iss The attraction: *The Advocate*'s dem graphics—educated professionals, ty cally in their late 30s, whose househ income averages $72,000. As for sex orientation? "Who cares?" says Mich Chaney at Avrett, Free & Ginsbe Johnnie Walker's ad agency. "Alter tive lifestyles have become part of ma stream America."

Other gay-oriented magazines a gaining readers and advertising as w *The Advocate* faces plenty of compe tion from sometimes saltier publicatio such as *Ten Percent*, *Genre*, and *Ou* which won an ad from General Mot Corp.'s Saturn division for its May iss No more mimeographs for this crowd

WHITEWATER AL RIDES AGAIN

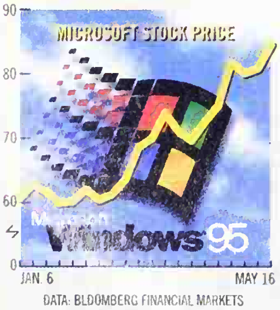
ALFONSE D'AMATO. WHITEWATER. A match made inevitable by last November's GOP landslide. On May 17, the Senate approved 96 to 3 a measure introduced by Banking Committee Chairman D'Amato (R-N. Y.) creating a special panel to take over the Whitewater probe.

D'Amato will head the investigation, which promises to examine the Clinton Administration's contacts with federal officials involved in the original Whitewater probe as well as the financing of the President's 1990 Arkansas gubernatorial campaign. Senate hearings focusing on the handling of documents in Deputy White House Counsel Vincent Foster's office following his death will resume later this summer.

CLOSING BELL

CROCODILE TEARS

Microsoft has its trials: The Justice Dept. is blocking its proposed $2 billion merger with Intuit. On May 15, Executive Vice-President Mike Maples announced he would retire. But cry not for Bill Gates: Microsoft's shares are up 40% in three months. Its legal hassles have been overshadowed by hopes for Windows 95, the new operating system due to debut in August. And on May 16, Microsoft signed a vague but promising deal with NBC to create programming for interactive TV.



DATA: BLOOMBERG FINANCIAL MARKETS

JOHN S. ABBOTT

SPANGLER WINS NATIONAL GYPSUM

FORMER CHAIRMAN C. D. SPANGLER has at last prevailed in the rancorous battle to take control of National Gypsum, the nation's second-largest plasterboard maker. Spangler's $1.2 billion bid scared away a competing offer from BPB Industries and won over Lafarge Coppée, the big Gypsum investor that previously had opposed a takeover. Now, however, comes the hard part. Gypsum is spinning off more than $100 million in cash per year. But the officers of a trust set up to protect the company against asbestos liability complain that the trust is underfunded. And the cost of upgrading the company's 18 U. S. plants could run beyond $500 million, analysts say.

BUSY SIGNAL FOR TELECOM REFORM

WILL THE WORLD EVER SEE telecommunications reform? Can it stay awake that long? On May 17, the House Subcommittee on Telecommunications & Finance voted 24-5 to send its overhaul measure on to the full Commerce Committee. But behind the scenes, intense negotiations continue over key issues, from deregulating cable rates to how quickly to allow Baby Bells into long-distance service. The legislation is expected to pass the full House as early as June—but the Senate is another matter. A bill crafted by Senate Commerce Committee Chairman Larry Pressler (R-S. D.) is under attack, and Congressional insiders say that the the odds of passage are no better than 50-50.

HEADLINER: CHARLES SANFORD

A MERGER FOR BANKERS TRUST?

Bankers Trust is in for still more interesting times. After a year of derivatives-related client lawsuits and just weeks after reporting a $157 million loss for the first quarter of 1995, Chairman and CEO Charles S. Sanford Jr. announced on May 16 that he will resign in 1996, when he turns 60.

Who will replace him? Instead of turning immediately to President Eugene Shanks, the Bankers' board will conduct a wide-ranging search. Sanford says it's simply "too early to have two CEOs." But early speculation is on a financial luminary such as Gary Wendt, head of General Electric Capital, or J. P. Morgan Vice-Chairman Roberto Mendoza.

But some analysts say the board's action may open the door to a merger. Sanford won't comment. With the board exploring all options, "it's a plausible read that...the company could be for sale," says Merrill Lynch analyst Judah Kraushaar. Much of Bankers' core derivatives business is out of fashion, but global custody and investment management operations might tempt a buyer. Its stock is at 58¼, just 116% of book value.

By Kelley Holland

THE AIR FORCE BACKS GE ENGINES

SCORE ONE FOR GENERAL Electric. Eleven months after allegations surfaced that faulty electrical bonding might cause a safety problem in thousands of GE-made aircraft engines, the Air Force has concluded there isn't any safety concern. Still pending: a suit from a GE engineer charging that many engines didn't meet required U. S. contract specifications, which the company is contesting. The Justice Dept., which joined the suit to protect government interests, will decide by May 30 how aggressively to pursue the case.

CLINTON PLANS AN OSHA OVERHAUL

BOTH THE ADMINISTRATION AND Republicans think the Occupational Safety & Health Administration is too heavy-han ed. (Business tends to thin that's an understatement.) B while GOP budgeteers want t slash funding, the Whit House thinks reforms will d the trick. On May 16, Pres dent Clinton announced a OSHA overhaul that would c penalties for employers wh fix job-safety violations. It als would reduce the number inspections at companies wit good safety records, and ta get enforcement toward con panies with high injury rate

RESPONSIBLE CARE®

Washington Outlook

EDITED BY OWEN ULLMANN

PHIL GRAMM'S CHILLY NEW ENGLAND SPRING

On a sunny Mother's Day, the reserved Yankees of Rindge, N.H., politely sipped punch and nibbled cookies in their tiny town hall as Senator Phil Gramm railed against big government. The Texas Republican vowed to complete the Reagan Revolution by cutting taxes, slashing spending, forcing welfare recipients to work, and letting states criminalize abortion. "I'm shootin' with real bullets," he drawled. Clarence May, a retired phone company worker, nodded in approval: "I like what he's saying—but he's got an uphill climb."

Gramm is hearing that observation a lot as he campaigns for the GOP Presidential nomination: Party faithful like the message, but aren't ready to embrace the messenger. Gramm has raised an awesome $14 million and is the Senate's loudest conservative voice on issues from deficit reduction to blocking Surgeon General nominee Henry Foster. Yet he is stagnant in the polls, with about 10% of the vote, and is confounded by problems that money can't solve.

LONE STAR LONG SHOT: *Painful polls*

BROOKS KRAFT/SYGMA

THE TWANG THANG. The man crowned by Washington insiders as the nominee-in-waiting a few months ago is watching his base splinter. He has lost ground to Senate Majority Leader Bob Dole, who has veered to the right, and firebrand commentator Patrick J. Buchanan, who is exceeding expectations. Religious conservatives complain that PhD economist Gramm talks too much about economics and not enough about God. Their worries were only reinforced by Gramm's May 17 admission that more than 20 years ago he invested $7,500 in a limited partnership to produce an R-rated movie titled *Beauty Queens*, which apparently was never made. His campaign denied the Texan was an investor in a company that produced porn movies.

Gramm's troubles come through clearly in the Granite State. Some laconic voters are put off by his aggressive personality and thick accent. GOP Governor Steve Merrill has him on the defensive for stumping in Delaware and Arizona—states th have tried to steal New Hampshire's spotlight as the first- the-nation primary. "There's something about him that peop don't like," says GOP strategist Mark Goodin.

Recent evidence? The May 16 New Hampshire Poll p Gramm at 7%, trailing Dole (44%) and Buchanan (13%). Co cedes Claremont lawyer Robert Morgan, a Gramm fan: "Ne Hampshire likes to pick winners. Mr. Gramm's problem is t drumbeat of 'He can't win.' "

Some GOP veterans already are comparing Gramm's moni campaign to the failed White House que of another Texan: former Treasury Secr tary John B. Connally, who spent $13 m lion nationally but won just one delegate 1980. Still, it's too early to write Gramm. What he lacks in charm, Gram hopes to make up by capitalizing on h button issues. In antitax New Hampshi, for example, he contrasts his steady su port for tax cuts with Dole's votes for t hikes. And Al Rubega, president of t powerful Gun Owners of New Hampshi, says Gramm's uncompromising pro-g stance "plays fabulously well" there.

To appeal to religious conservativ Gramm has enlisted GOP pollster Frank Luntz, who works with Pat Robertson's Christian Coalition, develop moral themes. He also drafted two former aides of e Vice-President Dan Quayle, a favorite of social conservativ Recent speeches at Jerry Falwell's Liberty University the Heritage Foundation quoted the Scriptures and Ada Smith, winning raves from religious activists.

Gramm believes his vision of lower taxes and less gover ment will eventually take hold. "I don't always make a gre first impression," he admits, "but I wear well." That may true. But will voters bother going on a second date?

By Richard S. Dunham in Rindge, N.

CAPITAL WRAPUP

LIVING DANGEROUSLY

▶ If Social Security is the third rail of politics, why do Senators Bob Kerrey (D-Neb.) and Alan K. Simpson (R-Wyo.) keep dancing on the tracks? Kerrey headed a panel that proposed entitlement cuts. And Simpson vowed to probe the American Association of Retired Persons, Social Security's champion. Now, they're pushing a bill to let some payroll taxes be diverted into IRA-type accounts—raising fears their bravura will prod Congress to consider privatizing the system.

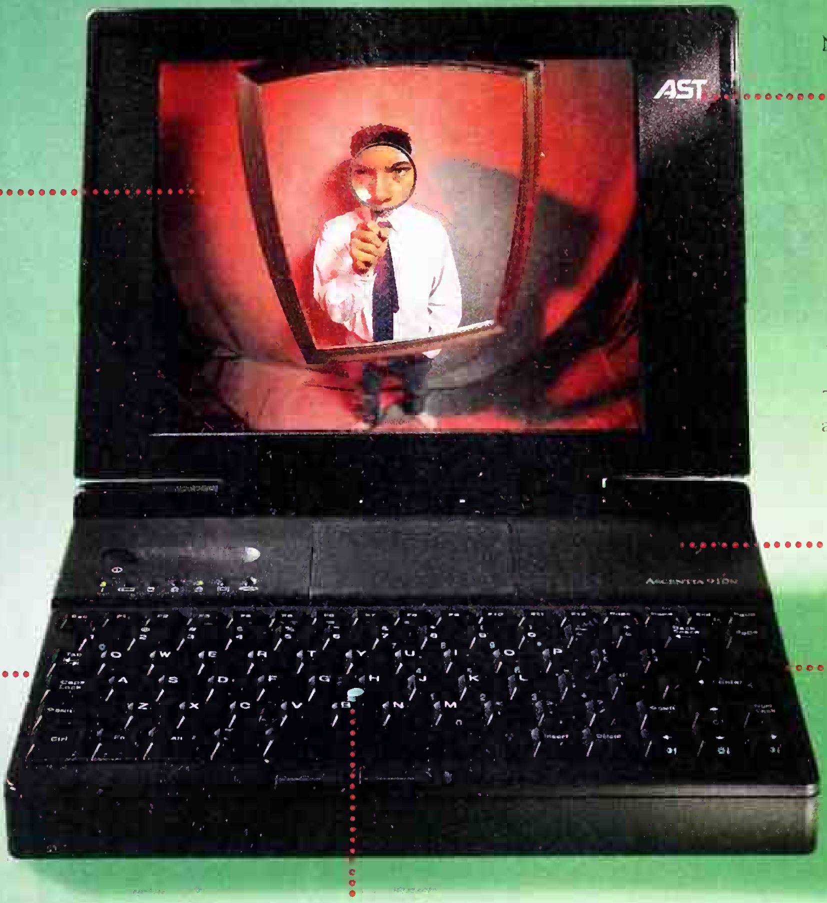
QUAYLE'S QUIET NOD

▶ Officially, former Vice-President Dan Quayle is neutral in the '96 GOP Presidential race. But friends say Quayle is privately promoting Senate Majority Leader Bob Dole (R-Kan.). The ex-Veep isn't going public so as not to offend a fellow Hoosier, Senator Richard G. Lugar, a long shot for the nomination. The main reason for backing Dole, according to confidants: The 71-year-old Kansan likely would be a one-term President, so Quayle could run in 2000.

BALDRIGE GOES PRIVATE?

▶ The coveted Malcolm Baldrige Awards, administered by the Commerce Dept., may be headed for privatization. The awards have been a h with business since being established in 1987. But House and Senate GOP budget-balancing plans do away with $3.4 million to administer the program, which honors managerial excellence and technological innovation. Commerce insiders say the awards are so popular that business probably will pick up the tab.

WHAT TO LOOK FOR IN A TOSHIBA, COMPAQ AND IBM NOTEBOOK.



No sticker shock here. The 910N costs less than the IBM ThinkPad 755C.

See how the screen measures up against the one in a Compaq LTE Elite (10.4"TFT vs. 9.5"TFT).

On the road, even a few ounces can make a big difference. The 910N is over half a pound lighter than a Compaq LTE Elite.

The lithium ion battery will easily outlast a Toshiba T4850CT by over three hours.

intel inside®

With the SmartPoint trackstick your hands never have to leave the keyboard. Try that with a Toshiba T4850CT external trackball.

Standard memory, you ask? The 910N features 8MB RAM, compared to the 4MB RAM in the IBM ThinkPad 755C.

With all the choices out there, you're probably asking yourself, "What to buy? What to buy? What to buy?"

Well, maybe this will help. Pictured above are a few comparisons to illustrate how the new AST Ascentia 910N stacks up against the field.

The 910N gives you the muscle of the Intel 486DX4/75MHz processor. Just imagine this kind of power and speed to crunch your facts and figures.

PC WORLD BEST BUY

To see what's going on, there's a 10.4" TFT active-matrix color screen for crisp graphics. And on a single charge, the lithium ion battery lets you work six to ten hours.

As with every Ascentia notebook, the 910N comes with a 3-year worldwide limited warranty.* For a little extra reassurance, we provide a 48-hour repair service** and around-the-clock telephone support. It's what you'd expect from one of the world's largest computer makers.

Give us a call at 1-800-876-4AST and we'll tell you where to find the new Ascentia 910N. Now that you know what to look for.

Ascentia 910N

Intel 486DX4/75MHz or DX2/50MHz processors

10.4" diag. TFT active matrix or 10.3" DS-STN color display

340MB, 510MB or 700MB removable hard drive

8MB RAM, upgradable to 32MB

PCMCIA slots - Two Type II or one Type III

Lithium ion battery: 6-10 hours use

Weight: 6.1 lbs.

JAPAN

JAPAN'S AUTO SHOCK

Tariffs and the Super Yen spell trouble

In the vast pink-toned Otori Room at the ANA Hotel in Tokyo on May 15, newly revamped Corollas gleamed under photographers' lights. Toyota Motor Corp. executives beamed and schmoozed with swarms of Japanese journalists, cooing over the new Japan-only models and chuckling over Peter Falk doing his famous Columbo shtick for the new Corolla ad campaign. But the rosy scene was as much an illusion as Falk's appearing to speak Japanese. Behind their smiles, the assembled guests were worried about the future of the Japanese auto industry.

As recently as January, Japan's carmakers were breathing sighs of relief. Domestic sales had picked up in the second half of 1994, ending one of the worst downturns in Japanese auto history. The cost-cutting benefits of parts sharing and model reduction were kicking in, and depreciation from heavy capital investments in the late '80s was helping bottom lines. Even Nissan Motor Co., hard hit by the Mexican debacle, was on the road to recovery. It seemed the worst was over.

Now the brutal vise is tightening once again. Washington's May 16 announcement of 100% tariffs on 13 luxury models, combined with a Super Yen of about 86 to the dollar, could accelerate a shakeout in the Japanese auto industry. At the least, Japan's 10 vehicle manufacturers will be forced to move more rapidly to expand in North America, Asia, and Europe while slashing costs at home. Nissan has closed a Japanese auto plant for the first time in postwar history, and Toyota executives have publicly raised the possibility of shutting down one of theirs. Mighty Toyota may even break with tradition and lay off workers.

GAME OF CHICKEN. There will surely be more pain. Japan's domestic industry still has too many employees, too many models, and too many suppliers. With production of about 11 million vehicles this year, analysts argue that is about 4 million too many, given falling exports and slow growth at home. Some experts believe not all of Japan's auto makers will remain independent, as stronger players absorb the weaklings (table). "Not all companies may survive," says Toshiaki Taguchi, a director at Toyota. The restructuring also could mean Japan's auto parts supply networks and distribution channels will be dominated by more hardy companies.

The auto shock will persist no matte what happens in the game of chicke being played out between the Clinto Administration and the government Prime Minister Tomiichi Murayam Washington believes the 100% tariff which would price Lexus and Infini out of the U.S. market, will force th Japanese to open their market to mo U.S. autos and auto parts. "This is pre ty clear-cut," says U.S. auto analys Chris Cedergren. "The tariffs have bee designed to force concessions."

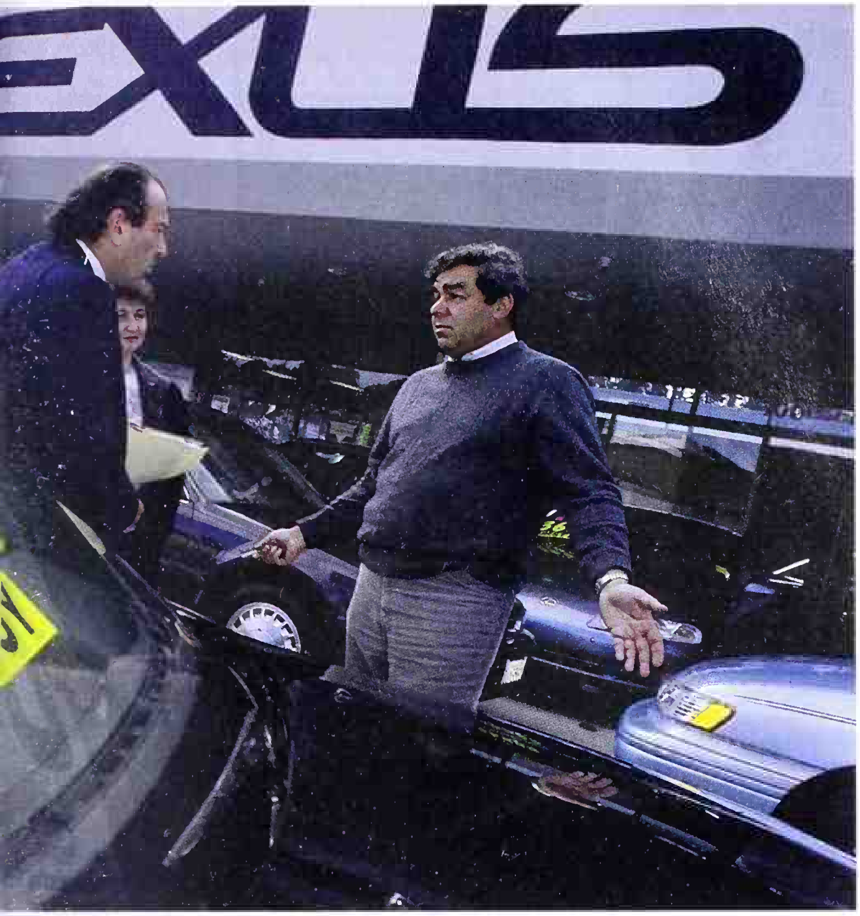
But the signals from Tokyo are tha the Japanese are not going to agree t the sorts of major deregulatory step or binding numerical targets that U.

The Shakeout in Japan's Auto Industry

The survivors will have to slash costs at home while building markets around the globe

WINNERS			
TOYOTA	MITSUBISHI MOTORS	SUZUKI	ISUZU
Untouchable. Although sanctions on luxury cars would hit Toyota harder than other makers, its conservative, cost-conscious management has avoided bold-move mistakes and socked away $25 billion for rainy days such as these.	Has been gaining market share at home with a string of popular recreational vehicles. A heavy presence throughout the Asian region puts them in growing markets where labor is cheap. Wide product offering is tricky to manage but a hedge.	Small but surprisingly strong, Suzuki ranked fourth in Japanese sales last year and has a great profit margin. Widespread investment in Asia and minimal exposure in the U. S. make it well-placed to deal with a rising yen. Unaffected by sanctions.	Strong in big and um-size trucks, di engines and recre al vehicles, all of are showing healt sales. It's making push into China a selling some land boost the bottom Unaffected by tari

GERRY GROPP



Japan's domestic auto industry has too many employees, too many models, and too many suppliers. Says one analyst: "Somebody should just disappear"

SANCTIONS MAY HURT JAPANESE LUXURY-CAR SALES BUT WON'T HELP DETROIT MUCH

de Representative Mickey Kantor is king. Some Japanese are betting that ssroots pressure from U.S. auto lers and consumers could stop the ctions from taking effect in 30 days. More important, the top ministries as l as members of the ruling coalition pear to have reached consensus that era of giving in to U.S. trade de- nds is over. "As victims of sanctions, ll suffer," but accepting new commit- nts to purchase U.S. parts "will also t us," says Taizo Yokoyama, a for- r official of the Ministry of Interna- nal Trade & Industry who is now a naging director of Mitsubishi Motors p. "So we might as well stand firm." If that happens, Clinton will have to accept some minor concessions at the Group of Seven meeting in Halifax, N.S., next month—or choose to impose the tariffs. His negotiating partner, Murayama, is on the verge of resigning and will carry little negotiating clout.

"OVERCROWDED." Part of Japan's resistance to U.S. pressure is based on the knowledge that the nation's strongest manufacturers clearly will survive a shakeout. Toyota and Mitsubishi will probably get even mightier as the strong yen and weak markets at home force them to continue their drive to become integrated multinational manufacturers. The U.S. tariffs affect only tiny fractions of their global business. Moreover, Toyota is sitting on $25 billion in cash and Mitsubishi, bolstered by being part of Japan's strongest *keiretsu*, has additional strength in a wide product line, from trucks and buses down to minis, that leaves it hedged against the vagaries of the market. Other survivors will include Suzuki Motor Corp., which boasts a 24% profit margin. "They can make cars even cheaper than Toyota," says Takahiro Fujimoto, an auto expert at Tokyo University.

If a handful of marginal assemblers is forced into a deeper embrace or outright merger with stronger competitors, it will only fulfill a long-standing MITI

JURY'S STILL OUT

JI HEAVY

er of Subarus ng big profits es of the Lega- s overreliance tation wagon me analysts to t will have to ith Nissan. y the .

HONDA

More than any other Japanese carmaker, Honda relies on the U.S. market. While reverse importing offsets some of the *endaka* problem, the company's domestic market share is falling. Sanctions on its Acura will hurt.

LOSERS

NISSAN

Made history with the first postwar closing of a Japanese auto plant, but it hardly put a dent in the company's problems, including heavy investments in Mexico and Spain and a substantial debt burden. Hard hit by tariffs on three models.

MAZDA

Is having trouble. Has a long way to go in the cost-cutting race, and marketing in Japan is not strong. Heavy dependence on exports to the U.S. means profits tumble when the yen rises. Tariffs will hurt two models. Is likely to require more help from major shareholder Ford.

DAIHATSU, HINO

Although both companies are strong in truck sales in Japan and Asia, they are unable to compete in passenger cars. They will likely be forced more deeply into the embrace of Toyota, which owns stakes in each.

PETER WEINSTEIN

GREG GIRARD / CONTACT

goal—to streamline the crowded industry. "The market is definitely overcrowded, especially now," says a MITI official. "The era of 10% economic growth [for Japan] is over."

So the onetime masters of industrial planning at MITI say they're prepared to let market pressures force Japanese manufacturers and parts providers to become more efficient. Small, unlisted suppliers that lack economies of scale have been killed by increased production and parts purchases overseas. Even larger companies are being forced into mergers. Suzuki has been pressuring its suppliers to join forces. Two aluminum-parts makers, piston specialist Totsuka and wheel maker Tenryu Seisaku, merged to form Totsuka Tenryu last June. Honda affiliate Showa, a shock-absorber maker, has joined with unlisted Seiki Giken, and Nissan suppliers Unisia Jecs merged with unlisted Nippon Denshi Kiki.

Similarly, weaker vehicle makers have started making ad hoc marriages of convenience with the strong. Hino Motors Ltd. has long been considered an independent company even though Toyota owns 10% of it. Now, in response to profit pressures, Hino and another independent Toyota satellite, Daihatsu Motor Co., are being drawn closer into Toyota's orbit, giving up production of three kinds of two- and three-ton trucks to market Toyota's instead. Toyota will sell some Hino trucks.

OVERSEAS ADVANTAGE

Mitsubishi, with plants in Malaysia and elsewhere, is a multinational manufacturer–and a probable survivor

"SLOW BURN." Among the majors, prospects are grimmest for Mazda Motor Corp. and Nissan. The two have been swimming in a red-ink sea for years. Nissan has lost $1.5 billion in the last two years and expects losses of at least $65 million in the year ended Mar. 31. Mazda's production is dropping along with its sales everywhere. Its domestic market share is now lower than Daihatsu's, and the company has a 60% export ratio. It is in no position to expand overseas production, which leaves it most vulnerable to the U.S. tariffs—its two sanctioned models account for 9% of U.S. sales. "We're talking about a slow burn among the weaker players," says Matthew Ruddick, analyst at James Capel.

Nissan is more worried about the yen than Washington. Despite closing the Zama plant, Nissan could shutter another by yearend. "Until the yen jumped again, we thought we'd be O.K.," says Nissan Executive Vice-President Yoshikazu Hanawa. "It's a big shock at the moment, and employees are especially worried."

They should be. While Japanese companies don't lay off workers officially, they've started paring payrolls in ingenious ways. Nissan has been transferring workers to dealerships on 25-month contracts, with the dealers taking on half the salaries. At the end of the "temporary" contract, dealers and employees may be "persuaded" to make the arrangement permanent. "If you're a 50-year-old office worker sent to a dealership in Hokkaido, that's not a cut, but, well, it's a cut," says Koji Endo, an analyst at Lehman Brothers Inc.

At the end of the day, Japan isn't likely to let any of its carmakers go bankrupt—and certainly not Nissan, Japan's second-largest carmaker with nearly 50,000 workers. One ace up Nissan's sleeve is its vast real estate holdings, reportedly among the largest in Japan. "Nissan is sort of a landlord that makes cars on the side," says W. Van Bussman, Chrysler Corp.'s corporate economist. By selling some of its land, Nissan could clean up its balance sheet. Nissan also could benefit if it absorbed Fuji Heavy Industries Ltd. Even Mazda will be kept alive by Ford and the Sumitomo group, its largest two backers.

Because most failing companies will be supported or absorbed, the number of workers actually laid off could be much more modest than the bloodletting the U.S. experienced in the early 1980s. So far, Japan's manufacturers have managed to cut domestic production without cutting payrolls. The peak production of 14 million vehicles was managed with a massive force of temporary workers and backbreaking ove time of 2,400 hours a year. By cutti the number of hours and redeployi workers, the companies hope to avo most outright job losses. Nissan's closi of its Zama plant, for example, result in only about 100 people losing the jobs—the ones who refused to be trar ferred to other plants.

So U.S. tariffs—combined with a ki er yen and slow growth in Japan—w help force a streamlining of the Jap nese auto industry. Tokyo University Fujimoto sees a future in which Japa auto makers form networks in whi they are both competitors and partne "They can handle these flexible ne works of quasi-independent firms whi compete pretty intensively at the pro uct level but sometimes cooperate the company level," he says. "Those ne works are pretty stable."

If the Japanese manage this sho as they have previous challenges, t result will be an even more compe tive Japanese market, where margi are razor thin and distribution channe and supplier networks are dominat by fewer players. The new networks cooperation envisioned by Fujimo could make the market tougher to pe etrate for U.S. parts makers and au companies themselves.

That raises the question of how se ous U.S. auto makers really are abo Japan (page 47). In 1992, Chrysler w the first U.S. maker to bring in a rig hand-drive auto from the U.S., the Je Cherokee. In the two-liter-and-und market, which amounts to 80% of au sales in Japan, U.S. makers offer ju eight models. Ford Motor Co. alo

ns a credible distribution channel.
Now, with the yen making Japan so
ensive for most foreigners, U. S. car-
kers reckon the market is relatively
ture and that trying to penetrate it
't worth the price. Aside from the
ssive initial investment in dealerships
spending on advertising and devel-
nent, it's difficult to build a distinctive
lan in the already crowded market.
Back home, the Big Three aren't like-
to benefit from the tariffs on Japan's
ury cars either. Lexus and Infiniti
ers are more likely to turn to Euro-
n marques, such as Mercedes, BMW,
vo, and Saab. Detroit won't be able
raise prices on Lincolns and Cadillacs
ause of the intense pressure from
Europeans. Cadillac just had its
rst quarter since the Arab oil em-
go of the early '70s, and the new
coln Continental was introduced last
r at a steep $7,000 increase over the
del it replaced. Ford has already had
offer big lease incentives to sell it.
OR TO DOOR. Few auto industry ex-
ts on either side of the Pacific ex-
t the U. S. tariffs to achieve their
ted purpose of forcing Japan to
lertake what Commerce Under Secre-
y Jeffrey E. Garten calls "fundamen-
" steps to open its market. Among
possible symbolic concessions from
an would be agreeing to allow the
S. companies to place cars and per-
s sales representatives in some Jap-
se showrooms. That will have scant
act because the real selling is mostly
r-to-door. Salesmen know their cus-
ners' birthdates and the names of
ir children. That level of commitment
ikely to elude the Big Three.
A second major U. S. demand is for
deregulatory steps to allow Japanese
air shops to import much cheaper
S. replacement parts for Japanese
s. Last, Washington wants Japanese
nufacturers to make major increases in
ir purchases of U. S.-made auto parts,
h for their transplant factories in the
S. as well as for plants in Japan.
There's much industry speculation that
yota might break ranks with other
nufacturers—and with MITI—to make
ne parts-purchasing commitments. But
chances of a quick agreement to
en up" the Japanese market in a way
t has major impact on the U. S. trade
icit are dim at best. It would have
n one thing to do this 20 years ago,
today the Japanese auto industry is
stronger and far more globalized than
r. It is strong enough, in short, to
orb the pain of a new auto shock and
ne back swinging.

, in Tokyo, Amy Borrus in Wash-
ton, David Woodruff in Detroit, and
rry Armstrong in Los Angeles

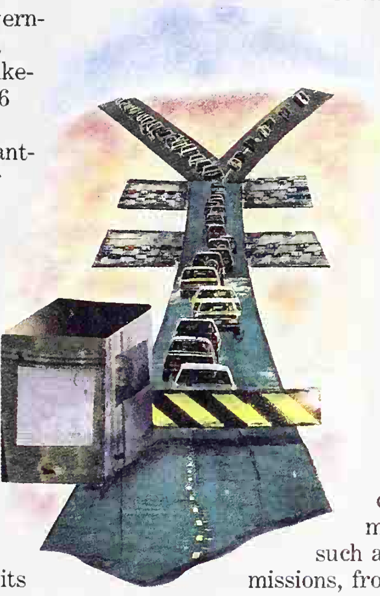
COMMENTARY

By David Woodruff

EVEN IF JAPAN BACKS DOWN, DETROIT WON'T WIN MUCH

The rhetoric flowed freely when U. S. Trade Representative Mickey Kantor announced trade sanctions aimed at wedging open Japan's auto market on May 16. U. S. auto makers have become as "productive as any industry on earth, and they should be allowed to compete fairly," Kantor declared. By slapping 100% tariffs on Japanese luxury auto imports, the Administration is hoping that Japan will cave in and allow U. S. autos and parts to freely enter its market.

Don't bet a yen on it. Even if the Japanese government does relent, a U. S. victory is unlikely to reduce the $66 billion trade deficit with Japan significantly or to bring a big payoff for U. S. industry. Detroit's Big Three have no major plans to expand into Japan, which they see as a mature, low-margin market. And while U. S. parts suppliers are hungry to sell more in Japan, the Japanese government is unlikely to open its market enough to make much of a difference.



ELLEN WEINSTEIN

ON A LIMB. Ironically, the Clinton Administration may be gambling on the wrong horse, while risking a serious downturn in U. S.-Japanese relations. The Administration has challenged Japan on autos and parts because those products account for 60% of the trade deficit—and the industry employs millions of voters. But before U. S. trade officials headed out on a limb, they should have secured a commitment from Detroit to invest in new models and expanded dealerships in Japan.

The Big Three have never invested the megabucks needed to crack Japan. Only in 1992 did Chrysler Corp.'s and General Motors Corp.'s Adam Opel unit begin to sell right-hand-drive cars there. Most important, the Big Three never developed the dealer network needed to compete with Japanese rivals. That's in contrast with European luxury carmakers, which have made substantial inroads in Japan.

With the Japanese market expected to grow just 2% annually over the next several years, Detroit still does not find Japan an attractive place to sell cars. Even though the high yen has made American auto imports more competitive, Detroit will come away with about 1% of Japan's market this year.

About the best that the Administration can hope to gain from the trade tussle is a voluntary agreement by Japanese carmakers to buy more U. S. auto parts both in Japan and in the U. S. Even that will be tough. Most Japanese plants in the U. S. already buy a great many small parts locally. But experts expect the Japanese companies to continue bringing in most big-ticket items, such as engines and transmissions, from home. In Japan, U. S. suppliers such as Tenneco Inc. want to boost sales of parts, but they still face a variety of obstacles, from complicated rules for parts approval to closed distribution systems controlled by the auto makers.

On the plus side, some Big Three executives argue that taking on Japan will improve Detroit's access to other booming markets, from India to Vietnam. Even so, that's an insufficient reason to pick a monumental fight with Japan. Japan's economy is undeniably plagued by Byzantine regulatory policies. But without clear U. S. industry intentions to compete with Japanese carmakers on their own turf, it doesn't make sense to wage trade war to gain entry.

Woodruff covers the auto industry from Detroit.

COMMENTARY

By John Templeman

WHEN WILL GERMANY STOP SLEEPWALKING?

The German economy is growing at a brisk 3% rate, and corporate profits should jump more than 40% this year. Anywhere else, it would be time to celebrate after four years of tough cost-cutting. But in Germany's executive suites, a deepening pessimism has doused the party mood. "This country is in trouble," asserts one prominent businessman.

Peer behind the economic data and you can see why business is in such a funk. Wages are high and rising, hefty social security taxes are increasing, and the overvalued German mark is menacing the export-led recovery. Worse yet, everyone is blaming someone else. Seen from the boardroom, the culprits are dilatory government and greedy labor unions. In union committee rooms and Bonn Cabinet offices, even if it sees the problems, each group fingers the other two as the guilty parties.

OVERPAID? The huge wage increases won by metalworkers clobber German competitiveness

MILAN HORACEK / BILDERBERG

In reality, there are no innocents in Germany's slow-motion, but deep-running crisis. The key problem is that government, labor, and business all cling to the outmoded social consensus that ensured labor peace and nurtured economic success after 1945. Trouble is, the old social pact depended heavily on two hidden pillars: Relatively protected national markets and widespread capital controls that shielded Germans from too many outside pressures.

DISMAL RESULTS. But now the Asian Tigers have elbowed their way into world markets, while the fall of the Berlin Wall has allowed millions of skilled but low-paid workers to compete with Western Europe's laborers. In finance, billions of dollars of hot money now slosh around the globe daily, swiftly distorting one national economy after another. Even Germany risks punishment by the traders.

The trigger won't be bloated government debt of the sort that causes runs on the Italian currency. It will be the terrible performance of German companies burdened by their high costs. Return on equity in Germany, figures Morgan Stanley, is about 6.75%, well below the 16% in Britain and 17%-plus in the U.S. If such dismal results persist, investors will shun German securities for opportunities elsewhere. "[Foreign] capital is free to move and look for the best returns," says Markus Rösgen, Germany analyst at Morgan Stanley & Co. International Ltd. in London. "It doesn't care whether Germans believe in some sort of social [welfare] market capitalism."

Yet most Germans are curiously unaware of the gravity of their situation. And business leaders, who know what's at stake, don't seem to have the stomach to tackle the problems. One example: After two years of productivity gains and wage moderation, engineering and metal-working employers conceded huge pay increases this spring to the IG Metall union.

This makes a bad situation worse. The German Auto Makers Federation (VDA), estimates that U.S. and Japanese unit labor costs will average 55% and 56%, respectively, of their German competitors' costs this year. The contrast with Eastern Europe is even more striking. Says Heinrich von Pierer, CEO of engineering giant Siemens: "Just the increase in hourly wages and benefits [this year] is more than half the total hourly cost of a Czech worker."

TAX ON TAXES. Adding to Germany's runaway costs is the gold-plated welfare state. Social levies already double average wage costs, but there is still no serious attempt to overhaul the system. Warns McKinsey & Co.'s Germany chairman, Herbert Henzler: "We are just muddling through."

Chancellor Helmut Kohl's government, faced by a strong Social Democrat contingent in parliament, is doing little. This year, instead of pruning benefits to finance the costs of long-term elderly care, the government slapped on an extra 1% payroll levy. This comes on top of a 7.5% surcharge added to every income tax bill, a sort of tax on taxes, starting on Jan. 1. The payroll taxes are so heavy that the jobless—now 9.6% of the workforce—are often better off staying on the dole. Idled workers with one child get 67% of their previous net pay for 15 months. Agrees a senior German official: "There are too many disincentives to work."

It's clear what government, business, and labor should be doing. Bonn needs to cut taxes and eliminate $100 billion in subsidies to special interest groups. Business must press on with the task of making German industry globally competitive. Unions must realize that fighting for a bigger slice of the national cake is self-defeating when the cake stops growing. Yes, it means a painful recrafting of Germany's cherished social consensus, which once produced an economic miracle. But unless Germans tackle this task, they risk massive social turmoil—with frightening implications for Germany, Europe, and the world.

Templeman is BUSINESS WEEK's Bonn bureau chief.

RUSSIA

AND YOU THINK YOU'VE GOT TAX PROBLEMS

Russia's madcap system has foreign investors despairing

Until the taxman showed up, everything was bubbling along just fine for Coca-Cola Co. About a year ago, the soft-drink giant opened a new bottling plant near Moscow—the first of $100 million in investments planned for the fast-growing Russian market. Coke is racing to grab market share from archrival PepsiCo Inc., which got there first.

Then this spring, Russian authorities without warning scrapped a tax exemption on imported construction materials used at the plant, assessing Coke a cool $1.4 million. In late March, Coke got another surprise tax bill for about the same amount, as the government suddenly hit foreign companies with an "excess wage" tax of up to 38% for virtually all of their Russian employees—retroactive to Jan. 1, 1994. Payment is supposed to be delayed until September, but Coke is taking no chances on penalties. "It's not clear that it has been deferred, so we're paying for all of our employees," says Jack Robinson, Coke's regional legal counsel.

BOUNTY HUNTERS. Most foreign business executives in Russia say they can handle political coups, gyrating ruble rates, and high inflation. But the nation's capricious tax system can do them in. It's not that Russian tax rates are so high—they generally are in line with those throughout Europe. The problem is that many taxes spring out of the blue and carry heavy retroactive penalties—often three times the amount due. Tax cops get extra pay linked to the amount they bring in from penalties. There's little chance for appeal. If foreign companies don't pay, inspectors can freeze their bank accounts, putting them out of business.

Foreign businesses aren't singled out for such cruel tax treatment—the same rules apply to everyone. It's just that many Russian companies find ways around them, from offshore shelters in Switzerland or the Isle of Man to outright bribery of officials. The Finance Ministry estimates that while most former state-owned enterprises pay their taxes, newer businesses renege on up to 70% of what they owe. At least 40% of Russian businesses pay no taxes at all.

ILLUSTRATION BY PAUL COZZOLINO

The Kremlin is under increasing pressure to collect taxes. The International Monetary Fund insists that the government cut spending and boost revenues as a condition for receiving billions in aid and loans. In a corruption-ridden environment, foreign companies accustomed to playing by the rules are easier targets than local startups.

Angry that Russia is milking U.S. cash cows, the American Chamber of
Commerce in Moscow urged Treasu
Secretary Robert E. Rubin to bring t
tax matter up during the Clinton-Yelts
summit on May 9-10. Rubin did discu
it with reformist Deputy Prime Minist
Anatoli B. Chubais, but he got litt
more than sympathy.

The irony is that Russia is shooti
itself in the foot over taxes. It bad
needs foreign investment, but the t
system is driving foreigners away. Ta
Huntsman Chemical Corp. of Salt La
City, which in 1989 took a 51% share
a joint venture with Marriott Intern
tional Inc. and Aeroflot to make plast
cups for the Soviet carrier. Huntsma
invested $2 million. In short order, ta
es shot up to more than $800,000

When the rush was on to introduce a notebook with a Pentium™ processor, Texas Instruments decided to do what others thought couldn't be done.

We created a notebook that maximizes Pentium performance by integrating *full PCI bus architecture in our Texas Instruments TravelMate™ 5000.*

And for flexible connectivity, we designed a way to allow external access from the PCI bus to the latest peripherals.

It was a challenge we addressed for two simple reasons: to give users true desktop Pentium performance *for faster running software and expansion capabilities* for long-term investment protection.

So now you have a notebook with *smoother full-motion video and enhanced 3-D graphics.* In addition, we designed the TravelMate 5000 to take advantage of the "plug and play" capabilities of Windows 95® when it becomes available.

But our engineers didn't stop there. *We added a second lithium ion battery* without sacrificing size, weight or eliminating a floppy drive.

The TI TravelMate 5000. For more information on what others thought you couldn't do with a notebook, simply call 1-800-TI-TEXAS (e-mail: 2ti@msg.ti.com).

75 MHz Pentium processor with PCI Bus

10.4" Active Matrix or 10.5" Dual Scan displays

2MB Video memory

8MB RAM, expandable to 32MB

*810 million bytes (=772MB) or 524 million bytes (=500MB) Hard Disk Drives**

Multimedia package: Built-in 16-bit sound, internal speaker and dual mode microphone

Two Lithium ion battery packs

Serial infrared port for wireless connectivity

HINA: MOVE OVER, KARL MARX— IERE COMES CONFUCIUS

hina watchers have noticed a subtle shift in the behavior of President Jiang Zemin. Long a colorless party boss, Jiang is showing another dimension. He has begun sprink- g his speeches with classical poetry. He urges youths to recover Peking opera. And he praises the values of nfucius, the ancient Chinese philosopher long scorned by communists.

With communism rapidly losing relevance, Jiang other senior leaders are casting about for nething to replace it in the post-Deng Xiaoping . Their new mantras are old ones: patriotism so-called Chinese values, particularly respect authority. "When leaders speak in communist minology, nobody—including most of the gov- ment—listens anymore," says Ding Xueliang, a mer mainland ideological theoretician now sed in Hong Kong. "So they are using national- and Confucianism as substitutes for a dis- dited ideology."

RAL COMPASS. It's far from clear that this im- makeover will be enough to make Jiang the t paramount leader. But whoever the next ongman is, he will likely keep harping on the ial stability and high ethical standards that at the heart of Confucianism. That's because ina's leaders are searching for a way to main- a grip on an increasingly skeptical and frag- nted society. And they realize that the public, rmed by the corruption, crime, and sheer greed t have accompanied China's economic takeoff, wants its mo- compass restored.

This renewed interest in Confucianism is somewhat bizarre ause until recently, the communists denounced it for foster- an elitist class system that kept the masses down. Now, national best-seller lists feature books on such figures as ng Guofan, the 19th century Confucian scholar-turned- rlord credited with saving the corrupt and crumbling Qing Dynasty by putting down a popular rebellion. And in November, Beijing hosted the inaugural meeting of the International Confucian Assn. The featured speaker: Singapore Senior Minister Lee Kuan Yew, the most vocal advocate of "Asian values."

Communism is discredited—but Confucianism favors respect for authority

THE BETTMANN ARCHIVE

Traditional values have been talked up in Jiang's recent anticorruption sweep. The official news agency, Xinhua, recently prescribed a revival of Confucianism as "good medicine" to treat the "crisis of morality" that it blamed on Deng's market reforms. But despite such high-minded rhetoric, Jiang seems to be mainly interested in ousting such political rivals as deposed Beijing party chief Chen Xitong.

Still, the search for a way to adapt traditional social norms to modern China goes beyond the cynical self-interest of politicians. A number of bureaucrats, businesspeople, and intellectuals believe today's Singapore, Taiwan under Chiang Kai-shek, and South Korea under late dictator Park Chung-Hee are all useful models for China in its transition phase. All three promoted Confucianism to underpin one-party rule but left management of the economy to a technocratic elite. If China follows these models, technocrats are likely to gain a larger say in running the economy.

But whether the present communist elders can pass themselves off as the standard-bearers of China's glorious past is another question. Clearly, Jiang's paeans to classic opera and poetry are falling on deaf ears among younger Chinese, who are more interested in pop music and getting rich. And Jiang himself, who also wants the support of party hard-liners, hasn't thrown away his Mao suits. Not long ago, he declared that "to achieve communism is the highest pursuit of our life." Such mixed messages suggest the party will go with whatever works as it tries to avoid history's ash heap.

GLOBAL WRAPUP

NEW MEDITERRANEAN FORCE

In an attention-grabbing move, rance, Spain, and Italy are forming int rapid-action forces that include aval, air, and land units. Under an greement initialed on May 15 in Lis- on, a trinational command separate om NATO will be set up next Novem- er in Florence to coordinate the new rce, called Eurofor, which could raw on some 12,000 troops. Eurofor to be prepared for peacekeeping perations as well as evacuation of uropeans from troubled areas.

This is a sign of growing concerns, particularly in southern Europe, over instability in North Africa, the former Yugoslavia, and the Mideast. The European countries worry about being inundated with refugees from areas such as Algeria as well as the radicalization of their own immigrant communities.

HUNGARY TO PRIVATIZE

▶ After six months of dithering and taking flack from the international finance community, Hungary has pushed a privatization law through parliament. Although further glitches are possible, the law should make it easier for foreign investors to negotiate to buy state properties. Those likely to go on the block include electric utility MVM and oil-and-gas company MOL. The government probably will also float a further stake in the state telecom provider, Matav, which is already 30% owned by Deutsche Telekom and Ameritech. Such sales may pull in $1.25 billion by yearend. These moves are meant to show that Socialist Prime Minister Gyula Horn is serious about continued reform.

OFFICE PRODUCTS

“Running a small business today is challenging enough without having to worry if you’re getting the best prices on office products.”

--Steve Landesberg

That’s why every week, 2 million businesses just like yours rely on Office Depot for all their office supply needs. Because every day, Office Depot guarantees low prices on the best selection of office products in America.

Our stores are as big as warehouses, stacked to the ceiling with thousands of office supplies, computers, business machines, software, furniture, everything your business needs. Even printing, copying, Dun & Bradstreet credit reports and mailing lists.

And every item in our store is published in our colo catalog, so you can order by phone or fax and receive guaranteed delivery next business day.*

Nobody buys for less. Nobody sells for less than Office Depot. We’ve become the #1 office products retailer in the country simply by taking care of business for small companies like yours!

For a Free Catalog, call **1-800-685-8800.**

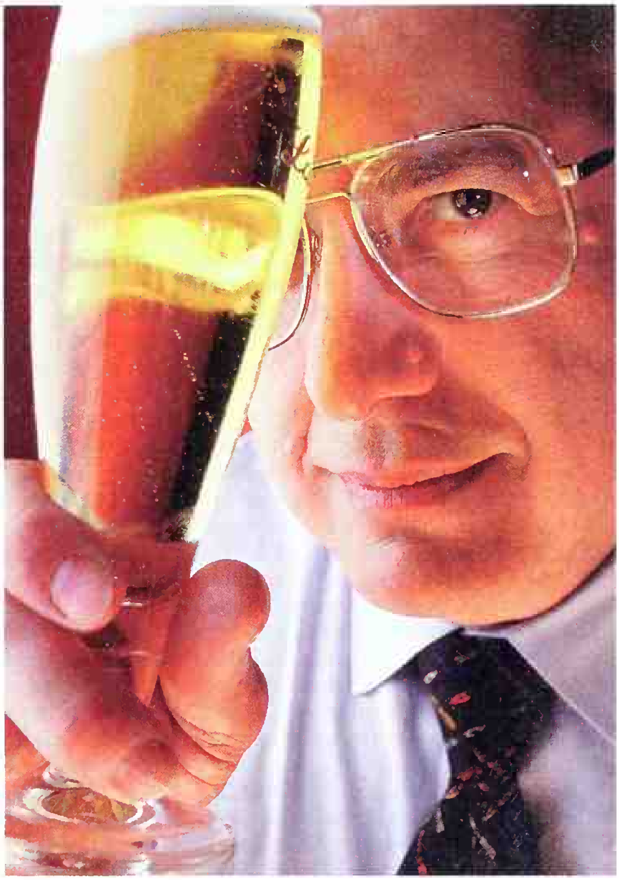
TRATEGIES

DID LABATT GUZZLE TOO MUCH TOO FAST?

The Canadian brewer's last setback: A bad deal in Mexico



George S. Taylor, the dour CEO of John Labatt Ltd., was almost
ddy when he an-
unced plans last July
pay $510 million for
22% stake in Mexi-
n brewer Femsa
erveza. After years of
eking growth beyond
e flat Canadian beer
arket, Canada's sec-
d-largest brewer had
acked one of the
orld's most promising
arkets. "We have
early positioned our-
lves for growth,"
ylor crowed. Paul A.
lcker, former Feder-
Reserve chairman,
w of James D. Wol-
nsohn Inc., Labatt's
vestment banker,
ared his exuberance.
lcker called the deal
landmark transac-
n in the post-NAFTA
vironment."

Barely 10 months
ter, that landmark
oks more like a land
ine. With the collapse of the peso at
e end of last year, Labatt says it will
ve to take a $219 million writedown
its Mexican investment in the fiscal
ar ended Apr. 30. And with the Mex-
n economy reeling, Taylor concedes
e Femsa deal is likely to hurt La-
tt's earnings for the next two years.
nalyst Jacques Kavafian of Levesque
aubien Geoffrion Inc. estimates that
batt's net earnings will climb only
6 in the fiscal year that's just ended,
$118 million, as its revenues rise 35%,
$2.3 billion. And the financial fallout
ntinues. The Canadian Bond Rating
rvice on Mar. 16 issued a "negative"
tlook for the company's debt, after
inting out that the Mexican
ritedown would raise Labatt's debt-to-equity ratio to 58%, from 44%.

CEO Taylor urges patience—but shareholders and hostile bidders may not wait for a payoff

The Femsa fiasco is the latest of several setbacks that have infuriated shareholders and set off speculation among analysts that the company may be ripe for a takeover. Already, Onex Corp., Canada's leading leveraged-buyout firm, disclosed on Apr. 14 that it was evaluating Labatt as a possible "acquisition opportunity." It's clear that many investors are unhappy with Taylor's strategy to expand into global beermaking, sports, and entertainment. From its 1992 peak of around 22, Labatt stock has tumbled 30%, to about 16. "Most of their thrusts have failed," grouses Ian Joseph, vice-president of Altamira Management Ltd., one of Labatt's institutional investors.

For the time being, Taylor, 54 and a 35-year Labatt veteran, is holding firm. Although he concedes the Femsa deal has put Labatt "in a potentially vulnerable position," he insists the company isn't for sale and vows to defend it against any hostile bids. "I share some of the frustration with the time it's taken" to execute the strategy, he confesses. To assuage restive shareholders he is trying to sell some of Labatt's sports and entertainment assets, including half of its 90% stake in the Toronto Blue Jays, to pay off some debt.

STEADY PROGRESS. Labatt's chief executive certainly has gone a long way toward remaking the 148-year-old brewery. After taking charge in 1992, Taylor sold off the company's low-margin food and dairy units, while improving the profitability of Labatt's core $1.3 billion Canadian brewery business. Aggressive marketing has helped Labatt capture 45% of the Canadian market, up from 41%. The net result: Operating profits at the Canadian brewery nearly doubled last year, to $192 million. Moreover, Labatt's net profit came in at $115 million in fiscal 1994, up 17%, on less than half the revenue it had in 1991. Even an executive at archrival Molson Breweries calls Labatt's "a very credible performance in a market where there's no significant growth at all."

Elsewhere, Labatt has made steady progress building market share for its beer operations outside Canada. Analyst Michael Palmer of Equity Research Associates figures Labatt has invested more than $275 million in Birra Moretti, Italy's third-largest brewer, and a network of 500 pubs in Britain. Labatt's Latrobe Brewing Co. has also made impressive gains. Since Labatt acquired full control of the Pennsylvania company in 1988, sales of its key brand, Rolling Rock, have doubled. It's now the eighth-largest brewer in the U.S.

Still, the foreign ventures haven't produced the bottom-line results that cheer shareholders. In expanding its European beer operation, Labatt lost $2 million last year. Meanwhile, Labatt earned just $3 million on U.S. sales of $169 million. Taylor blames marketing costs for sapping profits. "It takes a long time to build a beer franchise," he says, adding that fiscal 1995 results, to be released shortly, will show sharply improved earnings in the U.S. and Europe.

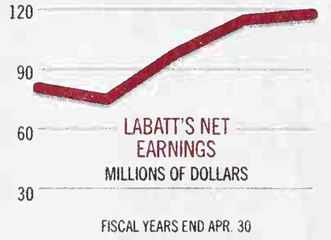
While conceding that Taylor's U.S. and European bets may eventually pay off, shareholders and analysts complain that his tenure has been marked by poorly thought-out and executed moves. Just one example: Labatt's legal tussle with Anheuser-Busch Cos. Anheuser sued Labatt in 1993 after the Canadian company tried to win U.S. trademark protection for the name "ice beer." Labatt contends it invented the process for making the smooth-tasting beer. On Feb. 11, a St. Louis jury ruled that ice beer was not a trademark and awarded Anheuser $5 million in punitive damages. Labatt is appealing the decision, but industry insiders say an angry Anheuser could cancel Labatt's lucrative licensing contract to brew Budweiser in Canada. Labatt dismisses such speculation as absurd. But a rival beer executive says Anheuser "wants to get out of the contract," since Labatt keeps most of the profits Bud generates in Canada. Anheuser wouldn't comment, except to say that terms of the contract are confidential.

Femsa is another sore point. At the time of the deal, many shareholders complained Labatt paid way too much for it. After all, Femsa has been losing market share since 1988 to Grupo Modelo, Mexico's No. 1 brewer, owned 17.7% by Anheuser. And as tariffs fall under NAFTA, analysts suspect Mexico may be swamped with U.S. brands. Philip Morris Cos.' Miller Brewing Co. turned down an opportunity to buy the same stake in Femsa because it felt the price was too high. With the peso's devaluation, Palmer of Equity Research figures Labatt's stake is now worth just $175 million—$335 million less than it paid.

In response, Taylor says no one could have predicted Mexico's financial meltdown. But he insists Labatt's Mexican expansion will eventually generate significant returns. True, beer consumption in Mexico, measured in volume sales, will shrink 6% this year, because of the economic crisis, according to Jose Antonio Fernández Carbajal, director general of Femsa Cerveza's parent company. But historically, Mexican beer consumption has recovered quickly from downturns.

Taylor claims he is sensitive to the concerns of investors, but he doesn't believe they're doing all that badly. Including special dividends and stock paid to shareholders in recent years—much of it from the company's spin-off of its dairy operations—Labatt reckons its shares have yielded a healthy annual return of 10.8% over the past five years.

SLOWING PROFIT GROWTH



DATA: COMPANY REPORTS, LEVESQUE BEAUBIEN GEOFFRION INC., BUSINESS WEEK

BYE-BYE BLUE JAYS. Meanwhile, Taylor is also trying to repair the company's balance sheet, by selling half of Labatt's share in the Toronto Blue Jays to its partners in the Sky-Dome. Within a year, Taylor also hopes to unload Labatt's rock concert promoter, BCL Entertainment. Still, these sales aren't likely to make a big dent in Labatt's $643 million of long-term debt. Analyst Kavakian of Levesque Beaubien Geoffrion estimates that Labatt's interest expense will nearly double in the current fiscal year, to $64 million.

Despite the planned asset sales, Taylor says Labatt's future remains closely tied to sports and entertainment. He's already looking to expand Labatt Communications Inc., which owns English- and French-language cable sports networks. Both are highly profitable, bu the household penetration of cable near its saturation point in Canada. T expand viewership and advertising op portunities outside Canada, Taylor talking with U.S. networks such a ESPN Inc. and Fox Inc. about taking 20% stake in LCI. An other possibility: t swap part of LCI wit a Canadian broadcas er for another broa cast outlet. In all, Ta lor is willing to pa with 49% of LCI.

Although Taylor be lieves his strateg has considerable meri shareholders seem u willing to wait for re sults. Last Septembe institutional holder voted down a poison-pill plan Taylo proposed that would have allowed La batt to issue more stock to fend off hostile bid. It was the first time a man agement-supported pill had been defea ed in Canada, and that sent an ope invitation to takeover bidders. Analys expect that an acquirer, such as One would sell most of Labatt's businesses t repay some of the estimated $1.8 bi lion purchase cost, keeping just the Ca nadian brewery or broadcasting arm.

Some analysts suggest that the fina cial fallout from the Femsa deal mak an imminent takeover unlikely. If that the case, some shareholders say the may take matters into their own hand by proposing an alternative list of dire tors at this year's annual meeting. Th "most meaningful way to drive valu might be to shake up management says one. The message to George Taylo is clear: Patience may not be the virt he thinks it is.

FALL FROM

Cover Story

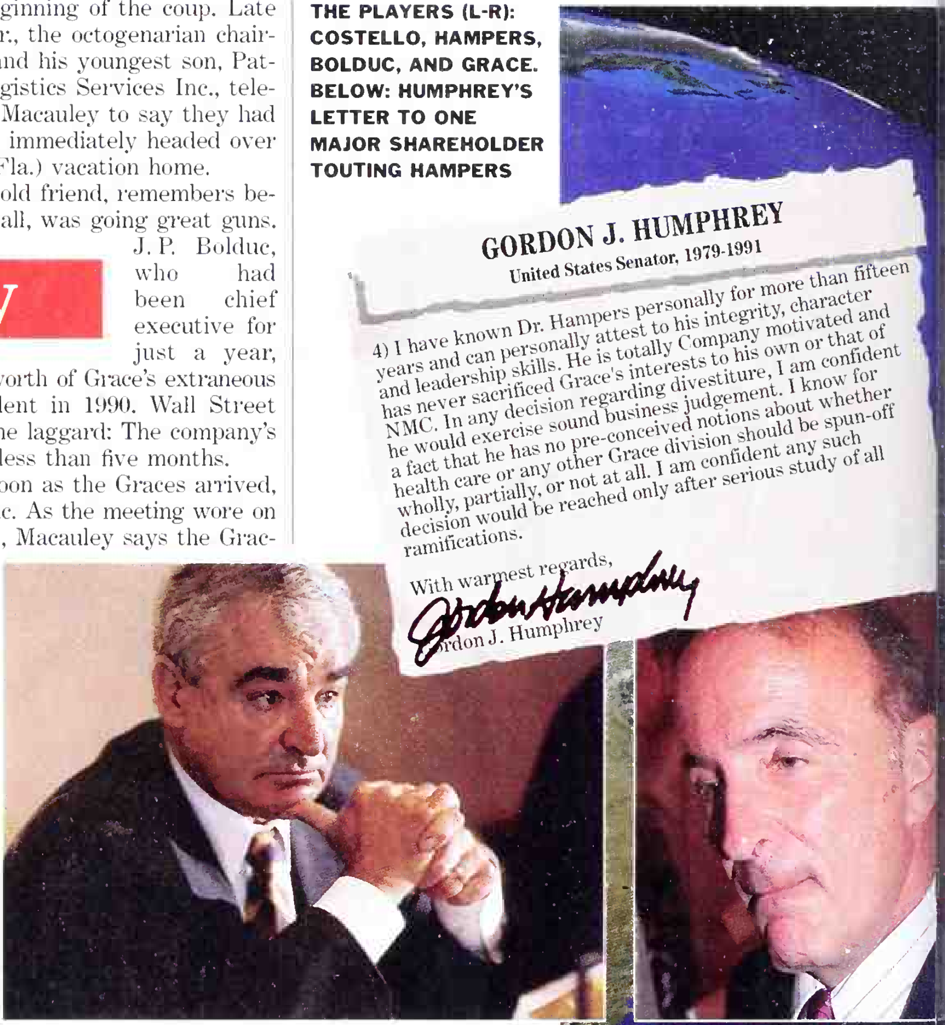
Feb. 11, 1994, marked the beginning of the coup. Late that night, J. Peter Grace Jr., the octogenarian chairman of W. R. Grace & Co., and his youngest son, Patrick, president of Grace Logistics Services Inc., telephoned Grace Director Robert C. Macauley to say they had something urgent to discuss. They immediately headed over to Macauley's West Palm Beach (Fla.) vacation home.

Macauley, ever indulgent of his old friend, remembers being mystified. The company, after all, was going great guns. J. P. Bolduc, who had been chief executive for just a year, had cut costs and sold $2.1 billion worth of Grace's extraneous businesses since becoming president in 1990. Wall Street was finally happy with the longtime laggard: The company's stock, at 45¾, had jumped 32% in less than five months.

"REALLY NEGATIVE WAY." But as soon as the Graces arrived, it was clear the problem was Bolduc. As the meeting wore on into the wee hours of the morning, Macauley says the Graces told him of troubling allegations they had unearthed against Bolduc, who had replaced the elder Grace as CEO of the Boca Raton (Fla.) company in January, 1993. The Graces told Macauley that Bolduc had allegedly committed financial improprieties that involved steering Grace company business to his friends and to a company on whose board he served. The Graces' "displeasure with Bolduc came out in a really negative way," says Macauley, who agreed that the allegations had to be pursued. "I wanted to investigate more thoroughly," he says.

With that secret meeting—which, along with the questions about Bolduc's financial dealings, has never been disclosed to the full board—the Graces began what appears to have been a concerted, 13-month campaign to push Bolduc from his post. Macauley says none of the allegations of sexual harassment that would eventually cost Bolduc his job were raised. Indeed, far from being the key issue behind

THE PLAYERS (L-R): COSTELLO, HAMPERS, BOLDUC, AND GRACE. BELOW: HUMPHREY'S LETTER TO ONE MAJOR SHAREHOLDER TOUTING HAMPERS



GORDON J. HUMPHREY
United States Senator, 1979-1991

4) I have known Dr. Hampers personally for more than fifteen years and can personally attest to his integrity, character and leadership skills. He is totally Company motivated and has never sacrificed Grace's interests to his own or that of NMC. In any decision regarding divestiture, I am confident he would exercise sound business judgement. I know for a fact that he has no pre-conceived notions about whether health care or any other Grace division should be spun-off wholly, partially, or not at all. I am confident any such decision would be reached only after serious study of all ramifications.

With warmest regards,

Gordon Humphrey

Gordon J. Humphrey

After making Bolduc his second-in-command, Peter Grace fell ill, and Bolduc became CEO. Out of Grace's shadow, Bolduc began to push the chairman aside

(L TO R) PHOTOGRAPHS BY TOM SALYER; GRAPHIC BY [illegible]

GRACE

How Peter Grace's hidden campaign to oust onetime protégé J.P. Bolduc unleashed forces far beyond his family's control

GERRY DAVIS

Bolduc's resignation, as the company has maintained, a BUSINESS WEEK investigation reveals that by the time those allegations surfaced more than a year later, they were just the most convenient cover for a long-planned corporate execution.

Cover Story

In fact, extensive interviews with more than a dozen key players—including directors, former and current executives, and major institutional shareholders—reveal that Bolduc's ouster was the result of a vicious, behind-the-scenes power struggle. It was a battle that pitted Bolduc, a voluble, back-slapping executive who naively believed his salvation lay in managing the company well, against the patrician Grace family and a band of loyal, financially beholden directors who resisted efforts to tamper with their private kingdom.

SHAREHOLDERS' VICTORY. As befits a Greek tragedy, all of the key players have suffered. Bolduc's reputation has been destroyed. Just days before his Apr. 19 death from cancer, Grace was forced to relinquish his position as chairman of the company he had ruled since 1945. Son Patrick, 39, who labored, several sources say, to gather information damaging to Bolduc, seems unlikely to ever run the company his great-grandfather founded in 1854—even though his father had talked openly of installing him one day as CEO. And Constantine L. Hampers, head of Grace's largest and most profitable division, National Medical Care Inc., failed in his highly politicized campaign to persuade the board that he was Bolduc's rightful heir.

Even Grace's determination to keep the company whole—and independent—has been undermined. Hampers has launched an unsolicited $3.5 billion takeover of the NMC unit. With NMC likely to be sold—either to Hampers or a higher bidder—shareholders say Grace's remaining units could also become acquisition targets. Wall Street investors are speculating that some Grace businesses, especially water treatment and packaging, could soon draw bids from other compani "I don't think the company will exist in its present form much longer," says one major institutional shareholder.

Oddly enough, it is the shareholders who have emerg victorious. For all the power he wielded, Peter Grace own just 0.005% of the company's common shares outstandi And his directors—many of whom presided over Grace two decades or more—shared a host of social and financ entanglements and refused to acknowledge modern-day st dards of corporate governance.

Now, W. R. Grace has been dragged kicking and screami into the late 20th centu A newly chastened boa has beaten back attemp by a faction allied with t Grace camp to inst Hampers as CEO. Inste the directors chose form American Cyanamid Cha man Albert J. Costel With a trimmed, more dependent board and ta of a breakup in the a Grace shares have jump 38%, to 61⅝ since Boldu resignation. Despite t high-level infighting, t folks in the trenches ha stayed focused on cost-cutting and a restructuring devised Bolduc. Sales rose 16% in 1994, to $5.1 billion, while oper ing income climbed 23%, to $515 million. Results for t first quarter were even better. Earnings from continui operations shot up 56% to $60.2 million, and revenues climb 25% to $1.4 billion.

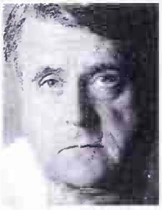
RESENTFUL: *Peter Grace felt betrayed when Bolduc caused one son to leave the company in disgrace*

The Grace Endgame

Jan., 1993 After months of gently prodding the board, Bolduc is named CEO. Peter Grace, ill with cancer, remains chairman.

May, 1993 Bolduc tells shareholders that he will divest extraneous Grace holdings, such as the wholesale cocoa business and a frozen bull semen unit.



J.P. BOLDUC

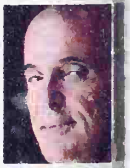
Feb. 11, 1994 Peter Grace and son Patrick, a company executive, pay a late-night visit to dir tor Robert Macauley, outli allegations of financial imp prieties by Bolduc.

LONG HAUL: *A truck at the division Patrick Grace heads*

Summer, 1994 Bolduc talks with Baxter I national about a joint vent with National Medical Car Disagreement over who wil head the merged unit scut the talks.

Oct.-Nov., 199 Son Peter Grace III misuse company funds. He resign and the money is repaid but Bolduc's handling of the matter enrages the elder Grace.

Dec., 1994 Angere over Bolduc's move to centralize NMC's billing and accounting in Grace headquarters, Hampers threatens to resign.



CONSTANT HAMPERS

lduc, 55. Current and former Grace exec- ves say his relationship with the much unger man had been extremely close, bor- ing on the paternal, for more than a ade. Grace tapped the obscure manage- nt consultant as his chief aide in 1982, en Bolduc joined him at a federal cost- ting group that became known as the ace Commission. The next year, Bolduc ned W. R. Grace as a senior executive l became Grace's right-hand man.

Bolduc made himself indispensable to the ckly tycoon, who always wore a loaded tol strapped to his leg. He oversaw the ease of the Grace Commission report in 34, then helped Grace form Citizens ainst Government Waste with columnist Jack Anderson l former Treasury Secretary William E. Simon. Bolduc also ame a member of the Knights of Malta, a secretive, selec- e Catholic lay order that counted Grace as its leader in the S. (BW—May 1). In addition, sources close to the compa- say Bolduc began managing Grace's personal outside in- stments, including a West Virginia timber company and ca Raton-based Brothers Gourmet Coffees Inc., which is w publicly traded.

By 1992, Bolduc was Grace's president and chief operating icer. Grace, meanwhile, was diagnosed with cancer of the and began undergoing chemotherapy. After a decade of bservience, Bolduc began operating more independently, mer executives say. That winter, he asked the board to ne him CEO. Since Grace would remain chairman, the ard acquiesced. Sources close to Grace say he was dis- ased but didn't argue against the move. In January, 1993, lduc became the first person outside the Grace family to the company.

As his power grew at the company, executives and directors say, Bolduc became less and less deferential. In the past, whenever Grace was around, former associates say Bolduc's large frame almost seemed to shrink in size. As his role expanded, any reserve disappeared. Bolduc's demeanor around colleagues never changed, however. Several longtime associates describe Bolduc as a somewhat roughhewn, bombastic man, who would swear and tell off-color jokes, and occasionally hug male and female colleagues.

> "This is Peter's board," Macauley told Bolduc. These are friends of his. All 20 of them." Bolduc shrugged off the warning

At the annual budget and planning meeting in the fall of 1993, Grace was conspicuous by his absence. "Bolduc really pushed Peter totally out of the company" around that time, recalls a former Grace executive. "Bolduc was telling executives not to pay any attention to [Grace, and] you could tell a little bit of friction was going on between Peter and J. P." Much of that growing tension sprang from Bolduc's determination to dump what analysts regarded as Peter Grace's vanity holdings—a cocoa company, a stake in gourmet food retailer Dean & DeLuca, and bath-products retailer Caswell/Massey—which were unrelated to the company's core specialty-chemical and health-care businesses.

BYZANTINE NETWORK. As 1994 progressed, the conflict between Bolduc and the Graces grew more intense. Bolduc was preoccupied with a restructuring at the disparate conglomerate. With praise from Wall Street rolling in, sources close to Bolduc say he failed to realize he couldn't afford to antagonize Grace, who still had the board's solid support. He shrugged off a warning from board member Macauley, who knew Bolduc risked pushing Grace past the breaking point. "This is Peter's board," Macauley says he cautioned Bolduc. "These are friends of his. All 20 of them."

Indeed, many of Grace's directors were interconnected by

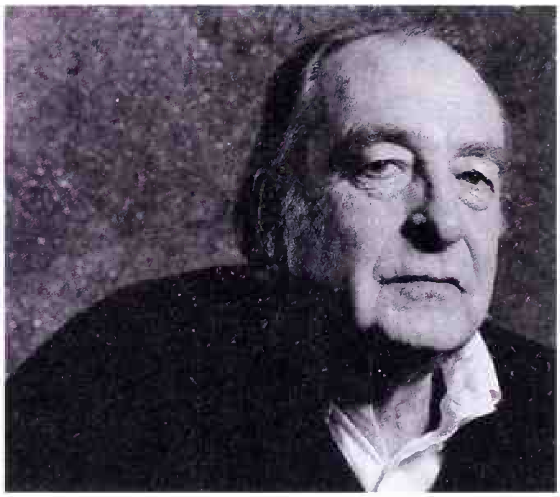
a byzantine network of old family ties, lucrative consulting contracts, investment activities, and joint memberships on other boards. Grace commonly paid many of his directors consulting and other fees in addition to their director's compensation. Over the past decade, Grace's proxy statements show that directors, their companies, or their relatives were paid more than $60 million in additional funds. Despite repeated efforts by BUSINESS WEEK to contact them, most Grace directors declined to comment.

Among Grace's board members, five had become particularly supportive of Peter Grace's efforts to oust Bolduc. This faction included Macauley, Virginia A. Kamsky, Charles H. Erhart Jr., Hampers, and Gordon J. Humphrey, a former U.S. Senator from New Hampshire. Macauley's charitable group, AmeriCares Foundation, counted Peter Grace as a founding board member and a daughter and granddaughter of Peter Grace as staffers. Kamsky's father had long been a top executive at Grace. Her consulting firm, Kamsky Associates Inc., collected $420,000 in fees from W. R. Grace in 1994 alone. Erhart was Peter Grace's second cousin. Humphrey drew consulting fees from the company as well and had long been associated with Peter Grace's various political activities. Humphrey also sat on the AmeriCares advisory committee and was an old friend of New Hampshire resident Hampers. A number of the directors, including Bolduc, also invested jointly with Peter Grace in ventures unrelated to the company, such as Brothers Gourmet Coffees and a private investment partnership, Catterton Group.



MACAULEY

HOLMES
As acting chief, he sensed the deeper turmoil at Grace and wanted a clean, professional CEO search

(TOP) PHOTOGRAPHS BY MELANIE EVE BAROCAS

As Bolduc grew bolder as CEO, he began taking aim at Grace and other directors' perquisites. First he stripped Grace of his private company jet and reduced his personal company staff from 10 to 4. Then, in late 1994, Bolduc began discussing the need to disclose some of Grace's perks to shareholders. There were also rumblings that Bolduc intended to cut back sharply on the directors' lucrative consulting agreements.

LOOKING FOR AMMUNITION. But what really brought the dispute to a head was an incident that occurred last November. Bolduc and other top executives learned that J. Peter Grace III, the elder Grace's son, had used company funds improperly as he arranged to buy a unit that Grace was divesting. The younger Grace was asked to resign on Nov. 8 and did so the following day. J. Peter Grace III did not return repeated requests for comment.

At a meeting on Nov. 29 of a select group of directors, a solution was proposed: If the $1.4 million was repaid immediately, and the elder Grace resigned by yearend, the matter would not need to be disclosed to shareholders, since son would no longer be related to a board member. Althou the money was repaid, Grace saw the move as a ploy force his resignation and refused to quit. For the elder Gra say Macauley and others close to him, these moves were affront to his family's honor.

At this point, the Graces—Patrick in particular—intensif their efforts to gather ammunition, putting together inf mation on what they claimed were Bolduc's own questiona dealings. The gist of the allegations: Bolduc had the compa award lucrative contracts to his friends, including one w owned a large auto dealership in Boca Raton and was hired provide Grace with a fleet of cars. Another involved the co pany's purchase of a large warehouse in Baltimore from a B duc friend. Still another allegation involved a bid for a $40 r lion construction contract for a new Grace plant in Malays One of the losing b ders was affiliat with a company bas in Charlotte, N. C., whose board Bold sits. Through his la yer, Gerald Walp Bolduc denies any propriety and says ties to these indivi als and firms were closed to senior exe tives or the boa beforehand. To t day, none of the a gations of impropri has been publicly closed or discussed the full board.

Sources close to t company also say t a consultant with cl ties to Peter Gra traveled to seve Grace offices in t U. S. in search of e dence about sexua inappropriate beh ior by Bolduc.

Grace was app ently spurred to tion by his feeli that Bolduc had trayed him. He h after all, made J Bolduc what he was: an up-and-coming corporate chieft who could now count heavyweights such as Blockbuster E tertainment Group CEO H. Wayne Huizenga as a friend.

That Bolduc even found himself in such surroundi was a triumph of will over circumstance. He came into t world in 1939 as Joseph Jean Paul Raoul Bolduc, son o Lewiston (Me.) bobbin maker. By the time he made it Minnesota's St. Cloud State University on a baseball sch arship, he called himself Paul Ralph Bolduc. After gradu ing with a BA in business administration in 1961, he joi the U. S. Agriculture Dept. as a $5,540-a-year accounta His name then: J. Paul Bolduc.

Bolduc's inauspicious beginnings stand in stark contrast those of Peter Grace. A grandson of W. R. Grace, N York's first Catholic mayor, Peter Grace sprang from some the oldest money in New York. After graduating from Y University, he played world-class polo before immers himself in the company. He expanded W. R. Grace w do I gain a competitive edge?

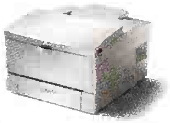
Mac OS

2 in a series

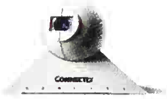
The Mac OS Advantage

Macintosh
System 7.5

The Mac™ OS. It's the operating system that helped make the Macintosh® famous. It helps people do more in less time. In fact, according to an Arthur D. Little study, people using the Mac OS are 44% more productive than those who use Windows.* It's also a great way to get the power of RISC on a desktop PC.



Plug and Play. We invented it. And while many have tried to imitate this perfect union of hardware and software, nobody else actually does it today. Which means nobody else makes it so easy to set up and use all the software, peripherals, accessories and networks you need to help your people be productive.



The real beauty of the Mac OS and Apple® advancements like QuickDraw™ 3D and QuickTime® VR is that people don't even know they're there. What they *do* know is that with a PC running Mac OS, it's actually practical to use multimedia, videoconferencing, 3-D visualization and virtual reality.

EXCEL
WordPerfect
Adobe Photoshop
QuarkXPress

Thousands of applications now run under the Mac OS. Which means thousands of applications share the intuitive interface pioneered by Macintosh. In the future, people won't even have to think about individual programs at all. They'll just sit down at their Mac OS desktop and get right to work.

Used to be, the only way to get your hands on the Mac OS was to get your hands on an Apple Macintosh. Today, you'll find it on PCs from Radius, Power Computing and more. The same places, in fact, where you'll find our new logo. For more information, call **800-472-4342, ext. 150**, today. Or contact us via the Internet at http://www.info.apple.com/macos/macosmain.html.

Co. from revenues of $296 million, when he took the company public in 1953, to $4.3 billion, when he was pressured to stand down in as CEO 1992. But despite his patrician roots, Grace could be crude. He may be best known to the public for such idiosyncratic pronouncements as "this food stamp program is basically a Puerto Rican program" (1983) and New York's troubles spring from "Cuomo the homo" and "Dinkins the pinkins" (1992).

The Sum of Its Parts?

W.R. Grace & Co. started in the Latin American shipping business in 1854. Over the years, it has bought and sold an airline, restaurant chains, home-repair centers, and a sporting-goods retailer. Grace now consists of six core businesses:

UNIT	DESCRIPTION	ESTIMATED VALUE (MILLIONS)
NATIONAL MEDICAL CARE	Outpatient kidney dialysis at 550 clinics, plus a growing business providing dialysis in patients' homes	$4,000.0
GRACE PACKAGING	Clear plastic and shrink wraps for the food industry	$2,400.0
GRACE DAVISON	Chemical catalysts used in the manufacture of motor fuel, plastic film, paint, plastics, and toothpaste	$1,100.0
GRACE CONSTRUCTION	Concrete and cement additives that enable buildings to withstand corrosion, water damage, and fire	$469.7
GRACE DEARBORN	Water-treatment systems for heavy industry	$375.7
GRACE CONTAINERS	More than 400 billion cans and bottles each year are sealed with Grace-made tops and caps	$375.7

Over the years, Grace had bought and sold such disparate businesses as Herman's Sporting Goods; American Breeders Service, which sells frozen bull semen to cattlemen; and the Houlihan's and El Torito restaurant chains. But when it came to selling off major assets—a steady shareholder refrain—Grace resisted. So, when Bolduc indicated to institutional investors that he would break up Grace's diverse units if the stock price didn't improve further, it just created another source of tension.

Bolduc probably could have continued remaking Grace if he had not made one final—and fatal—miscalculation. Until this point, Hampers, the powerful and autonomous NMC chief, had not taken sides in the escalating war. But in late 1994, Bolduc's moves to assert authority over NMC so antagonized Hampers that he threw his considerable weight in with the Grace camp.

SWEETENED SEPARATION. With that shift, Bolduc found himself without allies on the board. What little power he had derived from his sway with shareholders. Until almost the end, he had no idea how precarious his position was. "J. P. saw [the internal fights] as a minor irritant," says one big institutional shareholder who knew Bolduc well. "He was very confident [the Grace/Hampers faction] wouldn't uncover any business or operational problems."

Hampers was the wild card. A physician who cofounded NMC as a portable kidney-dialysis provider, he sold out to Grace starting in 1984—pocketing an estimated $100 million in the process—and stayed to head the operation. Fiercely independent, Hampers was left to run his own show, since he consistently delivered earnings and sales growth.

In mid-1994, Hampers says Grace began negotiations with Baxter International Inc. to merge part of NMC with Baxter's
kidney-dialysis unit. The Baxter/NMC deal, which has nev
before been revealed and which Baxter refused to confir,
would have resulted in a $3 billion freestanding compa,
says Hampers, who originally backed the plan. By late su-
mer, however, the deal fell apart over who would run t
new company. "It was a matter of control," Hampers sa.
"We could not work out the governance."

Then, in December, the Food & Drug Administration c
ed NMC for selling nonsterile medical products for a seco
time. Sources close to Bolduc say he was enraged and shar-
ly criticized Hampers. As pa

Cover Story

reluctant Thomas A. Holmes, a retired CEO of Ingersoll-Rand Co., who was seen as more able to step in and run a large industrial company while the board conducted a less hasty search. Macauley believes that if Hampers had pushed harder and been elected CEO, he would likely still hold that position today.

Major shareholders were stunned by Bolduc's departure. Only three weeks earlier, institutions representing about 35% of Grace's shares, had met with Bolduc. Investors felt Bolduc had put Grace on the right track. So when they learned of Bolduc's ouster from news services, the shareholders felt they were the victims of an end run by Grace.

A few days later, in a meeting with Holmes, investors grew increasingly angry about his refusal to provide them with any more details on Bolduc's departure. Shareholders also feared that Hampers, who had quickly begun a public campaign for the CEO's job, would be chosen. The company's largest shareholders insisted that the new CEO be an outsider with no ties to the Graces. After that meeting, Holmes hired lawyer Martin Lipton to guide the board through the morass of selecting a new CEO and avoid what threatened to be a slew of shareholder suits. One major shareholder believes that although Holmes initially thought the charges against Bolduc were reasonable, he gradually realized that the board had not understood all the subterranean forces at play. Holmes, a relative newcomer to the board, promised a clean, professional selection process using an executive search firm.

EMERGENCY MEETING. Hampers, meanwhile, continued lobbying heavily for the job. Although he had the backing of the Graces, he hired investigative firm Kroll Associates because he was convinced there was a "conspiracy" afoot to discredit him and deny him the job. Hampers allegedly also used Kroll to investigate the backgrounds of other candidates for the CEO position. One candidate for the job says Hampers appeared to be trying to come up with information to discredit rivals. Hampers and Kroll both deny this allegation.

> Peter Grace had hoped that his son Patrick would one day run the company founded by his great-grandfather. But chances are that will never happen

FAMILY PLOT: PETER GRACE, WHO DIED OF CANCER ON APR. 19, WAS BURIED IN SPENCER, MASS.

RICHARD SCHULTZ

The intrigue didn't end there. Board members loyal to Grace—and supportive of Hampers—began campaigning on behalf of the NMC chief. On Apr. 10, Humphrey sent an unsolicited letter to Miller Anderson Sherrerd, an institutional shareholder opposed to Hampers because he was an insider and tied to the old regime. Humphrey offered a personal testimonial to Hampers' professional abilities and character. "Dr. Hampers is well qualified to serve as CEO of W. R. Grace," wrote the former Senator in documents obtained by BUSINESS WEEK. "...He is totally Company motivated and has never sacrificed Grace's interests to his own or that of NMC." Humphrey closed the letter saying that he and "several board members who share the[se] views" would like to visit shareholders personally.

Meanwhile, Kamsky applied her own pressure. John J. F. Sherrerd, one of the principals of the same firm Humphrey was courting, shared in common with Kamsky a trusteeship at Princeton University. Kamsky offered to pay Sherrerd a visit, according to Nicholas J. Kovich, the portfolio manager who oversees the firm's Grace investment. She propod bringing along Hampers. But two board members say tt Holmes did not appreciate these maneuvers and put a stopo the proposed meetings.

Holmes had to move fast. Grace's big shareholders we threatening to withhold their proxies if a CEO candide wasn't identified before the May 10 annual meeting. Ad Hampers' alleged background checks on his potential rivs made it imperative to keep the candidates' names secret. n Friday, Apr. 28, the board was notified of an emergey meeting to be held Monday morning in New York. It vs only Sunday night, over dinner with Holmes, that Hamp learned he wasn't the nominating committee's choice.

Monday morning, Albert Costello was presented as pick of the nominating committee, and Holmes pressed an immediate vote. Costello won, with 13 votes. Hamps got votes from five board members: Macauley, Kams, Humphrey, Erhart, and himself. Two directors abstain. Macauley says he and others who had supported Grace ad Hampers were outraged: "I thought it was abnormay quick," Macauley says. "I disagreed with the process." T may be a little bit true, says one big institutional shareholder with a smile: "By the tie Hampers summoned his s porters together, he did have enough time" to blk Costello's election.

But if he couldn't be CEO of W. R. Grace & Co., Hamp had an alternative. On May he went to Costello's office ad announced his bid for N. Costello says he was happy o see Hampers' offer. He krw he faced a difficult and ti consuming decision or whether to break up the co pany, as shareholders wantd. Now, the decision had almst been made for him. At Gra May 10 annual meeting, e new CEO said that at the vy least, NMC would be sold to e highest bidder or spun off o shareholders. "The die is st of cast," Costello said after the meeting. But in a written sponse to BUSINESS WEEK, he denied that more sales of major assets are on the way. "I'm not here to preside or the liquidation of W. R. Grace," says Costello.

Peter Grace was an active player in the struggle or the company virtually until the day he died. Macauley ad others who knew him well believe that Grace clung to fe longer to finish the fight as best he could, even rising from s hospital bed to deliver a final speech to the board on Ap 6. Too weak to finish it himself, Grace's wife completed is thoughts. "I have spent my life serving this company," Ge told the board. The "sad, even tragic, and unnecessary evets of the past several months [were caused by] an effort by y successor to mislead you and attempt to embarrass me d my family, and pressure me into retiring from the boa. Bolduc, through his lawyer, denies ever misleading the bod.

After receiving last rites from John Cardinal O'Conr three times in a week, Peter Grace died on Apr. 19, st days before the annual meeting that would have marked is last day as chairman of W. R. Grace. He died with his tle intact and with the knowledge that he had, in the ed, bested Bolduc. "I got him," a longtime Grace confidant sys he can picture Grace saying. "I got the bastard."

THE AMERICA'S CUP

KEELHAUL ALL THE TECHIES?

Too much simulation, too little sailing, cost the U.S. the cup

TRICKY: *Black Magic (top) and Young America*

BLAKE SELL/REUTER

When Dennis Conner brought Young America to the starting line for the America's Cup races on May 6, he had the might of Yankee technology on his side. The sleek boat's design had been honed by hours of computer simulations, using software and engineers from such companies as Boeing Co. and San Diego defense contractor Science Applications International Corp. (SAIC). Much of the craft's winged keel was built by Ford Motor Co., and its carbon-fiber sails were high-tech wonders.

When yachting's premier event ended on May 13, however, the U.S. had suffered a humiliating defeat. In five straight races, Conner and the yacht he borrowed from rival team PACT 95 were trounced by New Zealand superboat Black Magic.

Is the loss to such a tiny nation yet another sign that America is losing its technological edge? Not really, insist Monday morning helmsmen. While Black Magic sported several innovations, the Yanks' biggest blunder may have been too much reliance on simulations and not enough on sailing. If you factor in the similarities of the two yachts and the margin of Conner's defeat, "it's obvious the reason is more than just the design," says John Marshall, head of the team that built Young America.

TEST BED. Unlike the three U.S. groups vying to defend the cup, the New Zealanders came equipped with two competitive boats. That let them assess the effects of small changes in, say, sail shape or keel design. Resulting improvements are typically too small to measure. But they can be detected when racing against a similar yacht, explains Boeing engineer Winfried Feifel, who helped design Young America. "We didn't have the benefit of racing against another boat," he says.

The Kiwis also took the time—and had the moxie—to experiment.

Excuses, excuses. They include everything from a freak tornado to an insufficient budget

The small wings on Back Magic's keel stick out straight instead of being swept back like those on its rivals. U.S. designers know straight winglets are faster but feared they'd get tangled with seaweed. They were proved wrong.

Another innovation was Black Magic's rig. The Kiwis moved the mast farther aft than normal and added more gizmos to alter its bend. "They did more research than anyone else on sails, doing over 200 wind-tunnel tests. We di have the time or the budget to do kind of development," says Bill Tre of Team Dennis Conner.

"Not one of these things makes than a 5- or 6-second difference," professor Jerome H. Milgram of design director for America^3, the ly women U.S. team. "But if you've six of them, it adds up."

Given more preparation time, Y America probably would have been er. It had a new, improved keel rudder ready. But a f January tornado dam the boat and set back overall effort. Then br gear and sailing mistake to a demoralizing loss a hands of Conner's sl Stars & Stripes in the cup defender trials. A Young America was ha over to Conner's crew the finals, there wasn't to install the new e ment—or fine-tune the

WRONG SAIL? It didn't that veteran seadog Co whose crew performed lessly in the defender was outsailed by Kiwi per Russell Coutts. New Zealanders consist read the wind shifts b in part because of b seat-of-the-pants wea forecasting. And in the race with stronger win conditions where the w more stable Young Am had a predicted speed vantage—Conner blew picking the wrong mai critics say. "Dennis was on the learning curve," Marshall bluntly. Bunk, sail-trimmer Trenkle. "We'd actually ten Young America going faster" the PACT 95 crew.

Still, Marshall and others wond better preparation and sailing w have been enough to beat the New landers. From its perfectly cut sai its crack crew, Black Magic "had a edge in everything," says Milgram. American teams hope they'll be u speed for the next America's Cu 2000. They plan longer campaigns more sailing time. Already, corpo backers such as SAIC and Ford eagerly signed on. But the clear le It will take more than U.S. techno to bring the prize back from I Under.

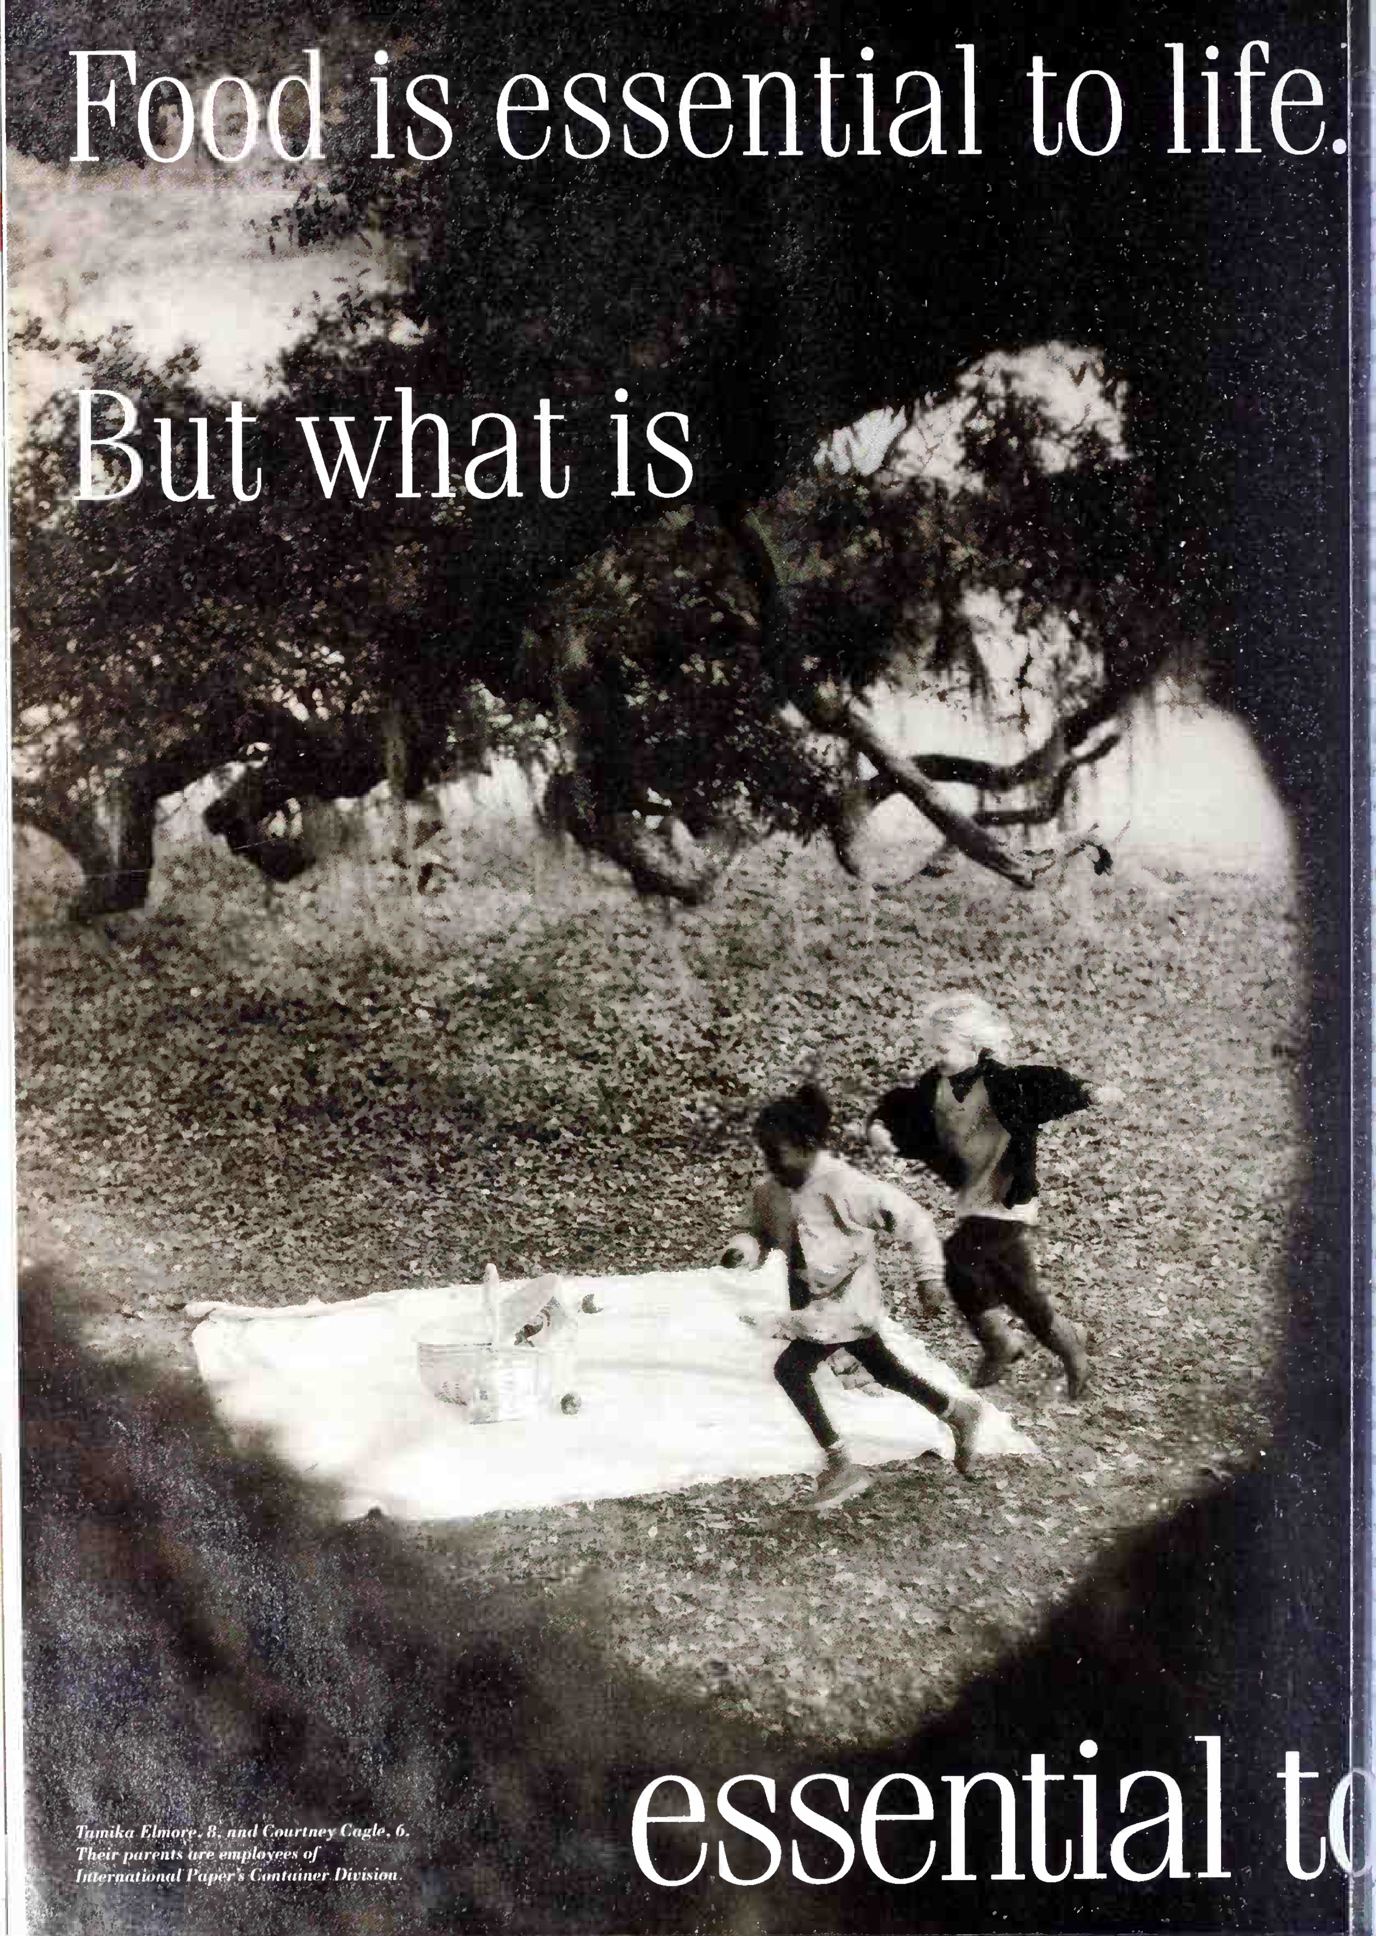
HEWLETT® PACKARD



Food is essential to life.
But what is
essential t

Tamika Elmore, 8, and Courtney Cagle, 6. Their parents are employees of International Paper's Container Division.

AT ARE THE ISSUES?

st as our bodies need nour- ent to make it from childhood gh youth to adulthood, our needs packaging to make it the farm through the grocery to our dining tables.

ithout the right packaging, would be wasted. Indeed, arts of the world lacking isticated packaging technol- nore than 50% of the food is very year. It either rots or is ged during shipping.

rtunately, we have the tech- y to avoid these problems. For ce, a paper package isn't just made from paper of varying nesses with graphics thrown Almost every package is a ble technological feat, each a ic solution to a special problem. me packages endure fluctua- in temperature and humidity, hold ice while allowing the to drain, some withstand raping stacking without being ed. You get the idea. Without ifferent types of packaging, vouldn't have access to as fresh food. You also wouldn't as much variety. Some foods l become too expensive for people to afford.

e abundance of packaging aise the question: would we etter off without it? The r: not really. The practical on is a packaging material not only fulfills all the rements of getting food to us lso is ecologically conscious, , renewable and recyclable.

International Paper, we rstand the need to find a e between preserving milk for row's breakfast and preserving rests for future generations.

ood?

WHAT WE ARE DOING.

International Paper invests millions every year developing innovations that keep food fresh and nutritious. Our Barrier-Pak® beverage cartons use a patented layering process of special papers and coatings that function as sophisticated barriers to hold in the fresh taste and flavor of juices. We're also working on new packaging systems that will keep milk fresh and nutritious even longer.

Along with creating revolutionary packaging, we're constantly looking for new ways to use less wood fiber in our packaging. One example is our Pineliner® technology, which produces corrugated boxes that require 17% less fiber yet remain as strong as conventional boxes.

We meet the need for virgin fiber through "sustainable forestry," which includes planting 50 million SuperTree® seedlings every year. SuperTrees, developed through a process of natural selection, produce 30% more wood per acre over a 25-year growing period.

WHAT IT MEANS TO YOU.

You can have fresh-tasting Florida orange juice in the dead of winter in Minnesota.

You can have fresh milk and tender chicken in Manhattan any time you please.

In short, you can have food that tastes as fresh as it does on a farm no matter where you live in America.

To talk more, please call Bob Gordon or Lyn Bernstein at the International Paper Packaging Innovation Center, 1-800-577-9862.

INTERNATIONAL PAPER

We answer to the world.

CURRENCIES

THE DOLLAR'S DRIFT

Convenience, not clout, keeps it the world's key currency

The U.S. dollar has finally rebounded on foreign exchange markets, buoyed by apparent progress in curbing the budget and trade deficits—and possibly by a sudden reversal in market sentiment. But its rally is unlikely to be long enough or strong enough to reverse the slow and steady erosion in the dollar's status as the key reserve currency.

As something to lose sleep about, the dollar's reserve status—that is, the willingness of foreign central banks to hold dollars in their coffers—may seem fairly marginal. Stanford University economist Paul R. Krugman believes that concern over the issue is "98% mysticism—people get frantic about it when they have no idea what it means, which is not very much."

HISTORY LESSON. Economists who take the foreign exchange market's pulse daily aren't quite so sanguine. "The world could be lurching toward a multipolar currency system where the mark and yen serve as regional international currencies," William Sterling, international economist at Merrill Lynch & Co., wrote in a recent market letter. Along the way, there could be currency crises and panicky dumping of dollars. "History teaches that major transitions in currency systems are unlikely to proceed smoothly," he warns.

The numbers themselves are irrefutable. The dollar has for years been the predominant foreign currency that central banks hold; it still accounts for more than 60% of official reserves. But over the past decade, there's been a gradual slippage in the dollar's share as central banks accumulate more German marks and Japanese yen. Today, a mere 9% of worldwide official holdings are in yen, up from 6% a decade ago. Global holdings of marks stand at about 16%, up from 13% a decade ago.

Central banks obtain foreign exchange in a variety of ways. As nations run trade or current-account surpluses, those surpluses are deposited locally, and reserves are set aside with the central bank. Then dollars, yen, marks, and other currencies are bought and sold through central bank intervention [illegible] trading. Most of the time, currencies are held in short-term government securities, which earn interest, also add [illegible] to reserves.

Perversely, the dollar's recent weakness may have raised global dollar reserves. The Bank of Japan, for instance, is estimated to have purchased $10 billion a month to support the dollar and undercut the yen's climb this year. Nonetheless, many smaller central banks in [illegible] may have been net sellers of dollars.

What is the significance of the dollar's loss of reserve status? First, there is the intangible but important geopolitical effect. The dollar's loss of prestige may undermine America's role as a superpower, observes Jeffrey Fran[illegible], an economist at the Institute for International Economics in Washington, D.C. A more tangible effect, though, may be a reduction in what economists call seignorage or the income or bene[illegible] country receives from its ability to get its currency accepted in exchange for goods and services.

EXTRA PENNY. When the Japanese sell Toyota [illegible] the U.S. and take dollars in return, for instance, they are accepting paper that represents a future claim on U.S. assets—in effect, an interest-free loan. For the U.S. government, the billions of dollars in circulation outside America means that a portion of government spending has been financed by an interest-free loan, noted Federal Reserve Board governor Lawrence B. Lindsey in a speech last year.

Lindsey quantified the benefit by noting that in 1981, following two rounds of inflation in 10 years, the [illegible] of dollars in circulation to U.S. GDP had fallen to just over 4¢ of currency per dollar of GDP. Twelve years later, after painful disinflation, there were slightly more than 5¢ for every dollar of GDP. That extra penny amounted to an extra $64 billion in seignorage, says Lindsey. A strong reserve status also means that the government probably pays les[illegible]

Treasury bills than it otherwise might.

Such benefits will accrue only as long as the dollar continues to be seen as a store of value. What worries some economists, though, is that periodic bouts of dollar-dumping on forex markets will prompt central bankers to reduce their holdings—and that economic fundamentals may hasten the process. The U.S. now accounts for about 25% of global output, compared with about 50% after World War II, and is a net debtor rather than a net creditor.

Still, despite the mark's and the yen's elevation in reserve status, they will not soon displace the dollar. For one thing, neither Germany nor Japan has a market for short-term cash instruments nearly as broad or deep as the market for U.S. Treasuries, which investors can hop in and out of on a 24-hour basis around the globe. "Any currency, if it is to become an international currency, must have an efficient market," says Toyoo Gyohten, chairman of the Bank of Tokyo Ltd. and adviser to the Finance Ministry on currencies. Gyohten favors reducing Japan's dependence on the dollar, which accounts for 75% to 85% of the central bank's forex holdings.

MISMATCH. The yen doesn't even have the regional status that the mark does in Europe, since many Asian countries still link their currencies to the dollar, and most Asian trade is still denominated in dollars. But with more debt owed in yen than ever before, Asian nations such as Indonesia and Thailand are experiencing a big mismatch between export revenues and debt service. They will "probably want to change their profile of foreign reserves to more closely resemble their liability profile," says James Lister-Cheese, an analyst at London's Independent Strategy, a bond and equity research firm.

As a reserve currency, pound sterling outlasted Britain's preeminence in the global economy, and the dollar's reserve role may well outlast the U.S.'s. Indeed, observes David Hale, an economist at Kemper Financial Services Inc., it is surprising that dollar holdings are as high as they are. The dollar remains the lingua franca of international trade and finance. Oil and other major commodities are priced in dollars, most international debt is still dollar-denominated, and the dollar is widely used as a "street" currency—though the mark is gaining in Eastern Europe. None of that will change quickly. Nor, with no good substitute at hand, will the dollar suddenly be unseated as the key reserve currency. Slowly but surely, though, its once lofty status is being chipped away.

RESTITUTION

SWITZERLAND'S MORAL DILEMMA

How should banks disburse Holocaust victims' funds?

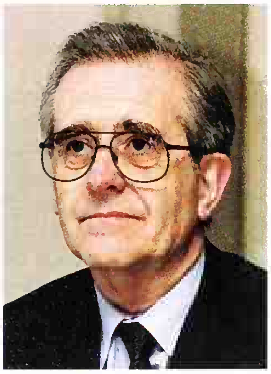
For the Jews of Nazi-occupied Europe, Switzerland might as well have been on the far side of the moon. Time after time, fleeing Jews were turned back at the border—in what the Swiss recently revealed was a secret agreement with Nazi Germany. The President of Switzerland, Kasper Villiger, admitted on May 7 that his country "bears a considerable burden of guilt for the treatment of Jews by our country." But in his speech before parliament, Villiger did not address an issue that continues to haunt the Swiss: Their banks may still hold on their balance sheets—as assets, not as liabilities—uncounted millions of dollars deposited by Jews slaughtered in the Holocaust.

The Swiss banking community maintains that it returned most unclaimed Jewish funds years ago. But Jewish organizations and critics in Israel and elsewhere believe otherwise and have persuaded the Swiss to take another look at the issue. The central question is a touchy one: Do banks have a moral responsibility not to profit from deposits of persecuted people when the heirs cannot be found? The banks contend that this is a nonissue, saying that most of the money was disbursed and that they've properly responded to claims. But critics are dubious. "I have no doubt that some of the missing funds found their way into the banks' profits, and shareholders received dividends from funds which don't belong to them," says Akiva Levinsky, ex-treasurer of Israel's quasi-official Jewish Agency, which has dealt with the matter over the years.

BURDEN OF PROOF. How much abandoned money may remain in Swiss bank vaults—and balance sheets? No one knows for sure, but estimates range from tens of millions to hundreds of millions of Swiss francs. One probably overgenerous Israeli newspaper estimate puts the figure at $6.7 billion. But whatever the amount, it is a sensitive subject in Switzerland for a simple reason: Swiss banks get to keep abandoned funds.

Switzerland treats inactive acco far differently than the U.S., w banks must turn over abandoned counts to the state if the owner heirs cannot be found. Swiss law that if an account is inactive fo years, the bank must post a notic the branch where the account is dled. Ten years after the notice is ed, the bank is allowed to take po sion of the unclaimed funds. If rightful owners, or heirs, turn up they can claim the funds—if they furnish satisfactory proof. And thats big "if" in Switzerland.

Even before the deposits were co ered abandoned and taken by the b critics charge, only rarely were refu or their descendants able to pry funds from the Swiss. The banks quired documentation, including th



CHAPUIS: *Bankers may soften their stance*

nt number, branch, and oof of inheritance. "The iss made it difficult for original depositors to their money, let alone the heirs who often ne out of Auschwitz hout as much as a scrap paper," says Amram m, former Israeli admin- ator general in charge bsentee property.

n thousands of cases, the rs received brief written ponses that nothing had n found. In each in- nce, the banks charged a ty fee to conduct the search. How- r, the Swiss maintain that they were ply following usual procedures. "This normal practice. It has nothing to do h Jewish money particularly. We id charge a search fee for anyone ing for missing money in our bank," s Franz Raggenbass, a spokesman Union Bank of Switzerland.

D LETTER. It wasn't until 1962 that Swiss government required banks report funds held by them on be- of foreigners or refugees from the . According to reports in Israel— Swiss never released any figures— banks reported 9.5 million Swiss cs in unclaimed funds. At that time, Swiss government asked all clai- nts to register. About 7,000 did so— ugh Levinsky says only a few of se claims were accepted. They received about 7.5 million francs when the Swiss disbursed the funds in 1972. Jewish communities in Switzerland and a Swiss refugee organization got the remaining 2 million francs. The 1962 ordinance did not apply to those living in Eastern Europe, as the Swiss feared that the funds would be confiscated by the Communists.

The 9.5 million-franc figure did not include numbered accounts, safe-deposit boxes, or holdings of Jewish-owned companies. "From the Swiss point of view, companies did not perish at Auschwitz"—even if their owners did—Levinsky notes. To the Swiss, the issue was a dead letter after 1972, when the funds were disbursed. Swiss banks did agree to carry out searches for missing funds—for a price—and to turn over abandoned money to the owners or heirs. But Levinsky knows of no one who has had any success. Swiss banking officials wouldn't comment.

Part of the problem in tracing Swiss bank accounts is the tight secrecy of Swiss banking laws. Banks must keep account records open indefinitely—but that is not always enough. Since 1934, when the Swiss tightened their secrecy laws, banks could open accounts with numbers, and the banks often had no record of who owned the account. Swiss law permits banks to destroy correspondence related to accounts after 20 years. That could help shroud the origins of the numbered accounts.

Critics maintain that the Swiss have approached the issue in a particularly heartless manner. During his five years as Israeli economic consul in Zurich in the early '80s, dozens of Jews asked Noah Flug for assistance in tracking down funds deposited in Swiss banks by relatives prior to and during World War II. In nearly all cases, the trail went cold. "The Swiss banks took a legalistic approach to the problem and were very inflexible," says Flug, now general secretary of the World Jewish Restitution Organization, formed to deal with Jewish claims in Eastern Europe. Swiss banking officials declined to comment.

LUMP SUM? As recently as March, Jean-Paul Chapuis, secretary general of the Swiss Bankers Assn., was saying that the problem of Jewish money had been solved. But in April, not long before Villiger's revelation of the secret pact with the Nazis, the bankers caved in. At the behest of the Swiss government, the association began an inquiry into the issue and has promised a report on the subject by yearend. "The money remains the property of the depositors and their legal heirs," says Kurt Hauri, director of the Swiss Federal Banking Commission.

Levinsky says the Swiss willingness to reopen the matter could lead to an overall settlement in which a lump sum would be paid to settle the claims once and for all. But the Swiss will have the last word. Will they insist upon paying only legal heirs who can furnish documentation—even though entire families perished during the war, leaving no heirs and no records? In fact, it isn't even clear if they will conduct any searches. Bankers Assn. spokeswoman Silvia Matile says the inquiry "is aimed at proving, among other things, whether the search for this money is feasible or not." The answer, for 50 years, has been no—and as long as it remains so, this sour episode from World War II will continue to cast a pall over the Swiss banking world.

INVESTING

RISK ARBITRAGE FOR THE TIMID

In the '90s, even cautious investors are having a go

Back in the rough-and-tumble 1980s, risk arbitrage—betting on the outcome of takeover deals—was a game played mostly by high-rolling wealthy individuals. It was considered much too risky for so-called "prudent" investors.

Now, some cautious investors, such as pension funds and endowments, are coming to the conclusion that risk arbitrage can produce fat returns with less risk than traditional stock investments. With merger-and-acquisition activity showing no signs of abating, such institutions as General Electric Co.'s $28-billion pension trust are beginning to jump in. Budge Collins, chairman and chief executive of Collins Associates, a firm in Newport Beach, Calif., that manages money for pension funds, endowments, and wealthy individuals, says that the approximately 10 arbitrageurs he deals with say they have received a total of about $1 billion in new money over the past year, most of it from corporate employee pension funds.

FRISKY RETURNS. Risk arbitrage, says Heide L. Lankeit, a senior research analyst at Tacoma (Wash.) pension consultant Frank Russell, "is a good diversifier. It's producing attractive returns now and we expect attractive returns over the next two to three years." Lankeit tracks the annual returns of 55 "event-driven" investment managers, whose holdings include distressed securities as well as risk arbitrage. Over the past three- and five-year periods, the returns were 16.6% and 13.6% respectively. That compares with S&P returns of 6.3% for the same three-year period and 8.7% for five years.

TIM GRAJEK

PLAYING THE M&A GAME

PLUSES	MINUSES
• Higher long-term returns than traditional investing	• Susceptible to sharp losses if big deal blows up
• Less volatility than S&P 500 stock returns	• Declines in a single year can be much worse than rest of market
• Index not closely correlated with stock market	• Management fees often higher than for more conventional funds
• More liquid than other alternative investments such as venture capital	

DATA: BUSINESS WEEK

In part because risk arbitrageurs are still seen as promoters of hostile takeovers, most pension funds that have invested in risk arbitrage prefer to remain in the closet. Yet company sources say that such companies as Eastman Kodak Co. and Kennecott Corp. are players. A spokesperson for General Electric says that the conglomerate's pension trust fund had "fairly recently" invested one-quarter of 1% of its fund, or roughly $70 million, with outside risk arbitrage managers.

To be sure, pension-fund consultants and arbitrageurs say that many more pension and endowment funds are currently kicking the tires than writing checks. But they think that more pension and endowment funds will eventually come to regard risk arbitrage as a relatively mainstream investment option, certainly one that promises less risk than venture capital, commercial real estate, distressed securities and junk bonds.

RAIDER-FRIENDLY. Risk arbitrage is certainly less risky—if somewhat less profitable—than it was in the 1980s, when many deals, often launched by raiders with questionable financing, fell apart. Since 1991, the cancellation rate on announced deals has averaged about 3.5%, half the level for the 11 years ending in 1990, according to Merrill Lynch & Co.'s *Mergerstat Review*. Today, bank financing is readily available and most large public deals are being launched for strategic rather than purely financial reasons. "There are blue-chip buyers and blue-chip sellers," says Peter M. Schoenfeld, vice-chairman and head of the risk-arbitrage unit at Wertheim Schroder & Co., a Street firm.

Playing the arb game, though, could raise some tricky issues for institutions. More money in the hands of arbs, says Alan R. Bromberg, a securities law professor at Southern Methodist University, itself help "create a more congenial environment for takeovers." But, he adds, it could also enable more raiders to play in the takeover game and create "conflicts of interest pension trustees," particularly if the company is a raider target.

Some of the new arb money has found its way to Wertheim Schroder, which claims to be one of the few large Wall Street firms that invests other people's money in these transactions. According to Schoenfeld, Wertheim's risk arbitrage limited partnership fund has grown by about 50% in the past year to about $180 million. Virtually all of the $60 million in new money has come from three corporate employee pension funds.

After One Night At The Sherry-Netherland, You'll Never Want To Stay In A Hotel Again.

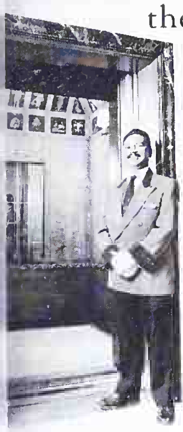
ROMAN-GRECO VASE
IN ONE OF OUR SUITES

When you first arrive at The Sherry-Netherland, you may have the same reaction as many of our guests.

"I've never seen anything like this."

Which is hardly surprising, because there's nothing like The Sherry-Netherland. Instead of the usual crowded hotel lobby, the quiet marble-columned space looks like the interior of a classical European building. Which is understandable. It was inspired by the Vatican Library.

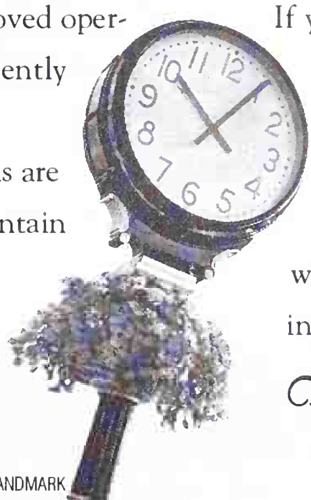
Although this is your first visit, the concierge greets you by name, as will the staff. Of which we have two to three per guest. (At a hotel, the reverse is true.)



-PAINTED
AN RENAISSANCE
LED ELEVATORS

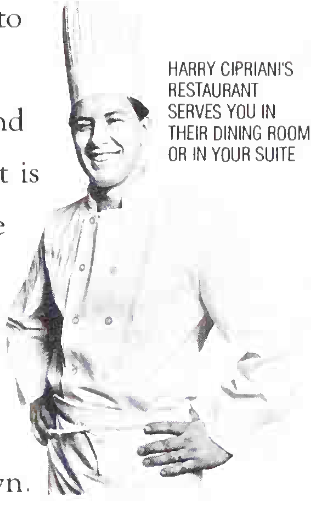
The serendipities continue. When did you last enter an elevator that was a work of art? Where a white-gloved operator whisks you silently up to your floor.

The suites and rooms are another revelation. Some contain antiques worthy of the Vanderbilt Mansion, which in many cases is where they came from. Some have marble bathrooms, handloomed French carpets, crystal chandeliers.



EVEN OUR CLOCK IS A DESIGNATED LANDMARK

We even have a library. Ask for a book or a movie. It will be in your room in minutes. And we have the best location in New York. Across from Central Park, a few steps from Bergdorf Goodman, Tiffany, and F.A.O. Schwarz — and just a short walk to Rockefeller Center.



HARRY CIPRIANI'S
RESTAURANT
SERVES YOU IN
THEIR DINING ROOM–
OR IN YOUR SUITE

The Sherry-Netherland is not a hotel. Rather, it is a magnificent residence owned by a small group of exceptionally diffident people who live there.

It's their place in town.

If you, too, would like to enjoy their kind of luxury, we invite you to call Mr. Louis Ventresca at 212-355-2800.

But we warn you. After one night with us, you may never want to stay in a hotel again.

The SHERRY-NETHERLAND
Your Place In Town

college and foundation endowments, and even small investments from a few public pension funds, including one big-city firefighters' union fund. Since the fund was started in 1980, Wertheim says it has generated a 23.3% gross compound annual return to investors after expenses—and a net return of 19% after the firm takes its hefty share of the profits. In 1988, the fund earned a gross return of nearly 114%. Defying last year's bear market, it generated a 12.6% gross return. The fund is also investing in overseas deals, including transactions in which neither the acquirer nor the target is a U.S. company.

Risk arbitrage, of course, is no slam-dunk. "Risk arb hasn't always worked," explains Budge Collins. "If in 1987 and 1990 you say you invested in risk arbitrage, it looks like you took stu d pills." When the hits come, they can e brutal. Wertheim's fund dropped y nearly 17% in 1987 and 28.7% in 19 0, thanks to the collapse of bids to b y out UAL Corp., parent of United A lines. Risk arbitrage investors are b ting that the skies will be a lot frien i er in the future.

By Phillip L. Zweig in New Y

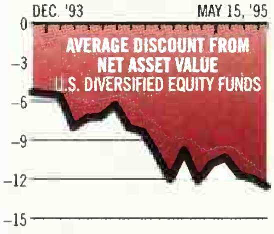
FUNDS

AN OPEN SECRET: CLOSED-END FUNDS

Bargains are plentiful. So why are investors shunning them?

The bulls seem to stampede down Wall Street every day, taking the stock market to new highs. They're galloping through the bond market, too. But there's one dark corner untouched by the thundering herd: U.S. closed-end funds. They're trading at bear-market valuations, making them some of the best bargains in the investment bazaar.

CLOSED-END DISCOUNTS ARE WIDENING



DATA: THOMAS J. HERZFELD ADVISORS INC.

Closed-end funds' problem is not their portfolios. The value of their holdings has surged this year. But closed-ends have a fixed number of shares that trade like stocks. That means, unlike mutual funds, they can change hands at prices far different from their net asset values (NAVs). When a fund trades at a price in excess of NAV, it's at a premium; when the price is below NAV, it's at a discount. In bull markets, investors bid up the shares: Discounts narrow and sometimes become premiums.

The bulls have held sway for the past six months, yet they have had no impact on discounts. Bond-fund discounts are little changed from the bear-market bottom. Equity discounts have actually widened (chart). The reason? Investors haven't shaken off 1994. That's when share prices for equity funds fell an average of 12.5%, even though NAVs lost less than half that amount. Bond-fund prices plunged 14.9%, vs. a 3.9% portfolio loss. "There's just no investor interest," sighs Thomas J. Herzfeld, whose Miami investment firm specializes in closed-ends.

When buyers are scarce is just the time bargains are bountiful (table). "These funds are about as out of favor as you can get, and many are historically very cheap," says Colin Mathews, an analyst for *Morningstar Closed-End Funds*. In buying closed-ends at a large discount, investors can win two ways if the markets rise: one from the gains in the underlying portfolio and the other from the improvement in share price.

It also helps to look for a catalyst that can eliminate the discount. For instance, the Jundt Growth Fund, at a 7.7% discount, plans to convert int a mutual fund, which will wipe out e discount. Analysts also like the Cha s Allmon Trust, a fund with a medic e track record and a 15.3% discount. P t folio manager Allmon is retiring d will likely be replaced by Liberty As t Management Co. Liberty also runs L erty All-Star Equity Fund, which n w sells at a 5.6% discount but often tra s at a slight premium.

A cut in the capital-gains tax wo ld help vintage funds such as Baker F n tress, TriContinental, and Salom n Brothers. All own stocks bought fo a fraction of their current value and h e huge unrealized gains. "One rea n these funds sell at discounts is that b y ers are factoring a tax liability," s ys Herzfeld. With a lesser tax bite, s counts should narrow.

"FLAT TAX" TALK. There's opportu y among the bond funds, too. Muni fu s have been under pressure as "flat t x" talk sweeps through Washington. B lowering rates, a flat tax would m e munis less attractive. Nonetheless, H z feld says some funds are irresisti e He bought Van Kampen Merritt Cali r nia Value Fund at a 20.1% disco t which is even larger than when Ora g County filed for bankruptcy.

Fund analyst Robert A. Young o Dean Witter Reynolds Inc. looks a similar funds that have different res s such as BlackRock Strategic Term T s 2002 and BlackRock Income Trust. e portfolio returns of both funds re around 10% so far year. Yet Term Tru up 8.8% in share p and trades at a 13 discount, while Inc Trust is up more t 14% and sells at a 5 discount. "If Inc Trust can rally, so a Term Trust," says Yo g

To be sure, there's sure thing in invest But at current lev s closed-ends come mig close.

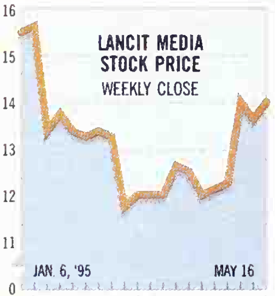
A SLEEPING BEAUTY IN KIDDIE TV

Kid stuff is a big winner these days in the movies—and in TV land. And every week, 62% of all preschoolers, according to A. C. Nielsen, watch PBS. So savvy investors have been buying into companies that excel in the fast-growing business of producing children's shows. One enterprise that has caught heavy hitters' fancy is little-known Lancit Media Productions (LNCT), a leading creator of TV programs for kids and family audiences.

PROFIT PROSPECTS 'R' THEM



EARNINGS PER SHARE
1997 Est. $1.00
1996 Est. 40¢
1995 Est. 20¢
1994 1¢
1993 -25¢

*FISCAL YEAR ENDS JUNE 30
DATA: BLOOMBERG FINANCIAL MARKETS, *RICHARD GEIST'S STRATEGIC INVESTING*

Based on Lancit's "sensational earnings prospects," Richard Geist, editor of *Richard Geist's Strategic Investing*, says the stock, currently trading at 13⅝, "could hit 30 in a year or so." That's not all. He believes Lancit is the "logical candidate for a buyout by a major media or toy company." Lancit CFO Gary Stein says they're talking with the big players in media and toys for possible strategic alliances, but there's nothing definite to announce. Lancit has already signed licensing pacts with Fisher-Price for toys, Sony for home videos, and Russ Berie for gift items.

Lancit's *The Puzzle Place*, featuring multi-ethnic puppet characters, premiered in January. Its ratings are second only to *Barney and Friends* in the PBS kids' lineup—thus outpacing *Sesame Street*. Whispers are that Lancit will soon announce deals with a national toy retailer and a department-store chain to market *Puzzle Place* products.

A second Lancit series is *Reading Rainbow*, the long-running PBS show that has won six 1995 Daytime Emmy Award nominations. Now in its 12th season, the series adapts picture books appropriate for beginning readers.

Lancit's third program, *Backyard Safari*, a weekly natural science series for kids in the early grades, is scheduled to air early in 1996.

While Geist expects 1996 to be a big year for Lancit, with estimated earnings of 40¢ a share on revenues of $35 million, he says Lancit should have a breakout in the year ending June, 1997, when productions will be up and running. By then, enough film costs will be written off that worldwide merchandising and licensing revenues will filter through relatively unimpeded to the bottom line, he figures.

Geist, who expects a 1997 net of $1 a share on revenues of $70 million, says Lancit's balance sheet is "stellar," with $10.5 million in cash and zero long-term debt. Despite threatened cutbacks at PBS, says Geist, "Lancit will see a proliferation of opportunities."

THE DEEP ALLURE OF POOL ENERGY

Don't follow the crowd. That's what adviser Charlie LaLoggia is telling the many investors chasing oil stocks. These companies are bubbling because crude prices are firming, but he thinks the shares are near their peak. Instead, LaLoggia likes Pool Energy Services (PESC), which does drilling and maintenance for oil and gas companies, mainly in Alaska, California, and the Gulf of Mexico.

What's Pool Energy's allure? Takeover prospects. Never mind that the shares, now at 9, are trading below their book value of 9½ or that Pool will, according to analysts, earn 20¢ a share in 1995—vs. a loss of 94¢ last year.

The speculation is that Nabors Industries (NBR)—an oil-and-gas equipment-and-services company—may make a run for Pool Energy, in which it already has a 6.4% stake. In a buyout, Pool Energy is worth 14 to 15 a share, figures LaLoggia. Nabors has been in an acquisitive mode for some time, according to analyst Joe Agular of Johnson Rice, an investment firm in New Orleans. Agular says Pool Energy is "attractively valued based on its healthy cash-flow."

Nabors acquired its stake in Pool Energy last June. A Pool spokesman says officials of the two companies met once after the purchase. Nabors Chairman and CEO Eugene Isenberg says he's still evaluating several altern tives, "including purchasing more P shares, making a proposal for a merg or other combination, and seeki board representation."

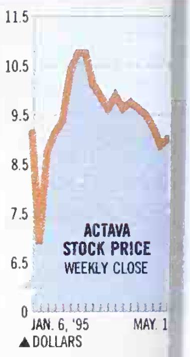
PLACING A BET ON JOHN KLUGE

What's billionaire John Kluge up these days? He's trying to g back into the media, entertainment, a telecommunications business in a l way. He had built Metromedia int giant company and then sold its asse mainly radio and TV stations, in 1984 $4.6 billion. His new company: Met media International Group, is focusi its growth efforts in Eastern Euro Asia, and the former Soviet Union.

"Metromedia International is a b on Kluge and his group—who ha consistently been the first to en markets with explosive upside pot tial," says Steve Christensen of D las Research & Trading. "We're b ting they'll be big winners again i these emerging markets for cable, r dia, and phone services."

The company results from a four-w merger of Orion Pictures (movies), MC Sterling (entertainment), Metrome International Telecommunications (ph equipment), and Actava Group (a mi conglomerate). Upon completion of t merger in July, Metromedia will be p licly traded, with Kluge as chairm Stuart Subotnick as vice-chairman, a Jack Philips as president and CEO.

THE ACTAVA ROA TO METROMEDI



DATA: BLOOMBERG FINANCIAL MAR

Investors can get in on the new Metromedia now by buying either Actava (ACT), at 9, or Orion Pictures (ORPC), at 6. Chistensen estimates that the new Metromedia, which will trade on the Big Board in July, has an intrinsic value of 30 a share.

The company has formed joint v tures with the governments in 18 co tries in Eastern Europe and the for Soviet bloc to provide phone, ca and media services. It has also sig similar agreements in two provi in China.

CHILE

A STRATEGY FOR ALL SEASONS

As Chile's "hybrid" economy dodges the Latin shock waves, it's the envy of the region

ENRIQUE SIQUEZ

Mexico's surprise peso devaluation in December sent powerful jolts through Latin America. The fragility of Argentina's economy was soon revealed, and some experts began worrying that all the nations that have opened up to free-market reforms would find themselves in trouble. But Chile, the long, thin country at the bottom of the continent, is buoyant with steadily increasing foreign reserves, falling inflation, and domestic savings that have reached East Asian proportions. "It's like having a nice house in a bad neighborhood," jokes Roberto de Andraca, the chairman of steel conglomerate CAP.

Chileans can be forgiven a little smugness. While recessions batter Mexico and Argentina, the country that started the region's market experiment two decades ago is racking up impressive gains. Gross domestic product will grow by an estimated 6% this year—as it has done, on average, for the past five years. Inflation has dropped to 8.3% annually from 27% in 1990, and Chile's trade surplus is widening. While a panicky capital flight forced drastic belt-tightening by Argentina to avoid devaluation of its peso, Chile's currency has climbed 7% against the dollar since Dec. 19 (charts, page 86E-10).

"HOUSE IN ORDER." That success is increasingly attributed to the "Chilean model." Although Chile's U.S.-educated technocrats started with University of Chicago-style radical reforms, they soon suffered a boom-and-bust in the early 1980s. In response, they gravitated to a distinctive hybrid system that guards against "hot money" flows from abroad while generating and channeling Chile's capital. As a result, the country is attracting big-ticket direct investments, vi its own companies are spreading t wings regionally. "This country has its house in order and now can take vantage of the very large mar around it," says Paolo Fresco, vice-c man of General Electric Co., which pects to double its 1994 Chilean sale $220 million, this year.

BUOYANT Billions are flowing into t Santiago bols and other capital mark

The combination of robust dom performance and do-it-yourself reg ssume this is a business venture.

Checked your bindings lately? Successful companies facing global business challenges gain confidence by knowing they are properly equipped. Which is why so many firms prefer the solid footing provided by UBS. As one of the world's largest financial institutions, backed by the strength a Triple-A credit rating provides, we are in a position to help. Drawing from a global network of investment and commercial bankers, we can design solutions to address the toughest problems. Next time you leap into a new global or domestic opportunity, take comfort in knowing you have the best bindings in the world. Union Bank of Switzerland.

As global as business itself.

Plan Your Next Meeting Via The Internet With Embassy Suites® Hotels

Embassy Suites®, along with its Promus Hotels sister brands Hampton Inn® and Homewood Suites®, is once again leading the hotel industry into new areas by providing busy executives with more flexibility and convenience when traveling or planning a meeting. Embassy Suites hotels pioneered the all-suites concept and is now among the very first to establish a presence on the information superhighway via the Internet.

Those with Mosaic, Netscape or any other World Wide Web browser can now connect to the Internet and find the Embassy Suites home page via www.promus.com/embassy.html. Hampton Inn and Homewood Suites may be reached via www.promus.com/hampton.html and www.promus.com/homewood.html respectively.

Interested guests can browse through a full hotel directory and, with a simple click, pick any property to get a complete list of hotel facilities, nearby restaurants and attractions, airport directions and more.
Later this year, interested guests should be able to view a photo of each property, obtain specific meetings facilities information and even book reservations and meetings direct on the Internet.

Merging convenience with technology is another way in which Embassy Suites continues to provide guests with Twice The Value at Twice The Hotel®.

ON A ROLL Goijberg's Madeco is one of Chile's new homegrown multinationals

HELEN HUGHES

integration means that Chile can probably sustain its success even if its bid to join the North American Free Trade Agreement stalls. Ministerial-level talks with the U.S., Canada, and Mexico on joining the NAFTA club are scheduled to start on June 7. Chile also can—and likely will—cut trade deals with Mercosur, the Southern Cone trade bloc made up of Brazil, Argentina, Uruguay, and Paraguay, and with the European Union. But the seal of economic good housekeeping represented by admission to NAFTA could remain elusive.

In Santiago, however, few seem to worry. That's because Chile's economy is being lifted by a powerful tide of direct investments generated mostly within Chile. Total i vestments in Ch rose to 28% of G last year, mainly nanced by domes savings that equal 25.4% of GDP. Ch "has done a specta ular job of increa ing domestic savings" with measur from privatizing pensions to taxing co porate dividends more than profits, sa Mexican Finance Secretary Guillerm Ortiz. "These are lessons that have be examined very carefully, not only Mexico but by many other countries.

One of Chile's lessons seems to that Latin nations have to be carel about dismantling all restrictions on ca ital flows, a notion at odds with orth dox free-market theory. Chile has shie ed itself against the shocks that afflict Mexico and Argentina by keeping tight rein on hot money. To avoid r peating the painful bust of the 198 the Chileans stipulate that foreign vestments must be kept in Chile for least a year and 30% of foreign cred must be deposited with the central ba for a year interest-free. Those a strong deterrents to short-term inve

Necessity:

Must demonstrate that better design doesn't have to cost more.

Must provide unique, all-weather play area for children.

Must be easy and affordable to maintain.

Must use natural light throughout to animate all living areas.

Must take advantage of an exceptional site, surrounded by Puget Sound and woodlands.

Must be designed for minimal environmental impact.

Must increase in value at a rate greater than the market as a whole.

Must be absolutely unforgettable in design.

AIA/THE AMERICAN INSTITUTE OF ARCHITECTS

Only an architect can understand, coordinate and translate needs and realities into something beautiful. Beauty that wil be apparent to your bottom line. For information on AIA architects in your area, call 1-800-AIA-9930.

rs—and a key difference from the rategies of Mexico and Argentina.

In another departure from free-mar- t orthodoxy, Chile's central bank inter- nes in currency markets to keep the so's exchange rate competitive against asket of the dollar, the German mark, d the yen. This "managed float" helps ep Chilean exports—from forest prod- ts to manufactured goods—competi- e in its main markets: the U.S., the ropean Union, and Japan. By con- st, Argentina's fixed peso-dollar par- and Mexico's attempt to keep its so within an exchange rate "band" sulted in overvaluation of their curren- s and huge trade deficits.

Of course, Chile also is benefiting m sheer luck—high prices for com- dity exports from fish meal to steel d wood pulp. For copper, which ac- nts for 37% of Chile's exports, the ndon market price has climbed to und $1.25 per pound, up from an av- age 87¢ in 1993.

GER ROLE. But the surge in copper nings is also a result of fast-rising duction—the payoff from Chile's ening of copper mining to foreign in- stment in stages since the mid-1970s d its creation of a stable business en- onment. State-owned companies still trol nearly half the output of the per industry, but they were overtaken last year by production coming onstream from massive investments in new mines by companies such as Australia's BHP, Britain's RTZ, and Japan's Mitsubishi. By 2000, such private investments will push Chilean output to 4.1 million tons—40% of the world's total—up from 2.6 million tons this year.

Chile also is allowing foreign interests to play a much bigger role in the sensitive telecommunications field. Last year, the government agreed to allow foreign companies to compete for shares of Chile's long-distance phone market. A price war touched off by entrants such as the U.S.'s BellSouth and Bell Atlantic has benefited Chilean users by driving rates down sharply in recent months. And at least eight foreign companies, including MCI Communications Corp. and Sprint Corp., are eyeing newly opening cable and personal-communications markets.

Helping attract such investments is

How the Chilean Model Works

IT SPURS SAVINGS BY:

- Taxing corporate dividends more than profits
- Encouraging pension savings in privately managed funds
- Running a government budget surplus and paying down public debt

IT DETERS SPECULATIVE INFLOWS BY:

- Requiring foreign investors to keep capital in Chile for one year
- Requiring deposits of 30% of foreign loans at the central bank at no interest for one year

IT KEEPS EXPORTS COMPETITIVE BY:

- Managing the peso's exchange rate to keep it price-competitive against a basket of the dollar, German mark, and yen
- Rebating the 18% value-added tax to exporters

HOW HIGH?
Privatized CTC is thriving but faces foreign competition in telecom

the political stability Chile has regained since the stormy days of Marxist President Salvador Allende in the 1970s. With a century-long democratic tradition, Chile made a smooth transition back to democracy in 1990 after 17 years of rule by military strongman Augusto Pinochet, Allende's successor. "What has changed has been the political and business climate," says John W. Lill, president of the Chilean subsidiary of Toronto-based American Barrick Resources Corp. The company is investing $500 million between now and 2000 in Chilean mining.

The probusiness climate owes much to a broad, four-party governing coalition led by President Eduardo Frei's middle-of-the-road Christian Democratic Party. "Democracy and the market are on everyone's agenda," says Andrés Velasco, a fellow at Harvard University's John F. Kennedy School of Government and former Finance Ministry chief of staff. "In some sense, no matter who governs, basic policies are not going to change very much."

It's not surprising that the Chilean model is beginning to create homegrown multinationals. One pioneer is Madeco, a conglomerate with 1994 sales of $390 million worth of copper and aluminum products ranging from aluminum-foil potato-chip bags to high-voltage cables. To broaden its base, Madeco has made a string of acquisitions in Argentina and Peru, partly financed by a $63 million issue of American Depositary Receipts in New York. "Argentina, Peru, and Chile are one big market," says Andrés Goijberg, Madeco's head of management analysis.

Supermarket chain Santa Isabel, Chile's second-largest, is also building a broad regional base. It bought two small supermarket chains in Lima in 1993 to carve off a 22% market share just when Peru's economic reforms were taking hold. It is about to open two stores in Paraguay, and it hopes to issue ADRs. "You have to grow or you'll disappear," says Santa Isabel Chairman
uardo Elberg.

In 1990, CTC, Chile's privatized t
communications company, was the
Latin American company to issue A

The world gets impatient with me.

It says, "Grow old gracefully, Hale."

It says, "Come on, three Opens is enough–

let a young guy in."

And every June, when I step up to that first tee,

it asks, "Is this the year that you take it easy, Hale?

How old are you anyway?"

And I answer, "I don't know. I don't count birthdays.

I count championships."

The favorite place for
business people to stay in San Francisco
has now
become the favorite meeting place.
Campton Place
announces significant expansion of its
meeting facilities,
creating the same executive luxury and
quiet refinement
that has become synonymous with
Campton Place.
The choice of discriminating travelers
continues to
offer the choice of exquisite meeting
accommodations,
from Penthouse Suites handling up to 25
for small
business meetings or cocktail receptions
to larger
conference boardrooms and now our
new, executive
meeting salon for over a hundred.
In total, 7 alternatives
depending on your business needs.
Campton Place.
Just steps up from Union Square and
a step up from
the usual business meeting venue.

Doing business
with graciousness still has its Place.
Campton Place.

TED BY PETER COY

ETTER ISIN THE SUN

VESTING RAISINS IS ONE griculture's great pains. fornia's Thompson Seed- grapes don't ripen until end of August, when the ther is too cool for them y on the vine. Research- ave dreamed of creating veet grape that ripens y enough to dry on the instead of in trays.

the early 1980s, U. S. culture Dept. research- n Fresno, Calif., invented chnique for doing just . They cross-pollinated less grapes—extracting tiny embryo—to create new seedless varieties. After much tinkering, USDA researcher David W. Ramming has shipped the first cuttings of his new grapes, called DOVine, for "dried-on-the-vine," and pronounced "divine." The world's first successful hybrid of two seedless grapes, they could change how raisins are harvested. Because they ripen to peak maturity 14 to 17 days earlier than Thompson grapes, shoots can be cut from the vine and left on trellises to dry in the warm breezes. Once dried, the fruit can be shaken from the canes by machines rather than hand-harvested. And the taste? "Plumper and sweeter than other raisins," Ramming declares.

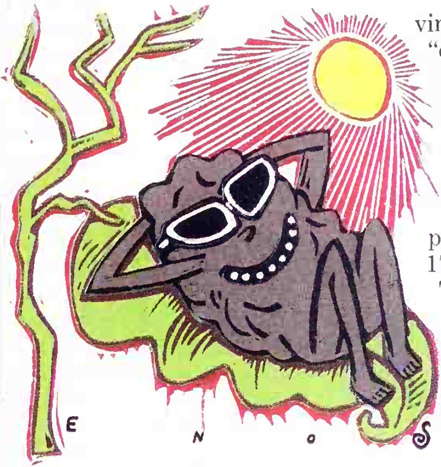

ILLUSTRATION BY RANDALL ENOS

LOGRAMS SHOW THEIR TRUE COLORS

TROIT LOVES THE IDEA OF USING HOLOGRAMS TO TRY future car designs. There's just one problem: Those ostly vehicles, seemingly suspended in three-dimen- nal space, don't look precisely the same from every rtical viewing angle. A tall engineer perceives colors shininess differently from a short engineer, who s the hologram from a different angle. Auto makers 't make decisions about a car's design if they can't n agree what it would really look like.

American Propylaea Corp., which is located in Bir- gham, Mich., thinks that it has the problem licked. the past few weeks, Hans Bjelkhagen, the vice-presi- t for research and development of the holography npany, has developed a set of color emulsions that go o the "holographic optical element"—the screen that duces the floating hologram when it's illuminated. emulsions eliminate the color shift that's responsible the variations when viewed from different vertical wing angles, Bjelkhagen says.

EARCHING THE TY-GRITTY OF LITY CONTROL

ORATE AMERICA AND National Science Foun- n are putting $9 million three years into rigor- esearch on quality im- ment. The aim is to get nd anecdotes and find hat methods dependably ve quality and overall corporate performance.

The studies resemble work that the Japanese Union of Scientists & Engineers, sponsor of the annual Deming Prize, has conducted since the 1960s, says David B. Luther, president of the American Society for Quality Control, a co-sponsor of the project along with the Total Quality Forum. Says Luther: "For the first time, we're going after no-kidding results."

IS THAT AN EARTH STATION IN YOUR POCKET?

FOR GLOBE-TROTTING EXECS, it'll soon be easier to stay in touch—even from the Sahara. This summer, Mobile Satellite Products Corp. in Hauppauge, N. Y., will unveil the Mini-Lynxx. The "anywhere" phone crams a satellite-communications earth station into a package little bigger than a laptop PC. At 10 pounds and 12 x 10 x 3 inches, it's half the heft of competing phones, MobileSat claims.

The $13,000 Mini-Lynxx stems from a collaboration between MobileSat and Israel's Rafael Development Corp., a government-industry venture formed to spin off defense secrets. Rafael adapted previously classified military antenna technology that can pick up extremely faint signals. As a result, the fold-out antenna has shrunk to only two panels, each slightly larger than a sheet of stationery. Rafael is working on a much smaller pole-type antenna that will make possible satellite phones the size of today's cellular models.

PURIFYING WATER FOR A PENNY A TON

MORE THAN TWO-THIRDS of the world's people still go outside their homes to fetch water—water that is often tainted with bacteria and other harmful micro-organisms. The World Health Organization reports that waterborne diseases such as cholera, typhoid fever, and dysentery kill more than 400 children an hour in developing countries.

Searching for an affordable remedy, researchers at Lawrence Berkeley Laboratory, an Energy Dept. lab in Berkeley, Calif., have developed an efficient ultraviolet-light system that is capable of purifying a ton of water for just 1¢. Physicist Ashok J. Gadgil estimates that a $500 unit could supply 2,200 people.

Gadgil crafted a steel box lined along the top with fluorescent tubes lacking the usual phosphor glazing that normally would absorb UV light. The lamps purify the water passing below by exposing it to ultraviolet radiation.

Water that goes in with 1,000 units of *E. coli* bacteria per milliliter comes out completely free of *E. coli*. The system is capable of churning out about 7 gallons of clean water a minute.

Because UV light does not kill giardia or cryptospiridium, intestinal parasites, Gadgil recommends using a sand filter to stop them in areas where they are a problem. Prototypes are being field-tested in India with funding from U.S. agencies and private philanthropies.

AUDIO

CAN YOU BELIEVE YOUR EARS?

In PCs, the sound may finally get as good as the picture

The search for realistic, concert-hall-quality sound has led audio equipment makers down some strange paths. Remember the quadraphonic craze of the early 1970s? Instead of two speakers, you needed four—and at least one manufacturer suggested a fifth, mounted on the ceiling. Or QSound, whose 1980s promoters proved more successful at selling stock than licenses for its three-dimensional sound?

Now, a new audio wave is gathering—and this time, the soundmeisters insist they've got it right. After a string of false starts, a half-dozen companies are trying to create the illusion of 3-D sound from just two speakers. What's driving them is 1990s-style multimedia, whose richly interactive games and educational programs need better sound than today's audio-equipped personal computers can deliver. "This technology fills that void," says Mal D. Ransom, marketing vice-president at Packard Bell Electronics Inc. in Westlake Village, Calif., the top seller of home PCs.

Since February, Packard Bell has been building 3-D sound into every multimedia PC it ships, using technology licensed from SRS Labs Inc. in Irvine, Calif. SRS—for sound retrieval system—first popped up in 1989 on top-of-the-line big-screen TVs from RCA and Sony. Hughes Aircraft Co., which invented the technology to enhance in-flight movies, sold it off in 1993 to the unit's managers. Last year, they sold 60% to Thomas C. K. Yuen, a founder of computer maker AST Research Inc. Packard Bell owns another 8%.

Other sound companies have jumped on the multimedia bandwagon, too. A humbled and restructured QSound Labs Inc. licensed its stereo-enhancement technology to Creative Labs Inc., the country's largest maker of PC sound cards, as well as to Capcom USA Inc., best known for its Street Fighter video games. A third company, Spatializer Audio Laboratories Inc., has deals with game maker Interplay Productions and chipmaker ESS Technology, and is plannin
package its 3-D audio chip as an acce

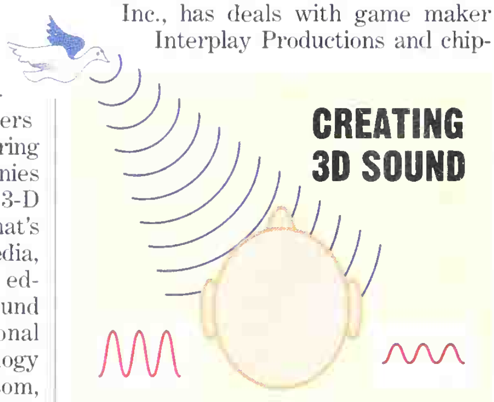
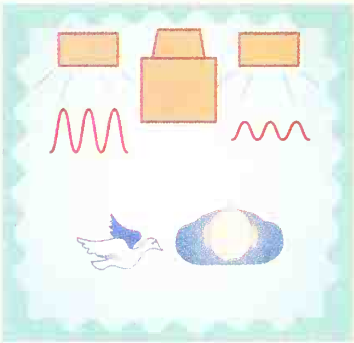
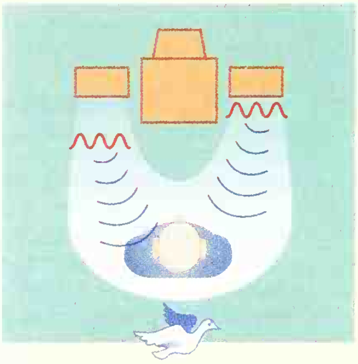
CREATING 3D SOUND



Perception of a sound's location is determined by variations in time, loudness, and frequency of the sound waves as they reach each ear.



Boosting certain frequencies that provide clues to a sound's location in the room, the SRS and Spatializer systems create the illusion of ambient sounds coming from the listener's side, instead of the front.



Varying the timing of sounds from different speakers, QSound and Spatializer systems can precisely position a sound in a specific place in the room—but only when the listener is seated in the "sweet spot."

LISA KNOUSE BRAIMAN/BW

ignal, subtracting the left channel the right, and boosts the resulting al to match the frequency curves tell the ear where sounds are com-'rom. It does the same on the left, combines the processed parts back the original stereo signal. The re-Ambient sounds on the right seem ome directly from the side, rather from the right speaker.

)atializer uses the same ambient l information—the differences be-n the left and right channels—but esses it differently. The ear can't where bass sounds originate, and e wavelengths are too short to be ced by the outer ear. So Spatializer ifies the midrange portions of the l. Then it adds short time delays, ent for each frequency, to partially l the sound the opposing ear hears. tricks the brain into thinking the l hits one ear before the other, cre-a spaciousness extending beyond tereo speakers.

TIER GAMES. QSound takes an en-different approach. It adds ef-during production, splitting mon-signals for each sound into left right components to place the l where it wants it. The company adds time delays, to bring sounds ard and even behind the listener. nd's technology produces the most ing sound effects of the three, -like stereo—the illusion is limited small "sweet spot" centered be-n the speakers.

at limitation led to QSound's earli-dio debacle. But it's not a problem multimedia world, since computer generally sit in one position: right ont of the PC. Says Perry Cook, ical director at the Center for outer Research in Music and stics at Stanford University: "Mul-ia almost guarantees that the lis-'s head is in the right place."

nost of companies is trying to du-e QSound's encoding techniques. ighest-profile customer—Creative which makes SoundBlaster sound —has its own encoding scheme to computer game sounds more re-. And startup Crystal River Engi-ng, in Palo Alto, Calif., is trying nder 3-D sound with standard sig-rocessing chips.

10 will win the multimedia sweep-s—systems that encode the sound 3-D effect, or those that derive it the existing audio signal? Com-industry analysts say the intend-ultimedia applications are still so t's impossible to tell. Either way, ers will soon get sound matching ildest new PC graphics. And stereo ever sound the same.

ONLINE SERVICES

WELCOME TO THE CY-BRARY

In the digital age, libraries face some tough questions

In the coming digital, online world, the public libraries will: (a) languish as outdated, expensive artifacts of an earlier age, or (b) adapt and thrive as key resources on the Internet and as public on-ramps to the Information Superhighway.

If you answered (b), you're in good company. Encouraged by everyone from Al Gore to Newt Gingrich, library administrators across the U.S. are determined to carve out a key role for their institutions in the digital age. In addition to ferrying local citizens into cyberspace, librarians are counting on technology to extend their patronage beyond the immediate neighborhood: Working closely with technology companies, they are digitizing collections for delivery over the Internet to local, national, and even global audiences.

The passage is hardly proving effortless. It's not clear, for instance, what level of I-way service libraries will be able to afford or be allowed to give away—channels of interactive video programming, or just text-only Internet service, for instance? Also, even if billions of taxpayer dollars were available to get all 15,872 of the nation's public libraries and branches online—which there aren't—legal issues still must be considered. Stocking reference works and lending books is one thing. Dispensing digital copies raises uncharted co
right issues. "We're moving from a
ation where libraries own books t
where all they do is lease the use
formation," says Karen Coyle, a tech
specialist in library automation at
University of California. "It's an en
ly different legal basis for the exist
of libraries." One possible solutio
brarians are lobbying for copyright
that permit limited copying by the
lic of electronic materials.

Some libraries are wasting no
getting wired. Patrons visiting an

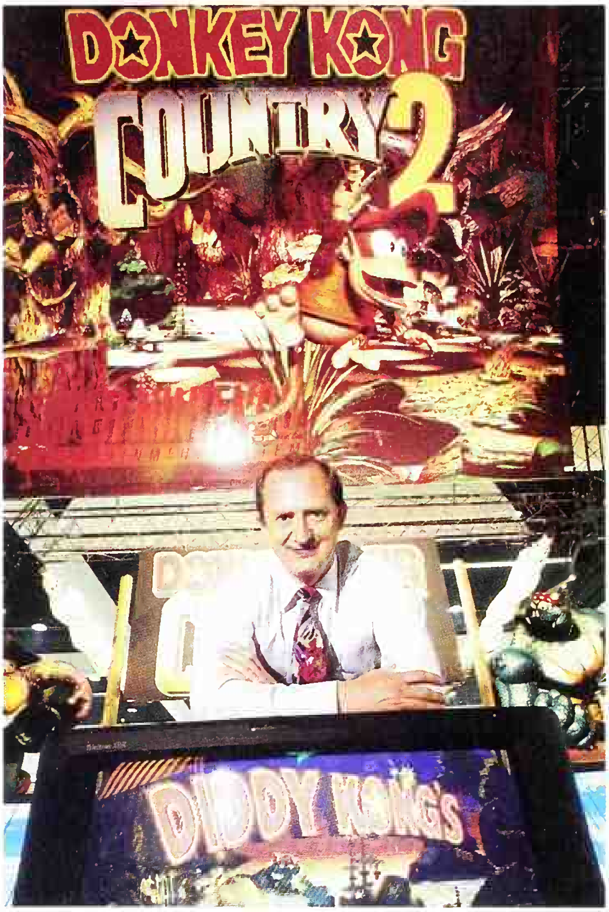
KILLER INSTINCT FOR HIRE

To keep its lead in games, Nintendo called on Britain's Rare



KING OF KONGS Rare's Chris Stamper must keep cranking out hits like Donkey Kong Country, which sold 7.4 million copies

ALAN LEVENSON

In the massive Nintendo booth at the bustling Los Angeles Electronic Entertainment Expo, "Killer Instinct" is the order of the day. Booth attendants pass out pewter pins and temporary tattoos with the logo for the violent new video game. Blondes in figure-hugging costumes pose for pictures with well-muscled hunks in "KI" fighting garb. Easily overlooked amid all the hullabaloo are two shy and softspoken Englishmen, the creators of Killer Instinct: Christopher Stamper, 36, and brother Timothy, 34, of Rare Ltd.

The Stamper brothers are on hand because they are now central characters in a new game that Nintendo Co. is playing. The No. 1 producer of video game players badly needs hot new software to keep the lead in the next generation of hardware. So in April, Nintendo plunked down an estimated $39.5 million for a 25% stake in Rare—its first investment in a video game developer outside of Japan. Nintendo is hoping that the Stampers can come up with another hit on the order of its Donkey Kong Country, a runaway bestseller last Christmas. With over 7.4 million copies sold, DKC has racked up revenues of $450 million for Nintendo, which makes and sells the game cartridges. Rare has netted some $32 million in royalties.

"FELL IN LOVE." Not bad, considering Rare's simple beginnings. In 1981, Chris Stamper, halfway to a degree in electronics and physics, said farewell to Loughborough University of Technology in Leicestershire. He was spending more and more time in the computer lab and decided to "jack it in" and pursue computer programming on his own. He started on a computer that he made with an 8-bit processor while at the university. "The weather in the UK is not always ideal to be out in," said Chris. "The computer can sometimes be like a friend. I fell in love." He soon persuaded brothers Tim and Stephen, now 31, to join him.

They launched a company, Ultimate Play the Game, in the cramped four-room row house next door to their parents' corner news shop. First, they developed games for the home computers then sweeping Britain—Sinclair ZX Spectrums and Commodore 64s. But there was no way to keep people from pirating their work, so they gravitated to cartridge-based video games, which can't be easily copied. The change in tactics also led to an identity change. The name Rare was chosen the same way they decide upon titles for games: sitting down with a thesaurus until they hit on something that sounds good.

When Chris first asked Nintendo for the programming codes needed to write Nintendo games, the Japanese giant turned him away. At the time—1983—the company was riding high on titles produced in-house such as the original Mario Bros. Undeterred, Stamper spent six months cracking the Nintendo code. At his next meeting with Nintendo, he arrived carrying a skiing game called Slalom under his arm. This time his reception was decidedly warmer. Nintendo bought the game for an undisclosed amount and went on to sell about 500,000 units.

In the intervening years, Rare has created over 60 games, including R. C. Pro-Am Racing and Cobra Triangle, for the Nintendo system as well as titles for other game platforms. Today, Rare employs 84 people and is headquartered in a dilapidated 280-year-old farmhouse in Twycross, Warwickshire, 20 miles northeast of Birmingham. The brothers renovated the rustic office room by room as they needed the space to park progammers and their Silicon Graphics Inc. workstations. The enterprise remains very much a family business, employing six additional members of the extended family and assorted university friends.

Video Games: A British Export

ARGONAUT SOFTWARE	StarFox	3.8
RARE	Donkey Kong Country	7.4
	R.C. Pro-Am Racing	2.3

DATA: COMPANY REPORTS, BUSINESS WEEK

HIGH-END HEADACHES. Although the Stamper brothers now sit atop a company valued at approximately $158 million, they remain focused on their mission. Tim, the managing director, still works on a team as a graphic designer and created several of the backgrounds for Donkey Kong Country. Youngest brother Stephen, described as "the quiet one," is director of operations and oversees the more practical issues of the company. His current chore: Planning a new headquarters. Chris, chairman and technical director, still writes code and is currently working on a hush-hush project for 1996.

The brothers almost never give interviews and live a pretty low-profile life. Tim is married to Carole, Rare's financial director, and Chris recently became engaged. An admitted workaholic, Rare's top man says that the brothers will continue to put in 15-hour days. "We feel that a 9-to-5 work ethic produces a 9-to-5-type of game," says the senior Stamper.

The Nintendo deal is certain to bring big changes for Rare. For starters, the company is about to triple to about 250 employees so it can come up with the complex programming for the next generation of games. There's a rush to produce a blockbuster for Nintendo because the competition is gaining: No. 2 game maker Sega of America Inc., which has 46.5% of the 16-bit market, compared with Nintendo's 52.5% share, has already introduced its next-generation player, called Saturn. And Sony Corp. has plunged into the video game arena with the new Sony PlayStation, a high-end CD-ROM-based system. Nintendo has disclosed that it will not be able to produce its long-awaited Ultra-64 system until next spring, missing the vital Christmas selling season, when 70% of all video game machines are bought.

Nintendo can make up for a late start if Rare is able to come through. "It's going to take some time to fully exploit the Ultra 64 hardware capabilities," says Howard C. Lincoln, chairman of Nintendo of America Inc. "I'm sure these talented people are the ones to do it," he says.

Nintendo isn't the only one to have discovered top-flight software developers in Britain. According to London-based Durlacher & Co., fully 40% of the world's video games are written in Britain. And in the past two years, half of Britain's game-software companies have been acquired by or forged deals with major hardware makers and publishers. "The giants have now recognized the value of the developers," says Durlacher analyst Geoffrey Chamberlain. Indeed, with the potential to crank out crowd-pleasers such as Donkey Kong Country, game developers are being treated like rock stars. Tim Steer, an analyst at Smith New Court Securities Ltd., has even labeled the Stamper brothers the "new Beatles." If that's so, then Nintendo may have just given them their ticket to ride.

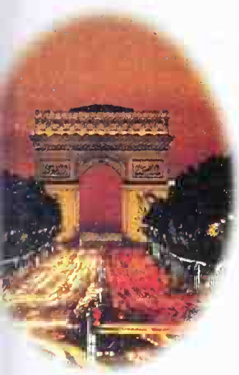
First admired on
e Champs Elysées,
ey're now destined
for Wall Street.

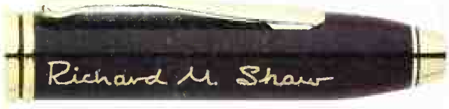


The Cross Townsend Collection originally debuted in Europe.

Europeans have always appreciated fine writing. So it comes as no surprise that the new Cross Townsend Collection was first seen in he cafés of Paris. In the board ooms of Geneva. Over tea in an nglish barrister's office. In fact, Cross Townsend writing instruments were originally designed for the discriminating European market. Each offers a unique combination of Art Deco tyling and advanced writing echnology. Each is based on a Cross design first seen in the 1930s. The collection offers a choice of four writing instrument models: fountain pens, rolling ball pens, ball-point pens, and 0.5mm pencils. All are handcrafted for precise operation and available in a selection of luxurious finishes. With their unquestioned lifetime mechanical guarantee, Cross Townsend writing instruments are certain to be treasured for generations. From $55 to $275.

Exquisite design ccents, classic Cross styling

Jeweler's attention to detail



Townsend writing instruments may be engraved with an exact reproduction of your signature. Inquire for details at finer writing instrument stores.

The Cross Townsend Collection.
A dramatic wide-diameter
interpretation of the classic
Cross silhouette.

The Cross Townsend Collection. Now awaiting your review at fine gift stores and stationers nationwide.

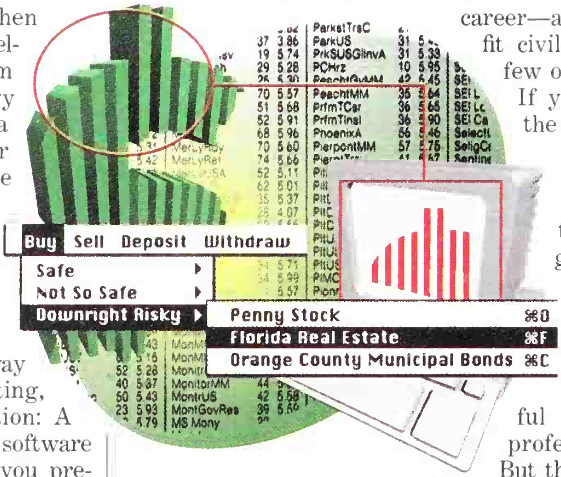
SET YOURSELF FREE FROM FINANCIAL-PLANNING PHOBIA

HOME SOFTWARE
FINANCIAL



Time was when trying to develop a long-term financial strategy meant dealing with a professional planner who might charge steep fees or steer you toward those investment products that would pay big commissions. But thanks to the revolution that's under way in personal computing, there's another option: A proliferation of new software programs can help you prepare for retirement, fund your children's education, and reach other major financial goals.

Although making even the slightest change in the underlying assumptions about inflation, tax rates, investment returns, and income can cause dramatic swings in the projections, these programs can help you assess whether you're headed in the right direction—and possibly spare you a nasty surprise on the day of reckoning. And while none of the programs attempts to select specific investments, some of them offer asset-allocation advice based on your age and risk tolerance.

PULL-DOWN MENUS. If you're one of the many people who have lingering phobias about finances and computers, Quicken Financial Planner may relieve you of both these fears. From Intuit, the maker of the popular Quicken home-budgeting program, the Financial Planner provides generous help screens, tutorials from noted financial columnist Jane Bryant Quinn, and colorful charts and graphs to demystify the whole process. And while some programs on the market give only a lump-sum estimate of how much your defined goals are going to cost and how much savings you'll have, Quicken provides a detailed grid showing year-by-year projections of your expected income, cash flow, and expenses—from now until your 125th birthday, if you think you'll live so long.

What's more, Quicken is among the surprisingly few programs that allow you to distinguish each spouse's income and retirement benefits and to project periodic changes for either person. This capability enables you to estimate the overall effect if, say, one spouse quits work for several years—to stay home with a child or return to school—and then reenters the workforce at a sharply higher or lower salary. By contrast, many lower-cost programs force users to enter the combined household income and the average annual change they expect over the course of their career—a design that might fit civil-service types, but few others.

If you can do without the coddling, Price Waterhouse has the Retirement Planning System and two other programs—for education and survivor income (covering insurance and estate matters)—that are as powerful as anything a professional might use. But the Price Waterhouse offerings are more like computational tools than instructional programs. The programs forgo snazzy graphics. After you enter some preliminary data, each program gives you summary screens that allow you to change, say, the projected inflation rate and instantly see the effect on the rest of the equation. Other titles, including retirement programs from Fidelity Investments and T. Rowe Price Associates, require so much flipping back and forth between screens that it might discourage you from running too many "what if" scenarios.

While some titles such as Fidelity Retirement Planning Thinkware rely merely on actuarial data for key determinants such as life expectancy, Price Waterhouse—to its credit—provides additi explanations for many of assumptions that it use determine whether you'l able to meet your g While the Fidelity prog operates on the premise you'll draw down your ings principal during re ment, Price Waterhouse you calculate the effect dipping into principal vs. skimming off the interest accrues.

LEASE OR BUY? Price Wa house is no longer the accounting firm that has own software: Ernst Young recently began ma keting a comprehensive p ning program, Prosper, w is largely a clone of Re Online's WealthBuilder, ware that has been on market for several ye (Prosper includes a few ditional calculators, inclu one for 401(k) plans, ar doesn't offer any direct cess to an online broke for electronic trading—u WealthBuilder.) PROGRAM/PUBLISHER	STREET PRICE	COMMENTS
FIDELITY RETIREMENT PLANNING THINKWARE FIDELITY INVESTMENTS	$15	Value is largely educational, showing virtues of saving early. Little flexibility to override assumptions on life expectancy, Social Security, etc.
JONATHAN POND'S PERSONAL FINANCIAL PLANNER VERTIGO DEVELOPMENT	$40 $50 CD-ROM	More an electronic book than a computational tool. 33 worksheets and quizzes in 235-page primer.
PRICE WATERHOUSE RETIREMENT PLANNING SYSTEM PRICE WATERHOUSE	$45	Also offers $45 education and survivor income programs, and $15 "lite" versions of retirement and education.
QUICKEN FINANCIAL PLANNER INTUIT	$40	Lets user distinguish each spouse's income and retirement benefits, and to project periodic changes.
QUICKEN PARENTS' GUIDE TO MONEY INTUIT	$30 CD-ROM	An electronic book that covers such topics as child-care costs, insurance needs, and family budgeting.
WEALTHBUILDER (a.k.a. ERNST & YOUNG'S PROSPER) REALITY ONLINE	$100	Strong portfolio-management capabilities. Includes Reuters Money Network, a $10 to $25 per month online service.

DATA: BUSINESS WEEK

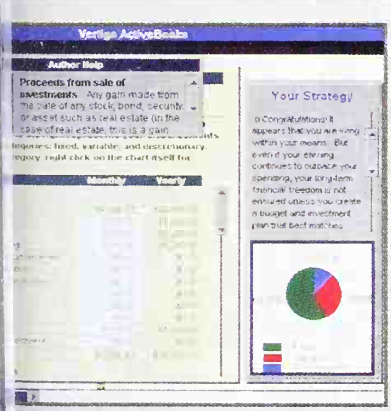
books interface, which combines distinct text with interactive worksheets and video clips into what it calls "electronic books."

But most of these programs come up short: The reading content is thin, the worksheets aren't as robust as in other programs, and the software lacks easy menus and strong hypertext capabilities that would let you jump around quickly among topics. The weakest program is Parents' Guide, which projects child-care costs by "regional averages"—in effect, giving the same estimate for residents of affluent McLean, Va., as for those of rural Culpepper, Va.

RISK VS. REWARD. Also disappointing are the low-cost retirement programs offered by three of the large mutual-fund families: Fidelity, Vanguard, and T. Rowe Price. The developers of each have cut enough corners—perhaps aiming to keep prices below $20—that the programs provide only a snapshot, rather than a detailed portrait, of your retirement prospects. The Fidelity program, for example, ignores the impact of taxes altogether in projecting the savings you'll need. Each program does include a soft sell for its family of funds, although mercifully at the end.

The best of the three: Vanguard, which includes an impressive asset-allocation section that shows the risk-reward trade-off between stocks and bonds. It lets you see how portfolios with different mixes of stocks and bonds performed all the way back to 1926.

Still, all of the mutual-fund programs do provide an educational service, showing the virtues of saving early. And when it comes to financial planning for major life events, you can't have too much information—and you can't start too soon. *Dean Foust*



Proceeds from sale of investments Any gain made from the sale of any stock, bond, security, or asset such as real estate (in the case of real estate, this is a gain

Congratulations! It appears that you are living within your means. But even if your earning continues to outpace your spending, your long-term financial freedom is not ensured unless you create a budget and investment plan that best matches

Your allocation among investment types is important, but so is your choice of specific investments. Allocating your assets properly may improve your chances of doing well, but it doesn't guarantee against losing money. Here's how your suggested portfolio compares to some others.

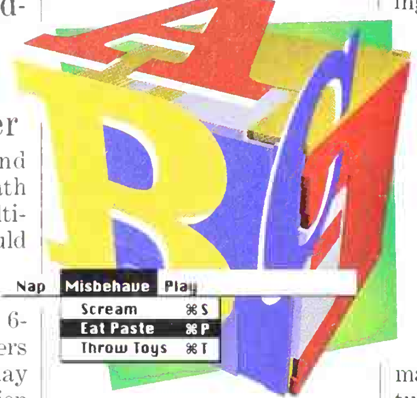
Moderate Growth Portfolio:

Stock investments can help protect against inflation, but assets may fluctuate in value, especially in the short run.

FIDELITY THINKWARE

- A program whose value is more educational than computational
- Soft sell for Fidelity funds at the end
- No allowance for the effect of taxes

A CHILD'S GARDEN OF SOFTWARE



I enjoyed being a toddler–from what I can recall. But if I had it to do all over again, I would kick and scream and hold my breath until my parents got a multimedia computer that could run the newest preschool software.

For parents of 2- to 6-year-olds, this software offers a form of educational play that is an invaluable addition to Tonka trucks and Barbie dolls. Most programs are remarkably creative and entertaining. Kids as young as 2 love to sit on their parents' laps and watch, while older kids become mesmerized by the things they can do. After reviewing several dozen products, I've picked some favorites. Most cost about $40, and some work on both Windows and Macintosh systems.

FAMILY VALUES. Why Do We Have To? offers an amusing look at rules kids despise, such as "clean your room" and "share your toys." Animated cartoon characters, led by Lester Lion, start out playing in a clubhouse without using rules—and end up fighting and deciding rules are worthwhile after all.

Featuring a family motif, Fisher-Price's Dream Doll House is one of the few programs aimed at girls, although my 2-year-old son cried when I dragged him away. Each room has toys and figures that become animated when you click on them, such as a vacuum that cleans up messes.

Examples of preschool computing at its best are reference books previously inaccessible to young children. One is My First Encyclopedia. Its central image is a giant "tree of learning" with lots of objects on its branches representing topics such as animals or anatomy. Clicking on an object triggers a video of a kid explaining the meaning of a word. The main drawback: You can't simply type in a word and get a definition.

TINY TUNES. Two worthwhile early-reading and -writing programs are Fisher-Price's ABC's and Fisher-Price's 1-2-3's. The ABC's program features a "jungle jukebox," which plays a little song about each letter. It also provides simple games, such as matching a letter with a picture. Kids have to find coins hidden in a café where the game takes place—then use the coins to start the jukebox. The 1-2-3 game uses animated "counting critters" to help kids learn numbers up to 10 in such settings as a snack shop.

HOME SOFTWARE
PRESCHOOL

The most bizarre program has to be Bug Adventure, which is filled with zany videos of real bugs. There's a shot of a praying mantis catching a spider, and—this was a first for me—a spider catching and eating a fish. The subjects are great, but video quality could be better.

Popular picture book a often translated into com er games, and the newe re volves around illust Richard Scarry's *How T Work in Busy Town.* I kids interact with chara and objects from the while they listen to a n tor describe the action can also build a tr though this task takes coordination. Several big titles will be hittin market pretty soon. An version of *Madeline* has tacular artwork. And H ton-Mifflin will shortly leasing CD-ROM versio *Curious George* and *Th lar Express.*

Fair warning before ing out to buy these grams: Most require mous computer p including at least a 48 Some need 8 megaby random-access memor updated video drivers they ca tricky t stall. A of the grams I played either my 486 PC to crash quired time-consuming te ing before they would Before getting your ki cited about a program, up and running first. T become captivated fro start—and learn som as well. *Geoffrey*

JAPANESE FIRM agreed to buy the huge Comdex computer trade show and related properties for $800 million from Sheldon Adelson's Interface Group. The price surprised some analysts, but those based in Tokyo praised the move. The sale would be one of the biggest recent acquisitions in the U.S. by a Japanese company.

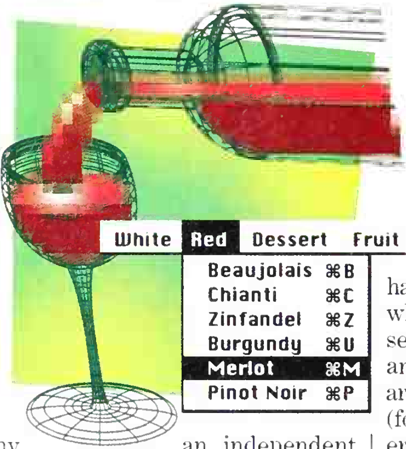
A MULTIMEDIA PC, A CORKSCREW, AND THOU



How many times does it happen? You're in a fancy restaurant trying to entertain a client or impress a date. At first, things are going swimmingly, but then the dreaded moment arrives. A sommelier takes your order and spoils your composure when you can't distinguish a Cabernet from a Chardonnay.

Lots of people, even many who enjoy drinking wine, feel stupid when it comes to choosing an appropriate bottle. After all, many oenophiles have a deserved reputation for being snooty, and many wine books are rather dry. Moreover not everyone can attend wine tastings.

These days people equipped with multimedia personal computers can run their own tastings. Microsoft recently uncorked the Microsoft Wine Guide on CD-ROM, a splendid introduction containing engaging videos with connoisseur Oz Clarke. *Food&Wine*'s Wine Tasting disk from Times Mirror Multimedia serves up its own expert in Steve Olson, an independent wine consultant. Wines of the World from Multicom Publishing includes recommendations from Ronn Wiegand, editor of *Restaurant Wine* newsletter.

Microsoft's simple-to-use disk is the classiest of the bunch. When you want to launch a particular video, you just click on one of the small, circular pictures of Clarke that pops up on the screen. In a segment about the appearance of wine, Clarke tells you how color serves as an indicator of a wine's age and taste. Clarke also takes you on a tour of 18 wines ranging from French Pinot Noir to Australian Shiraz.

Microsoft's CD-ROM includes a strong section on reading wine labels. You can click on different portions of 31 labels for an explanation of certain terms. There's also a 6,000-entry wine database, which you can search by any combination of region, grape variety, star rating (from Clarke and other experts), and food match. One flaw: The CD-ROM I tested crashed a number of times for no apparent reason.

TASTER'S CHOICE. In the *Food&Wine* disk, Olson has selected (and tells you where to buy) 48 wines representing an array of varietals and growing regions. These are grouped into eight flights (four reds, four whites). Users can rate such variables as brightness and color, then compare their benchmarks to Olson's. There is also a taster's-profile questionnaire. After you answer such questions as "Do you like the taste of fresh fruit, pound cake, or a hot fudge sundae?" Olson suggests wines you might enjoy.

HOME SOFTWARE
WINE

However, the *Food&Wine* disk was riddled with sloppy defects. It moved along at a snail's pace on my 486 PC, with badly out-of-sync videos. The "g" in "Wine Tasting" was dropped when Windows created a program group with the software's name.

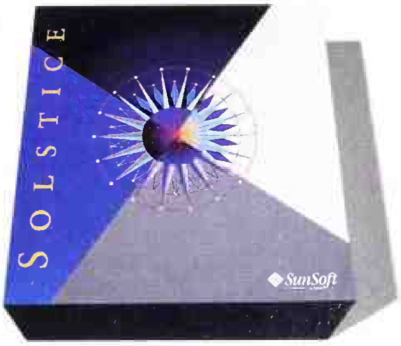
The Bigger.

The Better.



SOLSTICE
SunSoft

Introducing Solstice™. It's the single solution for managing all your systems and your whole network, too. No matter how big, gnarly, or heterogeneous the whole thing gets. Unlike the competition, Solstice gives you fully-integrated system and network management. From PCs to routers all the way to the data center. And Solstice is fully scalable, from a few nodes up to tens of thousands worldwide. It works with your existing hardware and software, which is just one way it lowers your operating costs. And best of all, Solstice actually exists. Right now. Find out more. Call 1-800-SUNSOFT, or see us on the Internet at http://www.sun.com/sunsoft/ And do it soon. Before the whole enterprise gets the better of you.

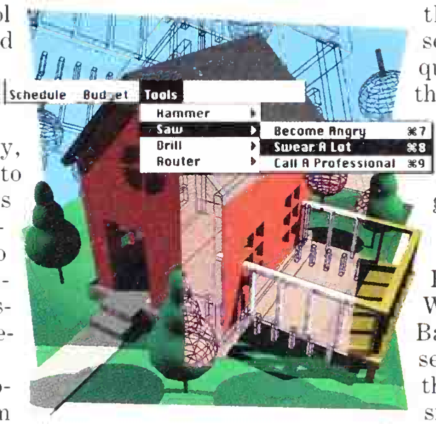
HOME SOFTWARE DO-IT-YOURSELF

USING A MOUSE TO FIX YOUR HOUSE

I've never been good with my hands, especially when it comes to building or repairing things. In fact, every time I face a home repair task, I wish I had paid closer attention to my high school shop teacher who warned that one day, I would regret not understanding the differences in nail weights. Fortunately, there's still hope. Thanks to CD-ROMs, do-it-yourselfers of all kinds—from 10-thumb wonders like me to veteran weekend carpenters—can find valuable assistance for home improvement chores.

LEAKY FAUCETS. Neophytes can choose from plenty of electronic primers, which are basically digitized versions of how-to books. However, CD-ROMs, with their massive storage space, have it over books in that they can complement written material with videos and animation that show repair procedures step-by-step.

The best of the lot is The Home Repair Encyclopedia from Books That Work. The program covers situations most homeowners are likely to face, such as how to fix a leaky faucet. Although the software relies more on simple animation and narration instead of video, the instructions are concise and easy to follow. Available only for IBM-compatible PCs running Windows, the disk also features money-saving advice, such as setting the hot-water heater at 120 degrees—hot enough for long showers without wasting energy.



Another program that tries the one-stop approach is Computer Associates International's $45 Simply House. Unfortunately, I found it somewhat difficult to navigate. Rather than relying on a traditional menu, you work with a graphic of a house. To get to the how-to advice, you click on an object, and after a brief animation, the program asks if you want more information on related topics. The animations are silly and get in the way of obtaining information quickly. For example, when you click on an exterior window, King Kong looks through the panes. A way around is to do a keyword search, which may or may not find the appropriate information. In fact, most of the space on the CD-ROM seems to be used for the quirky animations rather than how-to advice.

PAPER VIEW. For more experienced tinkerers, there are programs geared toward specific projects. One of my favorites in this class is IVI Publishing's Hometime Weekend Home Projects. Based on the *Hometime* series on public television, the CD-ROM features extensive use of clips from the show. The disk covers more than 60 weekend jobs such as hanging wallpaper, installing kitchen cabinets, and building a deck.

What's available for the seasoned craftsperson who doesn't need hand-holding? How about pure computer-aided design (CAD)? As any architect can attest, well-designed plans are the key to successful projects. One of the easiest programs to use is Broderbund's 3D Home Architect, available on fl disks and CD-ROMs. To dr mock-up of a room, you ply click and hold the m to "drag" the walls into proper positions. The gram has more than 200 mon pieces of furniture fixtures 50 sa floor plan if you w to see what a fireplace i den would look like, the ware can put one in draft and then take you virtual tour through the room. The CD-ROM add articles from *Amer HomeStyle* magazine on home and remodeling de as well as 50 video clips *The Home Pro*, a show on The Learning Chann ble TV network.

Such CAD capabilities just limited to inter Books That Work's 3D scape offers the same vanced design assistan gardeners. The $50 CI comes with a searchable base of more than 400 and plants to help plan choose suitable gree What's more, the soft can "time-lapse" lands to show how they woul as plants mature. The gram is even smart e to predict how shadow fall. Such programs mig spire even me to buy a el or a saw and see kind of do-it-myself proj can develop around house.

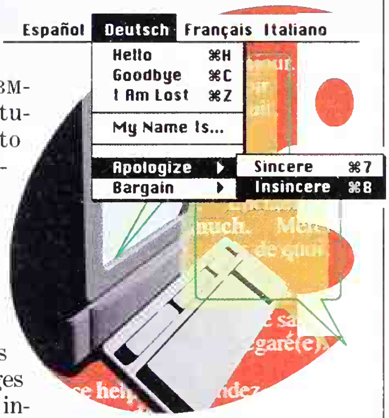
nternational. Students
ear proper pronuncia-
or click on a word to have a look at its meaning.

You can also test your accent. Most programs let you record (with a microphone) and play back your voice in response to drills, although the practice may be only as good as your untrained ear.



The TriplePlayPlus! programs from Syracuse Language Systems—available in French, German, Spanish, English, and, in June, Hebrew—come with mikes and employ automatic speech-recognition technology licensed from Dragon Systems. Within limits, that means the program can detect a faulty accent or slower-than-normal rate of speech. Audio cues let you know whether you got it right.

TriplePlayPlus! is built around a series of games and comic strips with dialogue, broken out by level of difficulty and segregated by subject (food, numbers, etc.). Students can choose aural-comprehension games that demonstrate how the language should sound, games that teach you to read, and contests that use speech recognition to get you to use your voice. In one entry-level game, Concentration, pupils are shown pictures of items arranged in a grid. After studying the location of the items and practicing vocabulary, the items are covered up and students are asked in the foreign language to find them again from memory.

TICKING CLOCK. Those who want to immerse themselves fully in a language—with no English—can try the $139 Berlitz Think & Talk programs from HyperGlot Software in French, German, Italian, and Spanish. The series combines a CD-ROM disk with up to nine audio compact disks. Think & Talk offers 50 simple five- to seven-minute scenes, using color illustrations with dialogue and sound effects such as a ticking clock.

Berlitz also collaborated on the Berlitz Live! series in Spanish and Japanese from Sierra On-Line, handsome programs aimed at familiarizing travelers with foreign customs and language. The Spanish version is punctuated with delightful music and contains animated sequences with dialogue. You can repeat the scenes and take over the dialogue for a character. A main menu leads to a dozen sections on such areas as grammar, hotels, and shopping. One nuisance: the trivial factoids that popped up on the screen each time I clicked to move elsewhere ("American hot dogs and hamburgers are increasingly popular in Mexico").

The Learn To Speak French and Learn To Speak Spanish programs from Learning Company and HyperGlot are also well-suited for travelers. The French version begins with tiny videos of the Eiffel Tower, the Louvre, and other sites, and is divided into 30 chapters on subjects such as taking a train. The "at the butcher shop" chapter begins with a video of the *boucherie*, takes you to a vocabulary page where you can click on terms to get definitions, then tests you in a word drill. So perhaps there's hope for my French after all, *n'est-ce pas?*

Edward Baig

HE WEEK AHEAD

MEETING

y, May 23 ▶ The Federal Reserve's
Open Market Committee will prob-
ep monetary policy on hold at their
g. That's the consensus view of
iists surveyed by MMS International,
The McGraw-Hill Companies. That
that the federal funds rate will
at 6%. The Fed has not raised rates
eb. 1. And given the broad evidence
e economy is slowing, monetary poli-
d remain on hold until at least fall.

LE GOODS ORDERS

sday, May 24, 8:30 a.m. ▶ New
taken by durable-goods manufactur-
bably fell by 0.5% in April, according to the median forecast of the MMS survey. That would reverse the 0.5% advance in orders in March. The April decline is suggested by the steep 0.8% drop in durable-goods output already reported. Most of the weakness is concentrated in motor vehicles. The backlog of unfilled orders was probably flat after increasing 0.5% in both February and March.

UNEMPLOYMENT CLAIMS

Thursday, May 25, 8:30 a.m. ▶ New claims for state unemployment insurance benefits likely fell to an annual rate of 350,000 for the week ended May 20. Filings took a surprise jump at the end of April, rising to 371,000. And they remained at 365,000 for the week of May 6. The four-week moving average of jobless claims is hovering near 360,000—a very high level given the solid growth in the economy and an unemployment rate below 6%.

EXISTING HOME SALES

Thursday, May 25, 8:45 a.m. ▶ Sales of existing homes were probably little changed in April after rising 5.8% in March, to an annual rate of 3.62 million. The bond rally has pushed down fixed mortgage rates to below 8% in some areas. Those cheaper loans have meant a rush of buyers who otherwise could not afford a home. Still, homebuying in this business cycle probably peaked in 1994.

Index to Companies

This index gives the starting page for a story or feature with a significant reference to a company. Most subsidiaries are indexed under their own names. Companies listed only in tables are not included

THE BUDGET: SEIZE THE DAY

At last. After nearly two decades of profligate living and failed promises, Washington is showing signs of fiscal discipline. The stunning rally in the bond and stock markets partly reflects a growing belief that serious efforts are under way to bring the federal budget under control by the year 2002.

Bitter controversy swirls on Capitol Hill over the right approach. The best road map so far is the plan put forward by Senator Pete V. Domenici (R-N. M.), who rightly defers any tax cuts until the budget is balanced. Conservative House Democrats are also proposing a fiscal plan that doesn't include tax cuts. In sharp contrast, the plan devised by Representative John R. Kasich (R-Ohio) has some unacceptable spending cuts to preserve about $350 billion in tax reductions. Sadly, the White House is a no-show even though President Clinton fought courageously, and at great political cost, during the critical first round of deficit slashing in 1993.

Clinton is making as big a mistake as the House Republicans. He has the power to nudge a congressional majority toward a genuine deficit-reduction blueprint modeled on Domenici's plan—with some changes, to be sure. At the moment, the proposed spending cuts go too far in hammering the poor, and there isn't enough equality of sacrifice. For instance, the earned income tax credit, an aid to the working poor, is targeted to become less generous, while corporate tax subsidies remain essentially unscathed.

Proposals to abolish the Commerce and Energy Depts. look like a wrong turn, too. Yes, Commerce is an unwieldy dinosaur. However, considering the new world of global competition, it would be better to radically downsize Commerce. A stripped-down, renamed International Trade Dept. could also consolidate under one roof 32 different trade and export agencies now scattered around Washington. Unrelated Commerce functions, such as the National Weather Service, could be privatized.

The Energy Dept., much like Commerce, is a b
cratic hodgepodge. Yet getting rid of the departmen
out finding a place for many of its functions is wrong.
ar waste sites must be cleaned up and nuclear bomb

LESSONS FROM GRACE

Intrigue. Nepotism. Private investigators. Allegations of financial and sexual impropriety. A vicious power struggle. The drama at W. R. Grace & Co. unfolds like a John Grisham novel. Yet the story is all too real, and it vividly illustrates what can happen when a corporate board falls down on the job. Corporate America should carefully heed its two main lessons:

A chairman is not a dictator: J. Peter Grace, who died of cancer on Apr. 19, wielded far too much power for far too long at the conglomerate he had run since 1945. Worse, with a minuscule stake in the company, he had little incentive to align his interests with those of shareholders.

Directors should be independent: Most of the comp
board members were tightly linked to Peter Grace
juicy consulting contracts, investments, and family tie
wonder they failed to exercise independent judgmen
half of shareholders.

Still, there were heroes at Grace. Unsung and u

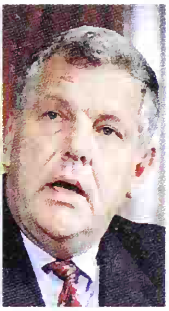
FAMILY VALUES

BILL TO RUPERT: WATCH IT, MATE

MURDOCH: *Gets earful*



BENNETT: *Irate dad*

EX-EDUCATION SECRETARY William J. Bennett has attacked Time Warner for selling and promoting rap music with violent lyrics. Now, Bennett may move on to a new target: fellow conservative Rupert Murdoch and his Fox Broadcasting network.

Bennett's ire stems from a Fox programming incident earlier this year. He was with his 11-year-old son when a "trashy" promo for *Beverly Hills 90210* flashed on the screen. "Damn. I was watching a football game with my kid, and I gotta see this crud?" griped Bennett. So he called Murdoch confidant Irwin Stelzer, an American Enterprise Institute economist, which led to an April phone talk between Murdoch and Bennett. "I said to him: 'You've got real garbage on this network, and you should take it off,'" recalls Bennett.

Murdoch, who had seen the promo, told Bennett he had already banned such sizzling promos from sports programs. As for cleaning up the rest of the network, Murdoch simply said he would "think about it," Bennett says. Not mollified, Bennett informed Murdoch about his then-planned attack on Time Warner—and told him Fox might be next. Officials at Fox had no comment. *Mark Lewyn*

SOFTWARE HARDBALL

WELCOME BACK TO THE JUNGLE, INTUIT

Quicken
CD-ROM DELUXE EDITION
for Windows
ON GUARD: *Dueling apps*

HOW QUICKLY FRIEND CAN turn to foe. Intuit, still reeling from the collapsed $2 billion merger deal with Microsoft, may find its flagship program, Quicken, under attack. From whom? Microsoft.

On Aug. 24, Microsoft will launch a revamped version of Microsoft Money for Windows 95. That's the personal-finance program Microsoft offered to Novell to quell the Justice Dept.'s fears of lack of market competition. People who saw a rough demonstration of the new version say Money will be very easy for first-time users. A much improved Money would pose a strong threat to Quicken, especially if Windows 95 lives up to its billing.

Meanwhile, during the six-month negotiations with Intuit, Microsoft managed to hire away a top Intuit sales guy, Stephen Schiro, now vice-president of Microsoft's End User Customer Unit.

Intuit CEO Scott Cook is at a slight loss to describe the situation he's in: "When we announced the deal, everyone was saying 'Congratulations.' Now that the deal is off, people are saying 'Congratulations.'" *Paul Eng*

TALK SHOW "In the future, we may wait a week or two before we decide to do something like this again."

—Microsoft CEO William H. Gates, after ending his attempt to take over Intuit

THE DEAL MILL

SLOW LOCOMOTION AT MORRISON KNUDSE

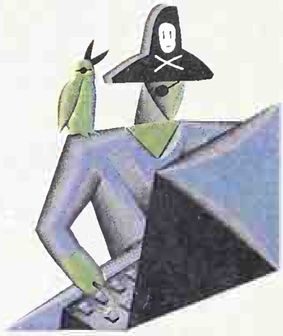
ONE OF MK RAIL'S RUMBLERS: *What's holding up the sal*

OF LATE, MORRISON KNUDSEN has been struggling. Yet the engineering outfit seems to be dragging its feet in selling a prized asset: a 65% share of MK Rail, which makes locomotives and components.

The stake, with a market value of $70 million, was put on the block in March to raise needed cash. Yet a potential buyer says he's getting nowhere. "I've made it very clear we're interested, but we've not been able to get any positive response from Morrison Knudsen, MK Rail, or its investment bankers," says Thomas M. Begel, chairman of Johnsto America Industries, a rai manufacturer.

His frustration is app ently shared by some bo members at the parent co pany. A source close to board says the sales proc is being slowed by MK R failure to provide a full fin cial picture. It delayed issu results for 1994 and the fi quarter of 1995, but expe losses in both periods. A Morrison Knudsen spokesm says: "We are continuing communicate with MK Rai our mutual efforts to fin buyer." *Richard Melc*

THE LIST I-WAY ROBBERY



Software producers lost $15 billion in 1994 from illegal copying. The U.S. had the lowest rate but the biggest losses. Virtually all of the software in use in China and Indonesia among others, is pirated.

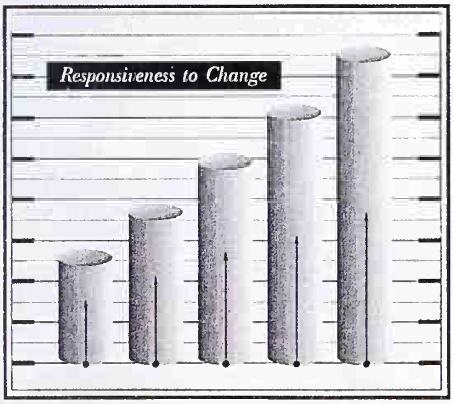
have a significant advantage over those tied down by convention, bureaucracy and big-spending.

FLEXIBILITY

The varied demands of today's marketplace require small businesses to perform an increasing variety of functions.



Whether it's in sales or finance, realty or retail, flexibility is the new key to long-term success. In these days of doing more with less, the way in which companies allocate resources has changed. In the past, financial clout often determined who came out on top. Today, faced with competitive and market pressures unimagined ten years ago, companies must now find

Flexibility and a sense of adventure must be a part of any company's corporate culture if it ceed into the 21st century.

•

Large companies, of c a greater challenge than small bu generally have an easier time imple cies. But no matter what the size companies with an adaptable str id bi outlook are better positioned to c rket share than their competitors; their ab uickly re cus, or even redefine, their bu objectives sures their continued succe

stimated U.S. retail price. Actual price may vary

From envelopes to index cards, letter-size to legal-size, the new HP LaserJet 5P tackles whatever comes its way. With two paper trays, the ability to print up to 10 wrinkle-free envelopes at one time, crisp 600-dpi print quality, and six-page-per-minute speed, it's the perfect printer for your business. Beyond all this, new wireless infrared printing ensures built-in flexibility into the future.

Imagine. Unsurpassed versatility. Legendary HP reliability. And now, surprising affordability. See your Yellow Pages for the HP dealer nearest you.

VEGGIEWORLD

ROY DISNEY'S MAGIC WAND

YOU KNOW A TREND HAS GONE mainstream when it captures the Magic Kingdom. That is what's happening with veggie burgers, thanks partly to a deal put together by Roy Disney's Shamrock Holdings.

FANTASTIC
Nature's Burger
All Natural Meatless Grilled Patty
• ALL NATURAL • LOW FAT • VEGETARIAN

SERVED AT DISNEY PARKS: *Goofy better eat his vegetables*

In October, 1994, Shamrock's investment arm, Trefoil II, acquired a minority interest in Fantastic Foods of Petaluma, Calif. The company makes Nature's Burger, a vegetable-and-grain alternative to beef patties. Just six months later, these veggie burgers are being sold at Disneyland and Disney World.

Coincidence? Not really. In addition to heading Shamrock, Disney, who is Walt's nephew, is vice-chairman of the board of Walt Disney Co., which owns the parks. "That relationship helped," notes Clifford Miller, managing director of Shamrock and Trefoil II. However, he also says he would like to think Disney would have given Fantastic Foods a shot even without executive influence.

Indeed, demand has been strong: After a short test period, restaurants at the Disney parks have boosted their orders from 100 to 7,500 veggie burgers per week. Besides, veggie burgers might be a fine fit for Disney's goody-goody image. "Can you imagine Cinderella eating meat products full of fats and nitrates?" asks Larry Tsai, director of marketing at Fantastic Foods. "All her little animal friends in Disneyland would turn their faces to the ground with shame." *Kate Murphy*

CASINO SOCIETY

LOTTERY PLAYERS, THE TUBE WANTS YOU

LIKE OTHER STATES THAT RELY on lottery revenues, Florida is finding people more reluctant to spring for a ticket or two. So starting this fall, the Florida Lottery Commission will be offering lucky lottery players an added thrill: a chance to appear on a new TV game show, *Flamingo Fortune*, and compete for cash prizes.

Tentative plans call for contestants to be picked by holding the right tickets. Don't expect to see any contest of skill or intelligence on the air. Florida's lottery is by law a game of chance rather than ability, and the rules will carry over to the game show. That should make it especially mindless, even compared with the usual TV fare. Top prizes could reach $100,000.

Mark Goodson Productions, known for *The Price Is Right* and *Family Feud*, is creating the show. Already, it has aired lottery games in Illinois and Massachusetts and hopes to sign up more big states. *Peter Valdes-Dapena*

OFFICE HOURS

THE 60-MINUTE ITCH?

IN HIS LATEST NEWSLETTER, well-known management psychologist Harry Levinson suggests that a woman in the workplace should not spend more than one hour alone in an office with any male co-worker. His reasoning? Men start developing sexual fantasies if they spend too much time alone with a woman—perhaps leading to no end of trouble.

Levinson says that his advice is based on his experiences as a therapist and on complaints he has heard from women. Some people, though, are appalled by Levinson's suggestion. "T absurd notion is demean to both men and wome says Sheila Welling president of Catalyst non-profit resea group for w en based i New Yor Welling does n tongue- cheek, t some g could c out of Le son's rec mendation ter all: " only merit to this obser tion is that it might lead shorter meetings." N that's a notion that m men and women would ag with. *Lori Bongio*

It's for you! Sprint's low, flat rates for small businesses.

Thanks to Sprint Business, now the world is flat.

Introducing low, flat rates on your long distance services. That includes all your state-to-state calls, as well as Sprint 800 service, fax, cellular long distance and calling cards.

You pay the same low rate whenever you call.

Day or night. Weekdays or weekends. On the road, or at the office. Even if you spend as little as $50 a month.

Your long distance costs are simple to understand.

Our low, flat rates end the confusion of calculating your cost per minute. And it's easy to sign up. Just call now. We'll help your business do more business.

NASDAQ BARKS BACK

The recent article in your magazine is flawed in several crucial respects ("Who watches the watchdog at NASDAQ?" Finance, May 15).

It suggests that pressure is building to transform NASDAQ into a national electronic-execution system. To our knowledge, the only persons who are advocating such a concept are some academics. While nice in theory, in reality such systems do not provide the immediacy and liquidity demanded by today's investors. Efficient markets need intermediaries, such as specialists and market makers, to provide the other side of a trade when an offsetting order does not exist. That is why the liquidity that exists in U.S. markets is the envy of the world.

The article also suggests that the NASD is pursuing an agenda favoring large member organizations at the expense of smaller firms. The NASD agenda is determined by representatives of all firms—large, medium, and small. Industry members of the NASD's board and district committees are elected, and rules are approved on the basis of one vote per firm per district. That's as balanced a voting process as you can get. For the past five years, most NASD board members from the securities industry have come from small firms.

WHAT'S FAIR IN TAXES?

Robert Kuttner's column "Dueling tax plans: One adds up, the other doesn't" (Economic Viewpoint, May 15) is formulated on two premises. The first is that lowering the tax rates will cause lower tax revenues. The second is that there should be tax equity; that is, those who earn more money should pay more in taxes.

In the first case, Kuttner was proved wrong during the Reagan era. When taxes were lowered, tax revenues
up. When Reagan compromised
Congress and taxes were raised,
revenues went down again. Kut
would probably argue that the d
went up during Reagan's watch,
what he would probably fail to men
is that Congress went hog-wild
pork-barrel spending.

As for equity taxation, why don'
go all the way and make the we

WHO'S LANDED 400,000 ACCOUNTS WITH ON-TIME PERFORMANCE?

We're not an airline, although major airlines are some of our biggest customers.

We're a managed services company called ARAMARK.
(You may have known us when we were called ARATEX).

Among our many services, we provide uniforms for all kinds of businesses, all over America.

We like to think a company's image begins with the uniforms its employees wear.
And at ARAMARK, our own image is surely reflected in the service we provide.

So we have to be accurate, on-time and accountable.

We address concerns personally – within 24 hours.

We customize solutions – whether it means designing sterile uniforms for a pharmaceutical firm or flame retardant uniforms for an aluminum recycling mill.

In our business, we devote ourselves to every detail, right down to the name stitched over the pocket.

We couldn't have become America's largest uniform company any other way.

We'd like to dress your business for success.

An Idea Without R&D Simply Won't Fly.

At Advanced Micro Devices, we champion ideas that make a difference to our customers. Ideas we're willing to back with over $1.2 billion in research and development in the past five years alone. Which means customers for our personal computer and communications microchips can rest assured that when they buckle up and taxi down the runway with AMD, their performance curves are going to soar. These days, you simply can't afford to invest in a computer or communications system unless it has the power to launch you into the future. That's why we will continue to invest our resources in one vision:

If it's a good idea. If it makes a difference. Run with it.

AMD
Run with it.

BLOW OUT SALE
REBATES

GM VALUE PRICING. *It's* EVEN GOOD FOR *the* ENVIRONMEN

Fresh air. Clear blue sky. A patch of cumulus clouds. Red plastic triangles flapping in the breeze, beari the words "Dynamite Dealin' Days"?

Bad enough a barrage of ugly, sales clutter assaults the landscape. We think it makes the whole ide of shopping for a new car or truck about as unattractive as the promotions themselves.

That's why General Motors created Value Pricing – a new concept intended to simplify the shoppi process. Here's how it works. We've taken the features most people say they need and included them for sticker price that's substantially lower than most comparably equipped cars. Features like anti-lock brake Air conditioning. Airbag. A 3 year, 36,000 mile Bumper-to-Bumper Warranty with no deductible. Eve 24-hour roadside assistance. And more.

VALUE PRICED
VALUE PRICED
19
28

What we've eliminated, however, is the traditional sales routine. In it's place we offer one low sticker price, so you can make easier comparisons to the competition. And judge value for yourself.

Whether you're buying or leasing, come see the more than 70 different Value Priced cars and truc available at your nearest Chevrolet, GMC Truck, Pontiac, Oldsmobile, Buick and Cadillac showroom

As for the environment, we think you'll find it's a very pleasant one in which to shop.

General Motor

ERNING CHINA
n Revolution Through Reform
enneth Lieberthal
on • 498pp • $30

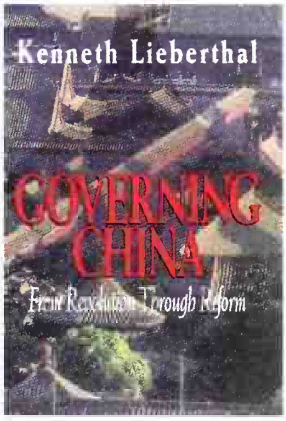
EADING CHINA'S ORTUNE COOKIE

These are hard times for China
watchers. Some of the most wide-
ly accepted beliefs about the
ntry's political system are being put
he test. For instance, sinologists
e long told us that the key to Chi-
future was whether or not reform-
eng Xiaoping would manage to out-
his conservative rival, Chen Yun. In
il, Chen died at age 89. So Deng
s. But with the 90-year-old Deng
self on his deathbed, outlasting Chen
sn't seem to matter
much anymore.

enneth Lieberthal, for-
director of the Uni-
ity of Michigan's Cen-
or Chinese Studies and
of America's most re-
ted China experts, is
ly aware of the diffi-
y of anticipating what
happen in the Middle
gdom. But he isn't
king from the task. As
jockeying for national
er breaks into the
n, Lieberthal's new
, *Governing China*, attempts to pre-
the direction the world's largest na-
will take under whatever leaders
rge.

ieberthal goes far beyond the ques-
of succession to describe how the
ese state and the Chinese Commu-
Party manage to rule one-quarter of
world's people. He presents two
s of looking at the system. One focus-
n the formal organizations—the state
the party. A second and superior
oach, according to Lieberthal, high-
s a power network that is “virtually
sible on China's organization charts.”
e, formal structures and hierarchies
n little, since power derives from
of personality and connections. “The
35 individuals who... oversee virtu-
all sectors of work and politics personally redefine the real rules of the game on an ongoing basis,” Lieberthal writes.

According to this logic, government and party officials owe allegiance less to their nominal superiors and more to their informal patrons. Lieberthal tells how he once got permission from a top official of a state-owned store to inspect certain documents. But that decision was then vetoed by the head of the store's personnel department, who, by virtue of his place in the informal network, was able to refuse the order of his “superior.”



With personality and connections playing so large a role, China has made little progress in developing a stable political system that checks its top leaders' power. “Those at the highest levels of the Chinese system are above the law,” Lieberthal writes. “Indeed, for the most part what they say practically has the force of law.”

At the same time, the state itself, as Lieberthal describes it, is far less dictatorial than many outsiders believe. More than 15 years of economic reform have severely weakened both the formal organizations and the informal network. As a result, governing in China today involves almost continuous negotiations among national, provincial, and local leaders. This, Lieberthal says, is best described as “fragmented authoritarianism.”

This fragmentation helps to explain how difficult it is for China's leaders to address their biggest problems. For instance, no consensus exists about the next stage of economic reforms. Central-government leaders such as President Jiang Zemin have wanted to slow economic growth to control runaway inflation. But others, including a great num-

Books

ber of powerful local leaders, say the emy is unemployment, not inflation and that the best way to avoid social unrest is through faster economic growth and more jobs. A deadlock has left amb reforms on hold.

Of course, provincial leaders, wh ten have top positions at local co nies, also stand to make a lot of m from faster growth. In weighing power of these bosses, Lieberthal m an opportunity to look at how their sions can be influenced by ordinary nese. Since the government forbids ple from organizing, most Chinese few opportunities to shape laws and icies that come down from on high. once Beijing issues its orders, the have to be implemented at the local el. That's where citizens can have influence.

Beijing's edicts are carried out at the loc level, where citizen do have some influen

Lieberthal also doesn't delve m into the growing influence of China's islatures, such as the National Peo Congress. While he dismisses the as still largely ceremonial, other scho say it is hardly the rubber-stamp pa ment it once was. For instance, one cial connected to the State Council or Cabinet, in private has complained bit ly about rival officials from the NPC, had the nerve to inform him that t not the State Council, get to write laws. And last March, a record num of NPC delegates voted against Jia handpicked nominees for Vice-Premi

Still, at a time when so much co sion about China exists, *Governing Ch* provides valuable lessons—for both general public and American policym ers. For instance, during the fight intellectual-property rights between U.S. and China a few months ag U.S. trade official said he couldn't un stand why Beijing was unable to enf its laws against counterfeiting. Of cou the central government could get the cals to do what it wanted, the U.S. cial said. After all, "it's a police sta It's that sort of overstated view of C na's political system that Lieberth book can help change.

TRANSACTION EVOLUTION?

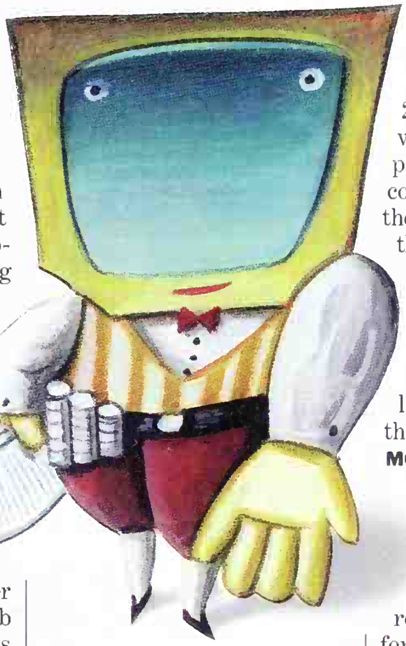
Has a cashier ever scowled when you tried to pay for a $2 chase with a credit card? at if you wanted to use card to buy something th a dime? Or maybe a ny?

ou couldn't do it—and for eason more fundamental n surly sales clerks. nsaction fees for the k network that handles lit-card purchases would up the retailer's prof- and then some. Today, are a major impediment the sale of information r the Internet, too. But ap processing of micro- nsactions—such as selling opy of this column— ld revolutionize the of information.

he Internet currently ks best for people want to give rmation away. example, Gener- Electric Plastics kes thousands of es of technical prod- information available over World Wide Web p://www.ge.com/gep), thus ing the cost of printing mailing or faxing the a.

IE CHARGES. But compa- s selling data have limited ices. They can give access y to paid subscribers, ich inhibits casual or occa- nal buyers. The alterna- e, used by BUSINESS WEEK line on America Online, re- on a service that bills you the amount of time on- e, then shares revenue h data providers. Time rges and subscription fees on your credit card.

Internet commerce requires hiding credit-card numbers from prying eyes and building links between the wide-open Net and supersecure financial networks. Companies such as Terisa Systems and First Virtual Holdings have solved the problems to the point where sizable credit-card transactions are becoming routine on the Net. But the current credit-card network is very expensive, partly because it needs huge capacity and backup systems to ensure that every transaction gets through without delay or error. "We have a minimum transaction of 31¢, and we'd have to take nearly all of it," says Nathaniel Borenstein, chief scientist for First Virtual (http://www.fv.com), which links the Internet to the banking network.



The trick to selling bits of information inexpensively is keeping small transactions off the bankcard system. Computer scientists at Carnegie Mellon University in Pittsburgh, with funding from Visa USA Inc. and the National Science Foundation, have developed a system called NetBill (http://www.ini.cmu.edu/netbill/). It uses digital signatures to verify both the identity of buyers and the delivery of information. The cost can then either be debited from a prepaid NetBill account or accumulated with other transactions and sent to the bankcard network.

Either way, the absence of a live connection to the bankcard network drastically lowers costs. NetBill Co-director Marvin Sirbu hopes to get the processing cost down to 1¢ or 2¢ per transaction: "We want to be able to sell a page for a dime, so that it costs as little to get it off the Net as it does to walk to the library and make a copy of a journal." This fall, NetBill will premiere as part of an NSF-sponsored effort to make the contents of major research libraries available on the Net.

MONOLITHS. The ability to make micropurchases could revolutionize the distribution of information. Sirbu compares the current situation to retailing in the 1960s, before bankcards hit the scene. Department stores dominated the marketplace, partly because only they had the wherewithal to let you charge purchases. Visa and MasterCard made it possible for any merchant to offer credit, and the retail monoliths faded.

Services such as America Online and CompuServe are the online department stores. But as NetBill and others become available, how small can transactions get? "Nobody has built a penny-a-joke business yet," says First Virtual's Borenstein. But someone probably will.

Economic Viewpoint

BY RUDI DORNBUSCH

THE INFLATION BEAST IS ASLEEP —NOT SLAIN

ANXIETY: Bond markets, once skittish, are now overconfident. But inflation could return at any moment. Would the Fed hang tough?

Rudi Dornbusch is professor of economics and management at the Massachusetts Institute of Technology

Bond markets around the world, with Germany and the U.S. in the lead, are celebrating the end of inflation. The immediate cause is the long-awaited slowdown of the U.S. economy. Markets had bought into the dogma that the Federal Reserve Board never has the foresight and resolve to act in time and stop inflation before it gathers momentum. They also had long believed that once the economy reached full employment, inflation would be just around the corner. For the time being, the markets have been proven wrong on both counts. The Fed has engineered a soft landing, and inflation, far from being around the corner, seems well down the road.

So much for the good news. The bad is that inflation remains unfinished business. Markets have swung from excessive skepticism to unreasonable confidence. Later in the year, they may well be surprised by a burst of inflation, especially if the slowdown in the U.S. proves temporary. The conviction that the recurrent problem of overheating is vanquished is premature.

Forecasts for inflation around the world show that in every major economy, inflation is beginning to climb—however modestly. In the U.S., according to *The Economist*'s consensus forecast, consumer prices will rise 3.7% next year, compared with 3.3% this year, while in Germany, consumer prices will rise 2.7% in 1996, up from 2.3% in 1995. In the past, such small increases would have been shrugged off—inflation starts in earnest at 5% or 6%. Today, they should prod monetary authorities to respond or risk undermining the newfound confidence in moderate inflation. Central bankers must be even more watchful if output remains strong enough to prevent slack from developing in the economy. Otherwise, credibility will suffer, and a much more dramatic fight will have to be staged down the road.

HONEYMOON'S OVER. In some countries, such as Canada and Britain, the honeymoon of disinflation is over, though unemployment remains high. This will soon be true in Germany. The inflation reduction of the past few years has been impressive, but recent wage settlements have been uncomfortably large. Although a strong mark is containing inflation for now, the respite is temporary. Later in the year, German rates will have to rise, and that will force rates up throughout Europe. The Bundesbank was right in recent years to ta
a stand on inflation and drive it back dov
But the task is incomplete, and a return
that vigilance is only a question of time.

For the past decade, inflation has av
aged less than 4% in the U.S.—an importa
achievement. But that record will be tested
the year ahead. Over the past two years,
flation averaged only 2.4% annually. This ye
it is expected to rise to 3.3%, and next year
could rise to as much as 4%. Wage sett
ments have been restrained by the wide-op
deregulated, competitive economy. Yet p
ductivity growth is tapering off, wage
straint will weaken in the face of strong pr
its, and the large drop in the dollar and
boost in commodity prices are putting in
tionary pressures in the pipeline. It does
take much to get from here to 4% inflati
and getting there will raise the question
just what level of price increases the Fed
prepared to accept.

POLICY SHIFTS? Victory over inflation is
won in a single battle. It requires steady v
ilance and repeated and uncomfortable
straint every time the party gets going. Co
petition and open markets dampen the cycl
resurgence of inflation, but they most d
nitely do not eliminate it. We are not in a n
world without inflation; we found that out
1989-90 and will likely learn the lesson ag
within a year.

If and when the U.S. economy rebou
late in the year, higher interest rates will
appropriate—even if they risk bringing o
slowdown in the upcoming election year. F
ther, if election politics usher in tax cuts
fight the slack, the Fed would feel compel
to offset the stimulative effect with still hi
er rates. The politics of Fed policy will
complicated next April, when Chairman A
Greenspan's term of office expires. Will Pr
ident Clinton reappoint a Fed chairman w
would be willing to slow the economy at s
a delicate time, or will he shift Treasury S
retary Robert E. Rubin to the Fed, seek
to capitalize on Rubin's semiconservative c
dentials in order to get an expansion go
without causing a ruckus in the bond mark

The past year may have been reassur
on the inflation front. But the real test
how much the Fed has changed and h
committed it is to price stability will co
over the next year. With these issues ahe
why is the bond market so complacent?

Economic Trends

BY GENE KORETZ

LESS RED INK IN THE U.S. BUDGET

April tax receipts made a difference

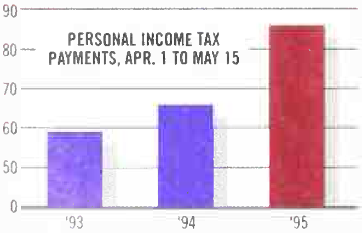
Not too long ago, budget watchers were boosting their estimates of fiscal 1995's deficit in the wake of growing outlays for interest on the national debt. Indeed, the Administration's own deficit projection in February showed a mere $10 billion decline from last year's $203 billion shortfall.

Now, however, experts at Morgan Stanley & Co. see a significant improvement. "We think the deficit could come in as low as $165 billion to $170 billion," says economist David J. Greenlaw.

The recent slippage in interest rates has obviously contributed to the brighter budget outlook. But more important, says Greenlaw, is an unexpected surge in income-tax receipts during the April taxpaying season—a surge that Greenlaw believes helps to explain the slump in consumption early this year.

According to the government's tally, consumers have had to ante up a much larger chunk of final settlements on 1994 income-tax liabilities than they did in former years. In 1994, for example, individual income-tax payments from Apr. 1 through May 15 were up only $6.9 billion, or 11.7%, over 1993. This year, such receipts over the same period soared by more than 30%, or $20.1 billion.

A SURPRISING SURGE IN TAX PAYMENTS



▲ BILLIONS OF DOLLARS

DATA: INTERNAL REVENUE SERVICE

It's likely that consumer spending was also restrained by a slowdown in the pace of income-tax refund disbursements by the government earlier this year. Because the shortfall relative to year-earlier trends never exceeded $6 billion and was entirely eliminated by mid-April, however, Greenlaw believes the big increase in final tax payments in April is the true culprit behind the more recent sag in consumer demand.

Why the jump in tax liabilities? Some of it may be due to a rise in capital-gains realizations last year by stock and bond market investors, and some may reflect payments by the relatively few taxpayers who chose to defer part of their liabilities from the 1993 tax hike. But a key reason, argues Greenlaw, is the delayed effect of the record wave of home-mortgage refinancing inspired by low interest rates in 1992 and 1993.

Greenlaw believes the refinancing boom significantly lowered homeowners' mortgage interest tax deductions for 1994, causing many to pony up higher final tax payments in April. Indeed, mortgage debt service payments fell to 5.7% of disposable personal income last year from 7% a few years earlier.

Looking ahead, Greenlaw thinks that the inhibiting impact of the April tax hit on spending will soon dissipate. By July, he says, "personal consumption should be posting healthy growth again."

SPRINGTIME FOR TREASURY BONDS

'Tis the season for falling yields

Investors take note. Economist Lacy H. Hunt of HSBC Holdings Inc. observes that the U.S. Treasury bond market has exhibited a distinct seasonal pattern around this time of year for more than a decade.

From 1984 through 1994, 30-year Treasury yields tended to move higher from the end of March through mid-May and then to move lower through the end of June. On average, they rose 18 basis points in the first half of the second quarter and fell 22 basis points in the second half.

The record is not quite perfect. But in three of the four years when yields fell through mid-May, they fell even more through June. And in each of the three years when yields rose in the second half of the quarter, they rose significantly less than in the first half.

Hunt thinks the seasonal pattern may be related to the mid-May refunding of debt by the Treasury. Or it may reflect the draining of liquidity from the market as taxes are paid in April and then the restoration of liquidity as the Treasury gradually recirculates the funds back into the economy. Whatever the reason, however, he feels the seasonal pattern is another reason to believe that the bond market rally will continue through June.

A CURRENCY TILT IN EMERGING ASI

The yen exerts upward pressure

Market observers are predicting t most of the Asian Tigers—Ho Kong, Singapore, South Korea, and T wan—and such Tiger "cubs" as Malay and Indonesia, are likely to allow th currencies to rise against the dollar coming months. The reason: the stro yen is inflationary for their economi

Though the Tigers import a lot Japanese capital goods and componer their exports to Japan are relativ low compared with their exports to U.S. So they must steer a mid course between yen appreciation a dollar depreciation to dampen inflat while maintaining buoyant growth.

The catalyst in this scenario is a ing capital flow from Japan to the r of Asia. Rather than monetize this fl the Tigers are likely to allow their c rencies to drift higher while relying productivity gains and higher-value ports to maintain competitiveness.

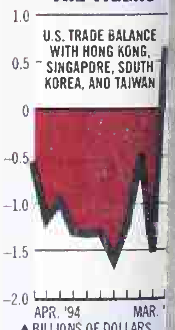
WHERE AMERICA EXPORTS THRIVE

Asian demand is on a roll

The soaring yen may be hurting Tigers by raising their product and debt service costs, but it's clea helping the U.S., whose exports emerging Asia hit $92 billion last yea nearly double their 1989 level. Indeed February and March, the U.S. ra trade surplus with the four Tig (chart) for the first time since 1981.

Noting that exports to Hong Ko Singapore, South Korea, and Taiwan are running 28% over 1994, economist Joseph Quinlan of Dean Witter Reynolds Inc. argues that yen appreciation is now enabling American companies to best their Japanese competitors in these markets. "If Tiger currencies also rise against the dollar," he says, "the appeal of U products will be that much greater."

THE U.S. TAMES THE TIGERS



▲ BILLIONS OF DOLLARS

DATA: COMMERCE DEPT.

ERIC HOFFMANN/BW

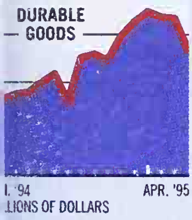
JAMES C. COOPER & KATHLEEN MADIGAN

XPORTS ARE ON STANDBY OR A RESCUE MISSION

U.S. ECONOMY Foreign trade is expected to be the expansion's cavalry this ; galloping forward just in time to rescue the econ- from a fate worse than slower growth. You only e to look toward the heated U.S.-Japan trade talks rasp how important trade has become. In fact, ex- s contributed more than a quarter of the growth of gross domestic product over the past year.

he worry is that trade will end up more like the omy's Little Bighorn. After all, depending on for- economies that are influenced by different cyclical ors and monetary policies can be risky. Already, vth projections worldwide have been downgraded use of the problems in Japan and Mexico, and Eu- 's recovery may soon lose its bloom.

FACTORY ORDERS SINK LIKE A ROCK



DATA: COMMERCE DEPT.

Exports should be able to hold off those attacks, however. The weaker dollar, increased productivity, and falling unit labor costs give U.S. manufacturers a big advantage over their competition. And emerging nations in Latin America and along the Pacific Rim will continue to increase their demand for capital and consumer goods, y of which will be U.S.-made.

course, bringing down the U.S. trade deficit will require slower import growth. Luckily, imports ld ease in response to weaker U.S. demand. Al- y, the durable-goods sector is losing steam (chart). the narrowing of the federal budget deficit contin- to be a drag on domestic growth. Little wonder, , that the Federal Reserve did the expected at its 23 meeting: It left interest rates unchanged.

N IF the outlook for the rest of 1995 looks good, rade picture hardly improved in March. Exports of s and services did rise for the second consecutive th, increasing 5%, to a record $65.3 billion. But rts hit their own new high, rising 4.3%, to $74.5 n. As a result, the trade deficit stood at $9.1 billion, t the same as February's $9.2 billion.

e March numbers indicate that the GDP net-export e won't change much when the Commerce Dept. ses its first revision to GDP on May 31. The wider deficit subtracted almost a percentage point from omic growth last quarter.

a result, trade did not offset what will likely be an upward revision to first-quarter inventory growth, which was already the fastest pace in 10½ years. Faster stockpiling suggests that real GDP grew at an annual rate of more than 3% last quarter, up from the 2.8% pace first reported.

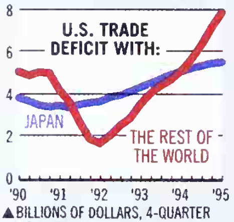
A BETTER-LOOKING first quarter is likely to come at the expense of the second, though. That's because retailers especially will have to wrestle their excessive inventories into better alignment with sales. That means fewer purchases of new merchandise. Already, orders for durable goods have been reduced to a trickle at U.S. factories, and fewer imports will be coming in.

New orders plunged 4% in April, the largest monthly decline in 3½ years. Although the drop was broad, the transportation sector accounted for about half of the fall, explaining the auto industry's steep second-quarter production cutbacks. Orders for nondefense capital goods also dove, indicating that business outlays for equipment, while still healthy, will not maintain their robust 1994 pace.

To avoid massive production cuts and layoffs, U.S. businesses will have to depend on foreign customers to keep assembly lines humming. That's why the latest economic forecast done by the Organization for Economic Cooperation & Development raises some doubts about the trade picture. The OECD forecasts that the 25 major economies will grow by an average of 2.7% this year. That's down from the 3% growth rate projected by the OECD back in December.

The two biggest factors in the downward revision were the questionable recovery in Japan and the financial crisis in Mexico. Those two countries are America's two biggest trading partners after Canada. But the U.S. trade deficit with Japan is the chief problem: In the past year, the monthly trade gap with Japan has averaged $5.5 billion, compared with the $7.9 billion deficit with all other countries combined (chart).

WHERE THE TRADE GAP IS MOST SEVERE



▲BILLIONS OF DOLLARS, 4-QUARTER MOVING AVERAGES

DATA: COMMERCE DEPT., BUSINESS WEEK

Even so, U.S. exporters will still carry the day, because 44% of their goods go to countries outside of Canada, Europe, and Japan. Most of these nations will grow faster than their more developed cousins. And because the dollar has fallen against the yen and mark, U.S. businesses in these markets have a price advan-

ERIC HOFFMANN/BW

tage over their Japanese and German competitors.

True, many emerging nations link their currencies to the dollar, so U.S. companies cannot directly cut prices when they export to these countries. However, they have a price edge over the Japanese and Germans, who must choose between raising prices or losing profits because of their stronger currencies. Increased sales to emerging markets is a key reason why export growth will continue to strengthen.

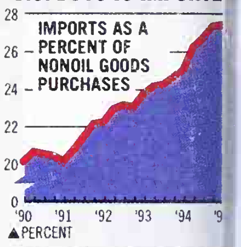
How important will exports be in the second half? If exports fail to sizzle, GDP growth could fall closer to 1% than 3%. That means higher unemployment and rising odds that the Federal Reserve's next move will be to cut short-term interest rates.

Foreign workers will also be hurt. First-quarter imports captured a record 27.4% of U.S. demand for nonoil goods (chart). That means overseas manufacturers will take a hit from the U.S. slowdown and inventory realignment. But weaker imports will improve the trade gap by a fair amount by yearend.

A CONTRIBUTOR to the trade troubles has been America's towering public deficit. The red ink of federal, state, and local governments, coupled with weak savings, has hiked the need for foreign funds to finance U.S. investment. That's why GOP efforts to balance Washington's finances may someday turn the tide on the trade deficit.

If the public posturing and behind-the-scenes lobbying are any indications, though, that process w't happen overnight. What will help this year, at least the prospect that the deficit in fiscal 1995 is on track shrink to its smallest total in six years.

MORE OF WHAT THE U.S. BUYS IS IMPORTE



▲PERCENT

DATA: COMMERCE DEPT., BUSINESS WEE

The Treasury Dept. reported a surplus of $49.7 billion in April, the largest monthly surplus on record, as personal tax receipts rose 27.3% from a year ago. The calendar played a part in the windfall: Because Apr. 1 fell on a Saturday, entitlement checks were mailed in late March, adding to that month's red ink.

For the first seven months of fiscal 1995, which ends Sept. 30, the deficit to $94.3 billion, half of its total in the same period 1992. That suggests that the budget gap could the year at less than $165 billion—the thinnest trai red ink since 1989.

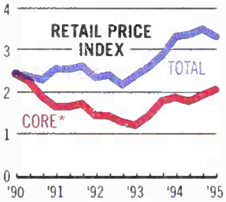
Of course, a shrinking deficit takes stimulus out the economy. Witness the defense cuts. Add in wea consumer spending and some slowing in business vestment, and these sectors tally up to weaker grov That's why in the coming months, foreign—not dom tic—demand will need to play a big role in keeping economy on the beam for a soft landing.

BRITAIN

HOW LONG BEFORE RATES HAVE TO RISE?

Is Britain's economy slowing to a noninflationary pace, or isn't it? Chancellor of the Exchequer Kenneth Clarke says yes. Bank of England Governor Eddie George says no. And the six "wise men" aren't sure.

BRITISH INFLATION: TAME, BUT RISING



▲PERCENT CHANGE FROM A YEAR AGO
*EXCLUDES MORTGAGES AND TAXES

DATA: DATASTREAM INTERNATIONAL, BW

Score Round 1 to the Chancellor. In the face of confusing data, Clarke is believed to have rejected George's May 5 request for a rate hike that would have lifted base rates for the fourth time since September from 6.75% currently. That came despite a still solid advance in first-quarter gross domestic product and a plunge in the British pound. Clarke's veto, coming just after the Conservative Party's local-election trouncing, seriously undermined his credibility with the financial markets as an inflation fighter.

However, sterling has since rebounded, and on May 24, first-quarter GDP growth was revised down. The details suggest that Britain is really two economies now: one driven by strong exports and one suffering from weak domestic demand. The downward revision gives Clarke the ammo to resist another plea from George at the June 7 policy meeting.

However, with price pressures building, Clarke may not be able to resist for long. While headline retail inflation slowed to 3.3% in April as the impact of new taxes faded, core inflation, minus taxes and mortgage costs, has risen to 2.1%, nearly a percentage point above its low point last July (chart). Core producer inflation has picked up even more, and de spite the GDP revision, growth re mains above its noninflationary trend of about 2.5%.

The central bank's May inflati report argued that, without high er rates, the government will no be able to meet its inflation target: 2.5% for the core retail pric index by early 1997. And on Ma 23, three of the six wise men, th government's independent economic advisers, said higher rates would be needed just to keep inflation below 4%. Clarke's dilemma: Raising rates could send the weaker Britain into recession, while no action could fuel inflati in the other Britain.

RON BROWN'S HOT TICKETS

GARY PAYNE/GAMMA-LIAISON

Did Commerce dole out trade-mission seats based on political pull?

When Texas executive E. Glenn Biggs sought a seat on Commerce Secretary Ronald H. Brown's trade mission to Latin America last June, he got a little help from his friends. James H. Fall III, a Treasury official, put in a good word for Biggs, then chairman of Texas TGV Corp. and a director of Diamond Shamrock Inc. In a May 31, 1994, memo to Commerce, Fall noted that Treasury Secretary Lloyd M. Bentsen "would be greatly appreciative of any assistance you could offer."

Fall wasn't Biggs's only well-placed connection. A few days earlier, Washington lobbyist Ronald L. Platt, a major Democratic donor and former Senate aide to Bentsen, had weighed in with a letter to Brown backing Biggs. In the end, Biggs got one of the hottest tickets in CEO-land, a seat on the Ron Brown Express. Did Bentsen get Biggs on board? "I'm sure it didn't hurt," says a Diamond Shamrock spokeswoman, who adds that the trip led to a tax ruling in Argentina that saved the company $20 million to $30 million. Biggs couldn't be reached.

UNDER FIRE. How important is political pull to landing a seat on Ron Brown's frequent trade trips abroad? Commerce Dept. documents recently ordered released by a federal judge after a suit by a conservative watchdog group show that it certainly doesn't hurt. The more than 30,000 pages suggest that influence has been an important factor for CEOs looking to seal megadeals overseas with Brown's help. Donations to the Democratic Party didn't hurt, either: A BUSINESS WEEK review of Federal Election Commission records shows that 15 of 24 executives who went with Brown to China, for instance, gave to the Democrats, either on their own or through their compani
On a trip to Latin America, 11 of

Connections, Connections

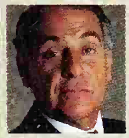
Some executives whose Democratic ties helped them secure seats on Ron Brown's trade missions:

JOHN ALLEN CEO of Allen & Associates International, got Democratic Senators John Breaux of Louisiana and Ernest Hollings of South Carolina to put in a good word for him. He went to Russia.

E. GLENN BIGGS chairman of Texas TGV Corp., went to Latin America. Backing his trip: James Fall, an aide to then-Treasury Secretary Lloyd Bentsen, and Democratic donor Ronald Platt.

LYNN FORESTER CEO of TPI Communications International, went to Latin America after Representative Edward Markey (D-Mass.) and Senator Daniel P. Moynihan (D-N.Y.) wrote letters for her.

WILLIAM GINSBERG CEO of Cellular Communications International, went to India after Philip Verveer, a college classmate of President Clinton, wrote a note on his behalf.



JAMES HARMON CEO of Wertheim Schroder, went to China after Tony Coelho, a Wertheim managing director who was also a top political adviser to Clinton, drafted a letter on his behalf.

DATA: COMMERCE DEPT. DOCUMENTS

s for U.S. business and an additional billion in follow-up contracts. Comce insists it assigned seats based on ine need for a government boost in ng deals.

he idea that politics played a role is iculous, unfounded, false," says a esman. Adds Melissa A. Moss, a merce aide who oversees the CEO tions: "We have a pretty darn rigorprocess in place, and there are no exions. Every company has legitimate s they're working on." Also, many ected executives were turned down. White House, for instance, unsucully lobbied to get Gerald McGowan, nton supporter and a board member e Cellular Telecommunications Inry Assn., a spot on a trade mission. McGowan: "It didn't work for me."

ill, critics note that Commerce offiare no strangers to the world of ical fund-raising. Brown is former man of the Democratic National mittee and Moss is a former DNC fie director. "This is what you get you put fund-raisers and political operatives into the realm of making policy decisions," say Joshua Goldstein of the Center for Responsive Politics, a nonpartisan group focusing on money in politics. Judicial Watch, the conservative legal group that forced the release of the documents, contends that favoritism badly tainted Commerce's selections. "The role of government is to provide equal opportunity, not special treatment," says Chairman Larry Klayman.

The problem: Unlike the federal procurement process, where standards are published and contractors bid competitively, the Commerce method of selection has been shrouded in mystery. Even some executives believe that political connections may have played a role in their selection. John Allen, CEO of Allen & Associates International, an intermediary for U.S. generic-drug companies doing business in former Soviet republics, accompanied Brown to Russia. Allen, a Republican, says he had been on an early list and then asked Democratic Senators John B. Breaux of Louisiana and Ernest F. Hollings of South Carolina to "give me credibility," to win a spot. He says: "I would like to think [their letters] helped, but our own success should have given us enough momentum to get us selected."

Another well-connected CEO was James A. Harmon of Wertheim Schroder & Co. Former House Democratic Whip Tony Coelho, a managing director of the company, sent Moss a letter on July 14 recommending Harmon for a spot on a trip to China last summer. "Your help on this means a great deal to me personally," he wrote. Coelho was a top political adviser to Clinton at the time. Harmon says he didn't know until recently that Coelho wrote on his behalf.

Others relied on Friends of Bill, such as Philip L. Verveer, who attended Georgetown University with Clinton. Verveer wrote to Commerce aides to boost the chances that William B. Ginsberg, CEO of Cellular Communications International Inc., would go to India a few months ago. In his Sept. 29 letter, Verveer, whose wife is an aide to Hillary Rodham Clinton, noted that Ginsberg was a "very generous donor" to the Democratic Party.

"ANOTHER FACTOR." Ginsberg says he was a logical candidate because his company held a 50% interest in an Indian cellular license. But he adds that Verveer's letter was "Phil's way of saying, 'This person is eminently qualified, but here's another factor to take into consideration.'" Says Verveer: "I would like to think that if a lot of people are equivalently qualified, if someone is a friend, they should consider that. That's traditional in this town."

Commerce documents also show that Sanford R. Robertson, president of Robertson, Stephens & Co., a San Francisco investment banking firm, was added to the China guest list at the last minute. Robertson was an early Silicon Valley supporter of Clinton, who held fund-raisers at his San Francisco home. Robertson says it was his business ventures, not his political connections, that won him a seat. His company was closing a joint-venture deal with a Chinese securities firm. He says he "got a lot of things going for several clients."

Brown's Republican foes claim this pattern confirms that the Commerce chief, in the name of flogging U.S. exports, put the government up for sale. The truth is murkier: Supersalesman Brown mixed business and politics. Now he and the Clinton Administration will have to deal with the fallout.

BUSINESS WEEK/HARRIS EXECUTIVE POLL

A BALANCED BUDGET OR BUST

American business has spoken: Balance the federal budget, even if it means giving up corporate subsidies. That's the message in a new BUSINESS WEEK/Harris Executive Poll of 408 senior executives. A decisive 57% of corporate leaders said balancing the budget was a "top priority" that will only happen by setting a strict deadline. Only 23% felt such a step might harm the economy.

Given a choice between balancing the government's books or slashing taxes, 79% of executives opted for budget balance. Yet few thought it would actually happen: Asked if Uncle Sam's ledgers would be balanced by 2002, 86% said no.

FULL STEAM AHEAD

Republicans and Democrats are arguing over how to balance the federal budget. Which of the following statements comes closest to your point of view?

a. Balancing the budget is a top priority that will only happen by setting a strict deadline	57%
b. Balancing the budget is a worthwhile goal, but drastic cuts in federal spending could jeopardize the economy	23%
c. The most important goal should not be balancing the budget, but rather setting different spending priorities	20%
d. Not sure/don't know	0%

SAYING YES TO SACRIFICE

Some Republicans say that the drive to balance the budget by 2002 will require most, if not all, business subsidies to be eliminated. Considering your specific industry, are you willing to forgo special tax incentives or spending programs for the sake of budgetary discipline, or not?*

a. Willing to forgo tax incentives	57%
b. Willing to forgo spending programs	56%
c. Not willing to forgo anything	10%
d. Depends on the circumstances	7%
e. Not sure/don't know	6%

NO SACRED COWS

I'm going to read you a list of business subsidies or incentives that might be eliminated in order to balance the budget. Should each of the following be eliminated or not in order to help balance the federal budget?

	SHOULD	SHOULD NOT	NOT SURE/ DON'T KNOW
1. Farm subsidies	83%	13%	4%
2. Incentives for energy development and efficiency	68%	27%	5%
3. Federal loan guarantees	65%	29%	6%
4. Export-promotion programs	59%	34%	7%
5. Research and development support for emerging high-tech industries	51%	45%	4%
6. Small-business grants and loans	49%	47%	4%

AXING AGENCIES

Supporters of a balanced budget are proposing to eliminate some federal agencies. Do you favor or oppose eliminating:

	FAVOR	OPPOSE	NOT SURE/ DON'T KNOW
1. Energy Dept.	71%	24%	5%
2. Housing & Urban Development Dept.	69%	27%	4%
3. Commerce Dept.	63%	33%	4%
4. Education Dept.	52%	46%	2%

* Respondents could pick more than one answer

READ OUR LIPS

Separately, GOP spending proposals would balance the budget by relying exclusively on spending reductions. As a last resort, would you favor or oppose modest tax increases to help balance the budget by 2002?

a. Favor modest tax increases	39%
b. Oppose modest tax increases	57%
c. Not sure/don't know	4%

TOP OF THE AGENDA

Which of these issues is THE most important to American business?

1. Balancing the federal budget	31%
2. Improving the U.S. educational system	28%
3. Helping to make U.S. companies more competitive globally	17%
4. Cutting taxes	9%
5. Fighting crime and drugs	6%
6. Reforming the welfare system	5%
7. Providing guaranteed health care for all Americans	1%
8. Reforming campaign finance laws	0%
9. Not sure/don't know	3%

NO TIME FOR TAX CUTS

Which do you think is more important—balancing the federal budget or cutting taxes for business and individuals?

a. Balancing the federal budget	79%
b. Cutting taxes for business and individuals	19%
c. Not sure/don't know	2%

YE OF LITTLE FAITH

All in all, do you think the federal budget will be balanced by 2002 or not?

a. Will be balanced	11%
b. Will not be balanced	86%
c. Not sure/don't know	3%

Edited by Michele Galen

Survey of 408 senior executives at corporations drawn from the BUSINESS WEEK 1000. Interviews were conducted May 19-23, 1995, for BUSINESS WEEK by Louis Harris & Associates. Results should be accurate to within 4.9 percentage points.

ALBERTO MENA/BW

HO'S AFRAID OF THE ORLD TRADE ORGANIZATION?

e last thing it wants to decide is the U.S.-Japan brawl

ne thing hasn't changed since the army of trade bureaucrats in Geneva switched the name on the door n General Agreement on Tariffs & le to World Trade Organization in uary. They still have a tendency to uss trade disputes endlessly, prefer- over a nice meal.

hat's why the protests of America sters that the WTO run roughshod over . trade law are over- n. Indeed, the dirty e secret about the global trade tribunal at its dispute-resolu- process is deliberate- et up to stall long gh to get both sides egotiate a settlement. TO bureaucrats were ng to test that pro- on something sim- than the escalating e tensions between J.S. and Japan—per- an obscure case as U.S. complaints Korea's regulations lating short shelf- for meat effectively out American pro- rs. The WTO's goal to build a foundation se law for more diffi- disputes and bolster olitical support in l capitals.

stead, *quelle hor-* The fledgling world court must make but by trying to re- an intractable and cally charged trade rel: The fight be- n Tokyo and Wash- n over auto parts. o is taking Washing- o the WTO for unilaterally imposing ariffs on Japanese luxury cars. The in turn plans to go to the WTO with ad indictment of Japanese practices shut out the U.S. parts. The U.S. would force the WTO to rule on so- invisible trade practices—murky s such as cartel-like dealings and ess-government collusion for which are no clear international rules. ve been thrown into the deep end on this one," moans a WTO official.

CHAIRMAN RUGGIERO: "THROWN INTO THE DEEP END"?

CARLO CARINO/CONTRASTO/SABA

STANDOFF IN GENEVA

The U.S. and Japan are starting cases against each other with the World Trade Organization. Here's how the process will work:

Step 1 The WTO will send the U.S. and Japan back to the negotiating table.

Step 2 If there's no resolution after about 60 days, the WTO can appoint a three-person panel to decide the case. The panel has six to nine months to issue findings.

Step 3 The panel's report may be appealed to another three-person panel. The appeals panel has 60 days to rule.

Step 4 The loser of the appeal must comply with WTO rules or negotiate compensation with the other country. If the parties can't agree on compensation, the complaining country may retaliate with tariffs.

DATA: WORLD TRADE ORGANIZATION

America's neo-isolationists are salivating. A Tokyo victory would confirm their suspicions that the WTO is an all-powerful global court poised to impose one-world government on the U.S. "If Japan wins, it makes it clear we ceded a major part of our sovereignty," says economist and WTO opponent Pat Choate. The trade nationalists have been egged on by predictions that Washington has set itself up for a big fall. Japan's narrow case is widely considered a slam-dunk for Tokyo because WTO rules clearly ban a member country from hiking tariffs without approval.

But the likelihood is that the WTO ultimately won't pronounce judgment on either party. That's because of the design of the organization's dispute-resolution process (table). Even though Japan and the U.S. broke off auto talks in late April, WTO rules are about to send them back to the negotiating room. That means the two governments likely will have 60 days to work things out. If they can't, a panel of three trade experts will hear the case. If the panel finds in Japan's favor, the U.S. could appeal to another panel of bureaucrats. Along the way, both sides can keep talking. "There will be ample opportunities to settle this out of court," says Commerce Under Secretary Jeffrey E. Garten.

IN YOUR FACE. Still, leaving it up to the WTO entails risks for the U.S., Japan, and world trade. Despite the built-in mechanisms for consultation in the WTO process, the in-your-face rhetoric of top trade negotiators on both sides already has made it tougher to craft a compromise. And new WTO Director Renato Ruggiero, whose candidacy both the U.S. and Japan opposed, may lack the clout to bring the two sides together.

Privately, U.S. officials admit their case isn't as strong as Japan's. Many WTO members aren't rooting for Washington anyway. They would love to shut down U.S. use of unilateral trade sanctions, and many see Japanese-style collusive practices as "important tools in their economic development arsenal," says Clyde V. Prestowitz Jr., president of the Economic Strategy Institute. "A lot of people will think if America can win this case against Japan, it might come after us."

But rulings against the U.S. could hurt the WTO far more. It surely would provoke a protectionist backlash, stepping up pressure on the Administration to withdraw from the WTO and undermining the new global trade liberalization pact the U.S., Japan, and Europe labored seven years to create.

A chilling prospect, sure, but hardly the most likely outcome. Both sides in the bitter auto-trade feud have a huge stake in not letting it get that far. And the new trade tribunal, constructed over long, leisurely lunches, seems designed to make sure it won't.

By Amy Borrus in Washington, with Bill Javetski in Paris

LOBBYISTS

THE SALE THAT GOT AWAY

Pleas by dealers of pricey Japanese cars leave Congress cold

SUITED UP: *In town for a convention, 850 dealers descended on Capitol Hill*

Attired in finely tailored suits, starched shirts, and power ties, they piled off buses onto Capitol Hill, square-jawed and determined. A clutch of eager GOP lawmakers arriving for work? Nope. It was a revved-up contingent of luxury-car dealers in pursuit of The Ultimate Sale. Their quota: convincing Congress that the Clinton Administration's stiff tariffs on U.S. sales of Japanese luxury cars would cost thousands of American jobs.

On May 23, some 850 dealers—in town for the annual meeting of the American International Automobile Dealers Assn.—descended on the halls of Congress to plead for a reversal of President Clinton's sanctions on top-of-the-line Japanese cars. "We're in the middle of a war," says Kent Petersen, a dealer from Ogden, Utah. "We can't afford to sit on the sidelines."

It was the first official visit to the Capitol for Geoffrey Pohanka, 37, a third-generation auto dealer from suburban Washington. As he made his way to the office of Representative Tom Davis (R-Va.), Pohanka insisted that a 100% tariff on the Lexus and Acura models he sells could cripple his family's $200 million-a-year company. "Three generations of work," Pohanka says, "and this could bring down the whole business."

Fidgety and distracted by the C-SPAN broadcast on the TV in his office, the congressman listened politely to Pohanka's pitch. But Davis wasn't buying. "I'm not sure I agree with what the President has done," he noted. "But I'm not sure we want to undermine the Administration on this one." A half-hour later, Pohanka got the same sobering message from Representative Frank R. Wolf (R-Va.) The luxo-lobbyists "had a good point," Wolf said, "but I just don't know what Congress can do."

Indeed, the lobbying expedition proved the equivalent of wasting all day on a showroom tire-kicker with empty pockets. Even before the lobbying began, House Speaker Newt Gingrich (R-Ga.) had told the group that "Congress has no interest in fighting the Administration on this as the Japanese watc" Instead, he urged the auto dealers, w may travel to Tokyo during the co- ing weeks, to appeal to Japanese lead to negotiate a settlement with the U. before the June 28 deadline when tariffs take effect.

That was hardly what the deal had hoped to hear from GOP leade "We got a cold dose of reality," si one. The importers claim the targe high-end cars account for less than 1 of Japanese auto makers' Americ sales—hardly enough to put the carm ers out of business. In the U.S., by c trast, the AIADA claims that 2,000 deal ships could go bust, jeopardizing jobs of 81,000 people. "My lifestyle w change," insists Howard A. Keyes Lexus dealer from Van Nuys, Calif. " hit my employees."

"FEATHERED NESTS." Such complai didn't draw much sympathy. "The de ers are only worrying about their o little feathered nests," says Represen tive James A. Traficant (D-Ohio). I the lobbying blitz wasn't a total was At local dealers' urging, Representat Mark Foley (R-Fla.) called U.S. Tra Representative Mickey Kantor a White House Chief of Staff Leon Pan ta to plead for his constituents dur their visit. And the California delegat persuaded Representative David Dre (R-Calif.) to dash off a note to Kan imploring the Administration to "so the dispute with Japan before we w out one of California's most import industries."

Still, Congress isn't about to take the cause of several thousand spec ty-car dealers who cater to a well-hee elite—not when the U.S. governm is taking a get-tough trade stance that playing well with most working-cl Americans. Gingrich promised the de ers he would consider a financial bail for any of them forced out of busin by the sanctions. But that's a little lik used-car salesman swearing his clun is in A-1 condition. Dealers know best they can do is to sit tight—a hope the U.S. and Japan settle th differences. For merchants practiced the art of the deal, Capitol Hill prov one sale they simply couldn't close.

COMMENTARY

By Paul Magnusson

MY OTHER CAR IS A GARBAGE SCOW

First, a confession. The interiors of my two Japanese cars are crusted over with the rich effluvia of childhood. Just as rock strata reveal the passage of time, so do layers of baby formula, bananas, apple juice, Cheerios, and Chicken McNuggets catalog the progression of my two daughters from infancy into girlhood. I know I'm not alone in this.

Therein lies the official explanations out of Tokyo for the U.S. recall of 8.8 million Japanese-made cars with Takata Corp. seat belts. Americans, it seems, are messy. Tests by Japanese carmakers on vehicles driven in America revealed the presence of animal hair, food, and soft drinks in the belt latches, interfering with the mechanism. That means, insist Honda, Nissan, and the Japanese Transport Ministry, that the "voluntary replacement" of belts is a convenience for consumers and emphatically not a safety matter. It's the customers' fault, you see.

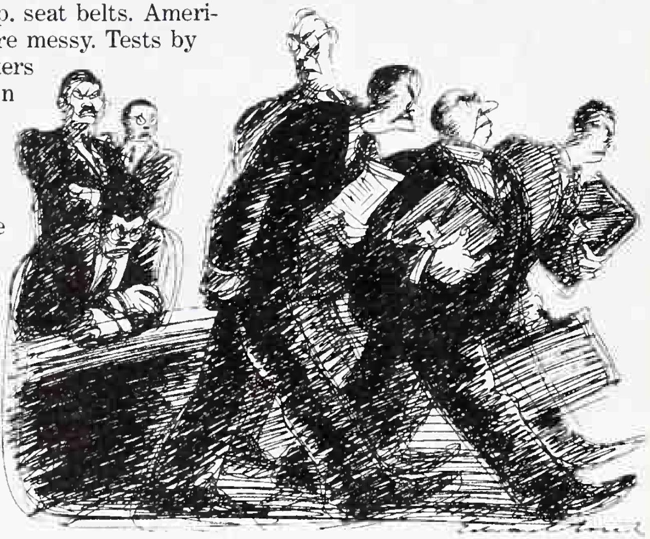
"IRRELEVANT." Yet the American subsidiaries of Honda and Nissan readily admitted on May 23 that the problem is a defect in the belt mechanism. The release button sometimes splinters and jams the entire gizmo. "I guess there could be food contamination, but that's irrelevant to the issue of button breakage," says a Nissan North America Inc. spokesman.

So here again is the essence of Tokyo's argument for the cause of America's $66 billion merchandise trade imbalance: a profound clash of cultures. Or, as the Japanese put it: *Nihonjin-ron*—the unique attributes of the Japanese people and their land.

As always, economics, not culture, is the true cause. But the issue of absolute Japanese singularity crops up frequently in trade talks. For years, Tokyo trade officials insisted that Japanese intestines are longer and therefore unable to digest foreign beef. Japanese snow is "different," they said, making non-Japanese ski bindings unreliable. And the dirt at Kansai Airport could be moved only by Japanese construction companies familiar with its peculiarities.

Now, add a new attribute to the list: Japanese car owners are neater. It's true, the cars in Tokyo are cleaner. But here again, the reason is less cultural than economic: Japanese cars, which have to undergo a $1,000 inspection after three years and every two years thereafter, don't stay on the road as long as they do in the U.S. It's cheaper just to trade that cream puff in for a new one. Used cars are shipped to the rest of Asia.

Japanese trade officials fault U.S. carmakers for not trying hard enough to crack its market. They note, for instance, that only Jeep Cherokees and Ford Probes are available with right-hand drive. Fair enough. But how about this: In return for well-placed steering wheels, let's see a seat-belt buckle from Japan that can stand up to the corrosive effects of bubble gum, lollipops, and Fruit Roll-ups.



Trade negotiators from the United States break off talks when Japan adamantly refuses to import any American C.E.O.s.

Magnusson reports on economic and social trends from Washington.

Links Sought as 3 Slayings Rock L.A. Apparel Maker

■ **Mystery:** Violence and threats directed against Carole Little spread fear through local fashion industry

UNDER SIEGE: *Police are looking in extortion, fraud, and organized cri*

CRIMES

DOES SOMEONE HAVE IT IN FOR CAROLE LITTLE INC.?

The company has been hit by explosions and three murders

The trip usually took 40 minutes. But at 6:05 p.m. on May 4, Rolando P. Ramirez' drive home from the office ended after just eight blocks. At a traffic light at the corner of Jefferson Boulevard and Main Street in South Central Los Angeles, his late-model Mercedes was riddled with bullets by a still unknown assailant. Ramirez, the 44-year-old controller of L. A.-based women's apparel manufacturer Carole Little, slumped dead over the steering wheel.

For a city where violence is commonplace, it would be easy to write off Rolando Ramirez as another grim statistic. But to the city police, he became the latest piece of a puzzling case in which a stunning series of killings and violent acts have rocked Carole Little, the $372 million clothing maker run by its namesake and her husband, Leonard Rabinowitz.

LITTLE: *Offering a $125,000 reward*

It's a tale that so far has baffled police, who are pursuing leads taking them from the murky world of garment manufacturing to organized crime, extortion, and fraud. The Federal Bureau of Investigation's organized-crime unit also is involved, though it won't comment on the investigation.

The death of Ramirez, a 16-year Carole Little executive, followed the shooting death last December of company Vice-President Kenneth Martin, who was gunned down while sitting in his truck at a red light. A year earlier, Carole Little executive Karin Wong Holzinger survived a highway shooting, two explosions at her home, and suffered through a series of harassing phone calls. Hakop Antonyan, whose company sewed garments under contract to Carole Little, was gunned down outside his Glendale (Calif.) factory the same night as the second explosion at Holzinger's home.

The execution-style killings of Martin and Ramirez have prompted investigators to focus on organized crime. Glendale police officials also are investigating whether Antonyan's death was "related to organized crime efforts to control a portion of the garment industry."

Another possibility: that rivalries within the $18 billion-a-year apparel industry have turned from nasty to violent. The business is full of factions, with large numbers of sewing shops competing aggressively for business. And Carole Little acknowledges that in 1991 and 1992, it began reducing its r ter of contractors from 90 to 20 or s

Investigators still are piecing toge er clues. Long Beach (Calif.) police s Holzinger claims she received extort threats telling her not to switch c tractors. Holzinger left Carole Lit shortly after the final explosion and recently filed a wrongful-dismissal s

At present, only suspect custody is Kara Demirdzhyan, unemployed menian living Hollywood, w has been char with stalking Ant yan and killing him outside his Gl dale factory. Demirdzhyan is plead not guilty to the charge, and police h uncovered no motive that would ca him to be involved. In the other mur cases, police have made no arrests. "I got a city full of suspects," says De tive Fred Miller, who is heading the vestigation into the Ramirez slayin

FRONT-PAGE NEWS. Investigators h not ruled out the possibility that violence may be related to internal sues at the company, though police nied recent reports of an investiga into possible embezzlement there. company refused BUSINESS WEEK's quests to interview its executi though Rabinowitz gave limited resp es to several questions. "Both of [slain Carole Little executives] w very well liked," he says. "Our empl ees are devastated but feel good ab the LAPD Robbery & Homicide sponse" to the crimes. The comp added in a statement that it sees evidence linking the two murders. Li and city officials have offered a $125, reward for leads.

Police will not discuss safety me ures being taken to protect current ployees, but immeasurable damage already been done to the company's age. The affair has made the front p of the *Los Angeles Times*, for one th "What someone is trying to do is Carole Little out of business," s Stanley Weintraub, the company's mer manufacturing vice-preside Weintraub, who now oversees dr manufacturing at another Los Ang company, says he was let go by Ca Little in 1992 and replaced by Holzi er. (TOP TO BOTTOM) ALAN LEVENSON, WENDI FITZGERALD/ST. LOUIS POST

INTRODUCING THE FIRST NOTEBOOK TO MAXIMIZE THE PENTIUM'S FULL POTENTIAL.

When the rush was on to introduce otebook with a Pentium™ processor, xas Instruments decided to do what ers thought couldn't be done.

We created a notebook that maximizes ntium performance by integrating *l PCI bus architecture in our Texas truments TravelMate™ 5000.*

And for flexible connectivity, we igned a way to allow external access n the PCI bus to the latest peripherals.

It was a challenge we addressed for two ple reasons: to give users true desktop tium performance *for faster running ware and expansion capabilities* for long-term investment protection.

So now you have a notebook with *smoother full-motion video and enhanced 3-D graphics.* In addition, we designed the TravelMate 5000 to take advantage of the "plug and play" capabilities of Windows 95®when it becomes available.

But our engineers didn't stop there. *We added a second lithium ion battery* without sacrificing size, weight or eliminating a floppy drive.

The TI TravelMate 5000. For more information on what others thought you couldn't do with a notebook, simply call 1-800-TI-TEXAS (e-mail: 2ti@msg.ti.com).

75 MHz Pentium processor with PCI Bus

10.4" Active Matrix or 10.5" Dual Scan displays

2MB Video memory

8MB RAM, expandable to 32MB

*810 million bytes (=772MB) or 524 million bytes (=500MB) Hard Disk Drives**

Multimedia package: Built-in 16-bit sound, internal speaker and dual mode microphone

Two Lithium ion battery packs

Serial infrared port for wireless connectivity

EXTENDING YOUR REACH™

TEXAS INSTRUMENTS

Warranty may vary from country to country. Contact your local TI office for details. Batteries and options are covered by a one year limited warranty. BASEBALL

AMERICA'S PASTIME. YEAH, RIGHT

Angry fans, falling club values. Baseball is whiffing

Back when baseball was fun, Robert Komie owned a choice piece of real estate: four box seats along the right-field line at Chicago's picturesque Wrigley Field. Now, though, clients of his carpet-cleaning company prefer basketball's Bulls. So Komie has given up his season tickets. And as a guest in a Chicago White Sox skybox on May 19, he left during the fifth inning, after the dessert cart came through. "I couldn't care less who won," Komie says. "I won't watch baseball now. It's too slow, too boring, the players are prima donnas, and the owners are arrogant."

In strike-scarred 1995, the Robert Komies of America are abandoning ballparks in droves. Baseball executives hope it's a pique that a good pennant race—or the end of the basketball and hockey playoffs—will cure. But increasingly, there is concern that the unresolved labor dispute is doing lasting damage to the game. Attendance is off, television viewership is down, and small-market franchises are on the ropes.

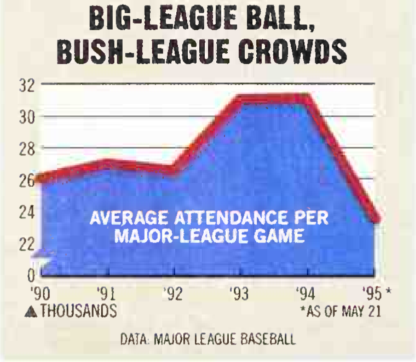
AILING BUCS. Now comes Walt Disney Co.'s May 18 announcement that it has purchased a controlling interest in the California Angels for an unimpressive $30 million. Unless baseball's economics change dramatically, that investment could signal the start of a series of low-ball deals. Without an agreement to share revenues among owners or a pay compromise with players, owners of small-market franchises may move to dump their clubs. And the teams could go cheap. "The day of the Baltimore Orioles selling for $175 million at auction are over," says Doug Metchick, general manager of Sports Franchises Inc.

The ailing Pittsburgh Pirates are set to change hands for a measly $86 million. The Kansas City Royals and Minnesota Twins are rumored to be on the block. Montreal, the winningest team in baseball last season, may be for sale. Toronto's vaunted Blue Jays could be sold, too, depending on the outcome of a takeover battle for parent John Labatt Ltd. (page 42). If so, a 25% decline in Toronto's home attendance this year won't inspire big-money bidding.

Even for top teams such as Toronto, fan rancor has grown and hardened. "For a lot of people, taking away the World Series last season was like taking away the American flag," says Philadelphia Phillies owner William Y. Giles. "I don't think we'll get a lot of people back until we get a labor agreement. And I think we've lost some people forever."

Despite strong showings in cities that boast fan-drawing new stadiums, such as Denver and Cleveland, attendance is down 20% leaguewide, as is television viewership. Television advertising billings have fallen as much as 30% in many markets. "Advertisers say: 'We don't want to put our money into a sport that the American public is rejecting,'" says James MacDonald, general manager for the Kansas City Royals' flagship station, KSMO. Teams have lost up to half of their game-day promotion sponsors. And prospects for block-ticket sales—a key attendance booster—have grown increasingly slim.

The scary numbers are pushing the owners into action. On May 19, they agreed to pay $7.8 million withheld from the player's pension fund after last summer's walk-out, ending a threat by the players to boycott July's All-Star Game.



BIG-LEAGUE BALL, BUSH-LEAGUE CROWDS

DATA: MAJOR LEAGUE BASEBALL

Even as players' union chief Donald Fehr and acting Commissioner Allan "Bud" Selig hailed the move as a pr ising opening for contract talks, tho no new negotiating sessions had b scheduled. In fact, few on either expect a settlement to be reached fore the season's end.

With nowhere else to turn for g news, owners are eager to talk ab the Angels deal. They hope Disn golden touch and entertainment im matur will rub off on a sport that lost its cachet among fans and sp sors. "I'm thrilled about Disney bec they know so much about family en tainment," says Giles. It could be the smart money is buying into base on the cheap. But before work be on the sequel to *Angels in the Outf* Disney will be stuck focusing on project that's vexing all of baseball r now: getting fannies in the seats.

The tallest recycling story ever told.

Suffice it to say, anything that's 2,232 steps to the top (in lieu of taking one of 104 elevators) is not your average office building.

Everything about Sears Tower is mind boggling. Like enough plumbing (25,000 miles) to go around the world. And enough telephone cable to encircle it 1 ¾ times.

It's sort of the Mount Everest of recycling challenges. So hopefully you'll have some idea of what it took to conceive a recycling program that now covers some 10,000 people working for sixty different tenants on over 100 floors.

You certainly won't have to use your imagination to appreciate the results. This year alone 1,200 tons of paper will be collected for recycling. An amount that, if baled and stacked, would be three times higher than the world's tallest building itself.

It could be just as surprising to find out what recycling could do for your business. Please call us at 1-800-977-6272. You'll find we don't mind challenges.

What business do we have saying we help the environment? That is our business.

PATENTS

NOT SO FAST, BUSTER

The Patent Office stalls TRW's bid for a satellite system

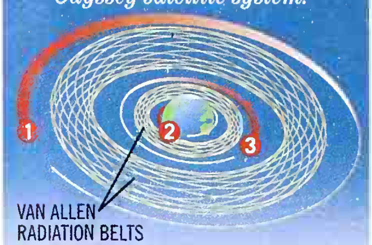
TRW Inc. was in the stratosphere. On Apr. 26, the company proudly announced that it had received two crucial U.S. patents for Odyssey, a proposed $2 billion, 12-satellite network. Its lofty goal: to dominate communications from a broad swath of the heavens—a 5,000-mile-wide band between the Van Allen radiation belts (chart). Patents in hand, the company hoped to build a cost-effective, lucrative entry into the potentially explosive satellite-phone business.

Trouble is, TRW doesn't actually have the patents yet. Its bragging, plus heated protests from Inmarsat, an international consortium that wants to launch satellites at the same altitude, caught the attention of the U.S. Patent Office, which had "allowed" but not awarded the patents. On May 12, the examiners decided to take a second look. Says Frederick R. Schmidt, the patent-examining group director who yanked the TRW patents: "We don't issue patents when there's a question with the prior art"—that is, when a new idea may not be new.

Now, examiners may reject some of the claims or force TRW to submit narrower versions. That would be a blow to TRW and its partner, Montreal-based Teleglobe Inc. In addition to Inmarsat, it faces well-heeled rivals in the race to offer global, satellite-based phone service. The $3.4 billion Iridium consortium, led by Motorola Inc., proposes a 66-satellite network. Globalstar, a venture of Loral Corp. and Qualcomm Inc., plans a $2 billion, 48-satellite system.

SPACE CLAIMS

TRW is seeking patents for its Odyssey satellite system:



① Traditional satellites fly 22,000 miles above earth.

② Proposed rival systems would fly as near as 500 miles. Because that proximity would limit their geographical reach, dozens or hundreds would be required to service the globe.

③ TRW plans an orbit of 6,400 miles. The company says that from that altitude, 12 satellites could service the earth.

FEWER "BIRDS." Against those rivals, TRW is pitting a good idea: Lofting its satellites into a higher orbit would let them see more of the earth's surface so that fewer "birds" would be required for global coverage. B

PEOPLE

LIFE OF THE BUYOUT PARTY

Gerald Schwartz sheds a low-profile image to tap Labatt

In the office towers along Bay Street, Toronto's Wall Street, Onex Corp. Chairman Gerald W. Schwartz is known as Canada's LBO king. Until lately, though, that has been something of an ironic moniker, given that most of Schwartz's major deals have been in the U.S. But with his latest move, Schwartz may earn his title: He's set on winning a hostile $1.7 billion tender offer for John Labatt Ltd., Canada's second-largest brewer and owner of the Toronto Blue Jays. Unless a higher offer emerges before his tender expires on June 9, he seems likely to win.

For Schwartz, 53, the Labatt bid is a departure—not just because the target is Canadian but because it's so well known. Since founding Onex in 1983, he has bought relatively obscure outfits. Among his best deals: the paltry $90 million Schwartz spent for stakes in six U.S. companies, including parts maker Automotive Industries and airline caterer Sky Chefs Inc., acquired from AMR Corp. Today, Onex' investment is worth some $500 million.

SHARING THE WEALTH. Schwartz's success formula? He gives managers up to a 20% stake in his companies and urges them to be aggressive acquirers. For instance, by this fall Sky Chefs expects to close on a $520 million buyout of Caterair International, another airline caterer. The move will make it the world's dominant in-flight caterer. It
will raise Onex' sales to $5.9 billion,
from $2.6 billion last year, when
earned $121 million.

Schwartz says he thinks he
make Labatt a "western hemisph
[beer] powerhouse." The brewer ha
22% stake in Mexico's Femsa Cer-
za. And if Onex' bid succeeds, it
get help in expanding from Quil
Industrial, the Argentine brewer t
is paying $231 million for a 27.
stake. Schwartz plans to shed ent-
tainment and European beer asset
help pay off the $1 billion of debt in
bid, though he says he intends to k
the Blue Jays.

FROTHY RETURNS?

Schwartz says he thinks he can turn Canada's No. 2 beermaker into "a western hemisphere powerhouse"

Trouble is, Labatt CEO George
Taylor opposes the bid, charging t
Schwartz is trying to "steal the c-
pany." And analysts figure La
could be worth up to 25% more t
Onex is offering. But Schwartz i
sure no higher bid will emerge t
he plans to spend much of the s-
mer sailing off Nantucket. If
right, Canada's LBO king will
over two of Canada's prized fiefd
Labatt and the Blue Jays.

CYCLE TIME MANAGEMENT
The Fast Track to Time-Based Productivity Improvement

NEEVE: *Can he protect "cycle-time management" from giant Motorola*

PETER SIBBALD

MANAGEMENT

'BUZZ OFF MY BUZZWORD'

Now, consultants are battling for control of choice phrases

What's in a buzzword? William W. Neeve obviously thinks there is a lot. For two years, this little-known Toronto-based management guru has been locked in what might be called a battle of the buzzwords with corporate giant Motorola Inc. Neeve says he dreamed up the term "cycle-time management"—shorthand for weeding the unnecessary out of business processes—and wants to protect it with a trademark from the U.S. Patent Office. He even calls his consulting company Cycle Time Management Inc. Motorola, which uses the phrase in management seminars and publications, opposes the Patent Office protection. The dispute currently is being adjudicated in U.S. Patent Court.

VALUES-BASED CHANGE
Emphasizing trust, candor, honesty, and integrity

The Neeve-Motorola dustup illustrates the latest twist in buzzwords: The effort by many consultants to gain control over key words and phrases by registering them with the Patent Office. Some are even trying to patent buzzwords now in common usage, at least among consultants. Andersen Consulting, for one, has drawn guffaws from rivals by claiming ownership of the phrase "change management." Technically, that means anyone who commercially employs the term, which is widely used to describe efforts to change a company's culture, could be sued by Andersen.

Such aggressiveness by big outfits is one reason Neeve is adamant about gaining control over "cycle-time management." He maintains that five Motorola managers attended a lecture he gave on the concept in 1987, a year after he founded his consulting firm in Canada. Soon, he argues, the phrase began popping up in Motorola publications and seminars. When he finally tried to register the term two years ago with the Patent Office, Motorola fought the move. "I have a file four inches thick on this, and it has already cost me about $50,000," the consultant grouses. Motorola says it believes the term is generic and shouldn't be protected.

In any case, it takes a lot of chutzpah to try to patent a buzzword. That's because the phrases often are used to repackage old ideas so they sound new. For instance, "joint ventures" became "strategic alliances" in the early 1980s and then "strategic partnerships." Now, they're often called "value-managed relationships" or "networks."

PROCESS-CENTERED ORGANIZATION
Structuring around processes, not departments

Of course, a choice word or phra can pack a lot of selling power if t catches on, providing the buzzwordsm with a slew of speaking engagemen consulting jobs, and book publishi deals. Michael Hammer, a consulta best known for promoting the concept corporate reengineering, concedes t the ideas behind his highly popu buzzword likely would have registe little more than a whimper under a ferent name. "Ninety-nine out of other alternatives were tedious and b ing and would put you to sleep," says. "If I used another term, it wo have fallen flat." But ev Hammer, who is beginn to lay the groundwork a phrase called the "p- cess-centered organi- tion," thinks it is silly try to protect a bit of c- jured vocabulary. "What you going to do? Spend all yo life in court trying to protect phrase]?" he asks.

COLLABORATIVE WORKPLACE
Rejecting hierarchy, embracing teamwork

"LIKE COCA-COLA." Hammer's ins- ciance hasn't stopped rivals from try to cash in on his term. Indeed, no cent concept has spawned more bu- words and phrases than "reengine- ing"—most of them now registered w the Patent Office. CSC/Index Inc. Cambridge (Mass.) consulting shop, h protected the term "business reen- neering." Coopers & Lybrand h claimed "breakpoint business proc reengineering." McKinsey & Co. ca the same thing "business process re- sign." Notes Edward M. Marshall, pr- ident of Marshall Group Inc., a cons- ing firm in Chapel Hill, N.C.: "If you a small guy with a creative idea a you don't protect it, your idea will knocked off as quickly as a desig dress."

As buzzwords go, "cycle-time m- agement" may well be nearing the e of its cycle. But Neeve says he plans continue his fight, figuring the phr still has value. "I crea something, and it's most like Coca-Cola me," he says. Besid he adds, "I don't le the fact that a lit company like mine be squashed by a g company like Motoro" Now, if he can just come up w a good slogan to use as his battle he might have a chance to win.

DATA: BLOOMBERG FINANCIAL MARKETS

THE CITI NEVER LEVIES AN ATM FEE

WHERE WOULD YOU RATHER bank? At First Chicago, which recently said it would slap fees on some customers who used human tellers? Or at Citibank, which on May 23 announced a kinder, gentler approach? Starting June 1, Citi customers, big and small, will have to pay precisely nothing to use automated tellers, personal-computer banking, and other electronic services. The irony: Citibank tried steering customers away from tellers in the early 1980s but retreated amid a crush of negative publicity.

THOSE DEFLATED RUBBER WORKERS

THE UNITED RUBBER WORKERS threw in the towel, ending their 10-month strike at Bridgestone/Firestone. No glorious victory, this: Bridgestone filled most of the strikers' slots with replacement workers. The company's strategy didn't thrill the Clinton Administration, but it did effectively win the battle. By unconditionally agreeing to return to work, most URW members will merely win preferential-hiring rights. Badly beaten, the union will meet on June 30 to vote on a merger with the deeper-pocketed United Steelworkers.

HEADLINER: WILLIAM AVERY

A TIDY PACKAGE FOR CROWN CORK

For a decade, William Avery labored in the shadows of Crown Cork & Seal CEO John Connelly. Cautious and debt-averse, Connelly expanded the company gradually. Then in 1990, Avery took over—and was quick to put his imprint on the packaging maker. In the past five years, he has acquired about 20 companies, more than doubling Crown's sales, to $4.5 billion.

On May 22, Avery took his boldest step yet—agreeing to pay $5.2 billion in stock, cash, and assumption of debt for France's CarnaudMetalbox. Avery's deal carries some risks: While it will make Crown No. 1 in packaging, with more than $10 billion in sales, it also will lift Crown's total debt to about 60% of capital. And the merger will give Compagnie Générale d'Industrie et de Participations, which owns 32% of CarnaudMetalbox, 20% of Crown and three seats on the combined companies' board.

Avery, a car collector who grew up on Chicago's South Side, is winning kudos on Wall Street for the deal: Crown's stock, trading at 37¾ on Jan. 1, reached 47¼ on May 23.

By Joseph Weber

NEWT JERKS LOBBYISTS' PERKS

A BUDGET BATTLE? A TRADE policy? Let's skip to what really counts on Capitol Hill. On May 24, House Republicans revoked the passes that had allowed lobbyists favored by the old Democratic leadership to buttonhole lawmakers just outside the House chamber—an area out of bounds to the general public. About 6,000 people now hold the special-access passes, which also allow selected lobbyists after-hours entrée to Capitol Hill office buildings. Earlier this month, Newt & Co. finished taking away the same lobbyists' free-parking privileges. The GOP says it's just removing perks not available to the public.

INCENDY FACES A CASCADE OF CHARGES

FOUR YEARS AFTER THE deed, the Cascade International scandal may be drawing to a close. A 132-count federal indictment was unsealed on May 23 by the Miami U.S. Attorney against Victor Incendy, his ex-wife, and three other people who had been involved in Cascade's $175 million fraud-and-stock-manipulation scheme. The Boca Raton (Fla.) retailer collapsed in November, 1991, after reports surfaced that it operated only a small fraction of the 319 fashion boutiques, cosmetic counters, and retail stores that it had advertised. Incendy disappeared and is now a fugitive. His ex-wife, Jeannette Incendy, was arrested on May 23 outside a health club near Jupiter, Fla.

ET CETERA . . .

FE HARBOR." That won't be easy— n the SEC is divided. General Coun- Simon M. Lorne and Commissioner ven M. H. Wallman, both ex-corpo- lawyers, advocate aggressive re- n. But agency staffers defend class ons as valuable adjuncts to their cing efforts and say minor tinkering eeded. "The SEC is like a large Ital- family at the dinner table," says iam R. McLucas, the SEC's enforce- it director. "There's a lot of arguing, greement, and debate."

evitt, who favors a middle-of-the-road approach, has jaw- ed the Senate Banking Committee to produce a compro- less radical than the House overhaul, which passed by a ided 325-99 in March. The Senate bill, likely to become eliminates bounty payments that lawyers pay investors agree to sue, and it caps attorneys' fees. It also gives panies "safe harbor" from liability for making business casts that don't come true—so long as they warn that pro- ions are speculative, and they don't engage in fraud.

ligh-tech companies have long sought a safe-harbor provi- because they have volatile stock prices, and they are continually being sued when they miss their growth forecasts. In 9 out of 10 cases, they settle for an average of $8.6 million to avoid even costlier litigation. "We view that as high-tech extortion," says Kenneth Glueck, director of finance policy at the American Electronics Assn.

Levitt's lobbying helped strip from the Senate measure a House requirement that losers pay both sides' legal fees. The SEC chief—backed by consumer groups—complained that a "loser pays" rule would scare off legitimate suits. And the Senate trimmed the House's safe-harbor rule by limiting it to public companies, not brokers and financial institutions.

But corporate interests bested Levitt elsewhere in the compromise bill, sponsored by Banking Committee Chairman Alfonse M. D'Amato (R-N. Y.). The legislation lacks two items the SEC had urged to help investors recover damages: a longer statute of limitations and the option to sue accountants and outsiders who assist in a fraud.

Not surprisingly, shareholders' attorneys are livid over D'Amato's bill. "It makes it all but impossible to hold swindlers accountable for fraud," fumes Jonathan W. Cuneo, general counsel of the National Association of Securities & Commercial Law Attorneys. And the Consumer Federation of America says the reforms essentially give companies a "license to lie" about their prospects, making it next to impossible to file even the strongest cases.

Still, momentum for relief from what Corporate America calls legal shakedowns appears unstoppable. With both parties on board, a bill is likely to arrive on President Clinton's desk by summer. Although it will tilt the balance toward corporations, Clinton may be forced to sign it: Given the current political climate, it's the best he can get.

By Michael Schroeder

CAPITAL WRAPUP

SSIN' GEORGE

ieorge Bush gets no respect from fellow Republicans. The House P voted to extinguish his Points of ght Foundation and narrow his ean Air Act. Curbing the Ameri- ns with Disabilities Act to ease bur- ns on business is next. In the Sen- , Phil Gramm raps Bush with lines e, "I don't want to be the 'Educa- n President,'" and "Don't read my s. Read my record." Bush's top de- ıder? Bill Clinton, who lauds him quitting the National Rifle Assn.

TAX PLAN TOO TAXING

►House Republicans are reviewing their seven-year, $350 billion tax cut to make it easier to balance the budget by 2002. One idea under consideration: Dump a generous depreciation plan for business investment. Another option is to limit the $500 per child tax credit to families earning less than $100,000—instead of $200,000 in the current bill—and phase out the credit after just three years. Those changes would reduce the House bill's cost by more than $100 billion.

CLINTON'S DREAM RIVAL

►The White House is hoping Newt Gingrich catches the Presidential bug during a June 9-12 tour of New Hampshire. Why? Because polls show President Clinton scores better against Gingrich than against other Republicans. Surveys show Clinton's ratings are higher than Gingrich's in every region, even in the Speaker's home state of Georgia. In a New York State poll, Clinton tops Gingrich, 57% to 28%. He leads Senate Majority Leader Bob Dole 44% to 41%.

CHINA

CHINA'S NEW ELITE

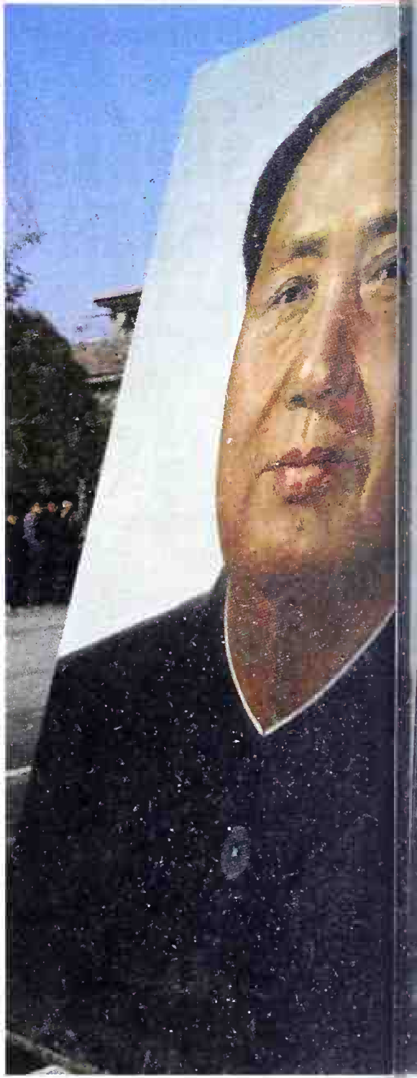
They survived Mao. Now, these superachievers may reshape China

Chen Xiaoyue was 19 years old the day Red Guards came hunting for "class enemies" at Beijing's Qinghua University. It was 1966, the start of the Cultural Revolution, and Chen's father—a professor who had taught at Harvard—was a prime target. Chen's home was ransacked, and his family was scattered to different corners of China. Chen spent 10 years toiling as a farmer and factory worker in remote Shaanxi province.

It was the seminal experience of his life. After working all day, he spent nights poring over old textbooks to teach himself math, physics, and English. In 1977, a year after the Cultural Revolution finally ended, Chen was one of the few people who passed the first competitive university entrance exam held in a decade. Nearly 20 years later, Chen is leading a different revolution at Qinghua: As associate dean of the management school, he is shaping its curriculum to prepare leaders for the market economy. "People of my generation will play a very important role for the next century," Chen says. "We have to establish a new business culture."

A dynamic new elite is coming to the fore in China. Its members stand out from both the older generation raised on communist glories and from younger Chinese exhorted to "get rich." This group came of age during the Cultural Revolution, when millions of teenagers became Mao's fanatic Red Guards. In the reign of terror that followed, millions of Chinese were humiliated, beaten, and murdered. Then, Mao banished 17 million teenagers to the countryside, closing their schools and denying them education beyond communist propaganda. They became known as the "lost generation," a waste of talent that hobbles China to this day.

WARY. A select group has managed to make up for lost time. Call it the Class of '77. Its members were the first students after the Cultural Revolution to gain entry to universities on the basis of competitive exams rather than political connections. Out of 12 million applicants for China's top universities in 1977 and 1978, they were the 5% who earned top scores. Many went on to earn master's degrees and PhDs in the West. Now, the Class of '77—sophisticated and wary of rigid ideology—is making an impact on every aspect of Chinese society, from



business to government to the ar

The Class of '77 Makes Its Mark

Survivors of the Cultural Revolution who entered China's best schools in the late 1970s make up the Class of '77, an elite group that is becoming more powerful as the country enters the post-Deng era

- ▶ Having risen largely on merit rather than family ties, the '77ers represent some of China's brightest minds
- ▶ They have built up extensive personal networks based on friendships during the Cultural Revolution
- ▶ After studying and working overseas, '77ers are more open to Western ideas and less bound by communist ideology than the older generation of leaders
- ▶ They fill key positions in the government, universities, and think tanks, and their help will be vital to whoever wins the power struggle after Deng
- ▶ State-run enterprises and Western multinationals alike rely on '77ers to run many operations in China
- ▶ They want the government to tolerate criticism, boost the private sector, and encourage the rule of law

THE WAY THEY WERE
From '66-'76, millions of teens were denied education beyond propaganda. Many have now caught up

a government run by pragmatic nocrats. Above all, members of the ss of '77 believe they are the most lified to lead China, by virtue of r experience with rural poverty and stern society. With Deng Xiaoping death and doddering Communist y career men fading from the scene, nbers of the Class of '77 are prepar- to take the reins.

hey will be able to tap into a tre- dous network. Alumni are every- re, from the upper management of e-owned companies to the Asian s of multinationals such as Kraft ds International and Goldman, Sachs o. They're pioneers in private enter- e, capital markets, and legal reform. y hold prominent posts in Chinese ersities. Tens of thousands are at levels in China's massive bureau- y. The '77ers "are the most impres- people I've ever met," says China ert Kenneth G. Lieberthal of the versity of Michigan.

be sure, the Class of '77 isn't the only influential group of fortysomethings in China. Far more powerful are the "princelings"—sons and daughters of top Communist officials. Many also did time in the countryside, but they advanced through patronage and nepotism.

They and others among Beijing's leaders view the Class of '77 with some suspicion. The class dominated the economic and political think tanks that influenced policymaking under reformist party boss Zhao Ziyang, purged after Tiananmen. Many Zhao advisers supported the students and subsequently scattered into the private sector or to overseas universities after the massacre.

SELF-RESPECT. As a result, Communist elders may take moves to slow the Class of '77's advancement into sensitive top-level jobs. "The leaders do not trust our generation," says an economist who had been a Zhao adviser. "We have too much self-respect to kowtow to them." This generation, however, will not be easily marginalized. For starters, they're very much in vogue. Recently, novels, TV series, and theme restaurants have been devoted to the experiences of the *laosanjie*, or "old three classes"—those who would have graduated from high school during the first three years of the Cultural Revolution.

More important, the Class of '77 has a pivotal role in the economy. The drive to develop capital markets, monetary policy, and a commercial-banking system largely is the work of '77ers. They hold directorships in the Finance Ministry and State Planning Commission. The China Securities Regulatory Commission has at least five '77ers in top positions, including chief legal counsel Gao Xiqing, a former Duke University professor who worked in a munitions factory in the Cultural Revolution. Gao left a high-paying job at a Wall Street law firm in 1988 to take his present post.

Some of this generation's most gifted members serve as a bridge between Wall Street and China's state sector. Shan Weijian, based in Hong Kong as J. P. Morgan & Co.'s vice-president for China, toiled six years in Inner Mongolia as a farmer, horse rancher, mason, and "barefoot doctor"—a rural physician with no formal medical training. He went on to earn a PhD in the U. S., work at the World Bank, and teach at the University of Pennsylvania's Wharton School before moving to J. P. Morgan.

China's progress in building a modern legal system also depends largely on '77ers. At 40, Wang Yun is a judge in the Supreme Court's commercial division, where she handles cases on contracts, bankruptcy, and banking. Wang entered college in 1979, after working in a dyeing plant for seven years. Her seniors had only orthodox communist training in school, but Wang and her classmates studied works by such Western theorists as Locke, Montesquieu, and Rousseau. "My generation learned more in law school," says Wang, who is a visiting scholar at Columbia University.

Since this group suffered so much during the Cultural Revolution, it is determined to build a sound legal system. "The Cultural Revolution was lawless," recalls Wang Xinan, director of the legal department in the Ministry of Machine-Building Industry, who spent six years on a farm and at factories in Gansu province. "My generation paid a high price, and we don't want later generations to have to as well." Wang is helping state enterprises develop legal skills so they can appeal to the courts rather than the ministry to solve problems.

The Class of '77 will have its mo
lasting imprint on education. Ch
Zhangliang, who heads the biology d
partment at Beijing University, says h
brethren occupy top academic posts. "
you look at every institute and universi
you will see over half are from this ge
eration," he says. Academics returni
from the U.S. are also revitalizing ec
nomics courses. "We must totally chan
the system," says Hai Wen, one of fi
U.S.-trained economists from the Class
'77 who started Beijing University's C
na Center for Economic Research.

LU MING ★ DEALMAKER

A NETWORK FORGED FROM PAIN

RON McMILLAN/ECHO ASIAN FEATURES/GAMMA LIAISON

As he travels across China, Lu Ming, Greater China development director for Kraft Foods International, often meets fellow members of the Class of '77. To break the ice, he finds out where they were during the Cultural Revolution. "Even if I didn't know him," says Lu, "if he has a similar background, we can quickly establish a rapport."

Like so many others of his generation, Lu, 37, endured tremendous hardship in the Cultural Revolution. His father, a philosophy professor, was sent to a labor camp and killed. With his mother and sister, the young Lu left home in the central city of Wuhan and went to work in the countryside. He toiled 16-hour days in the fields yet still found time to study at night. In 1977, Lu passed the new university exams and entered an engineering institute in Wuhan. After his graduation in 1982, the government sent him to Leuven University in Belgium to get a master's degree in business.

He returned to state-owned China International Trust & Investment Corp. (CITIC), managing its extensive investments in resources and building materials in 1985. He then ran CITIC's $100 million steel mill in Claymont, Del. That's where Kraft discovered him in 1993. Now, as the company's Hong Kong-based business-development manager, Lu negotiates joint ventures in China, where Kraft already produces powdered drinks, dairy products, and instant coffee.

Through alumni of the Class of '77, Lu has gained insights into key political and business figures. "My generation has reached a very high level in many companies," he says. "I know their motivation very well." In a country where connections are all-important, the Class of '77 is fast becoming the ultimate network.

SHEN YUANYUAN ★ LAW PROFESSOR

TEACHING AS A TWO-WAY STREET

It was a far cry from the typical Chinese classroom. Shen Yuanyuan, 38, a Harvard University Law School graduate and former student and professor at People's University in Beijing, tried out her new American teaching style at her Chinese alma mater when she returned there in 1993 to ecture on international aw.

Shen asked her students to conduct negotiations, write contracts, and answer her questions. That surprised many of them. Why? In Chinese universities, "usually the teacher gives you the whole system, one-two-three-four," says Shen.

Exposing students to the American approach is Shen's way of repaying her debt to People's University. Shen maintains close ties with her old school, which sent her to Harvard in 1988. Three days before her graduation, troops rolled into Tiananmen Square. Shen quickly arranged to stay in the U.S., entering graduate school at the University of Wisconsin.

Now working on her PhD on the sociology of law, she lives in Cambridge, Mass., with her husband, a Harvard law professor, and two children. But she tries to go back to Beijing every year. "I feel I have some moral obligation to give them what I have learned in the U.S.," she says.

Like many members of the Class of '77 who have studied in the West, Shen has developed ideas about personal freedom that might displease some Party elders. "Individualism isn't perfect," she says. "However, for China at this stage, it's quite useful." With that in mind, Shen is writing her dissertation on consumer protection in China. As fraud explodes in the market economy, a grassroots consumer movement is stirring. From both sides of the Pacific, she hopes to chronicle its growth.

Chinese intellectuals sent petitions the government calling for change. If s group is viewed as too threaten- , it could be bypassed for top posi- ns in the future. "They are hot pota- s," says Robin Munro, Hong Kong ector of Human Rights Watch/Asia.

But there's no guarantee that young- generations will be any more sub- sive. Educated Chinese in their 20s early 30s take the Communist Par- even less seriously. "They sneer at everything," says Stanley Rosen, a political science professor at the University of Southern California. Because the '77ers possess the skills needed to run bureaucratic machinery and formulate policy, whatever faction is in control will need to rely on this generation. Any leader "will have to solve society's problems," says a '77er who was a Zhao adviser. "He will need us to do that."

As the older bosses viciously struggle for power in Deng's wake, expect the Class of '77 therefore to wait its turn. Meanwhile, it will likely try to change the system quietly from within, gradually strengthening the institutions required for a civil society. If China can get through another decade without major upheaval, it could start to resemble the modern economic power so many await—thanks in large part to the Class of 1977.

WENG XIANDING ★ ENTREPRENEUR

FROM TECHNOCRAT TO TYCOON

For young technocrats such as Weng Xianding, China's complicated politics after June, 1989, rompted worries about whether gov- rnment work was for them. Doubting he could make a major impact as Beijing bureaucrat, Weng—a rising ar at the State Planning Commis- on—joined the exodus of govern- ent officials into business.

Now, he runs an ambitious $120 illion investment company in fast- aced Shenzhen, the economic zone ear Hong Kong. Among the projects his China New Industries Invest- ent Co.: a futures-and-commodities ading firm, a clinic to treat near- ghtedness with lasers, a raft of high-tech startups, a major office complex, and a sports club with racquetball courts and bowling lanes.

Weng relied on his Class of '77 contacts to build the group. After working at a brick factory in Henan province, Weng scored so well on the 1978 university entrance exam that he was admitted into the master's program at the Chinese Academy of Social Sciences, then a hotbed of reformist economic theory. There, he met students who would later attain government positions. After getting a master's degree in banking and finance in Milan, Italy, Weng set up New China Industries. Its 17 shareholders include provincial governments from around China and his old employer, the State Planning Commission.

Over time, Weng believes the business sector will become a major catalyst for change in Chinese society. By turning New China Industries Investment into a major financial-services company, he plans to play a big part.

JAPAN

THE JAPANESE HAVE A NEW THIRST FOR IMPORTS

But the surge won't do much to trim the surplus with the U.S.

Cruising through the opulent, marbled Tokyo branch of Barneys New York, Keiko Saijo exults in the bargains. She has just picked out an imported dress shirt that's going for 16,000 yen ($184), down 25% from the last time she looked. "The prices are really coming down, and the choice of products is getting much better," says the twenty-something office temp. She bubbles on about how cosmetics from Chanel and Christian Dior are getting cheaper, too.

Saijo, along with most Japanese consumers, is taking advantage of the high yen, or *endaka*. The currency's rise—about 20% over the past year—means many imports are getting cheaper, encouraging Japanese to buy more of them than ever. And as Japan's exports are increasingly expensive and hard to sell, the country's stubbornly high trade surplus with the rest of the world is declining for the first time in years.

Few non-Japanese have noticed this decline, however, because Japan's surplus, expressed in dollars, has barely budged. In April, it was down by 2% from a year earlier. But in yen terms, the surplus declined by 20%. The volume of imports also surged by 18%. "There clearly has been an underlying structural change," says Geoffrey Barker, head of research at Smith New Court Securities (Japan) Ltd.

Problem is, these positive signs don't spell relief for U.S.-Japan tensions. U.S. exports to Japan grew at about 16% in the first quarter, but Japan's exports are much larger and grew at about 10% for the same period, according to the U.S. Commerce Dept. That means the $66 billion U.S. trade deficit with Japan may barely budge this year. "A small acceleration of imports to Japan isn't going to do the trick," says Larry Chimerine of the Washington-based Economic Strategy Institute. "You gotta have big changes to reduce the deficit."

Stress can cause increased blood pressure, tensed muscles and sharply accelerated breathing rates.

Of course, if you're thinking of moving to client/server, you already knew that.

Can you move your business to client/server without suffering from negative side effects? We think so. In fact, with J.D. Edwards enterprise business software, the switch can be surprisingly pleasant. Instead of rushing headlong into an environment you may not be ready for, you make the move step by step, at a pace you find comfortable. To find out how J.D. Edwards client/server software can help your business, relax, take a deep breath, and call us at 1-800-727-5333, ext. 103.

JDEdwards®

SOFTWARE FOR A CHANGING WORLD™

and should reach 5,000 this year, worth roughly $60 million. Half of those will come from the U.S.

Overall, demand for imports has surged most noticeably for chemicals, fabricated metals, machinery, apparel, and cars, according to the Japanese government. Through April, sales of imported cars soared by 42%, to 111,744. That's still pretty paltry in a market of more than 6 million cars a year, and almost 27% of the imports were Japanese makes. But there's no doubt that foreign cars eat less dust than they used to.

PC DIVIDEND. Also catching on with the Japanese are American personal computers. Their market share has grown during the past year by about 10 percentage points and now stands at 35% to 40%, says Frank Sanda, president of Apple Japan Inc.: "The demand is overwhelming. We're growing at 30% year on year and now have better than a 20% market share, which is double what we have in the U.S." But unfortunately for the U.S. trade deficit, Apple's computers are assembled in Singapore.

PCs aside, much of Japan's appetite is for less sophisticated goods such as imported beer, food, and compact disks. Foreign beer tripled in market share last year, to 6%. Selling at $2.30 or less per 8-ounce can, imports have forced the price of Japanese brews down to $3.05 from $3.33.

Despite bad weather, food stores have managed to hold vegetable prices and profits steady by turning aggressively to imports made cheaper by the currency shift. Vegetable imports, for example, are growing rapidly.

While fixing dinner, Japanese can listen to cheaper CDs, thanks to *endaka*-linked price-chopping by Tower Records Inc., the U.S.-based chain that operates 23 stores in Japan. On Apr. 8, Tower slashed its prices by more than 10% for chart-topping CD imports. "Our customers are very happy," says Marketing Manager Shinichi Fujisaki. The result: Tower's CD sales volume has leapt by 15%, he says.

Ever since the Plaza Accord of 1985, which brought a dramatic surge in the yen, Washington has counted on *endaka* to help reduce Japan's global trade surpluses and ease access to its markets. Until recently, that expectation has been unfulfilled. Now, evidence suggests the yen may have finally climbed high enough to make a difference. The bitter irony is that it may be too little, too late to head off trade brinksmanship across the Pacific.

FRANCE

LIBERTE, EGALITE, FRUGALITE: FRANCE'S NEW FINANCE CHIEF

In a moderate Cabinet, Alain Madelin is a maverick

As ideas pour from his hyperactive brain, Alain Madelin sounds like an intellectual godchild of Margaret Thatcher or Ronald Reagan. He hates big government, worships free markets, and thinks taxes should be cut to the bone. So how—*nom de Dieu*—did Madelin become economic czar of France, that stronghold of protectionism?

In a reassuringly moderate Cabinet, named on May 18 by newly elected President Jacques Chirac, Madelin, 49, is the maverick. His post as Finance & Economy Minister is traditionally France's most powerful after the Prime Minister, Alain Juppé. Given Madelin's combative personality, many think he may work even bigger changes on a rigid economic system than Juppé. "Madelin represents innovation," says Christopher Potts, chief economist at Chevreux De Virieu, a Paris brokerage house.

Y. FORESTIER/SYGMA

TOUGH Madelin faces a public that's not ready for Thatcherism. He may well clash with Premier Juppé

As Industry Minister in 1986-88, Madelin trimmed his own budget without being asked and even floated the idea of abolishing his ministry. He also slashed aid to ailing companies, letting a shipyard close rather than prop it up with tax funds. "Protectionism," Madelin argues, "dissuades companies from improving their products" and "produc rising unemployment."

For France, that's revolutionary ta and Madelin faces a fight with a pub that's not ready for Thatcherism. Ma think he'll also clash with Juppé, a co sensus politician. Labor unions are ready challenging his first planned p vatization—of steelmaker Usinor Saci It will be far tougher to sell off pub services such as France Telecom. Ma Chirac backers also think the Preside should loosen the franc's rigid link the German mark, to cut interest ra and create jobs. That w Madelin's view two years a Now, he defends *le franc fort*, guing France's economic func mentals are strong enough to s port the policy.

MINIMUM WAGER. Son of a Co munist auto worker, Madelin w drawn toward the opposite car As a young man, he founded far-right Occident group a fought leftists in the streets d ing France's 1968 student rev He turned more moderate in 1970s. A lawyer by trainin Madelin loves to quote two gur free-market economists Milt Friedman and Friedrich A. v Hayek.

Yet Friedman wouldn't like of Madelin's ideas. Claiming sy pathy with the working cl because of his humble origi Madelin backs the monthly sub dies of $400 per worker that C rac plans to pay companies that h the hard-core unemployed. He applau a major hike in the minimum wa announced by Juppé on May 23, wh many economists think will hamper creation.

Juppé's speech quickly hurt the fra with traders wondering how the g ernment will pay for these initiati The next day, Madelin assured reports that Chirac would cut the deficit a support the currency, without offer any details. Madelin can only dispel uncertainty about the government's p gram by proving he has the courage his frugal, free-market convictions.

nternational Outlook

ITED BY STANLEY REED

VHY PUMPING UP NATO IAY BLOW UP IN CLINTON'S FACE

Vith Republicans on his back, President Clinton is contemplating embarking on a collision course with Russian President Boris Yeltsin over the future of Europe- security. The White House wants a rapid expansion of the ro alliance to cover emerging democracies in Central Eu- e—such as Poland and Hungary—while excluding Russia. Administration's stance echoes the GOP Contract With ierica's call for enlarging NATO. Both parties are also keen winning ethnic voters for the 1996 Presidential election.

But bowing to domestic politics on the crucial issue of ropean security could further erode Clinton's already bad- lamaged credibility overseas. On his ent trip to Russia, Clinton hardly le a peep about Moscow's crushing Chechnya. A move to expand NATO lefiance of Yeltsin, whom Clinton coddled throughout his Adminis- ion, would probably look like yet ther Clinton waffle.

PER RIFT? Such a step would also ercut Yeltsin and signal Moscow the West intends to isolate it. That could strengthen the hand of pow- l reactionary forces just as Russia ls toward elections for President for the State Duma, or parliament. anding NATO "is an affront to Russian feelings," declares rey N. Mitrafonov, deputy chairman of the Duma's foreign rs panel and a member of the ultraconservative Liberal nocratic Party.

Vhat's more, Clinton's campaign could deepen the rift ng European nations over the speed and scope of plans to den the security umbrella. Germany—which shares bor- with the Central Europeans—wants to move at full Britain isn't eager to make new military commitments, the new government of Gaullist President Jacques Chirac oppose the Clinton initiative in a typically French move to blunt U. S. influence in Europe. "The debate could lead to NATO's demise, not its revitalization," frets Charles A. Kupchan, a senior fellow at the Council on Foreign Relations.

But for now, the U. S. is pressing ahead with plans to rewrite NATO's eligibility requirements this summer so as to widen the alliance. The effort is meant to promote European integration and assuage the historical insecurity of Central Europe. But many wonder where the billions of dollars it would cost to bring the Polish and Czech militaries up to NATO standards would come from.

PARADING TROOPS: *Russia feels threatened*

There seems little need to rush into a poorly thought-out policy now. With a budget 70% below its 1988 peak, the Russian military is hollow. Manpower is way down, and fighter pilots fly just 40 hours a year, compared with 225 hours in the West. "Russia won't be able to threaten Europe for a long time," says Sherman W. Garnett, a former Pentagon Russia specialist.

NO BRAKES. Although the short-term military threat may no longer exist, Russia will remain a dominant presence in the region. But it would make a lot more sense to work on integrating the Eastern economies with the West than have them spend heavily on rearming.

The White House, doesn't want to back off and make it look as if Moscow autocrats control U. S. policy. "They don't have their foot on the brakes," sniffs one U. S. official. They shouldn't. But that doesn't mean Clinton should plow ahead. He hasn't come up with a fresh new vision of European security now the cold war is over. Instead, he's letting a game of one-upmanship with the GOP push him into what could turn out to be an expensive and risky European initiative.

GLOBAL WRAPUP

IWAN'S NEW CLOUT

'he U. S. decision to allow Taiwan esident Lee Teng-hui to visit his ia mater reflects how much U. S. itudes have changed toward Tai- n and China. In recent years, Tai- n has embraced democracy and it a powerhouse economy, making darling of the U. S. Congress. ina continues to arrest dissidents, ping alive its negative image. Beijing views the issue as a matter overeignty and considers the U. S. be reneging on past diplomatic agreements in which the U. S. recognized Beijing as the legitimate Chinese government. How far China will go in punishing the U. S. remains to be seen. Some believe Beijing has little leverage. "What can they do, stop selling us one-third of their exports?" quips one U. S. official. But it would be silly to underestimate Beijing's ability to make trouble.

AN INDEPENDENT BERMUDA?

▶ Over nearly four centuries of benign British rule, tiny Bermuda has turned into the thriving home of $14 billion in mutual-fund assets and of insurers with $29 billion in capital. Now, this financial mecca may be facing a change in governance.

On Aug. 15, the British colony plans to vote on Premier John W. Swan's long-sought goal: independence. Bermuda's commercial Establishment, fearful that a shift in the colony's status might scare business away, is trying to reassure investors that independence would not end its laissez-faire ways. Polls show that voters are strongly against independence.

BILL SWERSEY/GAMMA-LIAISON

STRATEGIES

TESTING NUCOR'S METTLE

The steel mill that's often imitated shows signs of strain

TERRY PARKE

Bill Clinton first knocked on the doors of Nucor Corp. in the mid-1980s, when, as governor, he wanted to lure a steel mill to Arkansas. Clinton befriended Nucor executives and last April even invited President John D. Correnti to the White House. After a state dinner, the two men talked shop until 2 a.m. "He wanted to know why the government couldn't run like Nucor," Correnti recalls.

Clinton is hardly Nucor's only fan. For two decades, the Charlotte (N.C.) minimill king has stormed through the American steel market, earning a growing stream of profits and delighting its stockholders—all while burly competitors such as U.S. Steel, Bethlehem, and LTV shuttered mills and lost billions. With its skeletal headquarters staff of 23 and a nonunion workforce tied into profit-sharing, Nucor has become the very model of a lean, low-cost company. "We benchmark against Nucor," says LTV Corp. Chairman David H. Hoag.

Now the company everybody loves to follow is stumbling. After 20 years of breathless growth, Nucor faces difficult challenges. A crucial new Trinidadian iron carbide plant has been plagued by breakdowns and delays. "It's a problem a month," admits Correnti, heir-apparent to legendary 69-year-old chairman and CEO, F. Kenneth Iverson. At the same time, a passel of new minimills challenging Nucor's dominant position is coming on stream. And at Nucor's key Crawfordsville (Ind.) plant, an exodus of managers has unsettled operations.

WALL STREET JITTERS. Boil it all down, and some industry observers see signs that the company's explosive growth may finally be stretching Nucor's lean management too far. Although revenues have more than quadrupled since 1986, to $3 billion, Nucor hasn't significantly increased its headquarters staff. Yet the company is now pursuing growth projects aimed at making it the biggest American steelmaker within five years, up from fourth place. At the same time, it is navigating its first executive transition since 1965 as Iverson, recovering from heart surgery, prepares to hand over the reins. The question now, sa one former Nucor executive, "is whet er Correnti can keep running it as t same tight-knit company."

The result: Wall Street no longer l lieves Nucor merits top dollar. The st sold for more than 50 times earnin two years ago—the highest multiple the industry. With trouble now on s eral fronts, Nucor's stock looks decide average. Shares have fallen 27%, around 51, since September, and to the stock trades for just 17 times ea ings. "Their premium has been high," says Howard F. Ward, mana of the Gabelli Growth Fund, which cently sold its Nucor stake.

Certainly, Nucor is in no danger going into a tailspin. Thanks to pla expansions and a 25% hike in flat-rol steel prices, the company's sales re 32% in 1994, while earnings jump 83%, to $227 million. Analysts exp earnings to rise an additional 39%, $350 million, this year. But to keep t company growing at 15% to 20% year—Iverson's goal—he is diversif into new products and markets. A that's what's giving investors the ters. Although cyclical worries are h ing all steel stocks, Nucor has be among the hardest hit.

Part of the problem stems from N cor's success: The e with which the lo cost producer has co to dominate mark for commodity-gra steel coils has spawn new competitors. While ceding the me exacting auto and appliance markets big integrated steelmakers, Nucor l prospered, selling "plain vanilla" st to manufacturers of auto parts and to

STRATEGY: *Iverson will move into new markets to keep rivals at bay*

Now newcomers are borrowing N cor's technology and barreling into the markets. A Canadian joint venture, G latin Steel, started up a Nucor clone Kentucky in April, while a team of N cor veterans is nearing completion o similar plant in Indiana. Minneapo based North Star Steel and its Aust lian partner, BHP Steel, are building Michigan, while LTV, with British St and Sumitomo, are scouting the D South for a minimill site. All told, se new plants will flood the U.S. some 14 million tons of new capacit more than a quarter of current prod tion. Much is targeted at Nucor's c market. Gallatin CEO Milan Kosanov claims that with more advanced equ ment and a better educated workfor he'll top Nucor's products. "We'll be t ing [quality] to a higher level," he sa

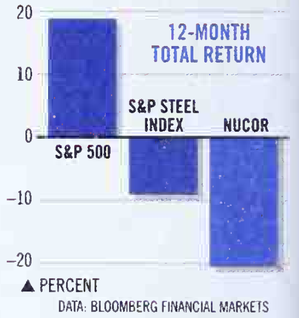
As Nucor runs into problems...

- Nucor's trouble-plagued new iron carbide plant in Trinidad is a year behind schedule and is expected to lose up to $20 million this year
- Slackening demand for its low-grade sheet steel has forced Nucor to slash prices
- New competitors are adding huge capacity in commodity steel markets, raising fears that it faces a price war
- A management exodus at a key Nucor plant has disrupted operations and raised questions about quality
- Explosive growth has stretched Nucor's lean management team, even as Chairman F. Kenneth Iverson's recent health problems and eventual retirement are leading to concerns about management depth

...its stock slides



DATA: BLOOMBERG FINANCIAL MARKETS

lenge. "There's a question of how good the new mills are going to be," says Iverson. "You get a bunch of green guys together, you're going to have startup problems." Rather than hurting Nucor, he argues that the new American mills will primarily supplant high-cost U.S. steel and imports, which topped 30 million tons last year. He also says that Nucor will begin selling to new customers, such as the BMW auto plant in South Carolina and Mercedes-Benz in Alabama. Meanwhile, he expects the company's exports, particularly to Southern Europe and Asia, to increase.

Nucor is also intent on proving that it can generate a substitute for its raw material: scrap steel. Prices for scrap have already shot up 70% in two years, and when all the new minimills open their doors by 1997, rising scrap demand will likely drive up prices further.

CARIBBEAN CONNECTION. To stay a step ahead of the competition, Iverson and Correnti last year earmarked $65 million for an experimental industrial process. At a new plant built in Trinidad, West Indies, Nucor would "cook" Brazilian iron particles with Trinidadian natural gas. The result was to be a steady stream of iron carbide able to replace scrap. Nucor would then load the mineral onto ships and deliver it to barges in New Orleans for around $100 per ton, far less than the current $150 per ton for high-grade scrap.

There was one problem: No one had ever made iron carbide before on an industrial scale. With only limited testing—an approach that had worked for Nucor in the past—Iverson went ahead with a full-scale plant. "This is a $65 million lab experiment," he said as it was going up. Now the Trinidad plant has become a $95 million problem—and counting. Chastened Nucor executives admit that the road has been rockier than expected. Though the crucial chemical conversion in Trinidad is working—"like a jewel," Iverson claims—the plant has been plagued with difficulties. "They tried to [build it] too fast, and without as much engineering as they needed," says J. Clarence Morrison of Prudential Securities Inc.

For starters, Nucor engineers envisioned the iron running down chutes, much like grain. But the corrosive metal promptly opened up gaping holes in the piping. While that has been fixed, the plant has encountered a slew of other mechanical problems since. "It's costing an awful lot," admits Iverson. The Trinidad plant is nearly a year behind schedule, and Iverson concedes that it will lose $15 million to $20 million this year. However, he says, the problems will be resolved by yearend, and he's going ahead with plans to expand. "People say 'Hire a consultant,'" says a frustrated Correnti. "I say, 'Find me one.' No one's ever done this before!"

Trouble is also afoot at the company's key Crawfordsville (Ind.) plant, which produces more than 25% of Nucor's 7 million tons of steel annually. In 1993, after Keith E. Busse, the highly touted manager of the mill, lost the succession battle to Correnti, he quit Nucor and set up a new company, Steel Dynamics Inc. in Butler, Ind.

To make matters worse, Busse took several key managers with him. When Nucor named Larry Roos as his successor, many workers reacted angrily to the new boss's more authoritarian style. Some invited the United Steelworkers of America to organize the plant. But Roos put out that fire last year by meeting individually with ea employee. "Crawfordsville was very n vous for a while," says Iverson. "R it's settled down now."

TALENT DRAIN. Former managers d agree, however. They say the exo from Crawfordsville has continued—a over the past year, some 20 top man ers and technicians have left. The r son: unhappiness with tighter oversi by Roos, combined with lucrative o portunities at the new startups. " wasn't a friendly place to work; y couldn't have had a more stark chang grouses one former high-ranking man er. Roos dismisses the complaints. "Th weren't used to seeing the general m ager in the plant," he says. "Their ty cal reaction was that I was spying."

Many of those who left now fill t management ranks of Nucor's new vals. The turnover has taken a toll, co ing as Crawfordsville has doubled pacity—and as the steel market h begun to soften. Overproduction h forced Nucor to cut prices, and qu tions have been raised about quali Sources close to the company say th in April the plant made $6 million operating profits, well below its $11 lion target.

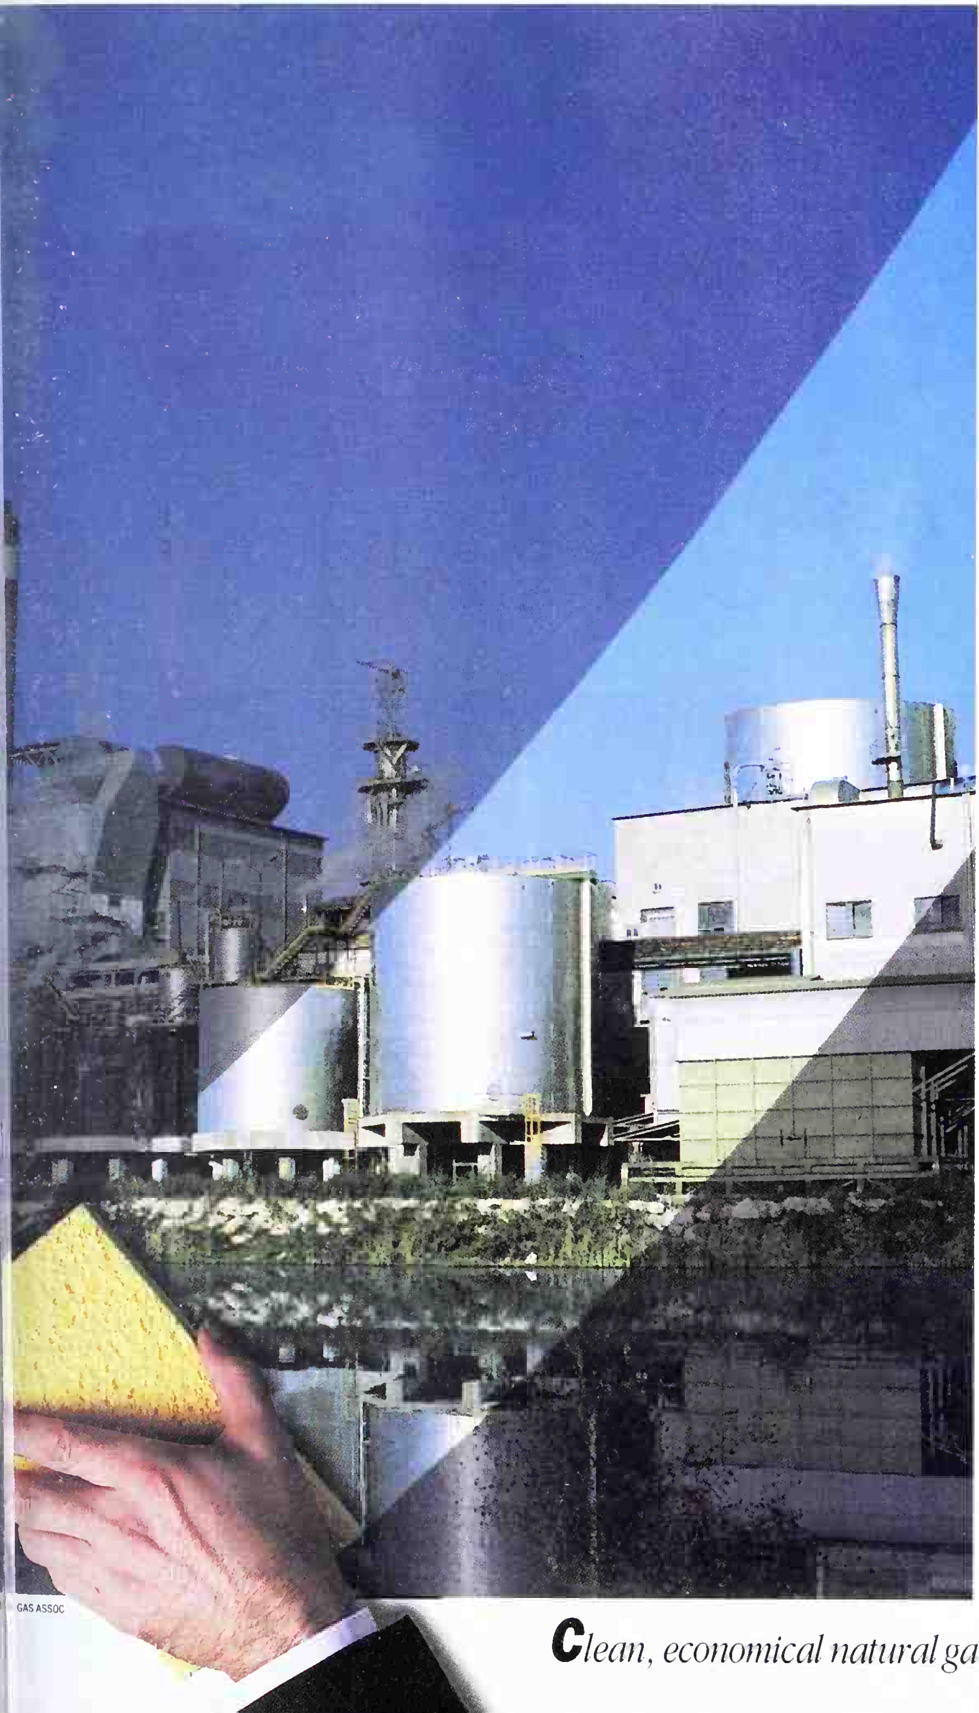
Still, few are counting the indus innovator out. Iverson, who will be 7 September, says he's fully recover from heart surgery. He played th sets of tennis one recent Sunday a is expected to turn the CEO's title o to Correnti within the next two yea Both dismiss arguments that Nu lacks managerial depth. "We can wea er the storm because we have a stro er ship," says Correnti. The question whether shareholders will again pay for a high-powered speedboat.

By Stephen Baker in Charlotte, N

The Trinidad plant was a "$65 million lab experiment" that has turned into a $95 million problem—and countin

ALAN BASDEN

Don't you wish we could just do this to acid rain.



In a way we can—if more industrial and power plants switch to natural gas.

Natural gas is playing a key role in industry's compliance with the Clean Air Act Amendments and our government's plans for a cleaner future. It should play a key role in your company's future, too.

Natural gas power plants can produce 99% less sulfur dioxide and 90% less nitrogen oxide than oil or coal-fired plants.

And paired with the advances in equipment technology, in most cases, natural gas is the most efficient, cost-effective energy around.

Plus, there's a secure and steady supply of gas; over 99% of the gas we use comes from North America, and more than a million miles of pipeline coast to coast delivers it easily.

If more industrial and power plants switch to natural gas, we'll help wipe away acid rain, instead of wiping away our environment.

Clean, economical natural gas. Think what we'll save.

Net Revenue by Product

YOU'VE TRACKED NEW BUSINESS

$ These days, a prime source of new business is the business you already have. For Norwest Corporation, selling more products meant fully understanding their existing customers' needs. But with customer profiles fragmented across 12 different databases, it became increasingly difficult to determine who needed what. $ How was Norwest able to better manage its commercial banking relationships and increase revenues in the process? With the help of Gemini,™* a consolidated sales and marketing account management system, built on a foundation of Microsoft® products, including Windows NT™ Server and Microsoft SQL Server,™ part of the BackOffice family. $ "We evaluated other systems, but only Microsoft gave us the power and flexibility we needed to reach our goals," says Daniel G. Pocrnich, Chief Financial Officer at Norwest Bank Minnesota. Gemini provides a comprehensive view of ever-changing customer profiles. So customers receive more personalized service. And cross-selling opportunities become abundantly clear. The result? Products sold to existing customers increased by 34 percent. What's more, Norwest increased account fee revenues from 39 to 60 percent of total revenue. $ To get more information on how Microsoft can help you gain a business advantage using computers, call (800) 437-3119, Dept. GN4.

ONLINE INVESTING

At your fingertips is a powerful new financial tool

Today, as I do so often nowadays, I began my day in Zagreb. I know it well. I can practically hear the balalaikas—or whatever they play in Zagreb—strumming. I can almost see the rain clouds beyond the horizon (on the infrared European weather map). Now is the time to get indoors and stop by the Zagreb Stock Exchange.

It is not busy at “http://ksaver208.zse.com.hr/”.

It is 7:21 p.m., Zagreb time, and I am only the 94th visitor today. Yesterday, 332 people stopped by. So far this year I am the 1,078th person to arrive from a U.S. commercial organization. There have been 15 from the U.S. military, one from Brazil, 198 from Germany, and so on—I have the list in front of me, all 35 pages of it, broken down by country, hour, company of origin, and lots of other things I don't understand.

It is a gala day at the ZSE! War has not impeded the never-ending quest for investment capital, it would seem. The words appear before me: “The biggest Croatian pharmaceutical company is going to be privatized.” Details, copious details, are available. Had I been one of the 107 visitors to drop by on Feb. 27, I'd have been among the first to learn about another unique investment opportunity: a chance to buy a Croatian municipal bond. It is issued by Istrian County, a leading Croatian tourist spot, for what is delicately referred to as an “environmental projec

A world where facts rule, the small investor holds sway, and the Street is not a factor

Like most emerging markets, Zagreb is an exciting, if r always hospitable, place for investors. For hospitality—a an unrivaled breadth of information—I need only tap ir the great global dialogue that is going on 24 hours a d This mammoth, never-ending idea exchange does not ways tell me what I want to know. But if it doesn't, al have to do is ask.

NITTY-GRITTY DETAILS. Such is the reality of my life now days—the virtual reality, if you will. I have just emerg from an extended exploration of the online frontiers of vestment. I have spent weeks there, cruising the electro vastness. I have gotten eyestrain, headach and backaches. I have risked repetitive-stre syndrome and Lord knows what else.

But it was worth it. What I found is a ne unique—and potentially very powerful—sour of investor information and interaction. True, is largely shunned by the established powe on Wall Street. And that is a good thing. T online world is unruly, anarchic—and no rep itory of conventional wisdom. It is a wor where small investors dominate, and whe facts—not the Street's agenda—are paramou

Sources of information online are rich, so startlingly so. And perhaps the greatest sources are the investors themselves. For t first time, small investors have a way of rap

JULIA GORTON

THE PLUSES

A GLOBAL DIALOGUE

The Internet newsgroups and mailing lists, and the commercial discussion groups—such as Prodigy's Money Talk bulletin board—are an unrivaled investment idea exchange.

CORPORATE INFORMATION

Securities & Exchange Commission filings for companies and mutual funds that file electronically are obtainable via the Edgar project at no charge. Corporate information is also available from a variety of other sources, such as World Wide Web sites and the commercial online services.

NUMBERS BY THE TRUCKLOAD

Economic, monetary, and stock data are available from a wide variety of sources, including the Federal Reserve, the University of Michigan web server, and other data providers on the World Wide Web.

A LEVEL PLAYING FIELD

Now small investors as well as institutions can broadcast their views worldwide–through the newsgroups or even their own World Wide Web sites.

THE MINUSES

GARBAGE IN, GARBAGE OUT

Since anyone can access the Usenet newsgroups, that supposed stock wizard may really be a precocious 11-year-old.

STOCK PEDDLERS ARE PROWLING

Stock peddlers prowl the investment-oriented newsgroups and the discussion groups of the commercial online systems, and some brokers are pushing stocks on their own Web home pages.

BEWARE THE QUICK-BUCK SCHEMES

The online world is rife with outright scams—quick-buck offerings aimed at the gullible and even some more subtle operations.

IT SURE AIN'T EASY TO FIND

Searching for investment information can be time-consuming—and therefore expensive—if you're not familiar with the Net. However, index pages on the Internet make it easy to find the more conspicuous and widely used investment pages.

DATA: BUSINESS WEEK

xchanging information—and it's often the kind of nitty-
y details that are prized by the pros. The message
ds of the large commercial services and the message-ex-
ge powerhouse known as the Usenet, with its 30 million
ntial users, can easily outclass the one-sided and often un-
ble output of the Street's analyst-report machine.

be sure, there are vast black holes in cyberspace. I can
r Zagreb's stock bazaar easily and drop by the Chicago
antile Exchange World Wide Web page seconds later.
none of the U.S. stock exchanges has a formal presence
e online world. I can enter trades into the order-execu-
systems of major brokerages (page 78). But I found
Street pros to be as reluctant to venture into the Inter-
as they are to recommend that a stock—heaven for-
–be sold. That anti-Web attitude, which is fast eroding, is
rific advantage for believers in the school of thought,
popular by Peter Lynch, that the best sources of invest-
information are people with personal knowledge of the
anies (page 66).

RICH-QUICK SCHEMES. For small investors, the online
l is more than information. This is the first time in his-
that they can communicate among themselves as easily
eir institutional cousins. Online investment communities,
ing on particular companies, are beginning to take shape.
mbled upon one on Prodigy (page 68).

ke most people who have encountered the Internet for
irst time, I was overwhelmed by the sheer mass of
But after mastering the basics, I found it easy to navigate the World Wide Web, the conglomeration of computer sites linked via the Internet. (A few of the best financial Web pages are listed on page 67.) Among other things, investors for the first time can get full-text copies of corporate filings with the Securities & Exchange Commission, something previously available only to people willing to spend hours at SEC offices—or to pay handsome sums to private document services.

True, there are dangers. I encountered a host of get-rich-quick schemes and questionable capital-raising efforts, operating so openly that one is tempted to wonder: Where are the regulators? An all-too-typical example of the downside of this new world can be found in the story of the online "prospectus" (page 74).

But I found the world of online investing to be reassuringly self-policing. At its best, the information exchange is a civil and informed person-to-person interaction, a "genuine dialogue" of the kind idealized by Martin Buber. Dialogue is a new phenomenon for investors, who are used to being talked at, not with. Shareholders now can even disseminate investment information about companies they own via their own World Wide Web pages. I found one example—rare, at present, but far from the last, now that Prodigy plans to give its customers that capability (page 72). Still, the two-way information flow, I discovered, can also be a double-edged sword, as is demonstrated by the tale of a prominent online investment newsletter (page 68).

Despite all this promise, the online investment world remains sadly underutilized. And one of the major reasons is that old bugaboo—fear and loathing of technology. Investors have not been treated kindly by many of the technological innovations of the past two decades, from computer-driven trading to mortgage-backed derivatives. The online generation gap doesn't help, either. Although some of the most devoted online mavens are retirees, a Luddite aversion to going online is the Achilles' heel of investors who were raised in an era when technological savvy meant the ability to change a typewriter ribbon. But even that is changing. "I have a 14-year-old nephew in Norway who obtains vast amounts of information from the Internet. I felt that if he can use the Net, we as a bank could use it, too," says Henrik Asland, a senior vice-president at Den Norske Bank in New York, who has begun tapping the Net's corporate data pool to research potential clients.

Yes, whether or not a little child shall lead them, the pros are coming. And that's exactly why the time to take the plunge into online investing has arrived. Once the pros arrive, the danger is that cyberspace will simply mirror the conventional wisdom. Today, going online gives investors a distinct edge. In the pages that follow, chronicling my journey, I'll show how a growing number of intrepid souls are pioneering the world of online investing.

The Dialogue

My first exposure to the online world was on America Online. AOL publishes an electronic version of BUSINESS WEEK, and that introduced much of the staff, myself included, to this vast global community. But I could just as easily have chosen any of the other major commercial online services—Prodigy, CompuServe, or the smaller services, not to mention uncounted thousands of private bulletin board systems. All are gateways to the most crucial aspect of the online world for investors—the great, ongoing dialogue.

This is a subject that has gotten a lot of awful press. And it's true that I saw some garbage on the investment message boards—idle chatter, scams, and "flames," or insulting messages. So what? There are still scads of useful information out there, particularly for the individual investor. Much of it is fresh, firsthand—and, unlike analysts' reports, subject to im-
mediate challenge from other users. Because of this ongoi
"peer review," investors are in a good position to get defi
tive answers to any question, from broad investment strat
gy to specific buy-and-sell analysis on individual stocks, mut
al funds, and bonds.

To get involved, I didn't need any fancy software or soupe
up hardware. I didn't even need a color monitor. Even with t
molasses-slow 2,400-baud modem and ancient IBM clone that
have at home, I could access Usenet newsgroups, Internet
mail, and mailing lists. Nor did I have use for any of the zillio
of books on the Internet. All I needed was a phone number
access a commercial service or bulletin board that is linked
the Net and carries a reasonable quantity of newsgroups. T
board provides the Internet address and easy-to-follow
structions on using the newsgroups and E-mail. My AOL
dress is Garywbw@aol.com. I also have a Prodigy addr
(NNEL28A@prodigy.com) and an address at an Intern
provider known as NETCOM On-Line Communication Servi
Inc.: garyrw@ix.netcom.com. But initially, I was only at AO

PALAVERING VIA USENET. AOL, like the other commercial s
vices, offers a host of online features of value to investors
various investment message centers, investment softwa
and commercial sites. But the only feature that has no offli
equivalent is the dialogue. Sure, investors can palaver amo
themselves and join investment clubs, but there is no count
part to the breadth of the online discussion groups. I fou
that the most varied and widely populated discussion tak
place in the Usenet newsgroups and in the Internet's
vestment mailing lists. The Usenet is a kind of global messa
center. The messages are "posted" in thousands of "nev
groups" that are electronic versions of the old-fashioned p
board bulletin boards. The mailing lists—there are thousan
of them, too—are similar to the Usenet newsgroups, exce
that the messages are sent by E-mail to each subscrib
The subscribers send messages to one central point, a
they are then sent out to every subscriber to the mailing li

Only a few of the newsgroups and mailing lists specifica
relate to investments. (Some of the "alternative" newsgrou
a kind of vast online gabfest, cover subjects ranging from St
Trek to hard-core porn.) But it's easy to ignore the ju
and aim at the Usenet groups of interest to investors. Th
go by the names "misc.invest," "misc.invest.stocks," "misc.
vest.funds," and similarly named newsgroups for Canadi
stocks, real estate, technical analysis, and futures trading.

Computer and high-tech stocks are particularly popu
subjects, given the large number of techies online. A

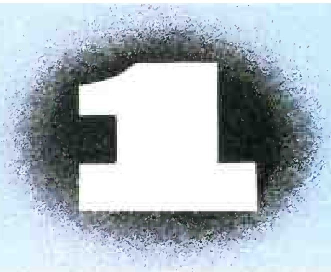
Navigating the Online Maze: An Investor's Guide



SCOUT THE TERRITORY

To find worthwhile sources of investment information in the World Wide Web—the galaxy of Internet "home pages"—start with one of the various index pages. Two of the best for investing are the Yahoo indexing service's economy listings and the Global Network Navigator's personal finance entries. A list of new financial web pages, updated every two weeks, is available from the National Center for Supercomputing Applications.

ADJUST YOUR SIGHTS

The Usenet newsgroups are an ideal p
for the next step—brainstorming with
er investors. The best area for exchan
stock ideas is the "misc.invest.stock" n
group. There are similar newsgroups
mutual funds, futures, and Canadian
stocks, and an array of
similar discussion
groups in the online services and
private bulletin
board networks.

ere's a great deal of id, insidey stuff. "I just ne back from the Atari esentation at the ckholm Norra Latin nference rooms," goes e recent posting in sc.invest.stocks. "We t a presentation by ari Europe's marketing ector." The message- ster was disappointed: ey did not have a fin- ed CD game to show." t there were positive ments, which he listed detail.

The messages are orga- ed into "threads"—or ojects—which can be ted alphabetically. It's y to scan them to nb out the get-rich-quick postings and "What is a stock?" eries from newcomers. In fact, the message traffic can be te astute, and because of the huge numbers of academics corporate execs viewing, or "lurking," in the newsgroups, range of expertise can be impressive—particularly for cks with a scientific dimension.

Newsgroup discussions move fast, with messages often ting answers in hours. One recent and typical message ead in the stocks newsgroup began at a 7:48 p.m. Green- h mean time on Apr. 18. A user at Delphi Information tems Inc., a commercial service, posted a query about the eloper of a certain type of laser—the excimer—to correct on problems. He didn't have the name of the company but ed that "the reports I hear about this are miraculous, so could be a hot company to watch for." Over the next five s, seven users provided the names of companies develop- the laser, as well as its regulatory status and the pros and s of the device. One message-poster was even using the mer laser, albeit not for eye surgery. And if I had want- o pursue the subject further, I could have continued my earch in "sci.med.vision" or the other medical newsgroups. se are also a great source of info about new drugs—a big er of pharmaceutical stocks.

he newsgroups don't stint on mainstream stocks. When last I looked, the stocks newsgroup was still the site of a lively discussion on the merits of Wal-Mart Stores Inc. And, as is quite common, there was a good assortment of expertise. One gent commented on the "changes in management technique since the death of Mr. Sam [Walton]," and added: "I work for a major competitor and see them falling closer to our erroneous ways!" His E-mail address was on the posting, so I could contact him for more information—or to verify his credentials.

Meanwhile, there was discussion of a hot initial public offering, Boston Chicken Inc. A lengthy, well-reasoned post from a shareholder presented the positive elements of the stock, and another user argued for shorting the stock. Elsewhere in the newsgroup—among the 6,500 messages available through AOL—I found arguments for and against just about every other stock imaginable. Quite a bit was refreshingly evenhanded—something one almost never gets on the Street. One user, for example, chimed in on a discussion of Toys 'R' Us Inc. with a skeptical but favorable analysis—while another provided a customer's viewpoint.

MYSTERY MESSAGE-POSTER. That's the kind of information I would need if I were considering the stock—and, believe me, much of Usenet is at least as reliable as the analyst reports I see. But the newsgroups—and the discussion forums of the online services—are even better. If I don't see what I want, all I have to do is ask. If I don't get an answer, I ask again, or rephrase my question—an intelligent or challenging question, reflecting some knowledge, is more likely to draw a response than "What's going on at IBM?"

The main hazard of the newsgroups is that you don't always know who's posting the messages. Still, I found it fairly easy to sort out the phonies and four-flushers. Anonymous messages, for example, are of dubious value, at best. You can post messages on the Usenet anonymously via a

raw data are available via the . You can get full-text corporate n stocks and mutual funds from 's Edgar database, which is e on the World Wide Web. The cial online services provide e data, too, and it's more easily le—for a price.

FIRE!

You can now use an online brokerage, which enables you to send your order directly to the floor of the exchange. The Big Two in the online arena are PC Financial Network, available through Prodigy, and Charles Schwab & Co., available through GEnie or directly from Schwab.

KEEP AN EYE ON THE TARGET!

The most important step of all. The online world, particularly the Usenet newsgroups and commercial discussion forums, are ideally suited to link you up with your fellow shareholders—who can join you in

Finnish-based Internet server, which hides the user I. D. and origin of the messages and sends them out again. One anonymous message I saw late in January, signed "The Shorters Network," dumped on a Canadian company, Fountain House, for its "weak fundamentals." The "network" charitably provided the names of three brokerages where stock could be borrowed to effect a short sale. But anyone who took the advice got badly burned—the stock promptly soared 20%, singeing the shorts, before declining. (My E-mail to the message-poster went unanswered, and I'd wager that the "network" is a one-man band.)

True, there are plenty of stock-hyping posts in the newsgroups—but those messages are usually flamed into submission. If you want to buy the investment equivalent of the Brooklyn Bridge, there's always the Wild West of the newsgroups, "biz. misc," the home of pyramid and other fast-cash schemes. But only the brain-dead would confuse such bilge with the ongoing dialogue that is the heart and soul of the online world.

The Coterie

As I trolled the newsgroups, I looked in vain for evidence that investors were using the Internet as a way of organizing among themselves, as well as obtaining information. But then I received a tip—by phone, not computer—about a curious community that had developed in an unlikely place: Prodigy.

Perhaps it's their mass-market appeal, I don't know, but Prodigy and the other big online services have a reputation among Internet old-timers for being déclassé. Yet Prodigy is where one of the most innovative uses of the online services is taking root. The Prodigy TMMI coterie, as I call it, vividly illustrates the potential of cybercommunications as a vehicle for investors organizing among themselves. The Prodigy TMMIers dwell in the discussion group known as the Prodigy Money Talk Bulletin Board.

I wish I could claim that TMM Inc. is a significant and noteworthy company. In fact, it is a troubled penny stock, a Thousand Oaks (Calif.) multimedia company with a history of litigation too convoluted to recount, including a bankruptcy (from which it has emerged) and the involvement of members of singer Michael Jackson's family. News coverage has been spotty despite the Jackson family link and the disappearance of one of TMM's founders, Philip Taylor Kramer, former member of the rock group Iron Butterfly.

TALKING "TRUTH OR LIES." For most of the past few months, investment pros who punch up TMM's stock symbol, TMMI, on their terminals would just find a handful of press releases. But for Prodigy users, it's another matter. At times, TMMI is one of the hottest topics in Money Talk. The first message "string" I saw was provocative: "TMMI—Truth or Lies." I read on. Another writer declared: "It is buying time . . . you NOW know what the others know, so do your thang!!!" "Obvious hype," yet another responded.

The enthusiastic debate on the Prodigy board seems to be restricted to a few users. But that's deceptive. The potential audience is in the hundreds of thousands. Prodigy estimates that some 50% of its 2 million users access the financial forums and features, which puts investment in a tie with news as the second most popular feature (the biggest draw is sports). One user who conducted a survey of TMMI shareholders via Prodigy and shared his findings on the board said he received more than 400 E-mail responses from TMMI shareholders who were "lurking"—reading but not posting messages. He estimated that Prodigy members own some 10% of the 40 million TMMI shares outstanding. "It's a society—a little cult maybe," notes Lawrence F. Panik, a dentist in Corona, Calif. and an active Prodigy TMMIer.

STEVE LABADESSA

DRILLING FOR DATA
Dentist Panik and hi
fellow TMM investor
are gaining influenc

The TMMI coterie at Prodigy has been aggressive in ferr
ing out information about their obscure company. Led by F
nik, who lives a short drive from TMM's headquarters,
group of Prodigy's TMM shareholders were given a present
tion on Valentine's Day. Such "dog-and-pony shows" a
typical for analysts and institutional investors—but ra
for small shareholders. The visit was organized cannily, to
clude people with different areas of expertise—a lawy
and a computer expert, for example. Only 10 sharehold
came along, because the company was concerned that t
visit might be construed as a shareholder meeting. T
participants reported their findings back to the messa
board.

To me, the issue is not "truth or lies"—whether TMMI is
great company or pond scum. What matters is far broader
that the online world has given these TMMI people clout th
wouldn't ordinarily have. Whether they use it well or poo
is entirely up to them, as it should be.

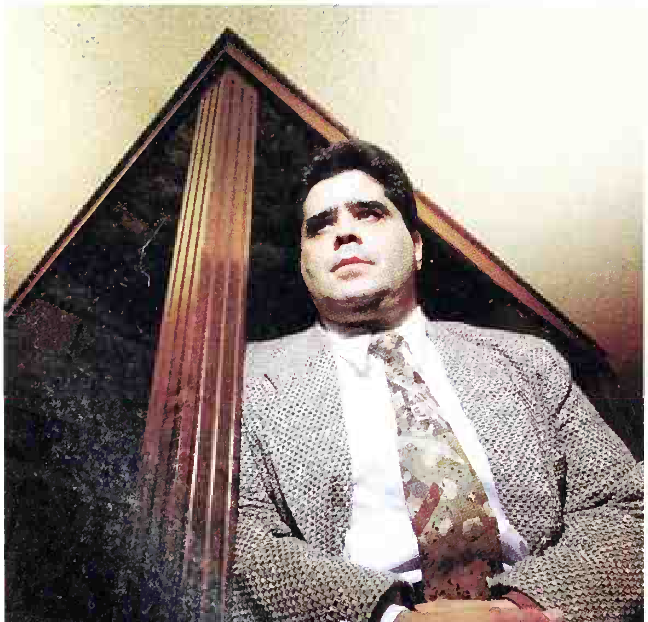
an obscure investment newsletter called *Hot Stocks Review*. Obscure offline, that is. But in the online world, *Hot Stocks* is as shy and retiring as Rush Limbaugh. There are other newsletters on the Web, but *Hot Stocks* and its online siblings—*Hot Stocks Whispers* and *Hot Stocks Confidential*—are probably the most visible sources of stock promotion. *Whispers* is posted in all the investment newsgroups, and each posting contains the *Review*'s Web site address. So when I got my first Web browser, I zoomed straight to *Hot Stocks Review*. I was impressed. It was well-written, interesting, and free as the wind to anyone possessing a Web browser. But was it reliable?

Cover Story

THE DOUGH IS POURING IN. I had several enjoyable phone conversations with George Chelekis, editor of *Hot Stocks*. Chelekis is based in Clearwater, Fla., but he focuses his stock-picking on Canada. In his varied career, the 43-year-old Chelekis has worked as journalist, author, and publicist. "I don't sell. I provide information," says Chelekis, a voluble sort who cheerfully punctuates telephone conversations with four-letter words.

Nevertheless, Chelekis told me that the money is pouring in—from subscribers, who get an extra-fast, E-mailed look at his dispatches for a fee. And above all, the dough is rolling in from the companies he writes about. As duly noted in an online "disclaimer," some companies pay a "research and promotional fee" to be mentioned in *Hot Stocks Review*. Chelekis says the average fee paid by the companies is $10,000. He wouldn't tell me how many of the companies promoted in the *Review* pay for the privilege, or which ones they are, saying they are handled by his "business staff." "I've never counted as to whether it's 60% or 50% or 40% or whatever," he sa But he insisted that the payments have no bearing on his o jectivity. By way of illustration, Chelekis told me that he on was offered $100,000 to rate a stock favorably and says suggested the company engage in an anatomically impossib act of intimacy. He wouldn't identify the company.



PAID TO PITCH?

Hot Stocks editor Chelekis won't reveal how many of the companies promoted in his online review hand over a hefty fee for the privilege

MESSAGE FROM GEORGE CHELEKIS: I've reviewed numerous stocks which have recently had fantastic percentage gains. For my latest selection on what I think may double or triple within the next sixty days... and could appreciate as much as 1000% this year, please go directly to [illegible]

Chelekis aggressively promotes risky Canadian over-th counter issues, including lots of mining outfits. And he c be enthusiastic. Maybe too enthusiastic. Take one of h recent picks, an Ottawa company that makes luminesce materials for signs, Luminart Inc. Chelekis has been so u stinting in his support for Luminart that on Mar. 28, t company took the unusual step of publicly disavowing t Mar. 20 newsletter, saying: "Investors are cautioned agair relying on Chelekis' column as an accurate source of inforn tion concerning the company's affairs." Chelekis says hewed to the straight and narrow in his analysis of Lur nart. He wouldn't tell me, incidentally, if he was paid pitch Luminart in *Hot Stocks*.

I can't understand why so few investment letters have f lowed Chelekis onto the Internet. Although he wouldn't rev the cost of maintaining the Web page, Chelekis conced that the Internet has been a remarkable, and extreme cost-efficient, marketing tool for turning Web surfers ir paying subscribers. No wonder. He has the field almost enti ly to himself—so far.

The Web Site

I wasn't alone in being drawn *Hot Stocks Review*'s multihu Web page. One Net browser w did likewise was a computer c sultant named Stephen H. Dim from Vancouver, B.C. Geor Chelekis' enthusiasm for Luminart was so infectious, mond told me, that he bought 900 shares of the stock at late in January. It was not a propitious decision.

In just a few weeks, the stock lost nearly half its val falling to 5¼ on the Canadian over-the-counter market. Ch ekis blames rapacious short-sellers, whom he says are league with certain members of the Canadian press. But reason for the decline is pretty much irrelevant. What re matters is what Dimond did in reaction.

An obscure company's stock declines for the murkiest reasons. Even for professionals, that can be daunting. Fac with such grim situations, small investors usually have all power and influence of a cockroach on the trading room flo They just get squashed. There's not a thing they can do say about it. Or is there? Dimond felt that Luminart was g ting a bum rap in the investment world, so he set out spread the word. Did he do this through a letter-writ campaign? No way.

RIGGING UP A CYBER-SPOTLIGHT. Dimond's solution: a Wo Wide Web page. As a computer consultant and engineer, had all the equipment at hand. After getting permission fr Luminart, Dimond went to work. Armed with a company b chure, a Macintosh computer, and a scanner—a device t translates hard copy into computer files—Dimond c tured the full-color image of the brochure. He s this, and some of the brochure's text, to a nea Internet provider called Wimsey Information Ser es Inc., where he already had a Web site. Vo "http://www.wimsey.com/dims/Luminart.html": Unofficial Luminart World Wide Web Site.

In one fell swoop, Dimond made information ab this fly-speck company available to the roughly million people who use the Internet worldwide. cause of the Web, Dimond was able to set forth case to the masses—something previously only poss for large corporations. Now, other small investors

CYBER-BOOSTER
Small investor Dimond set up a Web site to proclaim his faith in battered Luminart

likely to do the same. On May 9, Prodigy announced it will give subscribers the ability to set up their own Web pages. And the other major commercial services are sure to follow.

For Dimond, it was a simple issue: "Instead of panicking, I took action." Whether or not people should listen to him is, of course, another matter.

The Prospectus

A chichi New York designer beermaker, Spring Street Brewing Co., announced in March that it was placing an initial public offering prospectus on a World Wide Web page. It was billed as the "first online prospectus." When I saw the press release, I was taken aback. Hell, I had seen plenty of online prospectuses from the first sputter of my trusty Hayes Accura 144 modem.

Take a posting I saw in "misc.invest" some weeks before Spring Street sprung its IPO on the investment world. The earlier posting solicited "$7.7 million in equity investment over a 13-month period" for an unnamed product from an unnamed company that has "no competition" and would be sold via "TV direct marketing followed ASAP by retail." A profit-and-loss table was included in the message. And boy, it was the kind of investment prospect that would make Morgan Stanley hyperventilate. This company projected a first-year loss of $2.5 million on sales of $16.4 million and explosive growth thereafter, with profitability in the second year and earnings of $22.5 million on revenues of $137.5 million in the seventh year. An E-mail address was provided for further information. I wrote!

DISARMINGLY CANDID. I swiftly received "an executive summary extracted from the business plan for your review." Here's an executive summary of the executive summary: The company—Pocket Made Inc.—is planning to introduce a "revolutionary automated cleaning device for which it has patent rights." The device is Pocket Maid, a "handheld, battery-powered, rechargeable, portable scrubbing/cleaning device."

I turned to the chapter headed "The Investment and Return." The Pocket Made folks were a bit vague about fairly basic things, such as how much the shares would cost. So I called Pocket Made in Chicago to find out a bit more. They were disarmingly candid.

I was particularly interested in the legal aspects of the offering. After all, I had always been under the impression that the Securities & Exchange Commissi was touchy about the way compani raised capital. Bill McAninch, "vice-pre ident of operations, secretary, and tre surer," says that Pocket Made was off ing a private placement. In the newsgroups? That stru me as a mighty public way of conducting a private placeme McAninch and another company official conceded that th probably did go about the thing as if it were a public offeri which is supposed to be registered with the SEC and t states where they're soliciting funds—which, this being U net, would be all of them.

Did Pocket Made register any securities with the SEC? N Or even a single state? No. So wasn't Pocket Made offering sale of unregistered securities—a fairly serious violation the federal and state securities laws? Well . . . "In a sense it not legal, but the SEC never will enforce it," says McAnin "Basically," he added, "we were advised not to panic, that t government understands that it's not legal but never has pr ecuted anybody. They deliberately ignore low-level violation

LOOKING THE OTHER WAY? The Pocket Made people say th no one actually invested any money as a result of the Net licitations. And once McAninch became "queasy" about legal issues after talking to his lawyer, he says, he stopp posting on the Net. But he was not missed. "There are liter ly thousands of offerings on the Net. The proliferation is t mendous," McAninch notes.

SEC officials say that the agency's market-surveillance gro is keeping an eye on the situation. In March, the SEC filed against a Florida company for promoting a pyramid scheme the Internet. State securities officials in New Jersey, Ohio, Texas have begun prosecuting online investment scams.

Still, the buzz online is that the SEC and state regulat are turning a blind eye. The evidence for that? Well, tak look. Andrew Klein did. He's the former Wall Street law who heads Spring Street, and he made sure—in complia with a recent SEC no-action letter—that his online prospec had everything the offline prospectuses are supposed have, including ferocious-sounding "risk factors." He cruised the newsgroups, and it makes his lawyerly bl boil. "I'm amazed at the huge number of blatant securit law violations going on in the newsgroups," says Klein. officials say they have noticed an "enormous" increase in line securities offerings. So why are they doing so litt When I cruise the newsgroups, particularly "biz.misc," see post after post offering moneymaking schemes, the S see-no-evil attitude reminds me of Claude Raines's immor line in *Casablanca*: "I'm shocked—shocked!—that gambl is going on here!"

ere’s simply
hat does the job
style and grace
Range Rover.

No other SUV has the Rover’s unique combination of style, performance, and quality

The unanimous verdict: If man were only allowed to own one car, and if that one car were meant to be the perfect all-rounder—spacious, comfortable, powerful, capable of going on where the roads end—then the choice would quickly narrow down to one vehicle: the Range Rover.

“In short, the Range Rover i still the best i the world at what it does.”

ne Range Rover Classic. We had some help with the name.

or a quarter of a century, Range overs have survived the most brutal rritory in the automotive world.

The editorial page.

Therefore, the County Classic needs tle introduction.

Suffice it to say that its 14-gauge eel chassis, pillowing electronic air spension, permanent four-wheel ive, and tireless 3.9-liter V8 engine ake this Range Rover ideal for driving over endless rock beds, through arctic blizzards, and back to the executive parking space.

Its dual airbags, all-terrain ABS, and electronic traction control help make its armchair seating all the more relaxing.

And at around $45,000,* it may well be the only affordable work of art ever exhibited at the Louvre.

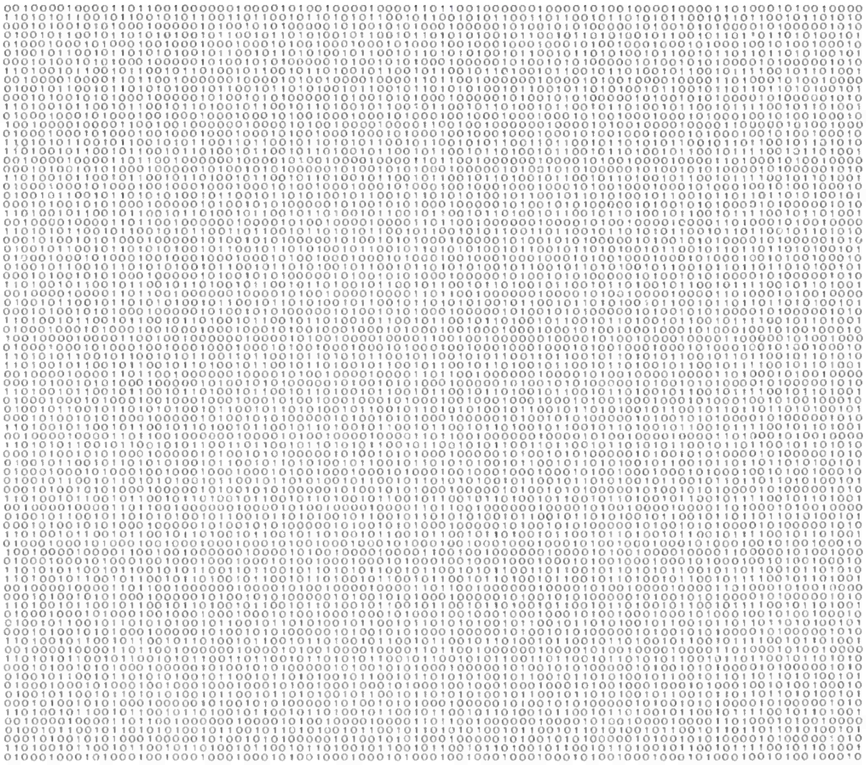
So why not call 1-800-FINE 4WD for the Land Rover dealer nearest you?

The County Classic is, after all, the most refined and elegant version of the original Range Rover.

But don’t take our word for it.

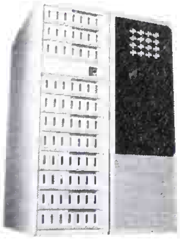
LAND ROVER RANGE ROVER

Your customer data has never really given you a clear picture of your customer.



Announcing The Open Parall

Decision support is one promise of information technology that has never been fully realized. Its aim is to help you uncover trends hidden in your databases, so you can manage information to satisfy customers and compete more vigorously.



Unfortunately, there's been no practical technology to make large-scale decision support possible. Companies that have tried haven't offered much beyond some hardware and a handshake.

But now, Unisys presents the most comprehensive decision support solution in the industry. It's built around the *Open Parallel Unisys Server (OPUS)*- a joint Unisys and Intel initiative in sc

able parallel processing. And it can hel

you **CUSTOMERIZE** your organizatio

to be more responsive to those you serv

isys Server For Decision Support.

based for openness, and offers unsurpassed database independence, with easy growth and ication portability.

tel inside ntium

OPUS supports databases from le, Red Brick and other leaders. Plus, 's already a portfolio of applications to make decision support an instant reality for key industries. And to deliver a complete solution, Unisys is deploying a new service team dedicated to decision support consulting and implementation.

UNISYS

To receive your *OPUS* information, contact us on the Internet at **http://www.unisys.com/adv** or call **1-800-874-8647, ext. 219.** Because once you can manage information instead of just process data, you'll get a clearer picture of what's really important to your success–your customer.

The Street

So what's Wall Street's attitude toward all this? That was the question I kept asking everybody I ran into online. The answer is simple. With a few notable exceptions, Street types wouldn't be caught dead online.

For the most part, it is the adventurers of investing—the computer-intense traders—who use the online services most. Futures traders are particularly heavy users, and newsgroups devoted to futures trading and technical analysis are popular with Wall Street futures and options traders. Many independent traders are habitués of these newsgroups and the commercial services. One independent futures trader in New York, Larry J. Lawrence, told me he even stumbled on a discussion of advanced technical-analysis software in a Prodigy investment bulletin board.

For the most part, however, the Street's main online preoccupation has been the prosaic business of taking customers' orders. Not surprisingly, the powers of online brokerage include the biggest discount brokers—Charles Schwab, Fidelity Investments, and Quick & Reilly. The big wire-houses are not anxious to replace their flesh-and-bones brokers with computers, and the only one with a significant online presence is a large trade-execution firm, the Pershing division of Donaldson, Lufkin & Jenrette Securities Corp. Pershing's online entry is a discount brokerage, PC Financial Networks.

Cover Story

Executing trades online may seem like a humdrum business, but in fact it's as hot as an overused modem. According to a study by Forrester Research Inc., a Cambridge (Mass.) consulting firm, the number of online brokerage accounts is likely to more than double, from 600,000 to 1.3 million, over the next three years. And that number may be conservative if Schwab, now linked to the laggard GEnie online service, shifts to one of the larger online services. Online investing's growth has been phenomenal: PC Financial had all of 10,000 accounts in 1990, and by dint of a hookup with Prodigy, it now has 160,000. Schwab claims the lead, however, with 170,000.

HAMPERED BY HACKERPHOBIA. Online investors tend to be more active, holding much larger balances and making bigger trades, according to Schwab Vice-President Carolyn Stewart, who heads the discounter's online effort. Operating margins are helped by the fact that the brokers are literally replaced by a computer—and by lower-paid recent grads. "The average age here is 25," PC Financial's Chief Operating Officer Blake Darcy told me at PCF's spanking-new quarters in Jersey City, N.J.

But the Street has kept a generally low profile online, with few firms even maintaining sites on the Web. Hackerphobia is one prominent reason. "The comfort level just is not there, and we can only speculate about the reason," says David Spector, head of the Internet services group at J.P. Morgan Securities Inc. In this tradition-steeped firm, comfort with the online world is high—sort of. The company has placed its Riskmetrics risk-assessment methodology on the Web, as well as detailed mortgage application data and an industrial commodities index—all fascinating to institutions but about as much use to individual investors as tide tables for the English Channel. Well, at least they're trying.

Morgan analysts and economists say they keep an eye on the emerging markets and the world fixed-income markets via Internet mailing lists, newsgroups, and E-mail. "As one of our analysts put it, 'Ever try faxing something to the Soviet Union?'" says Lisa Ezrol, a Morgan techie who helped set up the Morgan Internet connection.

Unlike most people on the Street, Morganites have the Internet literally at their fingertips. Any Morgan analyst or economist can get access to the Morgan internal "home pag which contains light and heavy Web stuff—New York City i formation, as well as financial and economic data sites. But a parently the Morganites are either ashamed to talk abo their Internet interactions or unwilling to share data sourc with their competitors. Although Morgan executives assur me that their people are heavy Net users, the Morgan publ relations staff searched diligently but couldn't find a single vestment pro or economist who was willing to talk about

NO TIME TO PROWL. Left to my own devices, I searched t newsgroups, using a nifty commercial Internet search dev called Infoseek, and found a bunch of Morgan people, alm entirely engaged in highly technical palaver in the comput newsgroups. For all I know, they might have been lurking using the Internet mailing lists, but I found only a sin Morganite who posted anything in the "misc.stocks" new group. I found the post when a novice's request stock symbols was answe with typical online helpfuln by a fellow named Kyle R den at "jpmorgan.com."

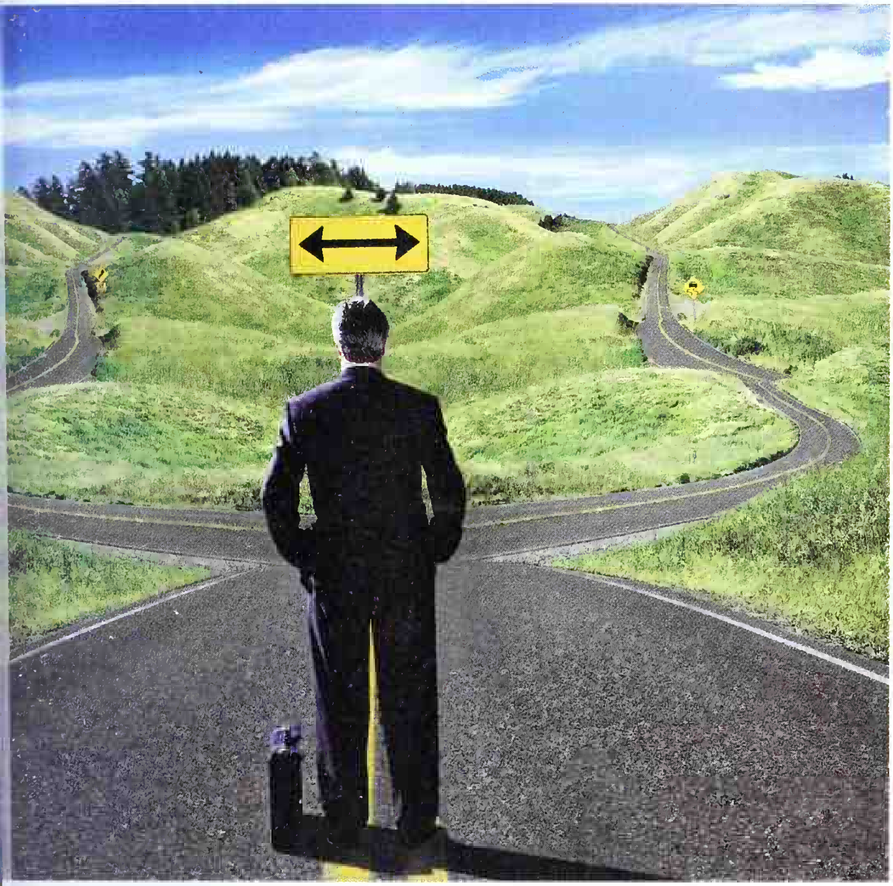
Our Business Is Helping Yours® Buy What Money Can't.



Up the road ahead, there are some challenging opportunities for your business. And money alone can only take you so far. When you need help beyond creative financing, we can make sure you're headed in the right direction. After all, we get involved in areas most financial service companies wouldn't dream of to provide
l value. Like helping a major shipping company establish a distribution network to ensure adequate
re parts availability. Or helping a leading mortgage company make housing more affordable for
-income families and dramatically increasing its affordable lending.

At GE Capital, we're 25 diversified businesses. And each one is dedicated to developing and deliv-
ig products and services that help make your dollar worth more than a dollar. If you're looking for
e smart business help, call 1-800-243-2222. And let us give you a few of the things money can't buy.

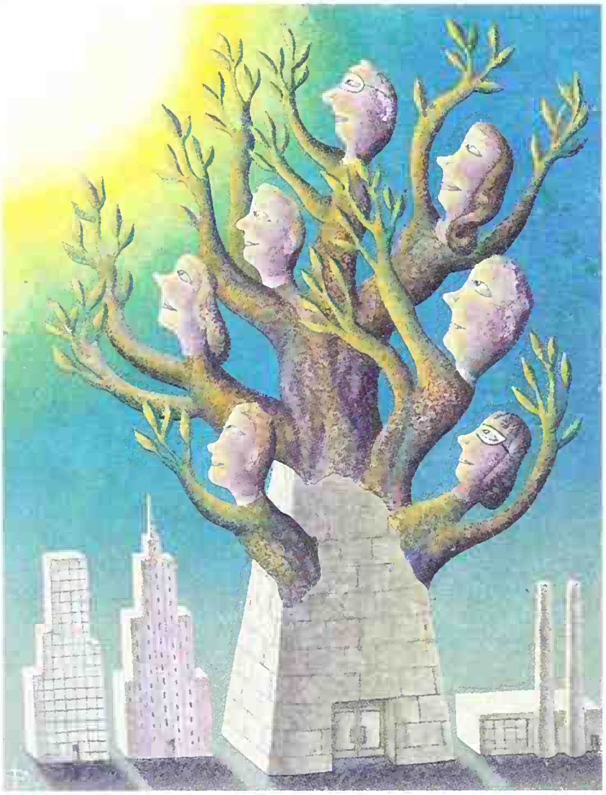
TRENDS

COMPANIES HIT THE ROAD LESS TRAVELED

Can spirituality enlighten the bottom line?

It's Spiritual Unfoldment time at the World Bank. Every Wednesday at 1 p.m., a group of bank employees sits in a semicircle in a conference room at the Washington-based agency and connects. Today, it's standing-room only. There's no stereotyping this crowd of about 60, which includes senior managers and young assistants. Group founder Richard Barrett, an engineer at the bank, leads the meeting, which begins with a moment of silence. Today's topic: "Ten Strategies for Attaining Soul Consciousness." After an hour of talk about such things as realigning ego and soul, even staffers who arrived looking wilted leave smiling.



BLAIR DRAWSON

SOUL SEARCH. Get used to it. Spirituality is creeping into the office. Having survived downsizing and reengineering, overworked employees are stealing a moment and asking: "What does all this mean? Why do I feel so unfulfilled?" And companies are turning inward in search of a "soul" as a way to foster creativity and motivate leaders. "We certainly have been through a period of excessively rational, painful thinking," says Jeffrey A. Sonnenfeld, director of the Center for Leadership & Career Studies at Emory University. "But the great interest in cost-cutting often cut out the soul of an organization."

It may sound flaky, but a growing number of companies are setting off on spiritual journeys. It's not about bringing religion into the office or requiring that employees chant mantras at their workstations. Rather, the spirituality movement in the corporation is an tempt to create a sense of meaning purpose at work and a connection tween the company and its people.

Depending on the outfit, that mean anything from employees join discussion groups to hiring consulta who help workers feel better about th lives so they can be more productive. some offices, only a few managers departments are reflecting on thi spiritual. In others, it's the CEO wh championing the spiritual approach an attempt to unify workers aroun common purpose.

CASH FROM KARMA? While s very new, the trend is start to go beyond fringe compan or vaguely foreign instituti like the World Bank (table). tus Development Corp. has "soul committee" that mal sure the company lives up to stated values. Boeing Co. recr ed poet David Whyte to read ems and regale top manag with fables as part of a progr to revitalize their spirits on job. And some divisions of AT are referring managers to training program intended to energize them at the job. S Lawrence Perlman, CEO of M neapolis-based Ceridian Co and an advocate of the spiritu ity trend: "Ultimately, the com nation of head and heart will a competitive advantage."

Employees, meantime, are barking on their own spirit quests. In living rooms and line, they're asking how to l their personal values and th jobs. "There's a real backlash the 1980s' treatment of humans as j something to dispose of because t cost money," says Judith A. Neal, as ciate professor of management at University of New Haven, who publ es the newsletter *Spirit at Work.*

And this is just the start, pred

Spirituality as a Management Tool

How some companies are trying to motivate employees and create a strong identity or "soul":

BOEING	AT&T	LOTUS DEVELOPMENT	MEDTRONIC
As part of a cultural overhaul, 500 top managers are listening to poet David Whyte three days a month for a year. The goal is to help executives be more creative by thinking differently about their company and their lives.	An outside consultant is coaching managers in certain units to be better leaders by helping them define their values. AT&T says the training has helped improve employee attitudes and leadership skills.	A "soul" committee is reexamining the company's management practices and values. Its aim is to build a strong culture and use Lotus technology to enhance teamwork.	The medical device maker sees its "mission" as restori people to full health and use that to motivate workers by appealing to their desire to part of something bigger tha themselves.

the Institute for the Future in Menlo Park, Calif., a research firm that forecasts trends. “We think the issue of meaning is going to be more and more important in companies,” researcher Robert Johansen told a recent conference of human resource executives. The institute is launching a study of companies' efforts to help post-downsizing employees find meaning in work. That could help companies evaluate whether they're getting any results—something few can prove thus far.

“POMPOUS CLICHES.” Results aside, there is no denying the popularity of the work and spirituality theme. Consider that two new books on the subject, *Jesus CEO* by Laurie Beth Jones, and Whyte's *The Heart Aroused: Poetry and the Preservation of Soul in Corporate America*, are on business best-seller lists. Still, other successful business authors are skeptical. “On the one hand, many of these books seem to me to be just a lot of pompous clichés strung one after another,” says Michael Hammer, co-author of *Reengineering the Corporation*, which put reengineering on the map. “On the other hand, they clearly speak to something that's bothering people.”

The notion of mixing spirit and business is suspect at its core, say critics. Blurring the line between spirited and spiritual, says management guru Tom Peters, gives managers too much entrée into employees' personal lives. “The word ‘spirituality’ says that you're screwing around with a part of me I don't want touched,” says Peters.

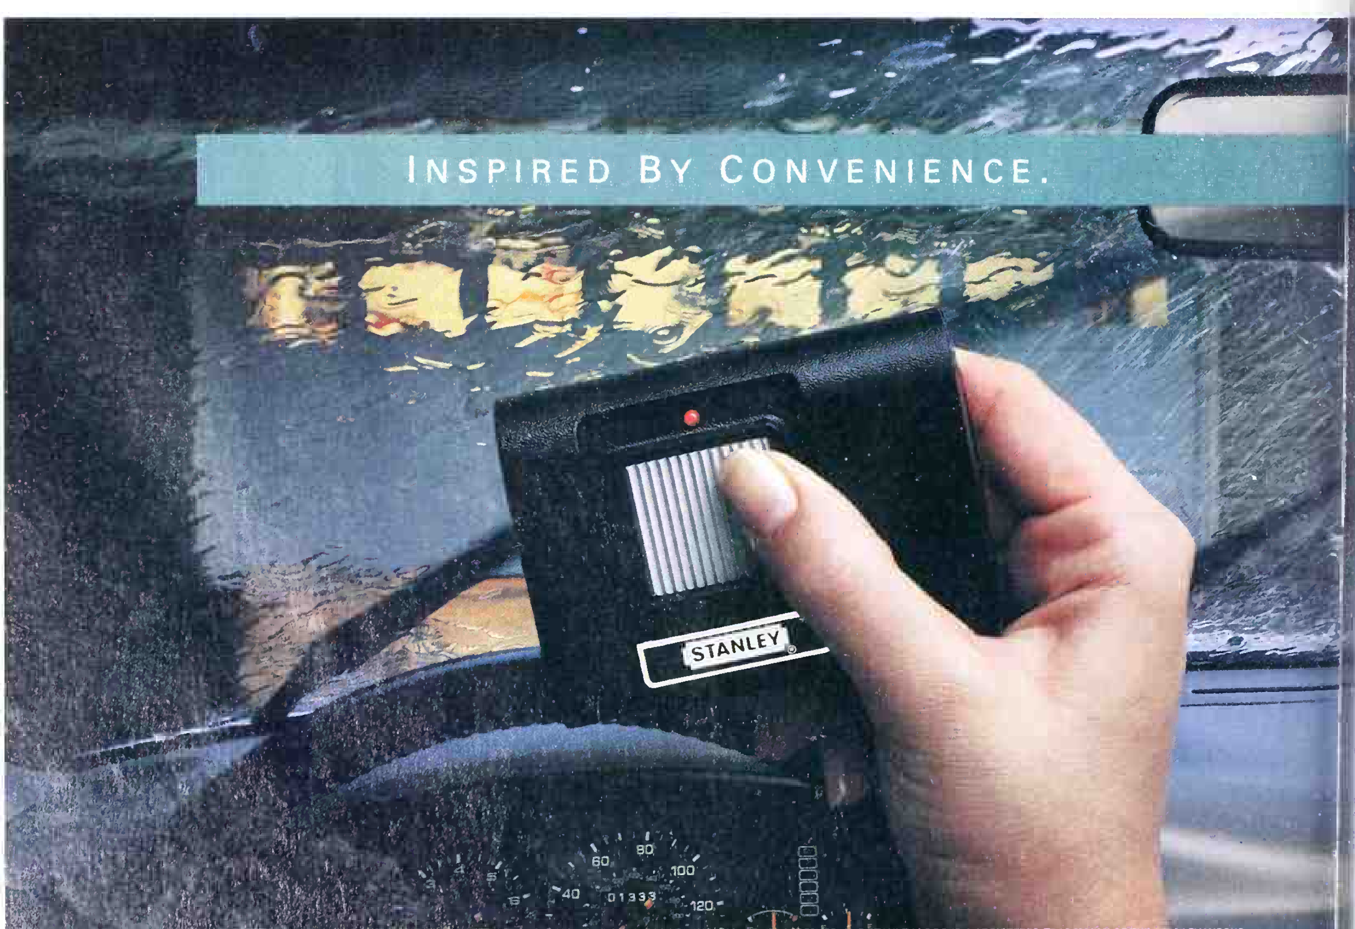
Others insist that the only way to bring spirituality to work is from within—not by having companies impose values or attribute some larger meaning to their jobs. “I worry that companies will make spirit the program of the month and use it to manipulate people,” says Neal. Some employees, especially those who are devout, say they resent having anyone in the office talk to them about spirituality.

Of course, the new soul movement hasn't quite caught on like other trends, such as total quality management. Its most vocal proponents are still the “New Age” companies that live off their aging-hippie images. Take Tom's of Maine, the maker of natural personal-care products. Founded in 1970 by Thomas M. Chappell and his wife, Kate, the Kennebunk company boasts 75 employees and sales approaching $20 million.

As Chappell, a Harvard divinity
school graduate tells it, the compan
aim is “serving our customers and se
ing our community” by abiding by ce
tain values. They include supporting t
environment, as well as treating wo
ers, suppliers, and customers with r
spect. Tom's also encourages employe
to donate 5% of their time to volunte
work and gives 10% of its pretax prof
to charities—money, Chappell notes, th
could be spent on advertising. In 19
he outlined his thinking in *The Soul o
Business: Managing for Profit and t
Common Good*. The bestseller has ma
Chappell a leading guru of soul (table

WHATEVER WORKS. More mainstrea
companies are using spirituality as
way to prod workers and inspire mana
ers, but they're still squeamish abo
admitting it. “Don't quote me using th
word,” warns Southwood J. Morco
CEO of Toledo-based Dana Corp. Ma
executives use such words as “value
and “mission” to talk about motivati
and meaning in the workplace.

At AT&T, managers don't really ca
what the program is called, as long as
seems to be working. Since 1990, AT
units have referred hundreds of mid
managers to Transpective Business Co
sulting in Woburn, Mass., at $1,65



© 1[illegible] MOTOROLA, INC. MOTOROLA AND [illegible] ARE REGISTERED TRADEMARKS OF MOTOROLA, INC. ALL RIGHTS RESERVED. THE STANLEY LOGO IS A REGISTERED TRADEMARK OF THE STANLEY WORKS.

d. The program is intended to help nagers be more effective leaders by ter tuning in to themselves and to ployee needs.

Throughout the grueling, three-day rse, leader Philip Massarsky uses vid- written exercises, and poems to help ticipants cut through their inhibitions. then has them write up a plan that help them live by their values at the e. About six weeks later, they return Woburn to report on their progress. Davis, a manager at AT&T Network tems, says that after one year, busi- s and engineering managers who went through the course showed marked improvement in leadership skills, as measured by employee surveys.

Aerospace giant Boeing is also rethinking its traditional approach to business. In February, President Philip M. Condit hired Seattle poet Whyte to speak to 500 top Boeing managers three days a month as part of an intensive, year-long executive training program. A dynamic speaker, Whyte doesn't lecture but recites dozens of stories and poems, including some of his own, to help bring to life the experience and emotion of change. One American Indian story he frequently uses at the start of a talk is about being lost in the woods. It begins:

Stand still. The trees ahead and
bushes beside you
Are not lost.
Wherever you are is called Here.

Gurus at Work

AVID WHYTE The Yorkshire-born poet ote *The Heart Aroused: Poetry and the eservation of the Soul in Corporate nerica*, a BW best-seller. A powerful eaker, Whyte has consulted with AT&T, eing, and Dana.

HOMAS M. CHAPPELL The founder Tom's of Maine and a Harvard divinity hool graduate, his 1993 best-seller, *The ul of a Business*, helped trigger discus- n about values and meaning at work. 's now a sought-after speaker and consul- nt who uses a well-publicized set of values market and run his business.

JAMES A. AUTRY The former president of Meredith Magazine Group, now a poet, author, and speaker, urges business leaders to tend to the human and spiritual side of work through his ruminations in *Love & Profit* and *Love & Work*.

TERRENCE E. DEAL A Vanderbilt University management professor and best-selling author, he was one of the first to write about corporate cultures. He's now preaching the importance of spirituality in his new book, *Leading With Soul*, a business fable written with co-author Lee G. Bolman.

DATA: BUSINESS WEEK

THE JUICE. Whyte says such poems help managers and other employees to rethink their daily habits and assumptions, thus stirring up some creative juices. "All the companies that are alive are realizing that they need more creative, vital, and adaptable workers," he says. "All that creativity and vitality and adaptability resides in the soul." One senior executive with 20 years at Boeing, who was initially skeptical of Whyte, is now a convert. "My first reaction was: What a waste of time," he says. "I thought to myself, what could a poet possibly contribute?" But the executive now says that Whyte "helped us to think differently than we ever had before. We had to look inside ourselves."

Giving overloaded managers time out to contemplate the trees will probably make them better workers—at least for a while. But in these times of massive layoffs and global pressures, it may take more than a little poetry to raise people's spirits over the long haul.

RETAILING

TRADER JOE'S ATLANTIC OVERTURES

The hottest West Coast food retailer prepares to head east

'Yippie aye oh—Trader Joe's is coming East," exclaims Sherie Winston. The last time the newsletter writer visited the quirky Southern California grocer, she packed an extra suitcase full of mocha-raspberry low-fat muffins, smoked bean dip, and six kinds of salsa to lug home to Washington, D.C.

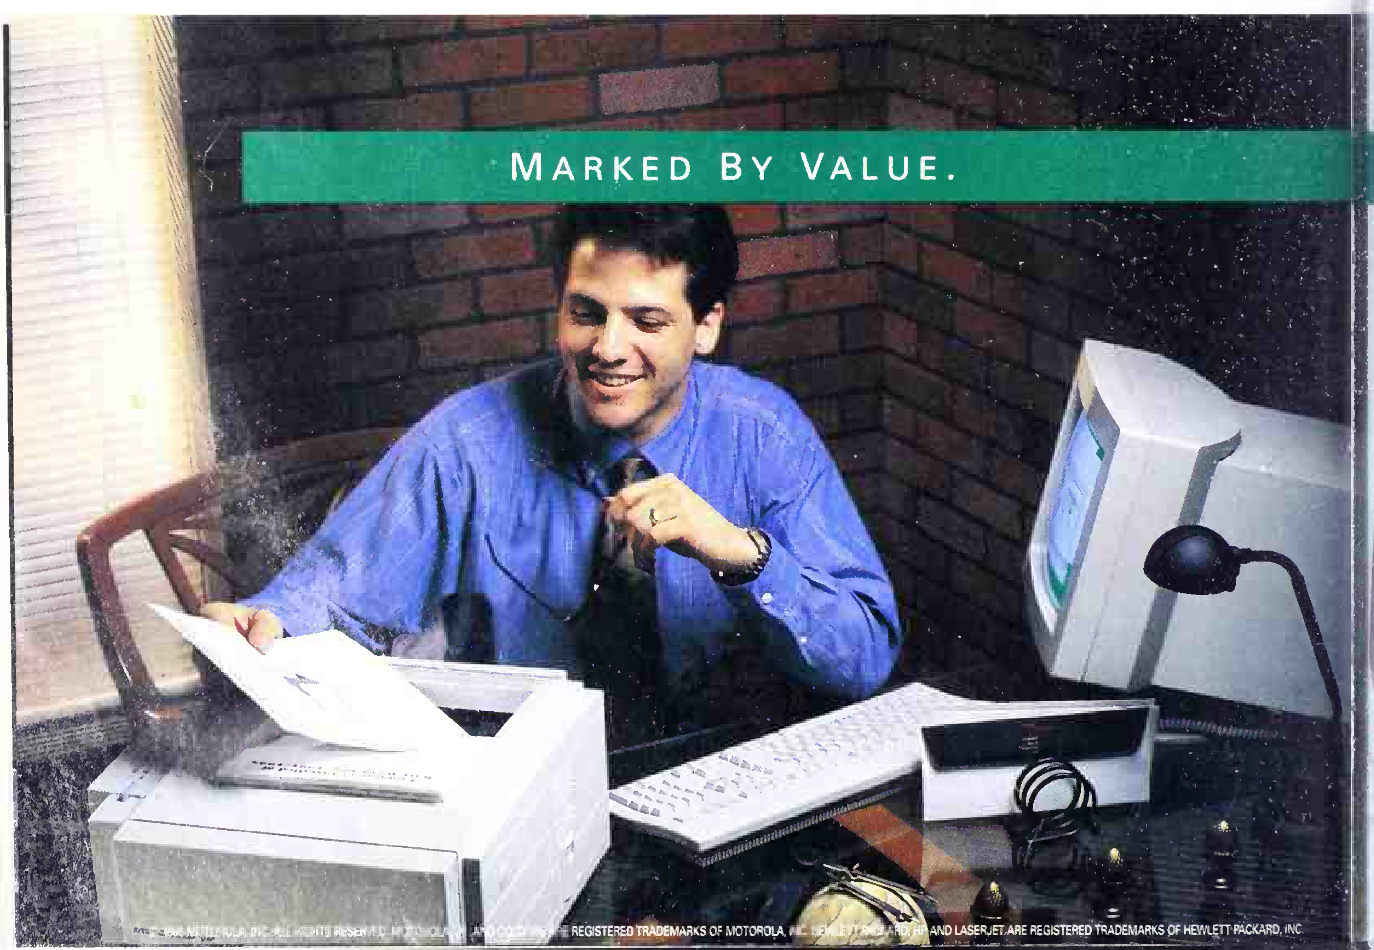
Imagine a cross between a gourmet deli and a discount warehouse club, and you've got Trader Joe's Co. Like L. L. Bean Inc. or Ben & Jerry's Homemade in the early days, Trader Joe's has developed a cult following—for its bargain wines, upscale private-label foods, and manufacturers' close-outs. "They are the fashion leader in food in Southern California, and they are damn near without competition," says Norman H. McMillan, a partner in retail consultants McMillan-Doolittle in Chicago, which doesn't have Trader Joe's as a client.

Now, the 28-year-old chain, with outlets from San Francisco to Phoenix, is heading east, where it aims to open 50 stores in five years, from Boston to Washington. "It's our hope to be on the East Coast by the fall of '96, but we have no leases signed," was the sole comment from Chairman and CEO John Shields, a former R. H. Macy & Co. executive. Since 1979, Trader Joe's has been owned by Germany's secretive Albrecht family, which also owns an estimated 4,500 Aldi's deep-discount food markets in Europe and the U.S. Trader Joe's, which has almost no debt and always pays cash, gets its funding from the Albrechts, who have an estima net worth of more than $7 billion.

Trader Joe's is tremendously pr able, industry experts say. And Shi has said publicly that sales more t doubled over the past five years, to year's $605 million; same-store sa meanwhile, have consistently grow more than 10% a year. By locating tiny stores—most measure fewer t 10,000 square feet—away from pr retail locations, it keeps real estate c low. Competitors estimate that sale its 72 stores average $1,000 per squ foot per year, double that of conv tional supermarkets and more t triple that of most specialty food sto

RARITIES. Its formula is no secret develops or imports unusual foods sale under the Trader Joe's label- Trader Giotto's or Joe-san's, if apt. it leverages its volume to insure it the lowest price. For example, it's largest retailer of brie in the U.S.- $3.99 per pound, a dollar less than n supermarkets. It keys in on trends portant to its young, educated custo ers: Ahi tuna is caught without n dried apricots are unsulfured—even p nut butter cups are all natural.

The store is full of bargains, wines



MARKED BY VALUE.

pecially. Buyers taste more than 8,000 samples a year. It also buys other food producers' mistakes. Just now, customers can k up a pint of Ben & Jerry's disconued Banana Walnut, Cherry Vanilla, Coconut Almond ice cream for $1.49, the normal price. Or Danish butter kies packed in leftover Beatrix Potcentennial tins for $2.99.

All this according to the *Fearless er*, Trader Joe's zany 24-page newser, packed with product trivia and cartoons. It had a mailing list of more than 800,000 until rising delivery costs forced the company to distribute it in stores. "I wanted it to be a marriage of *Consumer Reports* and *Mad* magazine," says founder Joe Coulombe, who retired in 1989. The current issue, for example, asks its readers: Why buy a certain $3.99 Côtes du Rhône from Trader Joe's, which managed to secure 4,000 cases? Because the obscure chateau's vineyards extend just seven acres beyond the demarcation line for the more famous Châteauneuf-du-Pape.

"There's very little unique merchandising, and this is unique," says David Nichol, chairman of beverage maker Cott Corp. While president of Canadian grocer Loblaw Cos., Nichol copied the newsletter when he created President's Choice, now a $1 billion private-label line. "I stole the name and concept of *Trader Joe's Insider's Report* [the original name of *Fearless Flyer*] for President's Choice," he says. Two years later, flush with success, Nichol bought the name from Coulombe, who renamed the Trader Joe's version. Adds Nichol: "It is safe to say that President's Choice owes the majority of its success to Trader Joe's."

Will the California concept transplant to the East Coast? Shields will have to grapple with a maze of differing state laws, particularly those governing alcohol. And while dry goods can be trucked east, the chain will have to line up suppliers for products such as baked goods—without the initial volume clout it enjoys back home. But if it can make the move, there's sure to be a contingent of California expats like Winston eager to load up on chic food bargains.

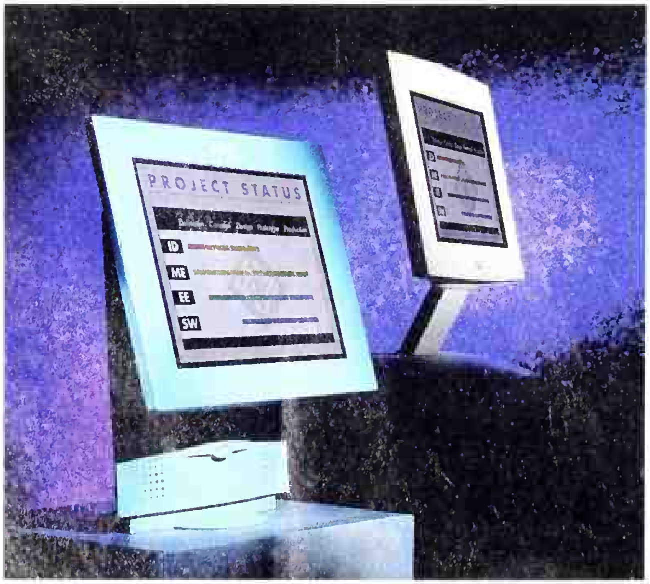
The Best Product Designs of the Year

'95 INDUSTRIAL DESIGN EXCELLENCE AWARDS

In the '70s, companies wanted designers to provide styling for their products. In the '80s, they began to ask for mechanical engineering as well. In the '90s, corporations are demanding that design firms deliver the whole shebang in product development—user research, industrial design, mechanical engineering, rapid prototyping, ergonomics, software interface design, graphics, packaging. As the 1995 BUSINESS WEEK/Industrial Designers Society of America annual awards show (page 101), a few even demand global capability—designing products that sell in Asia and Europe as well as the U.S.

Changing corporate needs are forcing flamboyant designers to become serious business people. Design firms, which only yesterday revolved around outsized egos, are fast becoming de facto extensions of the corporate world. Where companies once treated designers simply as creative "talent," used on a short-term basis, they are now hiring design firms for complex development work once done in-house.



A NEW LOOK

LCD COLOR MONITOR BY DESIGN EDGE

A new BUSINESS WEEK/Industrial I- signers Society of America survey of independent design consultancies hi- lights the shift. Big corporations incre ingly want to work with multiservice design firms that can more for them. Read through the survey returns: "We a moving from a single-project approach to multiple progra and long-term relationships with our clients," says Fitch I in Columbus, Ohio. "We are more integrated into the rest our clients' work," responded New York City's Smart Desi

Clients have a need for speed, too. Again, the BW/ID survey: "Clients demand shorter product-development sche ules," says Volan Design Associates of Boulder, Colo. "Time market is *it*," says GVO in Palo Alto, Calif. "Clients wa projects done *now*," writes Lunar Design, also in Palo Al

All of this is pushing industrial designers into the role product innovation suppliers to Corporate America. They doing soup-to-nuts turnkey projects that provide clients wi new products or entire product lines. And, for a select few sign firms at the top, it actually means selling innovati methodology itself. "We are now doing their research, app ing their core technologies, and conceptualizing future prod lines," says Gianfranco Zaccai, president of Boston-based I- sign Continuum. "Design is becoming much more strategic lot more like [management consultant] McKinsey."

Big management consultancies need not worry about competition from design houses yet. But design shops are clearly becoming more

MICROSOFT'S KEYBOARD HAS A WARM APPEARANCE

formidable. One striking change: They are bulking up on technology. Ten years ago, a pencil and a $100 drafting table were all the tools ed for industrial design. Today, it's more like $50,000 to ,000 per person. Workstations from Silicon Graphics, lett-Packard, and Apple Computer have replaced the ing table. Sophisticated three-dimensional-rendering soft- now substitutes for the pencil.

ne BW/IDSA survey shows that expenditures for technolo- re doubling and tripling every year. For nple, if Design Edge of in or IDEO Product Development of Palo Alto, Calif., do a turnkey product-development project for a client, they might use the following: Alias 3-D surface software ($90,000 for the software and workstation); an IRIS high-resolution color printer ($100,000); Pro-Engineer software that simulates the physical properties of the product ($70,000 for a workstation and software); software for mold-flow analysis that allows data to be shipped to rapid prototyping CAMAX machines ($50,000) that interpret the information for the milling machines ($200,000).

Design is suddenly capital-intensive, and not every design boutique can scrape up that kind of money. Which is why a shakeup is consolidating the industry. At the top are a few firms, such as IDEO and Fitch, that offer full-service, global product development and consulting. These companies, with about 200 employees each, are among the biggest design firms in the world. Their revenues, workforce, and spending on technology are rising at near double-digit rates at

BELL'S BIKE HELMET PROTECTS—AND FLATTERS—THE HEAD

a time when much of the design industry is shrinking.

A prime example of designer-cum-consultant, IDEO now creates combined teams with its corporate clients. As they work on a particular product, the IDEO employees also teach the client's workers the methodology of product innovation. At IDEO University, designers from Samsung Group and other clients also take courses on user research, rapid prototyping, and other design subjects. IDEO has a number of such relationships—with Steelcase, Japan's NEC, and AT&T. "We leave our clients with a new culture, not just a new product," says David Kelley, president of IDEO. "We work together on projects, but the goal is to pass on the process. It's strategic."

There's still a healthy business, however, for midsize shops that simply deliver the goods. These firms, with 30 to 50 people each, include SG Hauser in Calabasas, Calif.; Lunar Design

A HEAD-SPINNER
FLASHCAST SP 2000 INTEGRATED SPIN REEL

for consumer products, too. For sheer beauty, there is little to compare to the silver-medal-winning Flashcast SP 2000 Spin Reel. Cost? Only $39.95. The Jeep portable stereo was the darling of the IDEA jurors: They loved its rugged, retro, ammo-box look, with toggles instead of touch-sensitive membranes. The Bell mountain bike helmet is pure excitement.

In software, this was the year for CD-ROMs. The Cartoon History of the World, by Human Code, took a silver, as did Microsoft's Encarta—both for their user interfaces.

There were also some serious business lessons to be taken from this year's contest. Despite its great bottom-line power, design can't compensate for the wrong pricing strategy or the wrong technology. One badly positioned gold-medal-winning product went out of production shortly after taking the award.

In the following pages, BUSINESS WEEK presents some highlights of the 1995 competition. The IDSA jury that decided on the award was composed of eight designers, who sifted through 766 entrants. Now, a few choice selections...

THOMSON CONSUMER ELECTRONICS PROSCAN
***DESIGNER:* THOMSON CONSUMER ELECTRONICS**

Thomson Consumer Electronics Inc. has become a familiar name among the winners of the Industrial Design Excellence Awards competition, and this year is no exception. Under the guidance of Louis E. Lenzi, general manager of design for Thomson, it garnered four medals this year, tying AT&T for top honors.

Nothing illustrates Thomson's commitment to good design better than its ProScan big-TV line. This year, Lenzi's team focused on making these increasingly sophisticated television sets easy to use. They began by improving the item consumers pick up first after they uncrate their TV—the manual, normally written in either Japanese-English or techno-English. Thomson assembled a team of cognitive psychologists, creative writers, and engineers to write a new guidebook, one that would encourage users to noodle around with ProScan's features.

The centerpiece of Thomson's customer-friendly effort is a graphical user interface with icons similar to those normally found on a PC. Selecting the graphic guides with the remote control, viewers can perform dozens of tasks. They can change picture quality, program personal viewing menus, and get answers to vexing questions. For guidance, there's Nipper, the venerable canine mascot of RCA, which Thomson bought several years ago. Nipper pops up to offer "little asides that help with a task," says Lenzi, who heads the 65-member team that created the second generation of the ProScan product line.

Lenzi and his team also outlawed complicated remote controls. ProScan's remote sports only eight buttons, compared to the 40-plus found on an average remote. It controls power, channel-changing, and volume, plus the on-screen graphic menu. It's shaped to rest easily in the palm, an innovation based on suggestions from the 100 prospective customers Thomson interviewed. Better yet, it operates using point-and-select from on-screen icons, making life easier for the dedicated couch potato.

CONSUMER PRODUCTS
BRONZE

Thomson de-signed the ProScan TVs, which retail for $449 for a 20-inch set to $8,500 for the monsters, around the la st electronics, too. A nearly at screen—built using a spe steel alloy to prevent ugly brown blister that wrecks flat-panel pictures—delivers movie-screen qu on all models. N inch tubes, rat than standard s en-inch, allow 80-inch projection to produce excel visuals.

However, the j was most impressed by the team's efforts to consider the man factor. "T worked really hard at making it e for the customer to use," says Elizab Powell, a vice-president of design for Sony Signatures, the licensing and merchandising arm of Sony Corp. In fact, Powell acknowledges that Thomson has consistently improved the styling and quality of RCA products since buying the operation from General Electric Co. in 1988. Coming from a Sony designer, that's a serious complimen

A JUICE BAR FOR THE ELECTRIC CAR

GM/HUGHES ELECTRIC VEHICLE CHARGING STATION
***DESIGNER:* IDEO**

A Walnut Creek (Calif.) parking might seem like unlikely spot to mpse the future. it's where the d-medal-winning igners at IDEO are ting a futuristic a. Next to a ghtly lit aluminum sk are several king spaces, each which sports a k black-and-blue tricity-charging ion. Palo Alto lif.)-based IDEO eves this is the e where an ac- , middle-aged nan named Kilo ht someday rou- ly pull in, pay at kiosk with a lit or ATM card, a lightweight tic-covered induc- paddle charger her electric ve- and, returning r a couple hours opping, drive off the sunset.

he Kilo character art of one of y scenarios that designers creat- to wow both client lughes and the IDSA de- judges with their elec- vehicle-charging station. e 1991, IDEO has worked Hughes on a project to ess the daunting infra- ture needs that a shift ectric vehicles will require. Because electric cars can still travel 100 to 150 miles on a full charge, IDEO realized "filling up" will have to be incorporated the driver's everyday life. In addition to a overnight charge in your garage, you'll ble to top off in parking lots, convenience stores, shop- malls, etc., throughout the day, IDEO figures.

uman-factors experts at IDEO started by doing some research: They created several categories of people and gave them names, families, personalities, political beliefs, even hobbies and pets. As they considered various scenarios, they quickly realized that the technology of getting the electricity into the car was the easy part. Dick A. Bowman, manager of electric vehicle infrastructure at Hughes, says the crux of the matter became creating a station that was "unattended, intuitive, and nonthreatening." It was not merely a question of technology, it was one of social adaptation to new technology. That meant handling issues as diverse as graffiti, fears of getting shocked, inclement weather, and the safety of, say, a woman taking out her wallet in an unattended lot.

The scenario exercises "opened our eyes to all kinds of concepts we never thought about," says Bowman. The multifaceted design of the station speaks to many of them: If a vandal tries to snip a power cable, for example, special imbedded sensors are triggered and cut off the juice before anyone is fried. The kiosk's odd shape offers protection from rain—and provides space for advertising. Says IDEO designer Peter Skillman, who, with another designer, Mark Biosotti, handled much of the hardware design: "No paradigm existed for this—so we defined it." Welcome to the new world of product design.

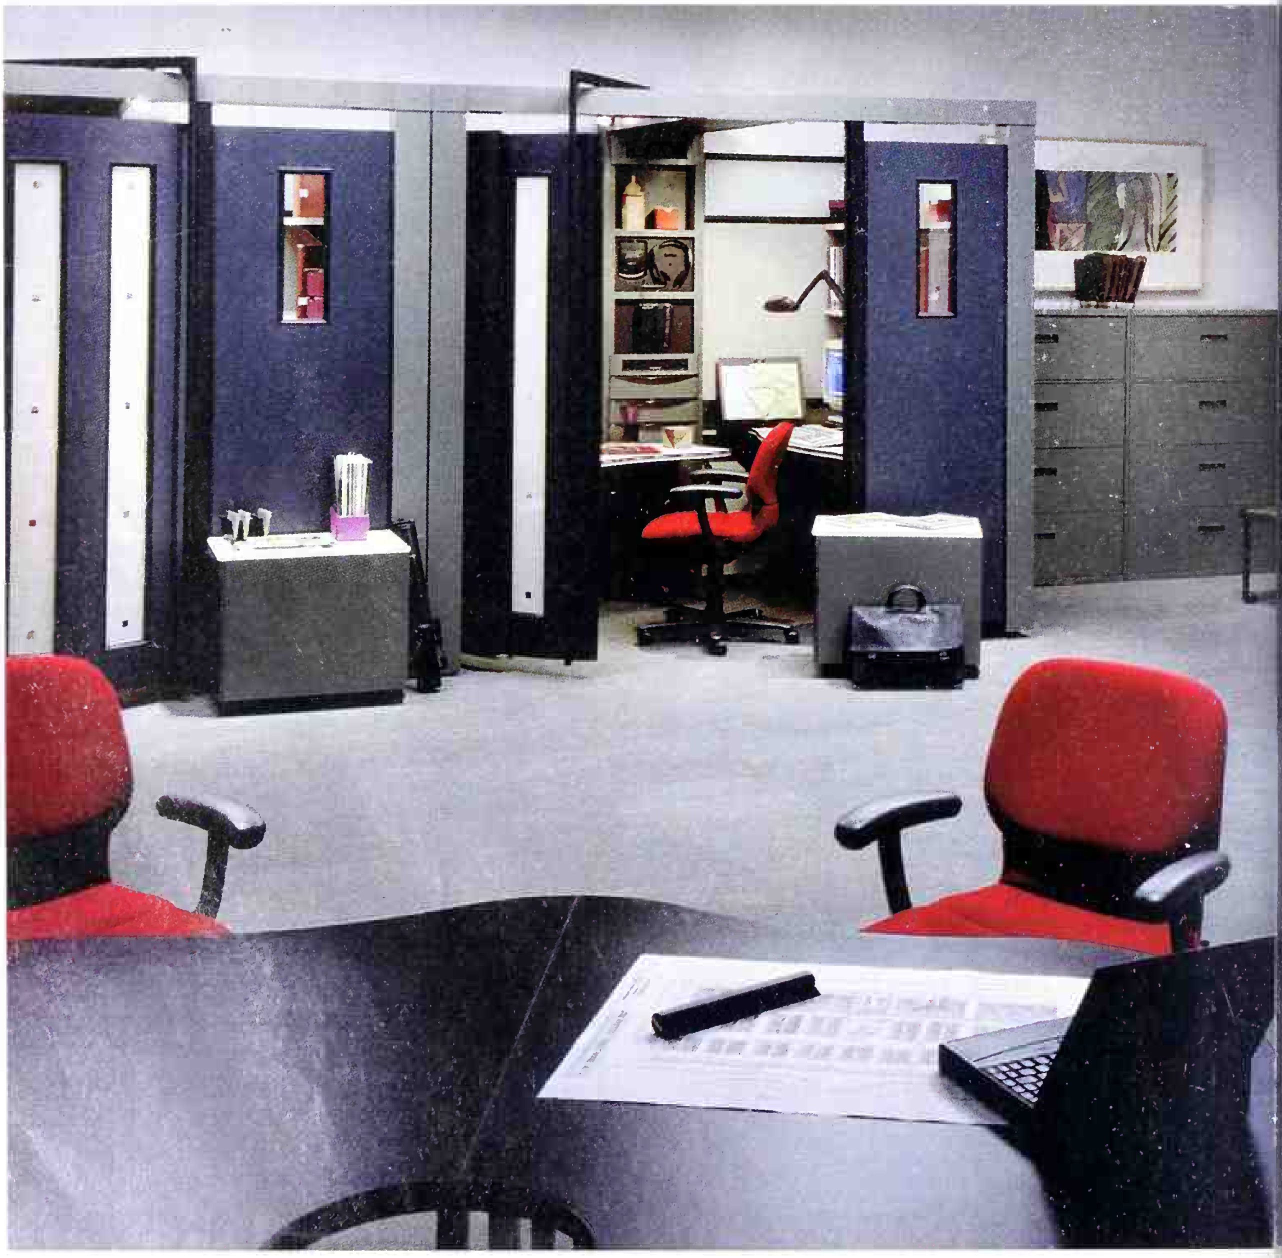
KEEP IN TOUCH, AND KEEP YOUR SPACE

PERSONAL HARBOR WORKSPACE
***DESIGNER:* STEELCASE**

Nice Conestoga you've got there. Dave Lathrop, Steelcase Inc. project leader, compares the company's Personal Harbor Workspace to the wagons that trekked across the West to California and Oregon a hundred-plus years ago. Each individual Conestoga in the wagon train provided privacy for a family, but at night the wagons would encircle the campsite, allowing the families to team up for protection while they ate and rested. So, too, does the Personal Harbor act as an individual workstation that surrounds and supports a common area, this time for work.

It's a good analogy, except this is no ordinary wagon train. The Personal Harbor brims with cutting-edge design ideas. When closed it sliding curved door frosted-glass windows, g complete visual, acoust and territorial privacy. It tains 48 square feet, is 7 inches high, and comes w partial cei Two work faces, one stationary and other mobile, are the f points of the space. A to of shelves provides additi book and binder storage.

FURNITURE
GOLD



o keep clutter off the k surfaces, the telephone, lves, drawers, and finger-filing system are vertical-stacked in what is aptly ed a totem. A control pan- ts the individual employ- djust lighting and ventila- . The unit has a special e for accessories such as s, paper clips, and coffee , and one part of the wall . floor-to-ceiling marker rd. Optional: an audio package that includes a CD player with wireless headset. The price, depending on options, is $5,000 to $7,000 per unit, a bit higher than competing prefab workspaces.

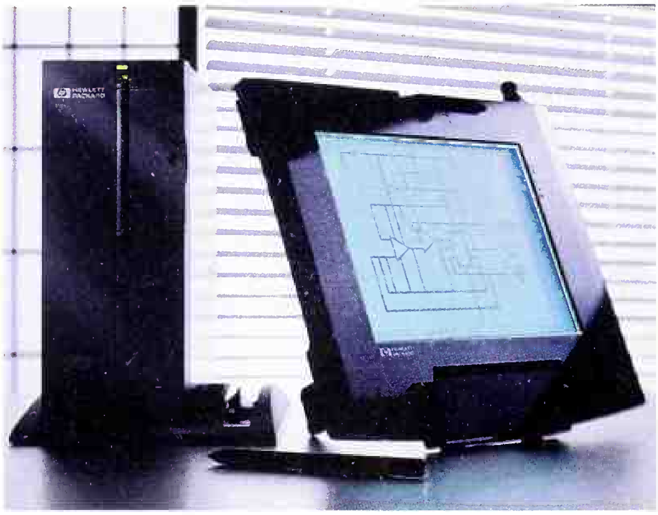
The space in front of the Personal Harbors, quaintly called the front porch, allows workers to expand their individual activities—temporarily or long term—by using carts, mobile tables, guest chairs, cabinets, or screens.

The designers at Steelcase, based in Grand Rapids, won a Gold Award not just for Personal Harbor's aesthetics, but for the way the product accommodates the changes in the way people work. Teams are becoming a mainstay of the work environment, and a group of Personal Harbors, combined with a common area including a large table and chairs, easily lets people think together or alone. Steelcase designers say workers can create the environment that works for them.

Lisa Smith of SmithChororos, a New York product designer and a judge in the competition, says the workstation "serves the office in a beautiful way. People can work in a group or go off into personal space."

Designers spent four years researching the changing nature of office work and building models before developing the product. Steelcase boasts that one customer—Hybritech Inc., a San Diego biotechnology firm—cut the time it takes to bring a new product to market from 14 to 4 months after its engineers started working in Personal Harbors. Who said you can't build a better wagon train?

By Marti Benedetti in Detroit



SHARE AND SHARE ONLINE

HEWLETT-PACKARD OMNISHARE
***DESIGNER:* HEWLETT-PACKARD**

No sooner had Hewlett-Packard Co.'s OmniShare, an interactive document-conferencing product, won a gold design award than bad news came. Pascal Baudot, the Grenoble, France-based designer, got a call from HP headquarters: After eight months on the market, the machine would be discontinued on June 1. The reason? Poor sales. OmniShare's price tag—$1,500 after steep discounts—apparently turned off customers. It was an example of price defeating design excellence.

BUSINESS & INDUSTRIAL PRODUCTS
GOLD

Current alternatives to the problem of hashing over documents with far-flung clients are pretty clunky. You can try to describe changes over the phone or trade an endless stream of faxes. Personal-computer software programs such as Intel ProShare and Lotus Notes allow documents to be shared on each person's screen, but they can be clumsy and can require a special phone line.

By contrast, OmniShare makes sharing documents a snap. The machine hooks up between a phone and a phone line. Two colleagues thousands of miles apart use pen pointers to bring up files loaded from a fax or PC, move them around, and annotate them. They can see each other's changes instantly.

When HP started the OmniShare project in 1992, research indicated that many architects, lawyers, and other traveling pros didn't use PCs. That has changed. Says analyst Jeffrey Henning of market watcher BIS Strategic Decisions: "The future of document conferencing is software." Even without the OmniShare hardware, HP plans to be there. OmniShare's ideas will live on in future PC software, HP says. That may not win a design award, but it might win more customers.

THIS LAPTOP RUNS CROSS-COUNTRY

DELL LATITUDE XP FAMILY
***DESIGNER:* DELL COMPUTER**

Fresh from glory as chief designer of Apple Computer Inc.'s PowerBook laptop PC, John K. Medica's first move with Dell Computer Corp. in early 1993 was a potential career-buster. Medica persuaded CEO Michael Dell to scrap all the company's existing laptop blueprints and start from scratch. Already way behind in the notebook business, Dell would suffer $20 million in write-offs with the move. Worse, it would mean placing a huge bet on a single premium model to resurrect Dell's tarnished name.

After taking an extra six months to research customer needs, Medica's team unveiled the Latitude XP last August to rave reviews. Combining industry-leading battery-life technology with sleek ergonomics, Dell sold some 34,000 Latitudes in the fourth quarter—equal to its entire 1993 laptop sales.

The main reason for the success: designing around the latest battery technology. In search of a machine that could keep going through an entire coast-to-coast flight, Medica poured resources into a partnership with Sony Corp., his old manufacturing partner for the Apple PowerBook. The plan: to adapt the lithium ion batteries used in camcorders for the PC market. This required lots of special circuitry and software from Dell. But the effort paid off in spades. PC rivals such as Toshiba Corp. are only now introducing full-feature notebooks with lithium ion batteries, which give from five to eight hours of use between charges.

BUSINESS & INDUSTRIAL PRODUCTS
SILVER

The team also used research to improve the outside of the box. Studies showed that people don't always hold their noteboo the same way—so the de ers created oversized m buttons around a centrall cated trackball, a setup had been introduced by PowerBook. And rather easy-to-break flaps for battery and removable h drive slots, designers tached covers to these ripherals. Snap them in the job's done; there's no to close.

Because some of Dell's lier machines suffered f quality problems, design went all out for reliab and durability. The Latit has a conventional 1- thick plastic enclosure r er than one made f thinner new mater and it has beefe hinges to hold screen in place.

Dell's gamble app to have paid off. company had b first-quarter earn results and the notebooks were of sales. Design the right techno gy and price eq success.

VAN FOR LL SEASONS

YSLER DODGE CARAVAN & PLYMOUTH VOYAGER
***IGNER:* CHRYSLER DESIGN STAFF**

hrysler Corp.'s minivans have become something of an American icon. With 4.5 million on the road, these utilitar- family-haulers are a quintessential part of suburban life. t kind of resounding success is tough to improve on. , all too often, designers overreach and mess up a good g in their attempts to do so.

he all-new minivan, though, is nearly as much breakthrough as the boxy original that rolled in 1983. Chrysler's designers and engineers markedly roved the utility of the new vans while at the same time ing them sleekly stylish. Most surprising, perhaps, they were able to capture the road manners of a sedan. sler has "achieved a real coup, pushing the design bench- k even higher," says Charles L. Jones, head of design at x Corp. and an IDEA judge.

TRANSPORTATION
GOLD

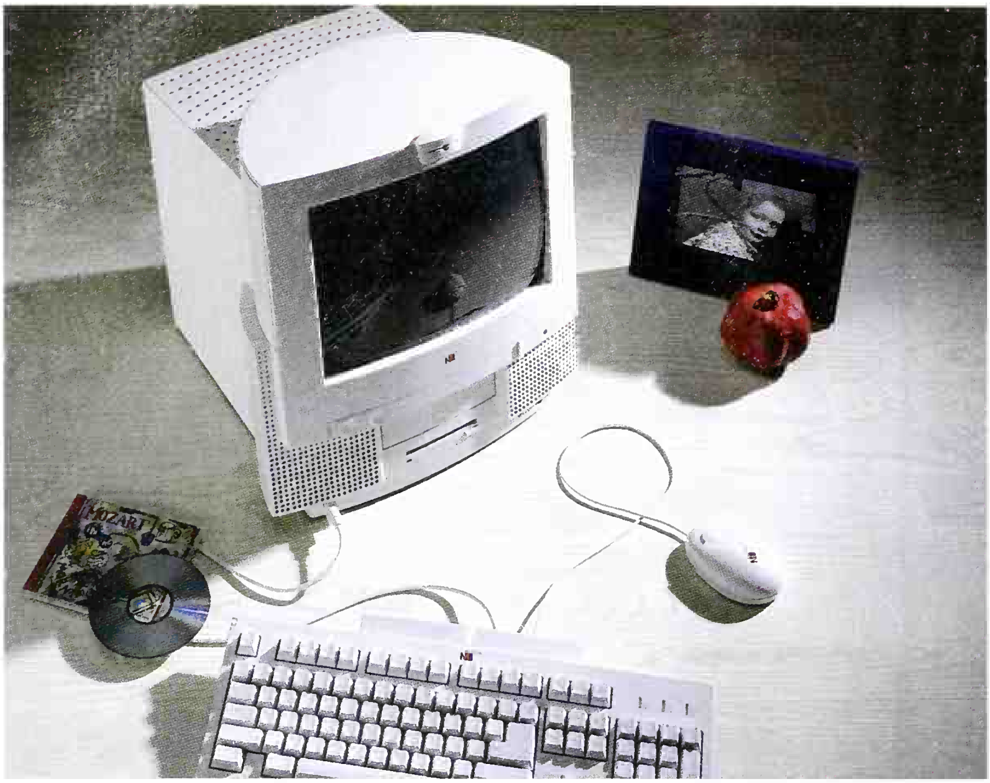
bove all, however, minivans exist to haul people and toys, tools, or materials. As such, the more room they inside, the more useful they are. Through clever use of e, Chrysler engineers significantly increased the new interior area—by more than 30%—without making much bigger on the outside. The new short-wheelbase ion is roomier inside than the old long-wheelbase model, h is nearly a foot longer. Chrysler achieved this feat by extending the windshield farther forward, pushing the wheels toward the bumpers, and adding a few inches to width and length. The door sills are 1.5 inches lower, making it easier to climb in and out.

Compared with the old vans, the new models make a quantum leap in styling, too. Chrysler designers transformed what had been essentially a box on wheels into a more rounded, pleasing shape. The body's sculpted blend of a carlike front end and cargo rear is deftly executed. The wheels' broad track lend a stable look. The van's new shape has utilitarian pluses, too: The windshield, which is four inches lower, offers better visibility, while smoother lines reduce wind noise and boost fuel efficiency.

Thoughtful details are everywhere. There's an optional sliding door on the left side, so drivers no longer need to run around the car to get kids or gear out of the back. On both doors, designers deftly hid the sliding track in the seam where steel meets window glass. Inside, the rear bench seat has tiny wheels that fold down like airplane landing gear. That makes it easy to roll the seats out the back and across the garage floor to make room for more cargo. Better yet, now a four-by-eight sheet of plywood fits neatly on top of the folded rear seatbacks. You don't have to yank out two rows of seats.

It's hard to successfully rethink a runaway success like the original minivan, but Chrysler has pulled it off. The company has given its customers a whole lot more van—for about the same price. The cheapest Plymouth and Dodge minivans will start at around $16,000 and the most deluxe Chrysler Town & Country will start at $30,000.

By David Woodruff in Detroit



GOOD DESIGN CAN'T DO IT ALL

MERIDIA INTEGRATED MULTIMEDIA COMPUTER
DESIGNER: ZIBA DESIGN

'Made in Taiwan": A lot of personal computers are. But innovative design? Hardly Taiwan's forte. Yet this year, one of IDSA's awards goes to an all-in-one multimedia computer made in Taiwan.

This product was a response to the bind many of Taiwan's high-tech companies find themselves in. They've thrived by manufacturing other people's computer boards and peripherals. But labor is no longer cheap in Taiwan, and many factories are moving to lower-cost sites in China, Malaysia, or Thailand. At the same time, the lucrative parts of the business—marketing, software, service, development, and design—are controlled by companies in the U.S., Europe, and Japan. If it wants to stay in the computer game, Taiwan has only one option: start designing and marketing its own computers. But how can a plethora of small companies afford such an expensive strategy?

About 18 months ago, George Chou, a director of the Taipei Computer Assn., came up with an answer: an alliance of Taiwan peripheral makers producing a single system with a coherent brand image. Chou brought together six companies: two monitor makers, a keyboard maker, a builder of PC motherboards, a disk-drive maker, and a producer of pen-based input tablets. Then he needed a designer to put the parts together.

All six companies were surviving on ever-thinner margins, squeezed by Western companies such as IBM, Compaq, and Apple Computer that keep demanding lower prices. To help them escape that trap, the Taiwanese government subsidized half the cost of hiring a U.S. design firm to come up with a series of products that they all could build profitably. They chose Ziba Design, based in Portland, Ore.

BUSINESS & INDUSTRIAL PRODUCTS
BRONZE

But getting the six companies to work together was rough. Each is headed by a founder and president who wanted to work directly with Ziba's founder, Sohrab Vossoughi. While the point of the project was to create a single, integrated system, each wanted its products to have distinctive features. Indeed, the IDEA award went to the computer designed specifically for Taiwan Video & Monitor Corp.

Ziba helped select a name for the system—Meridia—suggesting global reach. It then designed 10 products for the six companies, including two keyboards, two monitors, two drives, and the all-in-one computer/monitor that won a bronze IDEA award. The products share the same design "language": a simple case shape with soft curves, colorful buttons, front-facing speakers, and an indent at the top that doubles as a microphone holder.

Ziba's work highlights what can—and cannot—be accomplished with design. Although each of the six companies wanted to break into international markets with a brand of its own, the world of subcontracting is the only one they know. No sooner did they have Ziba's designs in hand than some began slipping it around to their old customers. Instead of establishing their own global identity to compete with the likes of Dell Computer Corp. and Compaq Computer Corp.—the whole point of hiring Ziba—the Taiwanese are drifting back to what they know best: selling hardware to big PC makers, who then slap on their own labels. When it comes to global business, good design is necessary but not always sufficient.

BETTER GRIP N HAWKING TOOLS

ALT PISTOL-GRIP DRILL/DRIVER (ABOVE)
KELIGHT (BELOW)
***IGNER:* BLACK & DECKER**

st four years ago, Black & Decker Corp. was battling
ith foreign rivals in both the professional power-tool
consumer-appliance markets. Shunning B&D, profession-
uilders and tradesmen were snapping up innovative
y-duty gear from the likes of Makita Corp., and Amer-
consumers were flocking to gadgets from Matsushita and
n.

oday, the pros are doling out their dol-
for Black & Decker products again. By
ing an ever-expanding line of well-
gned power tools and marketing them
r the trusted yet all-but-abandoned De-
name, B&D is back—a solid No. 1 in
fiercely contested $250 million market
rofessional cordless drills. One example
hy it is prevailing: the new DeWalt
less, pistol-grip drill/driver, a gold-med-
inner.

ot only does the drill/driver look all
ness, it also is comfortable enough for a
enter who wields it all day. Stressing
nomics, B&D designers gave the tool a cushion-grip plastic handle thin enough to grasp easily but wide enough for a battery pack that makes the tool cordless.

The designers faced some hurdles beyond "grippability" when they set out on the project in 1991: The drill had to be compact and simple to lug around, but it had to house a motor powerful enough for a pro. The designers also wanted a better motor than those available off-the-shelf. Lastly, the drill had to have a list price of $170 to $200 and be marketable globally.

Splitting the work helped. Designers at the company's Spennymoor plant in northern England handled the motor and transmission development, while engineers at the company's power-tool design center in Towson, Md., handled the battery pack and controls. That way, the company not only spread out development costs, but it also generated internal support for the product in different parts of the company.

So far, pros are warming to the tool's flexibility. They can hold the drill like a handgun with their index fingers on the trigger. Or, to apply more pressure, they can wrap a hand around the back end and squeeze the trigger with their middle fingers. It's this kind of flexibility that's allowing B&D to regain prominence in power tools.

When it comes to flexibility, nothing beats B&D's wildly successful SnakeLight. In a market where the average price is just $6, consumers are paying $30 for a product that lets them work "hands-free" under car hoods, under sinks, or in a closet.

The key to the SnakeLight is its bendable, tubular body, which can be coiled cobralike on the ground, wrapped around a pole, hung over a sink, or even draped around your neck while you work. B&D is marketing it in three forms: a white-colored body for home, a black shop model with a mounting bracket, and a red model for cars, which runs off a cigarette lighter. Form couldn't suit function any better.

DIGITIZING THAT CLUTTERED DESK

VISIONEER PAPERMAX
***DESIGNER:* GVO**

Newspaper clippings, dog-eared business cards, glossy brochures, handwritten recipes, or a child's prized artwork: There's value in every one, but together it's just a lot of paper cluttering our desks, drawers, and counters. Entrepreneurs at Visioneer Communications Inc. looked at the same mess differently, however. What they saw was the opportunity for a breakthrough product—an inexpensive desktop scanner into which all of those bits of paper could be fed, with their data or images captured electronically.

The idea was to capture text and simple images, not produce professional artwork, so the device wouldn't require the precision or flat-bed design of a graphic-artist's scanner. But it would need to be compact and easy to use.

The design wizards at GVO Inc. in Palo Alto, Calif., have made all of this happen in PaperPort (originally known as PaperMax). It has a footprint no bigger than a box of Reynolds Wrap but has the potential to snag the value off the page and send the skeleton to the recycling bin.

Within a few minutes of setting up PaperPort, you start imagining a little voice whispering, "Feed me." The device sits best between the keyboard and a PC or monitor. There's no on/off switch: The machine switches on automatically when you put the edge of the paper into the slot. Immediately, an image of the scanned item pops up on screen, a nifty software trick that lets the user enjoy watching the computer digest it.

BUSINESS & INDUSTRIAL PRODUCTS
SILVER

PaperPort is compact, minimalist, and inviting to use. Putting a curved face forward, PaperPort throws out its little chest to receive your orders, sucks in the page through its curved path, and then spits the scanned paper right back at you. If the item that is to be scanned is delicate, or precious (a birth certificate or photo), a quick shift of the curved top lid creates a straight path for safer scanning. Once it has been scanned, the data can easily be filed, printed, faxed, or E-mailed. Says GVO's Michael Barry: "This is going to help your life. t's not a statement about he power of technology."

Retailing for about $4 PaperPort has been a big for three-year-old Vision IDSA judge Dallas Grove Palo Alto Design Inc. sa PaperPort's simplicity a precursor: "It's a plug-a play kind of product. W just beginning to see that computer products] beca the technology is getting phisticated enough." Sop ticated enough to be simp

DANDY NCYBER-PEDIA

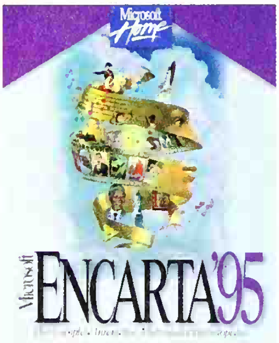
ROSOFT ENCARTA
***IGNER:* MICROSOFT**

'he way William Flora saw it, Microsoft Corp.'s Encarta was a software program that looked too much like, , a software program. So Flora took on the challenge of esigning the interface on Microsoft's multimedia CD-ROM yclopedia. In the process, he made the program a lot e versatile and pleasing to use.

CKAGING & GRAPHICS
ILVER

For starters, the original 1993 version of Encarta had too much ter on the screen. It looked more like a serious spread- t than a warm-and-fuzzy consumer title. The program ained dozens of buttons, distracting users from its main s—to help them uncover the nuggets of content they led to tackle school papers or other research chores.

he newly designed interface on Encarta '95 was meant to lify and not overwhelm the content, a great deal of h was fresh information (about half the articles in Encarta were revised in the 1995 version). Flora's team cut the number of buttons in half. To call up additional information or functions, they added "fly-out" menus that swoosh down as needed. For example, if you place the cursor over "areas of interest" at the top of the screen, a menu appears with specific choices, such as "life sciences" or "performing arts."



Another consumer-friendly move: Designers switched to an understated, less-vibrant palette that is easier on the eyes. And users can change the size of article text or choose a flexible screen layout that lets them display—or hide—article outlines.

Microsoft also improved Encarta's searching capability. The program's Pinpointer lets people do searches based on words, geography, subject, time, and the type of media displayed (sound or video). Now, you can narrow references on Greek mythology down to a picture and spoken line from Sophocles' *Oedipus Rex*—or get a different take on the play from Sigmund Freud.

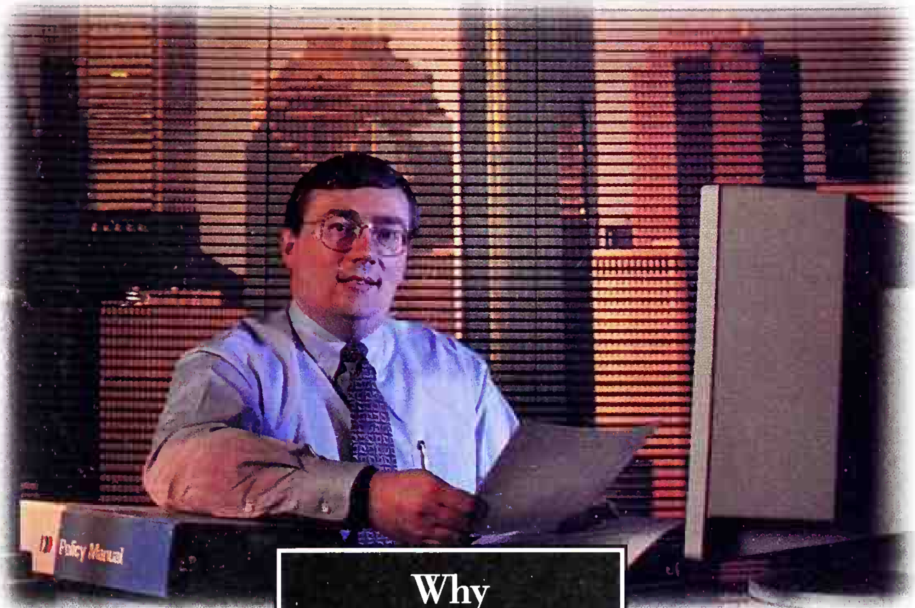
With the SAS® System, we can integrate large amounts of data and build a picture of how our fields are performing.



Why Chevron U.S.A. Production Company Relies on the SAS System

Chevron

At Chevron U.S.A. Production Company, the quest is to be better than the best. Out in the field, engineers join forces with earth scientists, operations staff, and support personnel to produce millions of barrels of oil reserves...find and develop new sources of energy... and maintain quality and low cost at every stage of the oil and gas production process.

The Means to Make Better Decisions

Providing the means to deliver accurate and timely information to improve work processes and make better business decisions is the job of George Alameda, Chevron U.S.A. Production Company's Manager of Information Technology.

The company is using the SAS System to help with enterprise-wide information delivery. "Our mission is to make financial, operational, and reservoir data available in an easy-to-use format to all the asset teams at work in CUSA Production Co.," says Alameda. "We've found the SAS System is a superior solution for analyzing data, turning data into useful metrics, and guiding our cross-functional teams toward improved work processes."

One team, in CUSA Production's Western Business Unit, is tracking the profitability of individual wells. "It's a tremendously difficult task to optimize our field operations for maximum profitability," says Alameda.

"With the SAS System, we can integrate large amounts of data and build a picture to compare one field against another and challenge our asset teams to identify and share best operating practices."

Reaching for the Best

Alameda looks forward to extending the use of the metrics and performance monitoring data to employees trying to improve their work processes. He admits his vision is far reaching, but so is the SAS System. "Our challenge is to be better than the best," he concludes, "and the SAS System is helping us reach that goal."

To receive a SAS System Executive Summary, give us a call or visit us on the World Wide Web at http://www.sas.com

Your brains got you to where you are today. So stop thinking already.

And *feel* the allurement of the road. *Experience* the elation that comes from the new 300 horsepower S4s. With a slight *touch* of your hand, *indulge* in supple power steering and rigorous handling. *Smell* its pervasive full Connolly leather. And *enjoy*, for once, stimulation of the senses, without the invasion of intellect.

"READY-AIM-FIRE GUY": *Compo*
says he'll make needed chan s

INSURANCE

THE FLOODWATERS RISE AROUND AETNA

Despite overhauls, profits are off–as the industry shrinks

"I'm very much a ready-aim-fire guy," says Ronald E. Compton, chief executive officer of Aetna Life & Casualty. "I am going to change what I can see needs changing." Compared with former Aetna CEOs who ran the Hartford insurer unchanged for decades, Compton, 62, has been a dervish, leading a series of restructurings and "strategic reviews" over the past five years.

Yet all that hasn't much helped the country's largest publicly owned insurer. Excluding special charges and capital gains and losses, 1994 earnings were no better than in 1990, when Compton started restructuring. Last year's profits represented a return on equity of 7.5% vs. 13.6% for the industry. Excluding catastrophe losses, 1995's first-quarter results were nearly the same as 1994's. "The company is still unable to generate a steady stream of growing earnings," says Peter Azcue of Value Line Inc.

Aetna's property and casu
business is producing middlin
sults. Potentially crippling cl
for environmental liability con
to dog the company. Aetna's
has been strong lately, but
lysts attribute that to com
statements that it may soon
tify the cost of those claims.
the stock has trailed most
major insurers' since April,
Aetna's is up just 24%, while
dard & Poor's multiline insu
index has risen 69%.

BREAKUP? Time may be run
out for Aetna. The industry is
solidating fast. Travelers fell
to financier Sanford I. Weill
years ago, insurer Contin
Corp. was bought by CNA Fina
earlier this year, and Ker
agreed in April to a buyout
Zurich Insurance Group. Wit
some big improvements, A
could face a similar fate or,
likely, drastic restructuring
breakup. Industry insiders say
na has done an analysis of its bre
value. Compton, a 40-year Aetna
ran, won't comment on the comp
plans. But he does say: "The fac
anybody—a board or a CEO—is g
to have to consider anything."

Compton's own position may no
quite rock-solid. Aetna's board cu
1994 bonus 45%, from $550,00
$300,000, while his salary remained
at $775,000. Four other top execs
their bonuses slashed. A more signif
sign of a possible power shift was
arrival, on Feb. 6, of Richard L.
ber, 58, as vice-chairman for strat
and finance, a new position.

Huber, whom the company
Compton recruited, is a tough, cold
make-waves operator with a backgr
in banking and on Wall Street—o
several bankers who have rece
moved into senior insurance posi
(page 111). Formerly Continental I
Corp.'s vice-chairman, Huber led a

What Aetna Needs to Fix

ENVIRONMENTAL LIABILITY	HEALTH CARE	PROPERTY-CASUALTY	REAL ESTATE
Mass of claims stemming from coverage written decades ago needs to be quantified. Possible charge: $1 billion.	Up to $200 million must be spent annually for the next few years to build a network of managed-care providers.	Expenses must be trimmed further, and loss ratios must be reduced at this under-performing unit.	The $13 billion real estate portfolio mus continue to be reduc About 19% is conside troubled.

ancial and strategic mind,” says mpton. Thomas C. Theobold, a former irman of Continental, says Huber is t a traditional insurance executive. I w it as a very positive sign for Aet- to have hired him. He brings a fresh nd. He looks very aggressively at at makes money and what doesn't.” ber leaves no doubt that he thinks tna has been a subpar performer. ile Aetna has many choice assets, ber says, “some of them haven't been rked nearly hard enough.”

No matter how their relationship ts out, Compton and Huber have ir work cut out for them. Environ- ntal claims are a top priority. Aetna eady has reserves of $436 million for ential claims, but analysts believe additional hit could reach $1 billion wipe out most—if not all—of 1995's ected earnings of $660 million.

he company also faces fresh chal- ges to its core health-care franchise. alth care contributed 75% of profits year. Now, Aetna has to compete n national health-maintenance organ- ions and other providers—and it's faring well in price comparisons. ey're a top-tier competitor,” says en Darling, who manages health-care nning for Xerox Corp. “But they've led to be at the high end of costs.” na is trying to cut them by shifting lth-care-plan members to managed . But building a network of provid- would cost about $200 million, ac- ling to James W. McLane, head of na Health Plans. Compton says nings in the health-care business will haved 15% this year.

OBLEMS BEHIND US.” That means lackluster property-casualty divi- , which earned just $60 million in 4 on $5.3 billion in revenues, will e to shine this year. Gary G. Bena- head of that operation, managed a 0 million earnings swing in Aetna's national business before taking over perty-casualty in late 1993. He has ady cut annual expenses by $120 on and cut over 2,000 jobs, while ing the underwriting focus away n volume to profitability. But proper- asualty lost more than $200 million ach of the previous two years, and sector of the industry continues to er from fierce price competition.

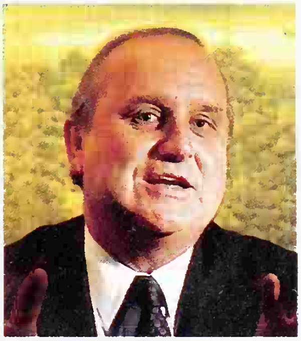
n the plus side, Aetna is cleaning up nce-embattled pension and life-in- nce business. The company took an million charge in 1994 for losses ciated with guaranteed investment racts. Also, it set up a $1.3 billion rve for future losses. But sales of nsurance were up 67% in 1994, and ife and annuity business saw profits 43%, to $159 million. Aetna has tled its portfolio of troubled real estate and mortgages to $13 billion, down from $23 billion four years ago. “We have put the bulk of our real estate problems behind us,” says Executive Vice-President Daniel P. Kearney.

Overall, Aetna is working on pruning low-performing businesses. The insurer recently announced plans to sell its Aeltus investment-management subsidiary. And the company is trying to bolster businesses it runs well, such as health care and life insurance. But with cash-hungry investors having already gobbled up some of Aetna's rivals, the pace of improvement needs to quicken. The market doesn't tolerate inefficiency for long. Just ask Travelers. Just ask Kemper.

By Tim Smart in Hartford, with Richard A. Melcher in Chicago

CAN A BEVY OF BANKERS BUOY THE PRU?

Want to get ahead in the insurance industry? Then go work for a bank. That seems to be the magic recipe these days, as lumbering insurance giants turn to the banking industry for executive talent. Aetna Life & Casualty's recent recruitment of former Continental Corp. Vice-Chairman Richard L. Huber to be the company's vice-chairman for strategy and finance is a notable example. But bankers have virtually taken over troubled Prudential Insurance Co. of America, which saw its capital drop 11% last year after paying out more than $1 billion in fines and settlements resulting from its limited-partnerships scandal.



RYAN: CHASE CONNECTION

Late in 1994, Pru hired Arthur F. Ryan, 52, former president of Chase Manhattan Corp., as chief executive. Ryan, who has a reputation as a cost-cutter unafraid to ditch underperforming assets, is the first non-Pru person to take the top job at the nation's largest insurer. Ryan, in turn, recruited two Chase colleagues: In February, John V. Scicutella, 45, joined Pru as head of operations and systems, a post similar to the one he held at Chase. And on May 18, Mark B. Grier, 42, a former Chase executive vice-president, became Pru's new chief financial officer.

FINANCIAL DISCIPLINE. The influx of bankers stems largely from pressure from insurer boards for greater returns—even at mutuals such as Pru that are owned by policyholders rather than stockholders. Bankers are not always regarded as the most innovative financial executives. But the best ones are attuned to the demands of Wall Street and bring a financial discipline that has been lacking in the staid insurance industry. Financial types such as former American Express executive Sanford I. Weill have also made inroads in the insurance industry. “There's a general view that bankers are more highly focused on the cost of capital and earnings,” says Larry G. Mayewski, senior vice-president at A. M. Best Co., an insurance-industry rating service.

Prudential, which declined to comment for this story, could use a little more focus. It lost $907 million last year, as its insurance operations suffered from such losses as the Northridge (Calif.) earthquake and as its mortgage-lending unit fell victim to rising interest rates. An unwieldy mix of insurance, mutual funds, securities, and real estate, Pru is one of the largest financial-services players in the world, with more than $300 billion in assets. But it lacks the sharply defined strategy of some other financial conglomerates, such as GE Capital Services Inc.

When he joined Pru, Ryan promised he would move in 1995 to improve earnings and capital. In March, he outlined plans to sell the Pru's $75 billion mortgage-servicing business. The unit could fetch $1 billion, analysts say, though no deal has yet been reached. Other moves could include further trimming of the property-casualty unit, which is in retrenchment, and greater emphasis on the sale of products to the retirement market. Bringing in the bankers is just a first step.

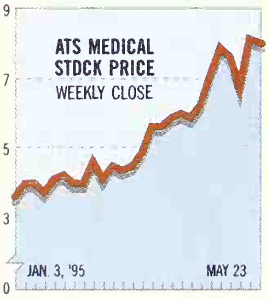
TWO HEARTS THAT BEAT AS ONE?

The chief product of ATS Medical (ATSI) is a new kind of mechanical heart valve—and it's giving rivals some blood-pounding competition. The Street has become aware of ATS: Its shares have doubled this year, to 8. But there's bigger reason behind the smart leap: takeover talk.

Savvy investors have been buying into ATS on the belief that the valve maker will soon get a buyout offer from Medtronic (MDT), a major world producer of implantable cardiac pacemakers and also a maker of prosthetic heart valves.

THE PULSE PICKS UP



EARNINGS PER SHARE
1996 Est. 13¢
1995 Est. 8¢
1994 0¢
1993 -3¢
1992 -48¢

DATA: BLOOMBERG FINANCIAL MARKETS, NELSON PUBLICATIONS

One New York money manager who has been accumulating ATS shares puts the value of the stock at 12, based on the prospects of the company's new improved valve. In a buyout, the stock could be worth even more, says this pro, who says an offer from Medtronic seems "imminent." He believes ATS has a good product and technology and a seasoned management team led by Chairman and CEO Manuel Villafana. (In 1976, Villafana founded St. Jude Medical, which the following year introduced the mechanical valve that is now the industry's standard.)

"There's a good fit between Medtronic and ATS," says Rachael Scherer, an analyst at Dain Bosworth. She thinks it's likely that ATS will be taken over one day—but couldn't say when or by whom. Scherer says Medtronic "is having a problem with its own heart valve," and it will have to figure out whether to focus on resolving the difficulty or go after ATS, whose sales are expected by one investor to double to $12 million this year. Currently, Medtronic is developing a new prosthetic heart valve.

ATS valves are marketed in 20 countries. In the U. S., the company is still seeking approval from the Food & Drug Administration.

The ATS product is a possible successor to the artificial valve that has been in general use since the 1960s. The industry's standard—the St. Jude valve—has not been changed much since its introduction, notes Villafana. St. Jude has about 64% of the world's $500 million mechanical-valve market.

The ATS valve, says Villafana, is easier to implant and monitor. And it has a proprietary "open pivot" design that improves blood flow and reduces the likelihood of clots. Villafana and Medtronic spokesman Dick Reed declined to comment on takeover rumors.

BROOKE MAY FLOW A BIT FASTER

Financier Ben LeBow loves complex transactions that give him big stakes in asset-rich but out-of-favor companies. Such deals have made a lot of money for him—and his shareholders. Not that his investment vehicle, Brooke Group (BGL), has skyrocketed. Far from it. Shares of this miniconglomerate trade on the Big Board at 3¼, down from 5½ in mid-September. But he's attracting the smart-money crowd, which thinks Brooke will break out and hit new highs in a year.

One reason: LeBow, a controversial dealmaker, is finally paying attention to beefing up Brooke's quarterly performance and bottom-line results. "This will attract the attention of a whole lot of investors when it becomes evident," says the manager of a large hedge fund who has bought into Brooke. He figures the stock is worth more than twice its current price.

This money runner notes that Brooke's unrestricted cash stash of $325 million (left over from the 1994 sale of its New Valley money-transfer business for $1.2 billion) plus assets of other Brooke units, make the shares worth more than 8.

One Brooke unit is Liggett Group, the fifth-largest U. S. cigarette maker. Liggett also owns a big factory and real estate operation in the former Soviet Union—which LeBow expects will puff up Brooke profits.

Brooke has bought 6.4% of the Show-Biz Pizza Time chain and has purchas for $26.8 million, Ladenburg Thalma a 119-year-old New York securities fi

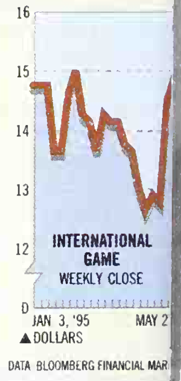
To skeptics, LeBow points to the turns reaped by shareholders w bought into Brooke (then Liggett) 1987 at 12 a share. Since then, LeB figures stockholders have received c and stock dividends of more than 2 share, mainly from asset sales.

WHY COINS ARE DROPPING INTO IGT

Top guns at International Game Te nology (IGT) and most Street a lysts are pooh-poohing rumors that No. 1 U. S. slot-machine maker is takeover target. "The big news is t nothing is happening," insists IGT Ch man Chuck Mathewson, who owns ne ly 5% of the stock. Yet since May when the shares hit a low of 12⅝, t have rebounded to 15 on very hea volume—between 1 million and 3 mill shares some days. So what's up?

A couple of hedge-fund invest have been snapping up the stock, some momentum investors—pros w jump on sharp turns in trading p terns. The buyers are betting, says investor, that either Sony or Sega E terprises will make a run for IGT. I buyout, IGT stock is well worth 30, says. "The stock appears to be hea higher, due to improving investor p chology emanating from the takeo speculation," notes David Boczar of V ue Investing Partners in Westp Conn.

BETTING ON A PAYOUT SOON



DATA: BLOOMBERG FINANCIAL MAR

Gaming analyst Steve Eisenberg of Oppenheimer says IGT's improved cost structure, signs of a pickup in profit margins, and low debt make it a sitting duck for a deep-pocketed group. The likes of Sony or Sega, he figures, could logically link their entertainment capabilities with IGT's skill and scope in slot machin

ECOMMUNICATIONS

ULTIMEDIA BY RIAL AND ERROR

spite glitches, AT&T insists it knows what it's doing

Whatever happened to AT&T's bold plunge into the new worlds of multimedia and anytime-anywhere communica- s? Under former communications ucts chief Robert M. Kavner, the any bought up, started up, or in- ed in virtually every segment of onverging voice, data, and video ds. And, in a high- le "You Will" televi- advertising cam- n, the long-distance hone giant promised a new era of futuris- ommunications was t to dawn.

ell, like lots of other imedia wannabes, is finding that the e isn't arriving on lule. Its foray into ased mobile comput- EO Inc., was a flop has been closed . Its 7.4% stake in ral Magic Inc., a de- er of communica- software, doesn't promising, given that of the gadgets us- eneral Magic's tech- y has made much of sh. Interchange, the online network purchased from Ziff Communications Co. for approximately $50 million in December, won't go live until June, six months behind schedule. In May, the phone giant announced plans to sell its 2.4% stake in 3DO Co., a much-hyped maker of video-game machines that is now struggling. AT&T says it is bailing out because game machines don't fit into its plans—although it still owns the ImagiNation Network, an online video game network.

Despite these setbacks, AT&T says that it's not worried. Chief strategist Richard S. Bodman says the company, which had $2 billion in free cash flow in the last quarter, is willing to seed all sorts of startups and new ideas in the hopes that some will flourish. "Our experience has not been any different than any other venture capitalist's," says Bodman. "When you spawn new businesses, only one or two out of 25 typically make it."

FALLBACK POSITION? Still, industry insiders say that AT&T management wants to see more successes. Chairman Robert E. Allen has publicly complained about the poor performance of Kavner's biggest legacy—the former NCR Corp., which was supposed to help vault AT&T into multimedia leadership (page 114). Now, consultants and industry executives who work closely with the company say AT&T has recently been narrowing its focus. It's in the midst of developing a strategy with greater cohesiveness—aimed more at business customers initially than at consumers.

The switch began after Kavner left last June for Michael Ovitz' Creative Artists Agency Inc. There have been no significant outside investments in consumer multimedia since. Instead, AT&T has been forming alliances to bolster its business offerings. The latest: On May 22, Apple Computer joined AT&T WorldWorx, a group that includes Intel and Lotus Development and is working on videoconferencing.

Another sign: In April, AT&T brought together most of its multimedia businesses under the stewardship of John C. Petrillo, head of its business-communications services. "Within the last 6 to 10 months, AT&T has gotten much more serious about planning around a single strategic environment," says Tim Bajarin, president of Creative Strategies Research International Inc., a consulting firm.

COURTESY OF AT&T

online network. AT&T isn't trying to be America Online or CompuServe. Instead, it will operate Interchange as a very sophisticated development "platform" that other companies, such as Washington Post Co. and Ziff-Davis Interactive, will use to build their own online services.

Interchange President Michael E. Kolowich says that AT&T's close relationship with some 10 million business customers on the phone side should attract service providers for Interchange. "If you think about it, AT&T is creating a platform for businesses to do business under their own brand name, the same way they do with an 800 number," he points out.

GUIDING PRINCIPLE. Whether it's in business or consumer services, there is a single guiding principle behind all of AT&T's multimedia endeavors: Use new interactive services to drive ever-increasing demand for phone networks. That doesn't mean getting into content, the way rival MCI Communications Corp. is doing through its investment in News Corp.

The No. 1 carrier has always said it's not interested in creating the videos, information banks, or other content traveling down the line—it would much rather transmit everyone else's traffic. "That's a smart strategy when you're the largest market-share player in the long-distance business," says Daniel Reingold, an analyst with Merrill Lynch & Co. "When you're the biggest, you want to be able to carry everybody's content."

And being the biggest, AT&T can afford to plow some money into losers now. Besides, it may be too soon to tell what a loser is. The EO pen computer was a bust. On the other hand, a product such as General Magic's Telescript communications language may pan out. It works only on handheld communicators from Sony Corp. and Motorola Inc., which makes it look like a dead end now. But there could be a payoff later. "It's a brilliant technology on the wrong platform," says an executive who works closely with AT&T. "But the concepts are still very important to AT&T. They've learned a lot."

The learning process will most likely continue to be messy for AT&T and everyone else in a business that continues to be embryonic, to say the least. As Merrill's Reingold says, multimedia "is going to take a long time, a lot of money is going to be spent, a lot of trials, a lot of errors." You don't have to tell AT&T that.

By Catherine Arnst in New York

ROB DOYLE/BW

AT&T AND COMPUTERS: ANY SIGNS OF SYNERGY?

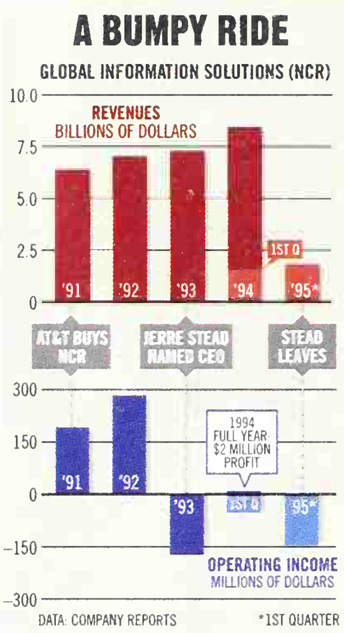
In 1991, AT&T shelled out $7 billion for NCR Corp. and finally staked out the strategic beachhead in computers that it had failed, despite billions of dollars spent, to achieve on its own.

What has come of that initially hostile and bitterly fought takeover? Has AT&T created the synergy between computers and communications to help it play in the world of all-digital communications and multimedia? The answer is mixed, depending on which area of AT&T's computer operations one considers.

Global Information Solutions (GIS), the inelegant new name for the former NCR, still leads the computer industry in having a full product line, from desktop to mainframe, that uses a common line of microprocessors—namely, Intel Corp.'s. Potentially, that's a big boost in helping customers wire up far-flung networks. And NCR has given AT&T presence in scores of foreign countries, including Japan, where the AT&T name was not well-known. In return, NCR has gained access to AT&T's deep pockets, the knowhow of its Bell Laboratories, and its strength in data networking.

But little has come from the acquisition. Of the 30-plus NCR officers on board in 1991, less than a half-dozen are left, most checking out as soon as their contracts allowed them to go. Early this year, Jerre L. Stead, the former AT&T executive who had been called in to streamline NCR in 1993 and improve its suddenly sagging profitability, left to run a software company. Lars G. Nyberg, recruited from Philips Electronics, is slated to become the third GIS head in four years on June 1.

A BUMPY RIDE



DATA: COMPANY REPORTS

*1ST QUARTER

GIS still has its strengths. For example, it leads the market for powe ful parallel-processing computers th excel in data mining—finding patterns in reams of retail transaction But rivals have been raiding GIS. Many of the unit's top technical and marketing personn have jumped ship for Oracle, Unisys, and even IBM. Says one recently-depar ed NCR executive: "The top talent's n longer there. They're going to have to rebuild that."

GIS's biggest immediate problem is in PCs, which contributed heavily to surprising $143 mi lion first-quarter lo at GIS. Margins col lapsed under inten price competition and a bumpy trans tion to new models Analysts say AT&T CEO Robert E. Alle told them the oper tion had a limited amount of time t get competitive or it would be shut down. "They were obviously embar rassed that this happened," says Ar thony Ferrugia, an analyst at A. G. Edwards & Sons Inc.

A spokesman says GIS intends to remain in the PC business, having streamlined its product developme process and reduced the number o models it builds. And to help push its high-end computers, the compa added 400 people to its consulting staff last year. A new computer lin planned for this fall is designed to give even small and medium-sized retailers, not just giants such as Wal-Mart, the ability to analyze masses of sales transactions. As AT&T has learned in its multimedia forays, the road to an all-digital world where computers and commu nications (and the companies that make them) blend is a bumpy one, indeed.

ONLINE SERVICES

EVERYONE'S RUSHING THE NET

Snaring subscribers with Internet access is now the big play

If you're like most people who enjoy surfing the Internet and its World Wide Web, you're paying $15, $20, maybe even $50 per month to connect your personal computer to the Net over a phone line. By yearend, that may turn out to be $15, $20, or $50 too much. Executives who are privy to discussions at certain telecommunications carriers say that basic Internet service may, in the next few months, become gratis—a giveaway, perhaps only temporary, bundled with long-distance service.

Even if free Internet service doesn't materialize that quickly, the fact that it's even being considered shows how badly companies want to grab some of the Internet action. With dizzying improvements to the multimedia experience that it's able to deliver, the Net is now the undisputed center of the online services universe. And companies ranging from AT&T down to mom-and-pop operations are jockeying to win their fair share of the millions of American households—and thousands of businesses—that aren't plugged in. Between the two, "there are 160,000 new Internet users every month," reckons Scott B. Ross, president of MCI Business Markets, the long-distance company's business-services division.

MURDOCH'S GATEWAY. Indeed, the Internet access market will grow from $123 million this year to more than $4 billion in 2000, according to Forrester Research Inc., a market researcher in Cambridge, Mass. Maloff Co., another researcher, based in Dexter, Mich., estimates that the number of so-called SLIP connections, a particularly popular way of plugging PCs into the Net, is growing by 38% every month. Prices have slipped from around $50 for unlimited usage each month back in 1993 to as little as $20 today, depending on location and other service factors.

Not since the cellular-telephone boom of the late 1980s has there been such a mad scramble to win subscribers to a new communications service. Local and long-distance phone companies as well as cable-TV operators are all looking to grab a portion of this market. Commercial online services such as America Online, CompuServe, GEnie, and Prodigy Services are increasingly emphasizing their improved Internet connections—usually a freebie with the monthly subscription—as a way of keeping their 5 million-plus subscribers in the fold.

More competition is coming. Microsoft Corp. plans to make Internet access a major component of its forthcoming network service, and AT&T, the long-distance colossus, is getting ready to jump in. Rupert Murdoch's News Corp., which just got a $2 billion cash infusion from MCI, is thoroughly remaking its Delphi as a mass-audience gateway to the Internet. Already, MCI has made Internet access part of its networkMCI Business service, which bundles E-mail, fax, and teleconferencing into a single service. MCI also runs an electronic m
on the Internet.

Until lately, the Internet-access ma
ket has been wide-open to just ab
anyone setting up shop. All you h
do was get an Internet node—a sm
engineering workstation and a few m
dems would do—and arrange to li
with a regional or national segme
the Net, and you were in busines
day, hundreds of companies buy Int
capacity in bulk and resell in sm
chunks—much as so-called aggre
do in the long-distance phone mar

TOO MANY TITANS. Not all Intern
cess companies are of the mom-an
variety. NETCOM On-Line Commu

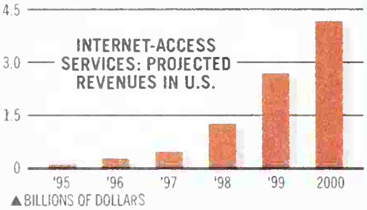
are eyeing the business market, which may prove more profitable than the cutthroat consumer market. Among others, IBM, MCI, a number of Baby Bells, BBN Planet, and UUnet, which is 10% owned by Microsoft, are promising businesses security and reliability as they move toward electronic commerce on the Net. The total market, including consulting services: $415 million, says Yankee Group's Franco.

So far, one company has been conspicuous by its absence—AT&T. But that's likely to change by yearend. Since last fall, companies in the Internet business have been bracing for an AT&T entry. A company spokesman declines to comment, except to say that AT&T is indeed developing an Internet strategy, but sources close to the long-distance giant say that there is an ambitious plan, known by the unofficial name of AT&T On-Line. Customers anywhere in the country will have local, dial-in access to the Internet at the relatively high speed of 28,800 bits per second. AT&T is also likely to offer them the modems for that speed at prices well under current retail. What's more, the company has turned the focus of its New York-based Downtown Digital operation, originally set up to create interactive-TV services, to developing spiffy on-ramps to the Internet that even the nontechnical crowd can use.

HIGH HOPES



DATA: FORRESTER RESEARCH, INC

AT&T is also working on Internet services for business customers. The nationwide service that it is developing to connect office networks using Novell Inc.'s NetWare, will be based on the TCP/IP protocols of the Internet. So it may be possible for AT&T to create, in effect, a sort of private Internet that would help businesses communicate securely but also offer access to the Net's other resources, such as the World Wide Web.

With or without AT&T, Internet access has turned into one of the hottest markets around. So if you're shopping for a connection, you would do well to avoid signing any long-term contracts. The competition is sure to bring new services and better prices for months, if not years, to come.

MEDICINE

ARTIFICIAL BLOOD MAY BE A HEARTBEAT AWAY

Northfield Labs is close to perfecting recycled hemoglobin

Richard DeWoskin's quest began in 1970, as critically wounded American soldiers were bleeding on the battlefields of Vietnam. A young biology student at the time, DeWoskin was recruited by prominent Navy surgeon Dr. Gerald S. Moss to help develop artificial blood for the U. S. military.

It was the start of a roller-coaster ride from discovery and breakthrough to the brink of despair. Now the company they star Northfield Laboratories Inc., may f ly be nearing its goal: to create an i pensive, abundant, and safe replacem for hemoglobin—the oxygen-carr component in red blood cells. "Our w is finally paying off," says DeWos now chairman and CEO. "We're not far away."

GOULD AND DEWOSKIN: *Their mixture still must endure more tests*

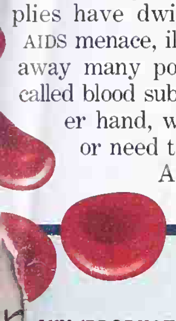
A half-dozen other tech and medical eq ment companies—inclu giants Baxter Interna al, Upjohn, and Eli Lil have targeted sim types of products. Bu cently, the Evanston startup has pulled ah in all-important "Phase trials to establish effi and safety. If it can pa final cluster of t Northfield's product, ca PolyHeme, could be on shelves in 1997.

HYPOGLOBIN. A dose skepticism couldn't h however. Over the decade, more hype hemoglobin has iss from science labs in Ar ica, Europe, and Japa and Northfield has b no exception. The fac human blood is fiendi difficult to duplicate. hemoglobin is the big challenge of all. This i bearing protein, wl makes blood red, bi oxygen and ferries i tissues throughout body. Massive blood

URGENCY: The need to develop replacement hemoglobin is greater than ever: Many blood donors have been scared off by the AIDS epidemic, and blood is already in short supply ckly leads to oxygen deprivation, owed by shock and failure of vital ans.

Physicians can bolster a patient's od levels temporarily with salt or tein solutions that keep the heart nping. But these can't deliver critical ygen. Transfusing donated blood ves the problem but has clear disadntages. It must be matched to the ient's blood type, which wastes preus time. It is prone to viral contamiion, as the AIDS epidemic has demonated. And it has a short shelf life ust 28-42 days.

Consequently, blood is almost always short supply. More than 4 million ericans receive upwards of 12 million ts of it each year. But recently, supplies have dwindled because the AIDS menace, illogically, has scared away many potential donors. So-called blood substitutes, on the other hand, won't carry diseases or need to be cross-matched. And in theory, they can be stored for up to one year. As a result, market for substitutes could run as as $2.5 billion a year, according to sts at Robertson Stephens & Co. n Francisco.



IST TYPE. The stumbling block for ists has been retrieving and isolathe 280 million hemoglobin mole- contained in each red blood cell so they can be transfused no matter a person's blood type is. Removed a protective cell casing, however, molecules tend to leak through the vessel wall into surrounding tis- Unless they are genetically or ically altered, the molecules can be to nearly every organ in the body. get around that, companies have ed several exotic approaches). Upjohn, in a partnership with n-based Biopure, is testing hemon from cow's blood that is rejig- to avoid attack by the body's imsystem. Somatogen Inc. in Boulder, Colo., working with giant Eli Lilly & Co., is producing hemoglobin from genetically altered bacteria. Others hope to bypass nature's own mechanism entirely. San Diego-based Alliance, backed by Johnson & Johnson, is developing a substance based on nontoxic, oxygen-carrying chemicals called perfluorocarbons. Such substances have produced side effects, but Alliance has reformulated them to smooth the body's acceptance.

Northfield's approach is less technologically ambitious and may, therefore, be easier to perfect. Scientists begin by removing red blood cells from donated blood that has sat on a shelf longer than the time permitted by the Food & Drug Administration. Since expired blood has no other medical uses, Northfield can obtain it cheaply. Next, they extract hemoglobin molecules and link them together in long chains, called polymers. Their larger size prevents them from leaking from the blood vessels. The resulting solution is purified and bottled, giving it a long shelf-life.

This approach isn't entirely new. Northfield used similar techniques in the mid-1980s to produce its first experimental substitutes. Unfortunately, these caused breathing difficulties and muscular pains in some test patients and had to be withdrawn from FDA trials in 1990.

Northfield says the problem was caused by naturally occurring contaminants the company had overlooked. With stepped-up purification, the symptoms disappeared. In March, Northfield received FDA approval to double its dosage of PolyHeme in ongoing human safety trials to 300 grams or six units—about hree-fifths of the total blood in the hun body—an unprecedented high level in the field of blood substitutes and ab t what might be required in a severe accident. Northfield's closest competits, Baxter and Somatogen, have had ficulty moving beyond 30 grams in simr phase II trials. "Northfield has jued way ahead," says Kevin C. Tang, a biotechnology analyst with Alex. Brown & Sons Inc. Investors are also pleased. The stock is trading at 13, double the price it listed at a year ago.

That doesn't mean the battle is over. "There are still a lot of fundamental questions that need to be answered," says Dr. Joseph C. Fratantoni, the FDA's chief medical reviewer for blood substitutes. Because of earlier safety problems—Northfield's and others'—the FDA remains wary of blood substitutes in general, and has yet to lay out specific endpoints for Phase III trials that establish efficacy and dosage. Says Fratantoni: "We've already got a product that's satisfactory in both safety and efficacy"—donated blood.

TRIAL TRIALS. Northfield's biggest problem is time. Even analysts who admire its prototype admit that Northfield may not have deep enough pockets for a prolonged Phase III trial. Unlike its larger and more diversified competitors, the company has no other products on the market or even in the pipeline. DeWoskin maintains that the need for a cash infusion is not immediate. The company has $12.5 million in the bank—sufficient to cover the next 20 months of expenses. "We're not strapped from an operating standpoint," he insists.

Expanded clinical trials and increased manufacturing will cost Northfield $25-$30 million, but DeWoskin and President Steven A. Gould believe they can sign up a partner—preferably a large pharmaceutical company that will trade cash and production capacity for PolyHeme marketing or distribution rights.

For DeWoskin, hashing out such deals is a minor detail compared with the enormity of proving the science—and helping patients. Since the 17th century, he notes, researchers seeking blood substitutes have tested everything from milk and vegetable oil to beer. If he can keep Northfield on track, they may be breaking out the champagne.

By Ron Stodghill II, in Evanston, Ill.

The Race to Develop Blood Substitutes

ANY (PRODUCT NAME)	HOW PRODUCT WORKS	CLINICAL TEST STATUS
field Laboratories Heme)	Isolates and purifies hemoglobin from donated human blood and links the molecules into long chains called polymers	In high-dose, Phase II* trials (up to 300 grams)
er International spirin)	Isolates and purifies hemoglobin in method similar to Northfield's but doesn't "polymerize" it	In low-dose Phase II trials
atogen and Eli Lilly 1.1)	Uses recombinant hemoglobin that's genetically engineered to mimic natural hemoglobin	Phase II trials—having trouble raising dose
nce Pharmaceuticals and & Johnson nson ygent)	Uses oxygen-carrying chemicals called perfluorocarbons (PFC)	Phase II trials—having trouble raising dose

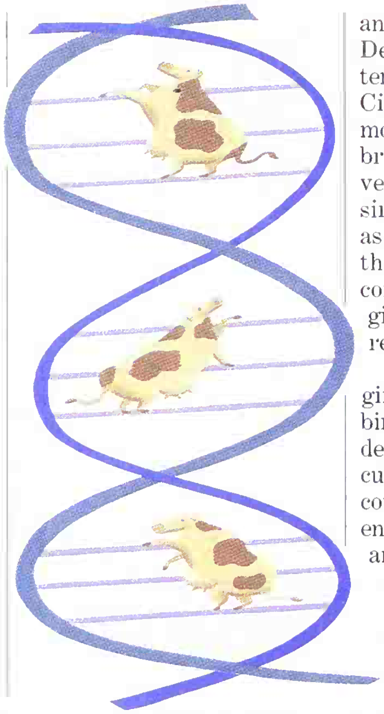
Developments to Watch

EDITED BY NEIL GROSS

DNA TESTING: BEYOND THE O.J. TRIAL



MILLIONS OF AMERICANS watching the O.J. Simpson trial have heard of the DNA test called PCR, for polymerase chain reaction. It's an ingenious biochemical technique for duplicating infinitesimal strands of genetic material millions of times, thus creating samples large enough to match against the DNA of a crime victim or perpetrator. Demand for PCR chemicals and equipment is now soaring. Hoffmann-La Roche Inc. and Perkin-Elmer Corp. sold hundreds of millions of dollars' worth of them last year.

The forensics market, however, may someday pale beside uses in agriculture and animal husbandry. Since last December, Applied Biosystems, a P-E division in Foster City, Calif., has sold 100 modified PCR kits to cattle-breeders, who use them to verify lineage or identify desirable genetic traits, such as marbling of the meat. In the past, such traits were compared visually, but PCR gives a faster, more precise reading.

Cattle may be just the beginning. Collectors of rare birds could use the kits to determine sex, which is difficult at an early age. Kits could also come in handy for environmental sleuths in Asia and South America. Instead of policing the rain forests for illegal lumbering, agencies could run tests to determine the exact origin of a two-by-four.

MAKE WAY FOR PLASTIC OPTICAL FIBER

SINCE PLASTIC WAS INVENTED IN THE 1850s, IT HAS transformed industries from textiles to transportation to microelectronics. High-speed communications is one of the last holdouts, but that may soon change. On May 15, Boston Optical Fiber Inc. in Marlborough, Mass., became the first company to sell plastic fiber for telecommunications. It promises data transmission speeds approaching those of glass fiber for a fraction of the cost.

The material—called graded-index plastic optical fiber, or GIPOF—is more flexible than glass. And while it won't take over intercity phone traffic, where peak speeds are critical, it could start replacing copper wire in car electrical systems and in computer local-area networks as early as next year. Boston Optical licensed the technology from a Japanese inventor and enlisted General Motors, Honeywell, and Boeing in a consortium to develop GIPOF, backed by $6 million in Pentagon funds. In Japan, Sony, NEC, Toray, and Toshiba have formed a similar consortium.

IT'S FLEXIBLE: *Plastic optical fiber could be used in LANs*

MINI LASERS WITH MEGAPOWER TO BURN

DO YOU WANT TO GET RID OF freckles or clear up age spots? No problem—if your dermatologist has a laser the size of a two-drawer filing cabinet. Now, these and other big medical and industrial lasers can be crammed into much smaller boxes, thanks to Paradigm Laser Inc., a startup in East Rochester, N.Y. Using its lasers, Lihtan Technologies Inc. in San Anselmo, Calif., has already unveiled a microwave-oven-size system.

Paradigm's trick? Necklaces of pinhead-size laser diodes around the main laser, a rod made of garnet crystal. Normally, light from diodes is too weak to activate laser rods. That limits "diode-pumped" lasers to a few watts of power. But Paradigm rings each half-inch of the rod with a 70-diode array. The result: An inch-long laser emits 100 watts, enough for surgery. A 3-inch, 2,000-watt laser easily cuts steel.

ZEBRA MUSSELS: *Death by air-bubble removal*

INNOVATIONS

ZEBRA MUSSELS CLOG water-intake pipes in th Great Lakes and elsewhere. Poison and scrap ing don't keep them away. So Tiao Chang, a associate professor of gineering at Ohio University in Athens, O has patented a vacuum that sucks bubbles o the water so the mussels can't breathe.

- A Duke University study has found that farm odors affect the brain's limbic system, making people depress tense, angry, fatigued, and confused. The N Carolina Pork Produce Assn. is funding resear on solutions, such as pu ting additives in hog fe
- A Dutch team uses sound waves to break u oil droplets in soil so th oil can be pumped out with groundwater. In te by De Ruiter Milieutec nologie of Halfweg and Technical University of Delft, 71% of diesel fuel was removed from soil i just five days, vs. 40% i 11 days without the use sound waves.
- Enviro-Gen, a batter from EnviroLite Produ Ltd. in Vancouver, B.C produces up to 12 volts electricity when you ad salt water. Its magnesium-alloy anode has to be replaced after 40 hou of use at one ampere.

CREATING A HIGHER STANDAR

OWITZER N THE HILL

yone can keep banks at bay, it's lobbyist Paul Equale

acing last month through the underground passages that connect the Capitol to its neighboring office buildings, stopping occasion- o slap a representative's back or trategy, Paul A. Equale was in se. The chief lobbyist for the In- lent Insurance Agents of America torming Capitol Hill, leading an of IIAA troops during the group's legislative conference. "I like lob- with 700 of my members in Equale said between pep talks to ops. "It's like walking down the vith a howitzer."

bravado is vintage Equale. g one of the most influential oots lobbying machines in Wash- the 44-year-old lawyer from , N.Y., relishes his image as the ssential Beltway insider. A zer extraordinaire" as one staff- ribes him, Equale is a fixture on , spending much of his day walk- halls, buttonholing members to gent-friendly legislation. He out at the Washington Sports Club on Capitol Hill, the better to be closer to legislative aides. He even held the reception for his second marriage at the Rayburn House Office Building.

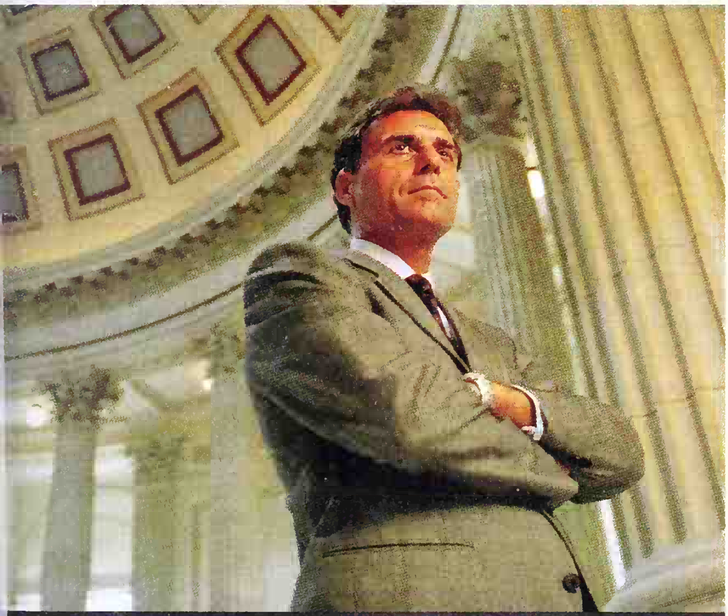
But the IIAA's clout and Equale's political connections face a huge test. The issue: the long running battle by independent agents to halt the advance of bankers into insurance sales. On May 10, the House Banking Committee approved an overhaul of the Depression-era Glass-Steagall Act, which separates banking and securities activities. While the act does not explicitly address insurance, the IIAA has in years past tried to attach language to such bills to restrict bank insurance sales. Rallying its 300,000 members behind such a move, Equale's group has usually smothered banking legislation before it emerged from the panoply of congressional panels that must approve changes in banking laws. But 1995 could be different.

Because bankers continue to make inroads into insurance through regulatory loopholes and court victories, this time simply killing legislative bank reform won't be enough. In January, national banks' ability to sell annuities was upheld by the Supreme Court—a battlefield where the agents' political clout is worth little. And under a loophole, the Office of the Comptroller of the Currency has allowed banks since 1984 to sell insurance from towns with fewer than 5,000 people—encouraging giant banks to set up shop in those tiny burgs from which they sell insurance.

This new world order has handed the usually uncompromising Equale, an outspoken Democrat, the unfamiliar task of trying to strike a deal in a GOP-led Congress before his agents lose any more bargaining power. "It's becoming tougher for agents to point to clear lines of demarcation [between] banking and sales of insurance," says Roger N. Levy, chief lobbyist for the Travelers Group. So restricting bank sales of insurance is "a tougher sell politically," Levy adds.

The IIAA has certainly been stung by bank competitors. In the mid-1980s the OCC allowed national banks to sell annuities. By 1993 banks had 32% of that $42 billion market, according to Michael White Associates, a consultancy in Radnor, Pa. Meanwhile, agents are also being squeezed as the number of insurance policies sold by mail or through insurers' own sales forces swells. The result: The nation's 40,000 independent agencies have seen margins decline 40% in five years, to about 15%.

That has sparked a lobbying frenzy among Equale's members. A database at the IIAA matches every member of Congress with agents in his or her district who can be called upon to sway



TICK: *Equale is an expert at "carpet bombing" Congress*

BARBARA RIES

Equale's Agenda

The Independent Insurance Agents of America (IIAA) wants bank reform to include:

STATE REGULATION Agents say putting states in charge of bank insurance activities would create a level playing field. But it also would keep banks out of the insurance business in at least 12 states.

SALES RESTRICTIONS Agents cite the need to protect consumers from possible abuses by banks, such as tying loan approval to the sale of insurance products.

COMPTROLLER CURBS Agents argue that big banks are exploiting a legal loophole allowing them to sell insurance nationally from small-town branches. They want Congress to curb further expansion of bank powers by the Comptroller of the Currency.

them. Equale also enlists a handfu o well-connected agents for a more er- sonal approach. One such tactical tr p- er: Lewis Gray, a Mississippi insur ce agent and former Navy flight instru o to Senator Tom Harkin (D-Iowa).

For more critical issues, Equale a tap the entire system in a move fondly refers to as "carpet bombin — marshaling every agent, through newsletter, or phone, to push an i with congressional members from t district. Such organization makes h IIAA a potent force. It also doesn't that its political action committee d out $1.1 million in campaign contri tions between 1991 and 1994.

"They've been in my town meet g back home, in my offices in Washing and in Baton Rouge," says Represe tive Richard H. Baker (R-La.) of House Banking Committee. "They one of the better organizations in ting their voice heard."

PEERAGE PRESSURE. The group's your-face style mimics its flambo lobbyist. No Ivy Leaguer—the son liquor store owner, Equale ea undergraduate and law degrees the State University of New Yor Buffalo—he still mixes easily with Gucci loafer set and the legislators lobby. Just look at Equale's trov photos showing him shoulder to sh der with assorted pols. "I'm like a p Democrat Equale boasts of his Hill

But peerage may not count wh new bloodline takes the throne. T why much of IIAA's intelligence flows through Equale's deputy, Rep can Robert A. Rusbuldt. Rusbuldt his boss's flash but can get a pers meeting with House Speaker Newt grich (R-Ga.) and attends Comm Committee meetings devoted to cra a deal between bank and insur interests.

Still, IIAA ruffles feathers when it to. In May, House Banking Comm Chairman Jim Leach (R-Iowa) an contended Equale reneged on a pro to remain neutral to the chairman's reform bill. The spat has been reso but Equale says such tiffs are inevit "It's a little like hockey: If you play game long enough, you have a few t knocked out," he explains.

He could lose a few more in weeks ahead as banks and agents tr hammer out a deal. But withou cease-fire, the IIAA's troops could fer greater casualties at the hand the courts and regulators. So a com mise doesn't sound so bad right n— even for a guy armed with a howit.

To Prevent Benefits Decay, Give Your Dental Plan An Annual Check-Up.

thout appropriate care, your dental plan
uld be eating away at your bottom line.
ensure you're not spending more to get
s than you should, make certain that any
ntal plan you select includes these essentials:
Comprehensive preventive care with at
ıst two dental exams and cleanings per year.
me plans don't include fluoride or sealants.
urs should. These treatments help prevent
vities, which brings down the cost of care.
Flexibility in appointment schedul-
g. Many insurers encourage their participat-
g dentists to schedule "plan patients" as
-in appointments. Your employee may have
take time off during the day to receive
ntal treatment or wait months to be seen.
at's not only a problem for the patient, it
sts you valuable employee time.

Plans that allow patients to visit the dentists and specialists of their choice. Research proves that patients won't go to dentists they don't trust. So you wind up paying the premium for unused benefits.

Emergency, weekend and holiday care. A plan that doesn't cover the unexpected is of no benefit to you or your employees. The emergency that isn't taken care of immediately can cost you dollars in downtime.

Broad therapeutic coverage. A plan that covers crowns and bridges, braces and dentures and even root canals may cost somewhat more, but will be more satisfactory to all plan users. Make sure that limitations on this kind of care are not unrealistically severe. You'll get fewer complaints even though employee co-payments are higher for these services than for preventive care.

To make sure your dental plan provides acceptable protection for its beneficiaries, write, call or fax the California Dental Association for our "Consumer's Guide to Dental Insurance." It's designed to help you ensure that the dental plan you select provides the essentials of good oral health and makes good business sense, too.

IN THE MARKET FOR A HOUSE? YOU'RE IN LUCK

REAL ESTATE

Mark Pofsky and his wife are looking to buy their first home. Intent on finding a 2,000-square-foot house in California's San Fernando Valley for less than $300,000, the Pofskys have made a few lowball offers but have not yet snagged a deal. Still, they're encouraged. "We started to look because of the interest rates coming down," he says. "It's a great time to buy a home."

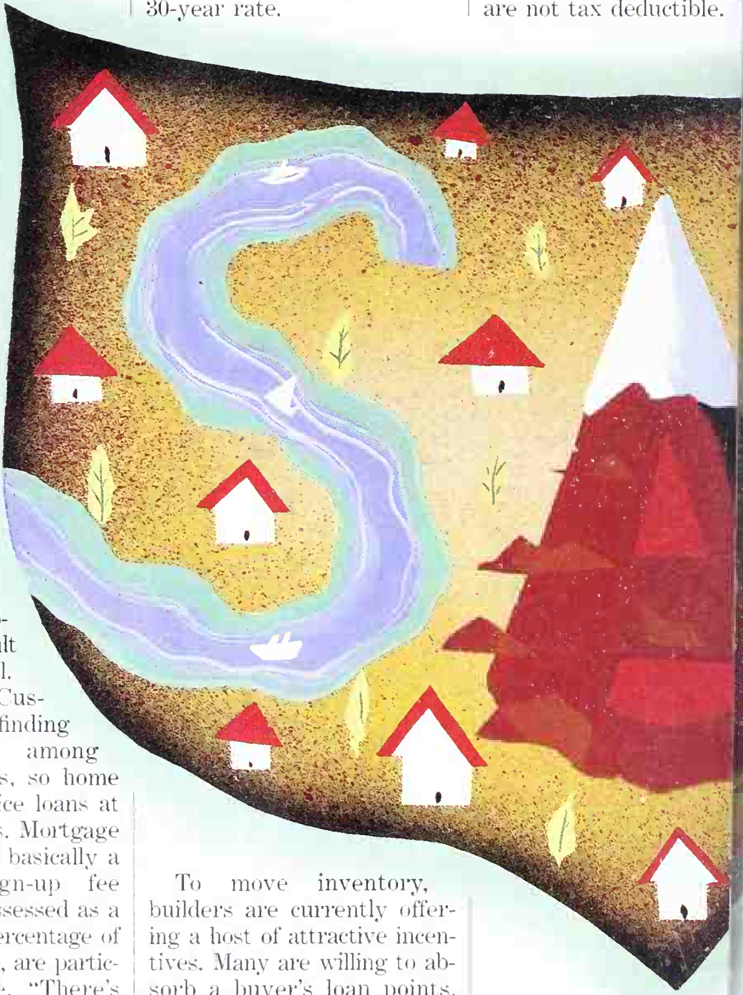
The market certainly is improving for buyers. Since peaking in January, the average rate on a 30-year fixed mortgage has dropped a full point, to 8.25%, and it's still falling. One-year adjustable-rate mortgages are at 6.51%, down 0.36 points in the same period. Happily for house hunters, this financing bonanza has coincided with an oversupply of residences—there's currently a seven-month supply of newly built homes, up 17% from a year earlier—and a cooling of housing price inflation. The average existing single-family home sold for $107,900 in March, 1995, the same price as a year earlier.

"If I were looking to buy, I don't know if I would wait," says Priscilla Toomey, president of MovePower, a Southport (Conn.) moving consultant. Adds Richard Loughlin, CEO of real estate giant Century 21 International: "Homes are probably the most affordable they've been in years." The March median home price in the Northeast was $136,700, down 3% from a year earlier; in the Midwest, $88,000, up 3%; in the South, $92,600, down 2%; and in the West, $141,900, down 3%.

After a very weak winter, due to rainy weather in the West and high mortgage rates nationwide, sellers are anxious. Likewise, mortgage brokers, who lost 44% of their business when the refinancing boom ended in the winter of 1994, are still scrambling to write new loans. This hot competition has benefited consumers. Countrywide Credit, for example, allows mortgage seekers to apply in person or on the telephone. Details are also available on computer via America Online and CompuServe. Phone lines are open six days a week, 16 hours a day, and borrowers can go through a 15-minute application process that can result in instant approval.

POINT SHAVING. Customers are also finding more flexibility among mortgage brokers, so home buyers should price loans at several companies. Mortgage points, which are basically a sign-up fee assessed as a percentage of the purchase price, are particularly negotiable. "There's still a lot of capacity, which is bringing better pricing and better options to the consumer," says Sylvia Reynolds, director of marketing at BankAmerica Mortgage.

When choosing a mortgage, however, consumers should be aware of how much interest they save on shorter loans. The 30-year mortgage remains popular. But remember that a 15-year $100,000 loan at 8% costs $90,000 less in interest than a 30-year loan at 8%. And 15-year rates are less than the current 8%, 30-year rate.



To move inventory, builders are currently offering a host of attractive incentives. Many are willing to absorb a buyer's loan points, pay all closing costs, or throw in extras such as a deck at no additional cost. In late April, Los Angeles-based builder Kaufman & Broad began offering a 100% financing program. "It effectively costs people zero to move into a house," says CEO B
Karatz. But it's expensiv
the long run. A 30-year a

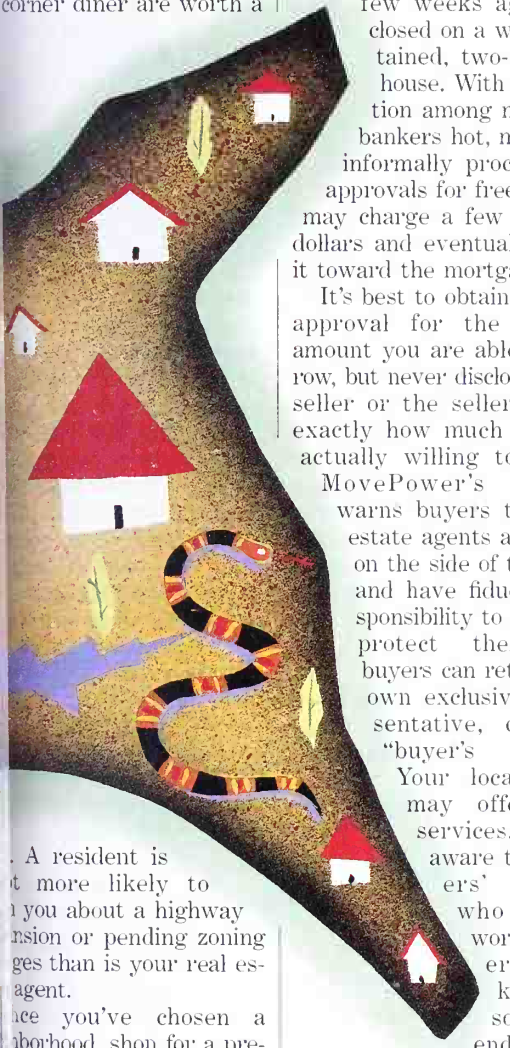
mmitment from a bank
end up to a certain
nt, assuming the proper-
ou choose is worth the
you're paying. Such



commitments are readily available today and can be a very helpful negotiating tool with the seller. Preapproval lets buyers know exactly what price range they can afford. It also tells the seller you're serious and able to close a deal quickly. Todd and Elizabeth Gaydowski of San Piedro, Calif., got their preapproval for free at a conference sponsored by the Community Redevelopment Agency of the City of Los Angeles. They weren't sure initially they could afford a home they would like, but the preapproval gave them confidence to start looking. A few weeks ago, they closed on a well-maintained, two-bedroom house. With competition among mortgage bankers hot, many will informally process preapprovals for free. Others may charge a few hundred dollars and eventually apply it toward the mortgage.

It's best to obtain advance approval for the highest amount you are able to borrow, but never disclose to the seller or the seller's agent exactly how much you are actually willing to spend. MovePower's Toomey warns buyers that real estate agents are really on the side of the seller and have fiduciary responsibility to them. To protect themselves, buyers can retain their own exclusive representative, called a "buyer's broker." Your local agent may offer such services, but be aware that buyers' brokers who also work as sellers' brokers can sometimes end up on both sides of the deal. You can get a free referral to a broker who only represents buyers through Buyer's Resource (800 359-4092), a franchise organization. The buyer's broker is paid a portion of the real estate agent's fee, so there's no extra cost to you.

The Dos and Don'ts of Buying a Home

DO...

- A lot of research: Knock on potential neighbors' doors. Get the local high school's SAT average. Find out from the town clerk what similar homes in the area have sold for recently.
- Comparison-shop for a mortgage: Lenders and mortgage brokers are in hot competition and will sometimes shave points or whittle down the interest rate.
- Get a preapproved mortgage: This shows sellers you're truly interested in buying and the deal can be done quickly—helpful when negotiating a price.
- Know all fees: Nail down exactly what you're expected to pay at the closing.

DON'T...

- Assume a real estate agent represents you: Unless you're working with a so-called buyer's broker, the agent works for the seller.
- Discuss your maximum price: Never let the seller or the seller's agent know the exact amount you're willing to spend.
- Sign a contract without an inspection contingency: A clean bill of health from a home inspector or contractor avoids headaches later.
- Buy "unique": Avoid the fanciest house on the street or one of a strikingly different style from its neighbors. They often appreciate more slowly and may be hard to sell later.

DATA: JOSEPH EAMON CUMMINS *NOT ONE DOLLAR MORE!*, MOVEPOWER INC.

LOCATION, LOCATION. Now that you've talked to the neighbors, gotten your preapproval, and found a broker, you have to select the house. Look for one that suits your needs, but don't forget that someday you may want to sell it yourself. The most important thing: location. Two-thirds to three-fourths of a home's assessed value is based on the land beneath it. So buy in the nicest neighborhood you can, but not the fanciest house on the block. The local palace won't appreciate in price as quickly as the average home on the street. Buying an oddball is also a bad idea: It's not easy to sell a salt box in a row of colonials.

According to the National Association of Home Builders, the homes that sell easily these days average 2,100 square feet and feature a large kitchen and a "media room" for entertainment equipment—what used to be called a den. Most people want two baths: Three-bedroom homes with one bath are obsolete.

What buyers want depends to some extent on what part of the country they live in. In areas with cold winters, an attached garage may be a key factor, but in Florida you would probably consider a pool essential. How much you will end up paying for your home and its financing also depends on where you are. Atlanta is overbuilt and a buyer's market, but in Salt Lake City, where the population influx is astounding, prices are up 6% over last year, and sellers are calling the shots. Whatever your local market, smart, well-prepared buyers are today finding great deals from coast to coast. *Nanette Byrnes*

LISA MANNING

HOW TO TAKE YOUR 401(k) ON THE ROAD

SMART MONEY

In this time of uncertain job futures, an advantage of 401(k) plans is that you can take them with you. But you have to transport your nest egg with care to avoid penalties and keep your options open. There are essentially three choices: roll over your old 401(k) into a similar plan at your new job, transfer it into an individual retirement account, or leave it with your former employer. If you decide to move the money, the most important step is to file forms to make a "trustee-to-trustee" transfer.

As long as the 401(k) goes directly from your old plan to your new one or to the bank or brokerage that has your IRA, you're safe. But if the company you're leaving gives you the check, it will withhold 20% of your savings for the Internal Revenue Service. Then you'll have to make up that 20% so you can transfer the whole amount to the new plan. If you can't make up the shortfall, you'll be taxed on the 20% that was withheld—and liable for an extra 10% penalty if you're under age 59½. But if you move the entire amount within 60 days, you can file for a refund of the withheld funds on your next tax return.

When you switch jobs, most companies with 401(k)s will accept your money right away. But some require you to work for a year before they will take the funds or let you contribute. Others may not allow transfers even if they have a 401(k). In that case, you can leave your balance with your old company or roll it into an IRA. All employers are required by law to keep the 401(k)s of former employees until retirement or age 62 if there's at least $3,500 invested. You can't make tax-deductible contributions after you leave, but the money will continue to grow tax-deferred. And because it's in a large pool, you sometimes have access to better money managers and more attractive investments than you could afford on your own.

But there are compelling reasons to take the money and run. Some companies will limit your investment options after you depart—you may no longer be able to buy company stock or certain funds. Or too much of the money in your old plan may be tied up in company stock.

Switching to a new plan gives you a chance to cash out and diversify. Ask yourself if "the investment choices in the new plan are at least as good if not better than the choices you're leaving," advises Kevin Roach, a partner at Price Waterhouse. If the choices are similar, take the money with you.

If you can't transfer your plan and don't want to leave it with your former employer, you can roll it over into a "conduit" IRA. This must be a new account set up to hold only your 401(k) funds. As long as they're not mixed with any other monies, your nest egg can reside in the IRA indefinitely and still be rolled back into a 401(k) plan in the future. This is a good ploy if you're starting your own business; later you can transfer the funds to a Keogh or simplified employee pension. Since you may not have these plans set up for a while, a conduit IRA comes in handy, says Martin Nissenbaum, a partner at Ernst & Young.

To keep your options open, don't transfer 401(k) funds into an existing IRA. If aren't separate from money, you can't roll back into a 401(k). And out a 401(k), you los benefit of using five-yea ward-averaging to with funds at retirement. Th tion gives you a tax when you want to with your entire balance. sums are "most compel you have short-term ne the capital," says Roach you need the $100,000 your plan to buy a con Florida. Divide the $10 by five. The resulting $2 is treated legally as if it your only income. So $20,000 is taxed at 15%, bill of $3,000. You then ply $3,000 by five, for a tax bite of $15,000. If yo paid a straight tax o $100,000, your bracket be at least 31%, and you $31,000. Lump sums $750,000 are hit with excise tax, so the bene five-year averaging decl withdrawals grow above that amount.

SILVER LINING. Even if y just considering job-hop avoid taking a 401(k) Some companies let you row funds without pa taxes from your plan, us up to $50,000 or half of vested funds. Then you ually pay yourself back if you leave for anothe any outstanding loan will be considered a dist tion. It will be taxed as nary income—and you'l the 10% penalty if you'r der 59½.

One silver li behind all cautionary clou you switch job you're at leas you can cash your existing 4 without incurr penalty. Curre law requires that you leave company to c not that you ally retire. S times, age have its wards. *Pam*

When You Change Jobs

- Move the funds to your new employer's 401(k) plan, but be sure to make a "trustee-to-trustee" transfer to avoid tax penalties.
- Leave your money at your old job until retirement if you prefer its investment choices or if your new company won't accept your plan.
- If you can't bring your nest egg to your new job or are starting a business, set up a "conduit IRA," totally separate from other funds.

DATA: BUSINESS WEEK

IT'S 72° AND SUNNY. YOU'RE ON YOUR VORITE COURSE WITH YOUR FAVORITE FOURSOME. COULD IT POSSIBLY GET ANY BETTER THAN THIS?

one can improve those days on course when it just seems that 're in paradise.

et players who couldn't imagine ng more from the game say that have gotten more. A lot more.

oin us. We're PGA TOUR tners, a group created by the PGA R especially for golfers who share ve of the game.

embership brings you a com- entary guest pass to a PGA TOUR enior PGA TOUR tournament, ssues of ON TOUR, a personalized tag and the opportunity to apply for a TOUR CARD. And the chance to play on legendary courses under PGA TOUR tournament conditions, in Partners Classics tournaments. All starting at just $25.

You'll also have the opportunity to attend clinics hosted by instructors to PGA TOUR players and participate in tournament Pro-Ams.

Why not join us this year?

We'll support you, enrich you, and delight you.

THE NEW LEADERS OF THE PACK

BMW'S NIMBLE ROADSTER: THE NEW R1100R

LEISURE

Back in 1975, I borrowed $700 from my Dad and bought a used Kawasaki motorcycle. Like others of my generation—I was 20—I found a bike brought a sense of freedom that four wheels just couldn't deliver. But after a couple of years, I sold the machine, went to work, and forgot about the thrill of two wheels, horsepower, and an open road.

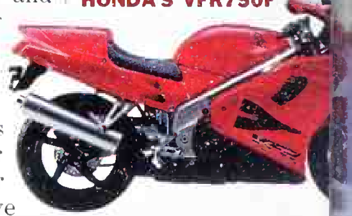
This spring, the old itch came back. Motorcycling is enjoying a resurgence, thanks in large part to returning riders who buy into the whole experience—bike, clothing, and accessories. In 1994, enthusiasts purchased some 300,000 new bikes, up almost 5% from 1993. And sales this year are expected to grow by at least that amount.

Things have changed since my riding days. You no longer choose a road bike just by color or engine size, as makers now offer distinct categories of specialized cycles. Sport bikes are lightning-fast, race-bred machines easily capable of triple-digit speeds. Sport-touring models feature high-tech engines and great handling but readily carry a passenger and saddlebags for comfortable, long-range travel. Standard motorcycles forgo aerodynamic bodywork and deliver all-around comfort and performance. Touring bikes are big—built for cross-country adventures. And cruisers, the largest-selling category epitomized by classic Harley-Davidsons, are constructed with wider saddles, higher handlebars, and a lower, more comfortable rider position.

For returning riders or newcomers alike, a safety course ought to be a top priority before making any purchase. The Motorcycle Safety Foundation (800 447-4700) offers beginner, intermediate, and advanced riding instruction around the country, with prices ranging from $50 to $200. The one- and two-day combination classroom and road courses are supported by local dealers who provide bikes and certified instructors.

Once you're ready to roll, you'll have a dizzying choice of models built in the U.S., Japan, Germany, Britain, or Italy. Japanese bikes, led by Honda, Kawasaki, Yamaha, and Suzuki, boast brilliant colors, rocket acceleration, and precise handling. The Honda VFR750F ($8,699) is a sport bike that delivers rock-solid Honda reliability and quality without rattling your molars.

SOLID QUALITY: HONDA'S VFR750F



TOP-DRAWER. BMW imports a full line of bikes, and this year introduces the R1100R Roadster ($9,990). The Beemer sports a new, multivalve Boxer engine that delivers plenty of torque through a low-maintenance shaft drive. The bike handles nimbly on back roads or highways, thanks to a sophisticated chassis and suspension. Optional antilock brakes ($1,200) give the R1100R rider confidence and safety. Fit-and-finish is top-drawer, as is the complete line of BMW clothing and cycle accessories. Another plus: BMW reimburses new bike buyers for the Motorcycle Safety Foundation course.

CLASSY CHASSIS: H-D'S FAT BOY

HE WEEK AHEAD

MER CONFIDENCE

, May 30, 10 a.m. ▶ The Confer- oard's May confidence index fell to m April's 105.5. That's the median of economists polled by MMS Inter- , one of the McGraw-Hill Cos.

DOMESTIC PRODUCT

day, May 31, 8:30 a.m. ▶ The ce Dept. is expected to revise first- GDP growth to an annual rate of 3%, 2.8% pace first reported.

ME SALES

day, May 31, 10 a.m. ▶ New kely sold at an annual rate of) in April, up from 577,000 in March. A drop in mortgage rates is spurring home buying.

PERSONAL INCOME

Thursday, June 1, 8:30 a.m. ▶ The MMS survey forecasts that personal income rose 0.3% in April, half the 0.6% gain of March. Consumer spending likely rose 0.2% in April, after a 0.5% rise.

NAPM SURVEY

Thursday, June 1, 10 a.m. ▶ The business index of the National Association of Purchasing Management probably fell to 50.5% in May, from 52% in April. The expected reading is near the 50% mark, at which point industry is treading water.

EMPLOYMENT

Friday, June 2, 8:30 a.m. ▶ The MMS median forecast expects that nonfarm payrolls added 163,000 workers in May, rebounding from the 9,000 drop in jobs in April. The unemployment rate probably slipped to 5.7% in May, from 5.8% in April.

LEADING INDICATORS

Friday, June 2, 8:30 a.m. ▶ The composite index of leading indicators probably fell 0.3% in April, the third consecutive decline.

CONSTRUCTION SPENDING

Friday, June 2, 8:30 a.m. ▶ Construction spending was likely unchanged in April, after falling 0.4% in March.

This Week, Online

Business Week presents frequent live conferences on America Online. It's your opportunity to ask questions about features from the magazine.

BusinessWeek ONLINE

Sunday

Blast off into the frontiers of online investing with BW Associate Editor Gary Weiss. Read his Cover Story in this issue–and then discuss his cyberspace discoveries online. **May 28**

9 p.m. EDT in the Globe

Tuesday

John Kotter, Harvard B-school professor widely known for his expertise on leadership, talks about his latest book, *The New Rules*. **May 30**

9 p.m. EDT in the Bowl

Thursday

Quantum physics, chaos theory–and management? Margaret Wheatley, author of *Leadership and the New Science*, tells how they relate, in an interview with BW's John Byrne. **June 1**

9 p.m. EDT in the Globe

Transcripts of all conferences are available for downloading from the BW Online area on AOL soon after each event.

For a free trial diskette including 10 free hours on AOL, call 1-800-641-4848 and mention Business Week.

TRADE: WHY THE EXPERTS ARE WRONG

Discussions about trade have a way of degenerating into economic mumbo jumbo. Well aware that most people don't know the first thing about how to translate dollars into yen, much less figure out why the trade deficit is so large, some economists and trade mavens frequently turn to elaborate economic explanations that confuse rather than clarify.

The current dispute between Japan and the U.S. is no exception. Having been lambasted for contemplating the imposition of stiff tariffs on Japanese luxury cars and thereby threatening the end of the world's free-trade system, the U.S. is being skewered, yet again, for mismanaging its own economic house. In the national income accounts, the experts opine, savings equals investment, and without enough savings there's not enough investment, and without enough investment there isn't enough growth. U.S. savings are too low, the budget deficit too high, consumption exceeds income, and imports of goods and capital outweigh exports. Hence the trade deficit and the capital-account deficit. The Japanese, by contrast, are champion savers, which explains their mammoth trade surplus.

True, the U.S. savings rate trails that of Japan. But there are two problems with this cascade of explanations. First, economics-textbook truisms are about as useful as observing that a rose is a rose is a rose. They don't say anything about cause. For instance, if America exported more to Japan, incomes would be higher, and Americans might save more. And the Japanese might well save less if they could spend more income on cheap imports.

Second, the analysis is tired. Look at what has happened in America over the past decade. The dollar has plunged 64% against the yen since 1985. The budget deficit will amount to about 2.6% of gross domestic product this year, down 5.4% in 1985. There has been an investment boom, produ ity is up, and Corporate America is piling on the pr Yet the U.S. still has a yawning trade deficit with Japan still would even if it did everything the experts recomme shore up savings and cut the budget deficit.

That's because economics is not the issue here. It's of market access, pure and simple. The mercantilist Jap export to the world while shielding their home market. ica keeps trying to break that market open. The Jap meanwhile, retain virtually unfettered access to the market. Lawrence Chimerine, managing director at the nomic Strategy Institute, estimates that if Japan's ma were to be totally open, the annual U.S. trade deficit wi pan would amount to only $15 billion, instead of the $64 it is today.

To be sure, autos may not be the cleanest unfair case the U.S. has against Japan. American carmakers push harder to offer right-hand-drive models and could more of an effort to open dealerships in Japan. And it' the unilateral action seems to undercut the new World Organization—although the U.S. has just made clear abide by the WTO's ruling.

No less a free trader than the Scottish economist Smith wrote that when a foreign nation imposes "high or prohibitions" on imports, then "revenge naturally di retaliation." That is, "we should impose the like duti prohibitions upon the importation of some or all of manufactures." The object? "Repeal" of those prohib Fairness and reciprocity, not macroeconomics, are the at hand.

THE SEC NEEDS TO POLICE I-WAY INVESTING

There's a brave new world that Congress couldn't have envisioned when it created the Securities & Exchange Commission in 1934. Now in its infancy, the world of online investing promises to democratize the research and trading activity that Wall Street firms have worked assiduously to shroud in mystery, in order to keep investors large and small in their thrall. It's about time.

As our intrepid Net-surfer Gary Weiss found, online investing offers a leg up to the little guy who's willing to invest his time and energy (page 64). Information about companies, products, and stocks—free, unadulterated, and largely unbiased by the views of conventional research analysts—ricochets across the bulletin boards of the I-Way. Prospectuses can be downloaded in a trice. Stock market letters, replete with plugs and pans, can be pored over. And stocks may be bought and sold. For now, most big-name firms have steered clear of the Net—which makes plain sailing for the few discount brokers that operate through online services. This flash in the pan: The number of online brokerage accou expected to double in the next three years, from 600, 1.3 million.

But the virtual world of investing isn't without i falls. Just as in the real world, it pays to be cautious. I misinformation—often obvious and easily spotted—pass company or product news. More serious is the potenti abuses by scam artists. Boiler-room antics are easily ap to the I-Way. So the SEC, which now has just a han folks perusing investor bulletin boards, needs to keep a watchful eye on this growing phenomenon. Mean the budget-cutters, led by Senator Phil Gramm (R are suggesting that the budget for the SEC, now a $ million, should be reined in. But when a whole new of investing is aborning, this is no time to hamstri agency.

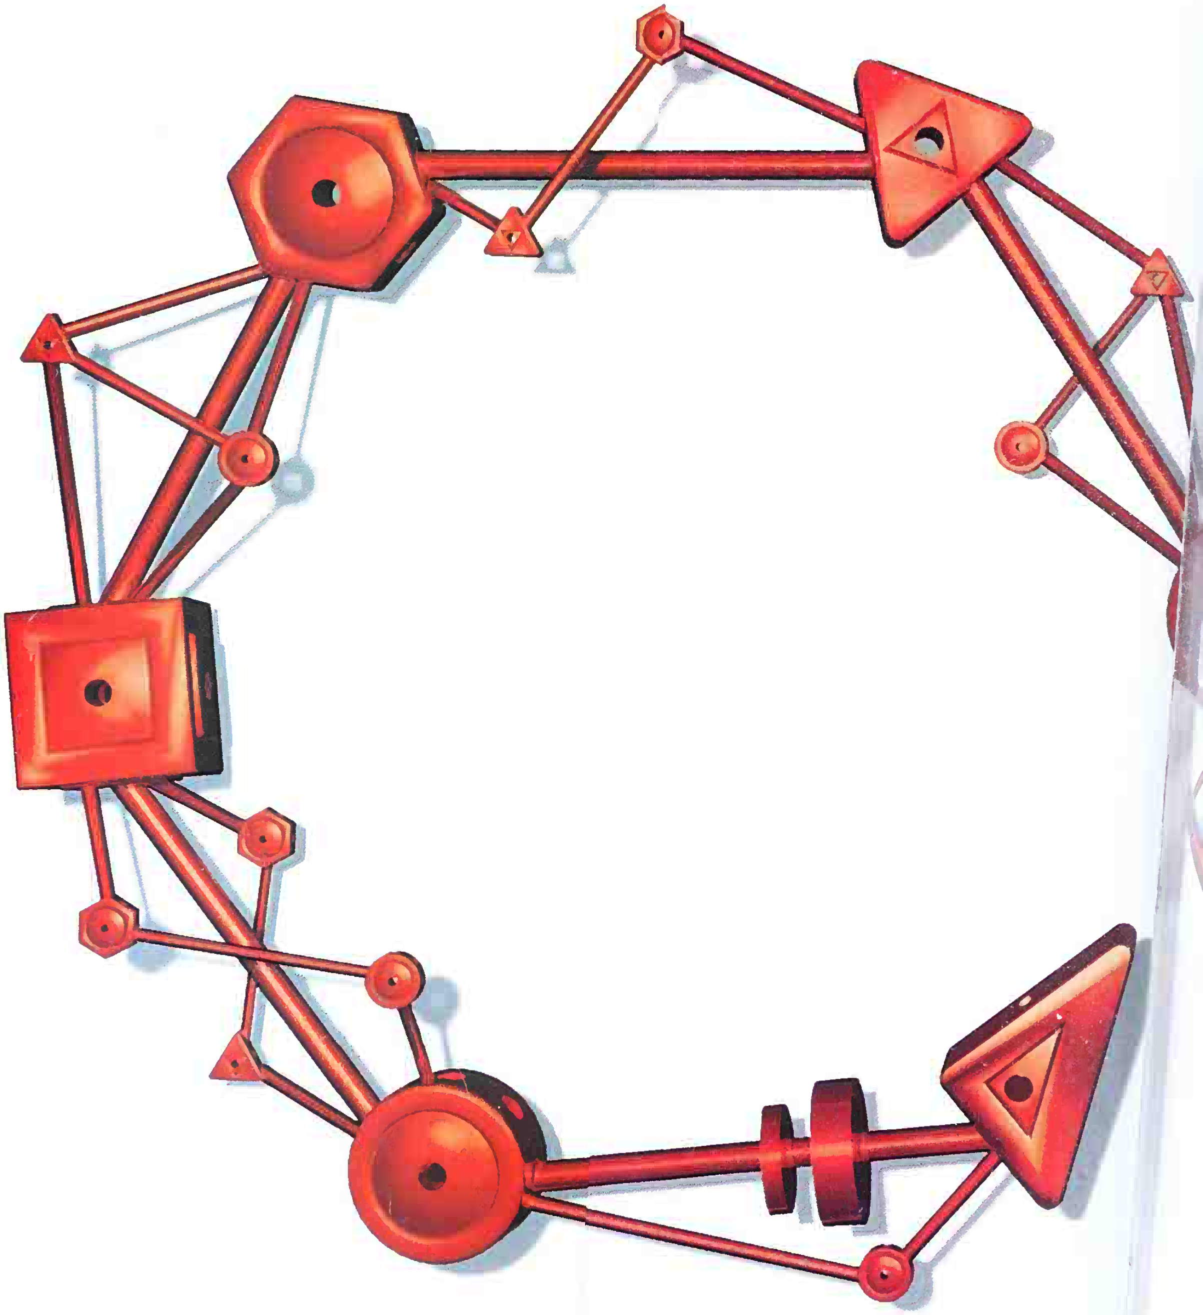
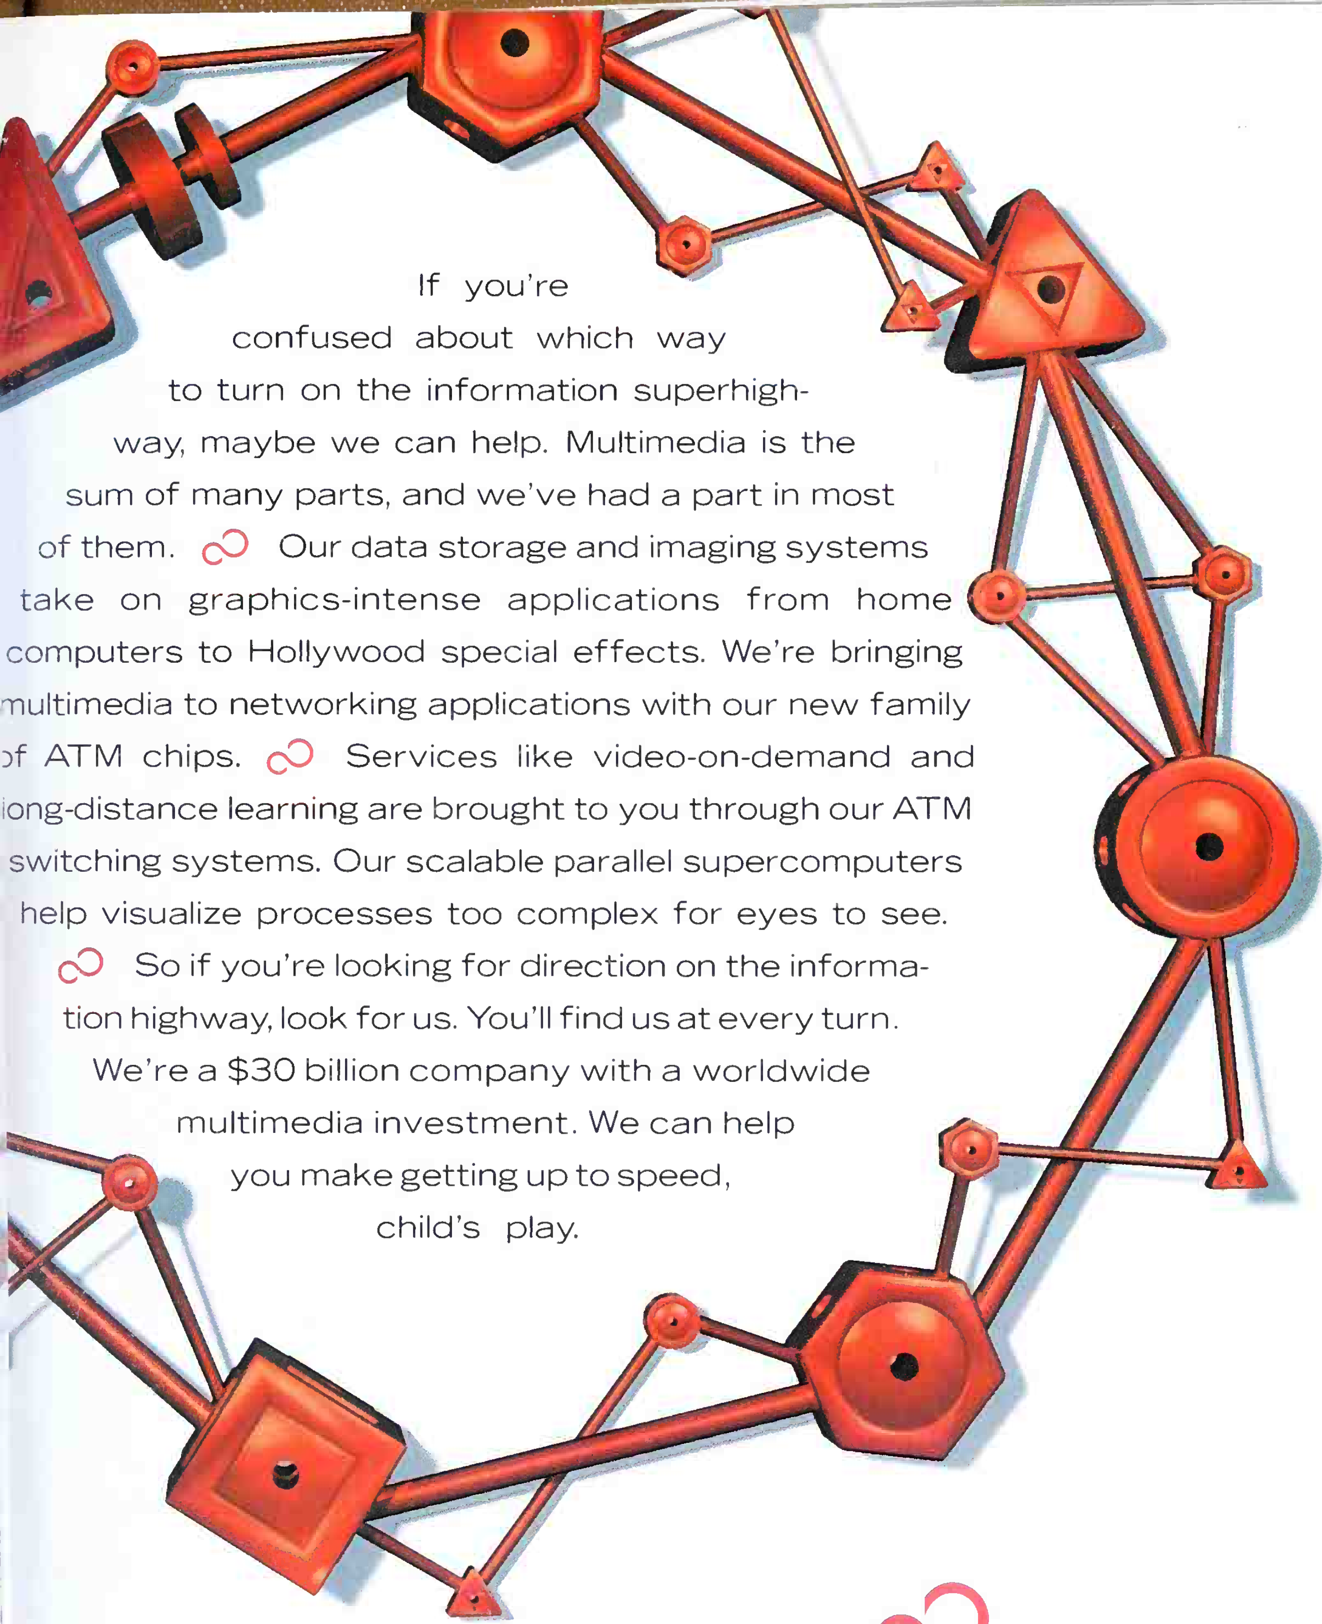
HOW TO MAKE
MULTIMEDIA CONNECTIONS
CHILD'S PLAY.





If you're confused about which way to turn on the information superhighway, maybe we can help. Multimedia is the sum of many parts, and we've had a part in most of them. ∞ Our data storage and imaging systems take on graphics-intense applications from home computers to Hollywood special effects. We're bringing multimedia to networking applications with our new family of ATM chips. ∞ Services like video-on-demand and long-distance learning are brought to you through our ATM switching systems. Our scalable parallel supercomputers help visualize processes too complex for eyes to see. ∞ So if you're looking for direction on the information highway, look for us. You'll find us at every turn. We're a $30 billion company with a worldwide multimedia investment. We can help you make getting up to speed, child's play.

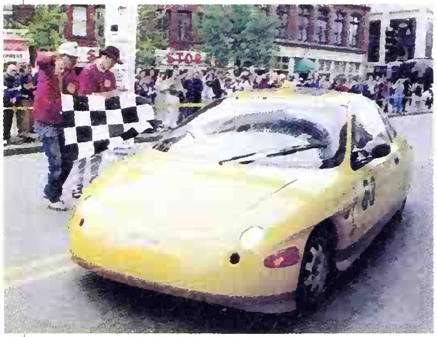
WILL PETE WILSON ZAP ELECTRIC CARS?

CALIFORNIA GOVERNOR PETE Wilson may pull the plug on the Golden State's clean-air rule forcing a reluctant Detroit to sell electric vehicles there by 1998. The Big Three auto makers fret that they will lose millions because clean-running electric cars will cost too much and can't travel far, so consumers won't buy them. A source close to the Wilson camp says he "wants to maintain the overall clean-air program, but he's taking a serious look at whether this one component makes sense." And if not, "there will be some tradeoffs, bringing in other technologies."



AN EV: *Is California dreaming?*

Wilson can't change federal air standards that led to the electric-car mandate. But his appointees control the 11-member California Air Resources Board, which under his predecessor ordered that 2% of new vehicles sold in the state be electric by 1998, and 10% by 2003. They would have to find another way to meet the U.S. air standards.

Detroit figures Republican Wilson is worried the EV mandate could prove a liability in a Presidential campaign among regulation-hating conservatives. Wilson aides, however, deny that there are political motives here. *David Woodruff and Eric Schine*

REALITY CHECK

ECONOMIC SOOTHSAYERS are well known for their confident predictions on the course of interest rates. Now comes the latest consensus from the Blue Chip Financial Forecasts—a survey of 50 economists and financial institutions. According to this prognostication, interest rates on 30-year Treasury bonds will be about 7% during the spring of 1996. That's just slightly higher than current levels.

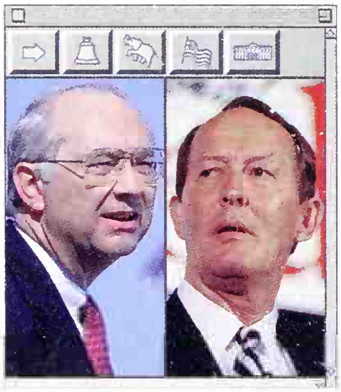
IN REALITY, predicting interest rates is much like shooting a gun out of a window and hoping a game bird flies by. Forecasters have missed all major interest-rate moves of the past three years, and long-term studies show no signs that economists do any better than chance. The reason? Long-term rates are set in financial markets, which are driven largely by investors' expectations. While economists are good at forecasting fundamentals such as gross domestic product and inflation, they can't track market psychology. With long-term rates, they assume tomorrow will be much like today.

TALK SHOW “We have been Chrysler's largest sharehol for nearly five years and remain committed to maximizing ue for all shareholders.” *—Alex Yemenidjian, an aide of Kir Kerkorian, who withdrew his $20 billion bid for Chrysler*

CAMPAIGN '96

MY WEB CAN LICK YOUR WEB

A WEB WAR IS BREWING among GOP White House hopefuls. Phil Gramm and Lamar Alexander are the first contenders to open home pages on the Internet. While others may follow, the two pioneering cyberpols are bickering over bragging rights. Ex-Education Secretary Alexander (http://www.Nashville.net/ ˜ lamar), who totes a laptop, says his Web site opened on May 12, with no fanfare. However, Texas Senator Gramm (http://www.gramm96.org) counters that his was the first publicl nounced, on May 23.



ONLINE: *Gramm, Alexander*

Alexander's Internet box includes position pa and v footage ing to hi auguratio Tenness governo The p border plaid, like his nel sh Gramm crows more pe (10,000- have use site than of Alexander (who cl 8,500). Gramm includes s bites and his voting re Users also can sign up for both candidates' paigns. *Richard S. Dun*

BILL'S BUNCH

HE'S NO LAURA TYSON

LAURA TYSON MAY HAVE shifted to a lower-profile job, but don't look for her to fade from public view. One reason: Her likely successor as chair of the Council of Economic Advisers is Joseph Stiglitz. While he's an eminent economist, Stiglitz prefers discursive academic exchanges over the sound bites demanded of the Clinton Administration's frontline economic spokesperson. Tyson, an articulate economist from Berkeley, has moved to the National Economic Council, which coordinates economic policymaking in the Cabinet. Robert Rubin, who moved from the NEC to become Treasury Secretary also command airtime b tue of his clout.

STIGLITZ: *Likely next CEA head*

Stiglitz, 52, on leave Stanford University, is sidered a pot Nobel prizew for breakthr work on the of informati the markets credit and g as well as st of public fi and taxation during his years with th ministration, has acquired as a "mad p sor," according to one House aide. "His eco advice is fabulous. Bu ask yourself: Is this th you want out in front cameras?" *Mike McN*

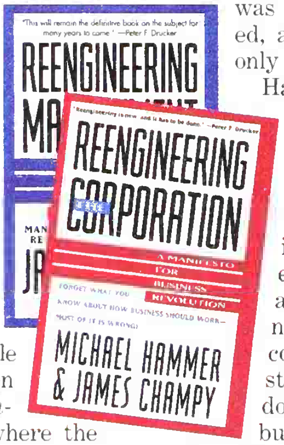
BOOK-OF-THE-DAY CLUB

REENGINEERING ROYALTIES

THE REENGINEERING GURUS seem to have streamlined the book-writing process as well. Two years after its publication, *Reengineering the Corporation*, coauthored by Michael Hammer and James Champy, is No. 2 on the BUSINESS WEEK paperback Best-Seller List, and two progeny are on the list as well. *The Reengineering Revolution* is Hammer's "how to" sequel, while Champy has written *Reengineering Management* to show where the first book went wrong. Also, Hammer has yet another book due out this fall.

What's going on? The original *Reengineering*'s phenomenal sales of over 2 million copies in 17 languages haven't exactly discouraged sequel-writing. According to Hammer, reengineering has become "an institutionalized movement" about which "there's a great hunger for useful information." To meet it promptly, *The Reengineering Revolution*, for example, was written, edited, and printed in only six months.



REENGINEERING MA
REENGINEERING THE CORPORATION
A MANIFESTO FOR BUSINESS REVOLUTION
MICHAEL HAMMER & JAMES CHAMPY

Has the demand peaked? Lisa Berkowitz, a spokeswoman for HarperCollins, which is the publisher for Hammer and Champy, notes that the concepts are still trickling down to smaller businesses and that the authors are ever in the process of discovering "how reengineering is changing, depending on its application." In short, you ain't seen nothin' yet. *Hardy Green*

I-WAY PATROL

THE ONLINE TAXMAN COMETH

CAN TAX COLLECTORS GET their hooks into cyberspace? As more companies do business online, states are slavering. Their problem is that a seller cannot be forced to collect sales tax for a state unless it has a "physical presence" there, such as employees or property, notes Michael Lippman, partner at KPMG Peat Marwick. The same rule applies to catalog sellers such as L. L. Bean, which only collects sales tax from Maine residents.

Some states are mulling ways to expand the definition of presence to customers' PC screens. "As commerce goes more electronic, there's a lot of revenue escaping taxation," says Michael Goral, an attorney at the Multistate Tax Commission, which coordinates state tax policies. "We're not looking to tax anything new," says Tim Leathers, the Arkansas official who chairs the MTC. "We're just following changes in the industry."

But don't tell that to online merchants. "The MTC is flirting with saying that a flow of electrons is physical presence," contends Robert Levering, senior vice-president of the Direct Marketing Assn. "What they want to do is extend it to metaphysical presence." □

FOOD COU
D COUPON

FOOD STAMPS: *Saved by agri*

AS THE GOP CONGRESS attacks social spending, effective opposition is coming from Corporate America's poverty lobby—companies that gain from federal spending on the poor. For example, the $1.3 billion energy-assistance program seemed dead after the House passed its 1995 spending cuts. But utilities pressured Northeastern senators, and $1 billion emerged from House-Senate negotiations. "We reminded them that this is a program to which we attach a lot of importance," says John Sparkman, a lobbyist for Pennsylvania Power & Light.

Likewise, the food industry stopped the $27 billion food-stamp program from
turned over to the st
thus handing the GOP o
its few welfare reform

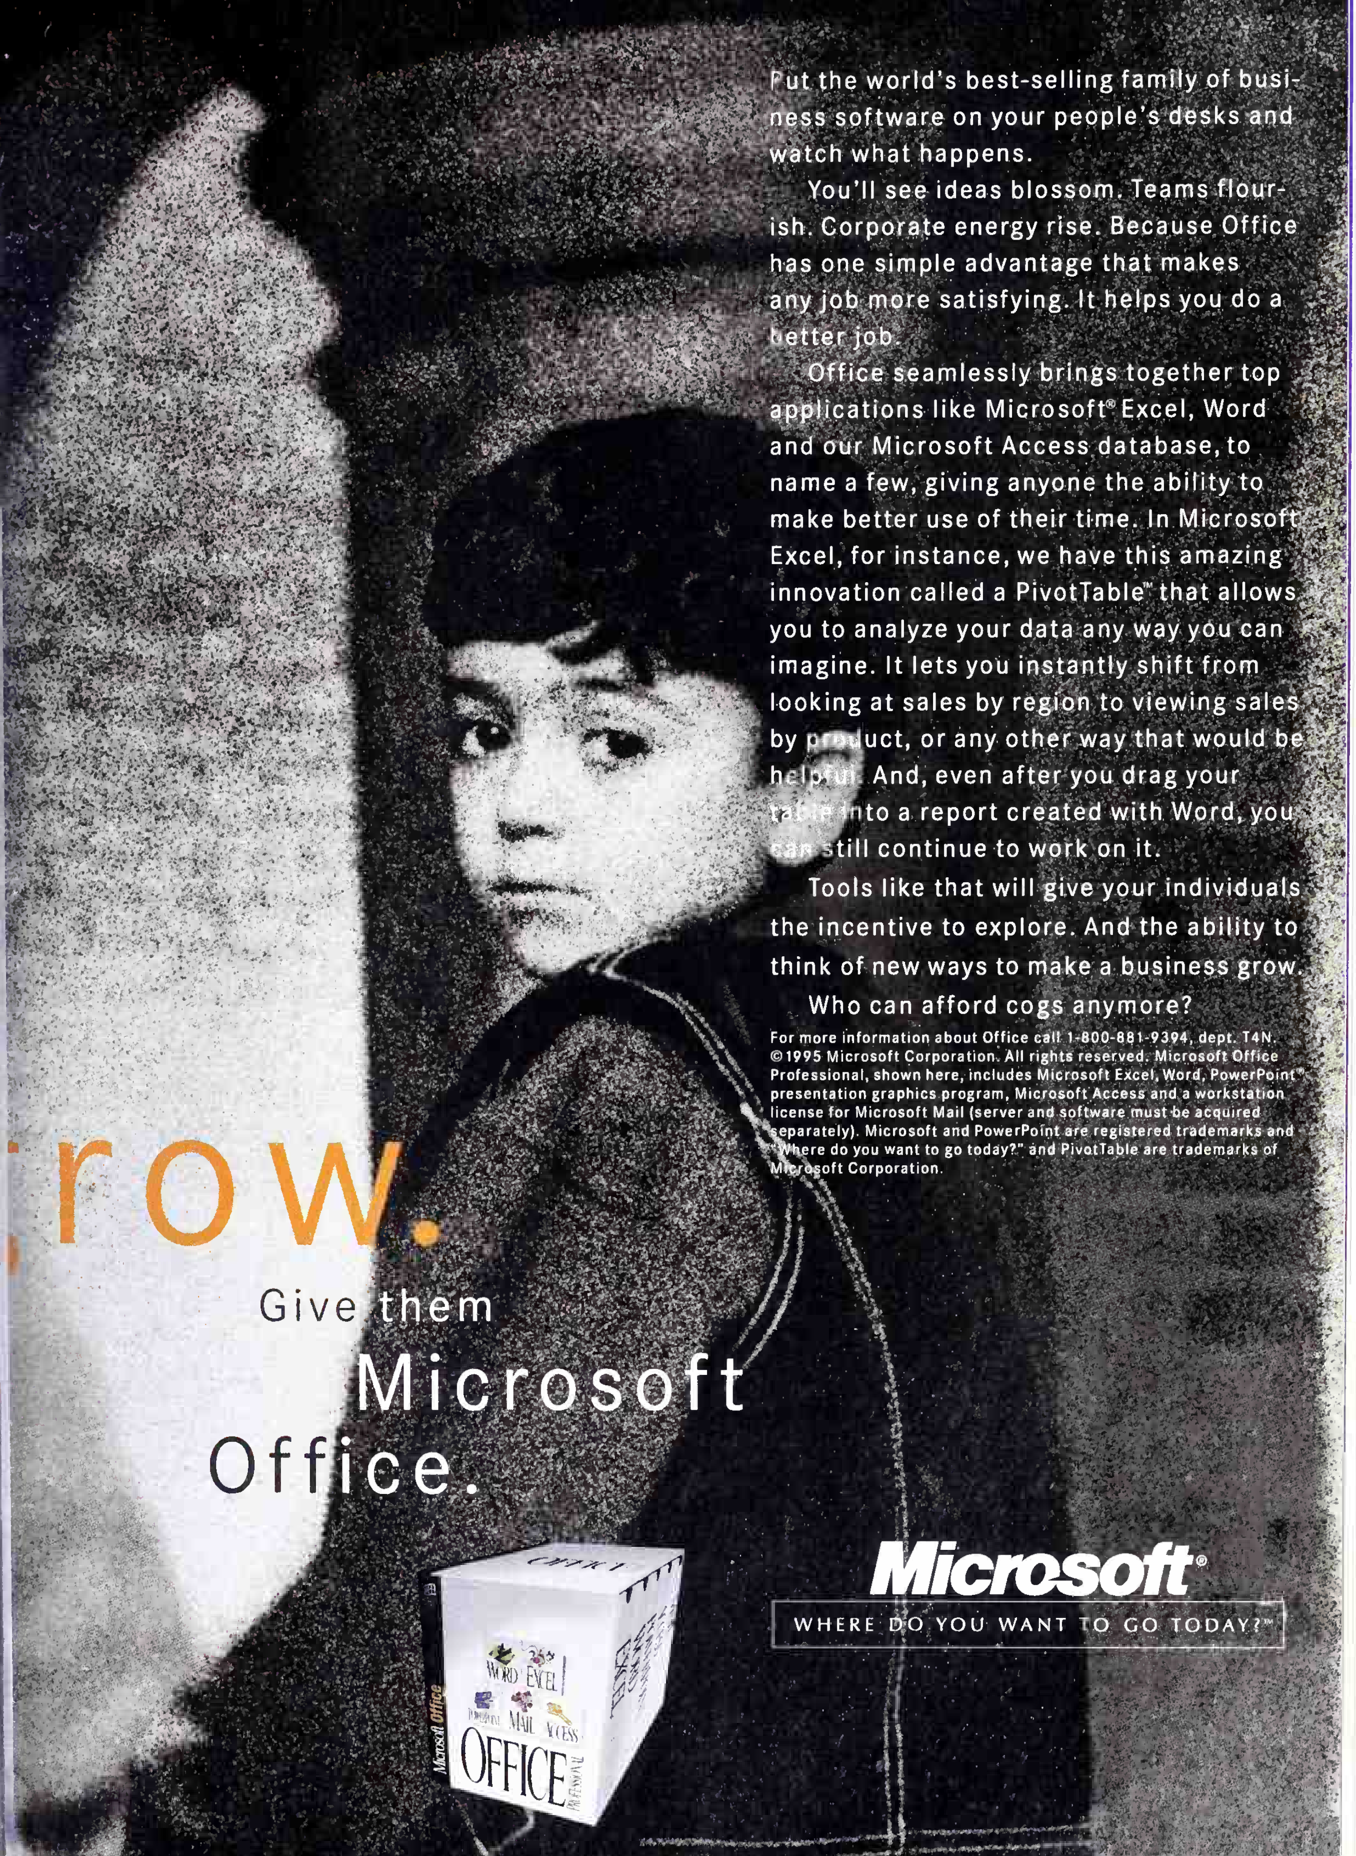
Encourage
your individual



Put the world's best-selling family of business software on your people's desks and watch what happens.

You'll see ideas blossom. Teams flourish. Corporate energy rise. Because Office has one simple advantage that makes any job more satisfying. It helps you do a better job.

Office seamlessly brings together top applications like Microsoft® Excel, Word and our Microsoft Access database, to name a few, giving anyone the ability to make better use of their time. In Microsoft Excel, for instance, we have this amazing innovation called a PivotTable™ that allows you to analyze your data any way you can imagine. It lets you instantly shift from looking at sales by region to viewing sales by product, or any other way that would be helpful. And, even after you drag your table into a report created with Word, you can still continue to work on it.

Tools like that will give your individuals the incentive to explore. And the ability to think of new ways to make a business grow.

Who can afford cogs anymore?

For more information about Office call 1-800-881-9394, dept. T4N. ©1995 Microsoft Corporation. All rights reserved. A PLAIN-FOLKS WINE MERCHANT

Hats off to Geerlings & Wade, one of your "Hot growth companies" (Cover Story, May 22). They provide a useful service helping ordinary folks into the world of wine.

Wine stores often suffer from an atmosphere of elite, special knowledge. Geerlings & Wade gives customers a description of the wines it offers, often including taste-test results. While its service is great for the wine enthusiast, it is invaluable for the novice who needs help making informed selections. It's good to see such a company succeed. We need more of them.

RUSH MADE ME READ IT

As owner of a talk radio station that has carried Rush Limbaugh since September, 1988, I thank you for such a great job of writing about our industry ("Everybody's talkin' at us," Media, May 22).

I don't normally read BUSINESS WEEK, but having heard Rush mention the article, I sought it out. Just like I bought Breathe Right for my wife after hearing Rush talk about it.

Radio is a powerful medium, and it always has been. Talk is just awakening the power it always had but which tended to be lost in the sound-alike music formats that have ruled the airwaves in the past.

Robert L. Vinikoor
General Manager
WNTK, AM & FM
New London, N. H.

HOW THOSE CAR TARIFFS COULD BACKFIRE

I think that the "worst-case scenario" you describe in "Your move, Japan," (News: Analysis & Commentary, May 22) is much too tame. After trade sanctions go into effect, Tokyo could retaliate by cutting its purchases of U. S. Treasury bills and bonds. With the resulting lower demand, bills and bonds would drop in price, driving up yields. The last thing that America needs—with its high rate of government borrowing, slowing economy, and overextended stock market and bond market—is rising interest rates.

I believe we should go to the World Trade Organization without imposing the sanctions. We don't risk losing any U. S. jobs in the meantime.

Moreover, it is ridiculous to require another country to buy our products. Washington needs to remember that competition is our policy. If Americans don't want Japanese goods sold here, we need to produce products that will provide better value and thus will persuade American customers to choose them.

Rick Zbavel
Fallbrook, Calif.

Your lead article and the editorial "Don't back down on Japan now" said much about the Japanese auto market, which is supposedly closed. From my view, cars should not be on the agenda.

When I moved to Tokyo more than two years ago, I was disgusted with the pitiful effort of American auto makers in Japan, especially after hearing all the U. S. complaints about barriers. Not only were they trying to sell vehicles too large for Japan's narrow streets but also left-hand-drive cars in a country where they drive on the left.

American companies are slowly improving their strategy and quality. But in businesses such as auto parts, they need to remember it is necessary to "get in bed" with Japanese companies if they want to be preferred suppliers. European carmakers, who have had more success in Japan, would laugh at American efforts.

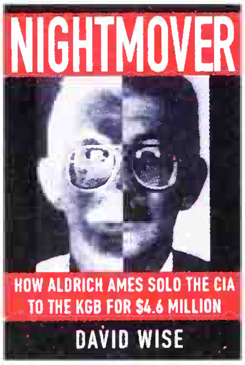
DUMB SPY, DUMBER SPYCATCHERS

The saga of CIA turncoat Aldrich H. Ames would be hilarious were it not for its deadly consequences. Ames all but wore a Russian fur hat to the office. He was a problem drinker who, among other glaring lapses, failed to report on meetings with KGB agents he was supposedly trying to recruit and abruptly started buying Jaguar autos and a half-million-dollar house, for which he paid cash. Yet his CIA bosses shrugged off the warning signals for years, giving him jobs that provided access to their most precious secrets: the files on Soviet agents.

Consequently, Ames became perhaps the most destructive spy of the cold war. The information he gave the Soviets led to the virtual annihilation of the agency's Soviet network. At least 10 CIA agents were executed. Others wound up in prison camps or had to flee to the West. Ames also compromised dozens of other operations, including vital communications intercepts.



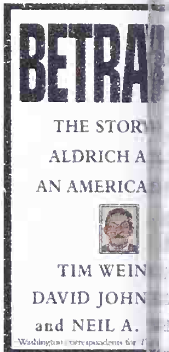
But what the Ames affair revealed about the agency is even more disturbing. If the CIA was ever a well-honed instrument of U.S. foreign policy, it isn't anymore. Rather, it seems to be a boozy old-boys' club overly concerned with protecting perks and deflecting scrutiny. It is, as David Wise writes in *Nightmover: How Aldrich Ames Sold the CIA to the KGB for $4.6 Million*, "a tired bureaucracy, living in the past, wearing blinders, and deeply flawed."

This book is one of three that tell the same incredible story of a marginal CIA man who became perhaps the greatest spy of all. *Nightmover*, whose author has written several previous books on intelligence, is probably the most thorough treatment. *Betrayal: The Story of Aldrich Ames, an American Spy* is a fast-paced, vivid account of the debacle by three *New York Times* Washington correspondents, Tim Weiner, David Johnston, and Neil A. Lewis. And *Sellout: Aldrich Ames and the Corruption of the CIA* by James Adams, the Washington bureau chief of *The London Sunday Times*, is notable for its rich biographical material on Ames and his father, Carleton, a hard-drinking Asia hand who had a forgettable CIA career. Adams also presents the most detailed recommendations on reforming the CIA.

But all of these books are far more concerned with describing the agency's flaws, as revealed in an appalling case, than with fixing them.

The CIA's first mistake came in the 1960s, when, largely as a result of the elder Ames's connections, it hired the unpromising Rick Ames. Later, an evaluator declared that the fledgling case officer did not have the moxie to recruit agents in the field and recommended that Ames be kept at headquarters. From early on, there were signs of trouble. Ames got blind drunk at parties, cheated on his wife, a fellow agent, and was careless enough to leave a briefcase full of secret documents on the New York subway. None of this prevented Ames from receiving a cushy posting in Mexico in 1981. There, the CIA allowed him to try to recruit a risky and unlikely target, a crack KGB counterintelligence officer named Igor I. Shurygin. Over the next two years, the two men engaged in a series of marathon drinking bouts at Mexico City restaurants with their employers' consent. In the end, it was Shurygin who softened up Ames for recruitment.

Wise figures the KGB man played on Ames's sense that "his talents had not been adequately recognized by agency." But Ames's main motiva was money. While in Mexico, he bi agency rules by becoming romantic involved with an agency source, a lombian cultural attaché named M del Rosario Casas Dupuy, whom eventually married. Back in Washing in 1985, he became desperate for ca the result of a costly divorce set ment with his first wife and Rosario's expensive habits. So he walked into the Soviet Embassy, handed over secret documents, and asked for $50,000. In time, Rosario Ames, who ultimately drew a jail sentence of five years, became aware of his spying and took a keen interest in its rewards.



Once he took money, Ames later the Senate Intelligence Committe had crossed a line. I could never back." And he didn't. His next was to eliminate the CIA's Soviet ag who could have fingered him. He st a huge batch of documents into s ping bags and carried them out of agency's Langley (Va.) headquart He knew no one would stop him. T proved to be the biggest haul for KGB ever. Included were the identiti virtually all Soviet agents workin the CIA and the FBI. Ames handed over to a KGB contact in a George restaurant.

During the next few years, Am who had become counterintellig chief of the agency's Soviet division- livered as many as a thousand d ments a year, more than the KGB process. In return, he received ments totaling nearly $3 million, us in fat wads of cash. Nor did the lapse of the Soviet Union in 1991 turb the relationship. Ames's pay ac ly increased under the KGB's Rus successor, the SVR.

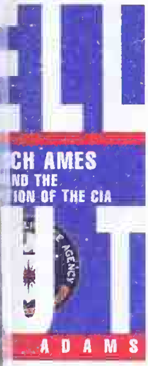
Despite having lost so much, the did not scramble to find the sour the leaks. It took a full year agents began vanishing to assembl investigatory task force. The ag didn't start seriously examining Ar bank accounts until 1992, three y

ALDRICH AMES DID PERFORM ONE SERVICE: EXPOSING THE CATASTROPHIC STATE OF THE CI r an alarmed colleague, who knew es was one of the few officers with ss to the blown Soviet agents, ed off the agency that Ames was nding way beyond his means.

nce the agency and then the FBI ed in on Ames, nailing him wasn't hard. He never saw much need to areful—he kept his correspondence the Soviets on his home computer. search of Ames's house after his ar- in February, 1994, the FBI found a er from the KGB containing a photo and where, they said, Ames could d his retirement dacha.

mes was under some suspicion from late 1980s but was allowed to go on ng until early 1994. Why the laxity? hree books blame the lapses on the protective CIA culture, particularly of the Directorate of Operations, secret branch where Ames spent of his career. Heavy drinking and ing of regulations were apparently non among DO officers, who routine- overed up misdeeds by colleagues. use of bureaucratic rivalries, it 't until 1991 that the CIA brought e FBI, which has responsibility for ing down spies in the U. S.

the end, no one in Langley paid of a price for the Ames debacle. en CIA officers, all but one of them ed, received "severe" letters of rep- nd. But the affair was a body blow e agency at a time when its *raison* was already in question because of the end of the cold war. In court to receive a life prison sentence, Ames dealt the agency another bruise, calling it "a self-serving sham, carried out by careerist bureaucrats who have managed to deceive...American policymakers and the public."



is hard to disagree with his com- after reading these books. But still infuriating that, as Weiner's reports, Ames was "thrilled and ated" by the fact that his critique een taken very seriously by policy- rs and the press. Only a hard could puncture his smug satis- , like the one dealt to him in one *Times* reporters' phone inter- . Ames was asked: Shouldn't he quit the agency 10 years earlier— his bitterness turned to betrayal? ponse, the master spy began cry- d hung up the phone.

Prices apply at participating Radio Shack stores and dealers. Items not available at a participating store can be special-ordered (subject to availability) at the advertised price. A participating store will offer a comparable value if the product is sold out. Independent Radio Shack dealers and franchisees may not be participating in this ad or stock or special-order every item advertised. Copies of applicable warranties are available upon request at stores for inspection before sale, or by writing Customer Relations, 1400 One Tandy Center, Fort Worth, TX 76102.

BY STEPHEN H. WILDSTROM

GIVING PCs THE POWER TO READ

I've spent much of the past 30 years sitting at keyboards of one sort or another, but I've never managed to become more than a wretched four-fingers-and-two-thumbs typist. Needless to say, I'm interested in finding another way to get stuff into my computer.

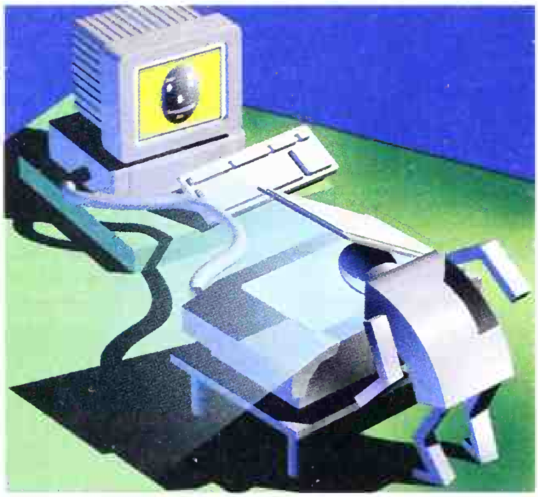

ILLUSTRATION BY JAME [illegible]

By far the most advanced alternative is scanning devices, and I'm finding more and more tasks for them. While voice- and handwriting-recognition still face fundamental challenges before becoming truly useful, the optical character recognition (OCR) technology that turns a scanned image into text is now a solved problem. The trick in making it work on the desktop has been having enough computing power to throw at the task. Fortunately, today's personal computers are up to a job that until recently could be handled accurately and quickly only by high-powered workstations.

CHEAP HARDWARE. OCR, which produces text that can be searched, edited, and copied into other documents, is a tough challenge in artificial intelligence. In effect, it requires teaching a computer to read. Accuracy increases when the software can recognize whole words and is able to determine which letter combinations rarely or never occur in English (or whatever language the software has been specialized for). Pentium PCs or Power Macs with 16 megabytes of memory have enough horsepower to make this sort of heavy lifting practical.

Getting started in scanning is easy these days because good hardware has gotten cheap. Handheld scanners, available for as little as $100, are generally not suitable for OCR. But a new generation of sheet-fed scanners is bringing inexpensive and compact power to the desktop. Virtually any scanner you buy will come bundled with a competent OCR program, usually Caere Corp.'s WordScan or Xerox Corp.'s WordBridge. Of course, any scanner can read in black-and-white drawings. (I did not look at more complex and expensive color scanners.) And in conjunction with software, a fax modem, and a printer, a scanner can turn your personal computer into a fax machine and copier.

Possibilities include the $350 PaperPort from Visioneer (800 787-7007), the $450 PageOffice from Umax Technologies (510 651-8883), and the $299 WinFax Scanner from Delrina (800 268-6082). If you want the best, fastest scanning, it's hard to top a flatbed unit such as the $549 Hewlett-Packard IIp.

ROLODEXING. Corex Technologies Corp. (617 277-5344), a Boston startup, has taken an interesting approach to OCR that demonstrates the technology's maturity. Automatically transferring information from business cards to a computerized contact list is a big help to anyone who collects scads of cards. But few character-recognition challenges are harder. Not only must the software read the often highly stylized typefaces of business cards, it must also figure out what each bit of information is so that it can be transferred to the correct field in your database of contacts.

Corex CardScan software, which lists for $99 by itself or $299 in a bundle with a specialized card reader, does a surprisingly good job—enough so that I found it significantly easier, even after making manual corrections, than typing in the cards by hand. It does the critical job of recognizing numbers with almost perfect accuracy, and most of the time separates voice and fax numbers correctly. Only E-mail addresses consistently caused this program to stumble. CardScan can work with about two dozen personal-information and contact-management programs.

The fumble-fingered won't be truly comfortable until our computers understand what we want when we speak into their microphones and scribble on their screens. But scanning and optical character recognition technology are work savers that have a place on every desktop.

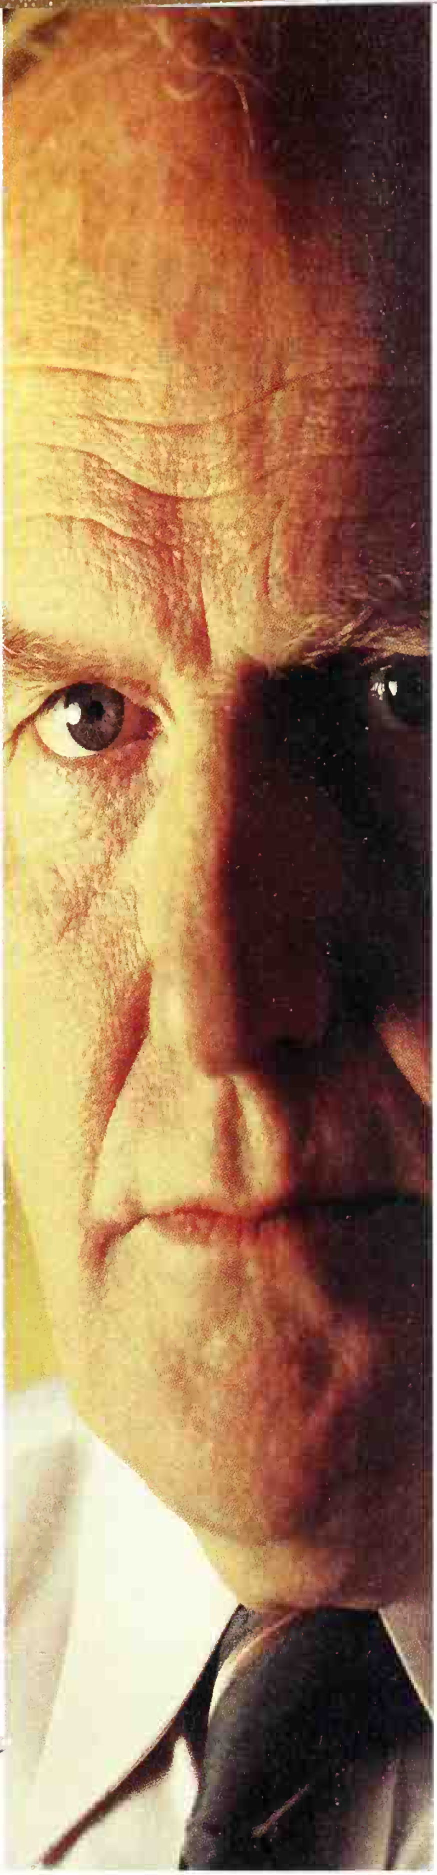
QUESTIONS? COMMENTS? techandu@mgh.com on Internet or fax (202) 383-2125



Tell me this.

an people do their jobs?

Faster than before.

Easier than last time.

If the answer is yes, we grow.

If the answer is no, we don't.

It's not that complicated.

How do you measure productivity? Here's how Arthur D. Little, Inc., did it. They took two groups of comparably skilled computer users. Sat one group down at Macintosh® PCs. The other at PCs running Windows. They asked all those people to perform identical business tasks. Then they measured the time it took to complete each task. And how accurately it was performed. Their findings? People using the Macintosh computers were 44% faster than the people using Windows. Forty-three percent more accurate, too.* Think that's impressive? Imagine the results if those people using Macintosh had been using Power Macintosh™ PCs instead – they're up to 92% faster than PCs based on Pentium processors.** So visit us on the Internet today at http://www.apple.com. And discover the power only a Macintosh can deliver. The power to be your best.®

Economic Viewpoint

BY ROBERT KUTTNER

YOU COULD DRIVE A LEXUS THROUGH THE HOLES IN THE WTO

RICHARD SCHULTZ

Robert Kuttner is co-editor of *The American Prospect* and author of *The End of Laissez-Faire*

HINDRANCE: The World Trade Organization is too weak to open markets yet strong enough to sink serious efforts to solve trade inequities

The two proudest trophies of recent U.S. trade negotiation—the North American Free Trade Agreement and the multilateral Uruguay Round—have already lost much of their luster. NAFTA was supposed to stimulate the emerging market most strategically important to the U.S. Instead, Mexico has become an awkward financial ward, destabilized by the hot portfolio capital that NAFTA itself attracted.

What's more, the new World Trade Organization, prize of the Uruguay Round and successor to the General Agreement on Tariffs & Trade, is alarmingly half-baked. On one hand, the WTO is too weak to be a true international court that might serve the U.S. by opening foreign markets. Yet it is just strong enough to undermine bilateral efforts and embarrass the U.S. if Washington rejects its rulings.

Despite the multilateral trade system, most real progress in opening markets has come from tough bilateral negotiation. The GATT system was useful for lowering official tariffs and establishing trade norms—but not much more.

Historically, national negotiating muscle has counted. The Economic Strategy Institute's recent document, *Section 301: A Catalyst for Free Trade*, describes 98 major cases where U.S. threats of sanctions—not recourse to GATT—made the difference. Section 301 of the Trade Act requires the executive branch to initiate complaints against foreign barriers and to retaliate if such barriers are not removed. If U.S. semiconductor manufacturers, satellite makers, orange growers, and retailers such as Toys 'R' Us Inc. have gained a foothold in Japan, the credit belongs to Section 301 and the resolve of the U.S. Trade Representative. In the same fashion, pharmaceutical and software exporters have won intellectual-property protection in Brazil, and U.S. movie and compact-disk distributors have gained access to Asia.

UNILATERALISM? But Section 301 is in bad odor internationally, perceived as "unilateralism." Many nations supported the WTO precisely in the hope it would kill Section 301. In the legislation implementing the WTO agreement, however, Congress specifically directed the Administration to continue using Section 301 on issues not adequately covered by the WTO.

The U.S.-Japan auto dispute is a case in point. The trade imbalance in cars and parts accounts for about half the U.S. trade de
with Japan. But the trade obstacles re
from ostensibly private actions—the clu
ness of the dealership system, the impos
of excessive inspection charges and mark
and a pricing system for auto parts
systematically excludes foreigners. Non
these is a state action, and thus none exp
ly falls under the WTO.

By moving unilaterally, the Administra
has been criticized for undermining the
Worse, if Washington and Tokyo file rival
complaints, the WTO could well find
Japan's byzantine private system for dis
raging imports did not violate "free trad
but that Washington's retaliatory tariffs

In the end, the WTO has neither the aut
ity nor the due process of a true legal b
It has no independent power to levy or c
penalties. WTO panels are ad hoc affairs,
ducted in secret, and are not subject to
of evidence.

TRANSATLANTIC TIES. It may be the U.S
plied the right principles in the wrong
tings. Free-trade areas are a sound id
but Mexico was a poor candidate. A g
trade body, committed to genuinely open
merce and with adequate judicial authori
also a fine idea, if a radical departure.
WTO is no such organization, and the U.
not yet ready to surrender its soverei
to a true world trade court.

If the WTO is not a true world trade or
ization, how about a more suitable reg
one? The Clinton Administration want
expand free-trade areas to Asia and S
America. Clyde V. Prestowitz Jr., preside
the Economic Strategy Institute, argues
the U.S. should create a liberal trade ar
the one region where it might work—
North Atlantic. The U.S. and the Euro
Union are sufficiently close in their norms
ing standards, and commercial practice
be symmetrical trade partners. European
ion trade officials are in a testy mood
now, concerned that Washington and T
will resolve their auto dispute with a bil
al deal that would leave Europe at a d
vantage. The concern is legitimate and
the more reason to seek closer ties with
rope. A North Atlantic Free Trade Ag
ment—a different NAFTA—is already the
ject of quiet diplomacy. It might be
workable than either the present NAFT
the WTO.

STARTING A NEW BUSINESS IS SIMPLY A MATTER OF KNOWING WHERE TO TURN.

The uncertainties of starting a business could corner you. You need information, but don't know where to find it. Quickly and easily. How do you get special government financing? Or build a business plan? What about tax laws? Just to name a few...

But now there's help. Introducing AT&T Resources for New Business.℠ Only from AT&T.

One call gives you direct access to the people, information and answers that can help you navigate through the difficulties of starting a business.

Questions about technology, specific industries or the Internet? You can even get information by fax. 24 hours a day, 7 days a week. You can also receive hundreds of dollars of discounts on office equipment, computer software and more.

These benefits are made possible through AT&T's alliances with leading information, technology and office supply companies.

And best of all, these resources are now available through one easy source. The same source that provides you with reliable, high-quality long distance service: AT&T.

You can only get this from AT&T. So call 1 800 STARTER. And discover how we can help get your business started in the right direction.

It's not what you'd expect from a long distance company, but that's the point.

AT&T. For the life of your business.℠

OU WANT TO SEND HER O COLLEGE. YOUR AGE IS S IMPORTANT AS HERS.

at if you're 30? Lucky you. Time is on your ·. You'll probably want to move into the stock ket, because historically stocks have outperformed ıther forms of investment over the long haul. Zero pon bonds are another possibility. Your investment grow at a fixed rate, and you can stagger the matudates of the bonds so they'll start paying off as each ɔur children reaches college. A smart tax move ıt involve putting money in your children's names. income this money earns—up to $650 per year—is taxable. The point is, even with time on your side, need a plan.

at if you're 45? If your child is close to college age, ıy be time to shift the bulk of her college money fixed-rate investments to protect against short-term uations in the equities market. If you had your child · you were 40, one possibility might be to withdraw rtion of your IRA when you reach 59 1/2. You may want to borrow against the equity you've built up in home through a home equity line of credit. The est you pay on loans up to $100,000 may be com-ly tax deductible. The options are many and varied, ı plan becomes extremely important.

ıt if you're 60? Assuming you've accumulated all ıoney necessary for your child's or grandchild's education, there are important tax ramifications in how you distribute the funds. You may want to transfer those assets to a Charitable Remainder Educational Trust. During the four years the child is in college, she'll receive an annuity from the trust, and use that money to cover her expenses. At the end of the four years any principal remaining will be transferred directly to the college. They'll receive the benefit, and you receive a tax deduction for a charitable contribution.

What if you're still baffled? You're not alone. Getting kids through college these days requires intelligence on your part as well as your child's. You need a smart financial plan and a partner to help you work it out. A Merrill Lynch Financial Consultant will help you look at your entire financial picture and together you'll come up with a formal written financial plan. And we have more ways to make that plan work than anyone else. So getting through four years of college may not be as hard as you think, at least for you. To learn more, call 1-800-637-7455, ext. 9441.

The difference is planning.

The difference is Merrill Lynch.

Merrill Lynch

A tradition of trust.

Economic Trends

BY GENE KORETZ

EQUITIES ARE DISAPPEARING

Blame mergers and buybacks

Despite high stock prices, the volume of corporate equities retired via corporate purchases outpaced new issues last year for the first time since 1989, and the trend seems to be continuing. Indeed, as economist Gary E. Schlossberg of Wells Fargo Bank points out, corporate equities are selling at around a 40% premium over the replacement costs of underlying assets—"a level that usually encourages new issue activity and discourages the elimination of supply."

One reason for the reemergence of equity liquidation, says Schlossberg, is a new wave of acquisitions undertaken by cash-rich U. S. companies seeking to expand global market share or reduce costs through economies of scale. At the same time, the low dollar has made U. S. acquisitions cheap for foreign buyers despite high stock prices.

Second, Schlossberg notes that stock buybacks are now being driven by the large gap between taxes on ordinary income and those on capital gains. Companies are choosing to divert spare cash from dividends, which are taxed as ordinary income, to buybacks that boost stock prices and generate lower-taxed capital gains for their shareholders.

This trend helps explain why the dividend payout rate for Standard & Poor's 500 companies is close to a historic low. "If Congress cuts the capital-gains tax," predicts Schlossberg, "dividend yields are likely to remain relatively meager."

YO, TAXI. TAXI! TAXI!!

Why New York cabs can be scarce

If you've ever been in Manhattan on business on a rainy afternoon, you know how hard it is to find a taxi. According to a new study by Linda Babcock and Colin Camerer of the California Institute of Technology, Richard H. Thaler of the Massachusetts Institute of Technology, and George Lowenstein of Carnegie Mellon University, the reason isn't simply that more people try to get cabs when the weather is bad.

Most New York cab drivers rent their cabs for a 12-hour period for a flat rate, keep all their fares, and knock off work during those 12 hours whenever they want. Since they make a lot more money per hour when demand is strong, you might think they would work longer on busy days. Not so, report the four economists, who analyzed nearly 3,000 daily trip sheets of over 1,000 New York taxi drivers from 1988 to 1994.

The study found that the drivers actually tended to quit earlier on busy days and work longer on slow days. The results suggest that drivers set a target for their daily incomes and quit when they reach it—though they could actually earn more and drive less by working the same number of hours every day.

THE GOOD NEWS ABOUT FERTILITY

Rates dip in developing nations

In recent decades, fears of an imminent unrestrained population explosion have waned, as family planning programs have helped reduce the average number of children born to women in developing countries from 6 in the late 1960s to 3.5. In fact, in the world's most populous country, China, the fertility rate is currently below the population replacement level of 2.1 children per woman, and demographers are hoping fast income growth will keep it low—as it has in such nations as Hong Kong, Korea, Singapore, and Taiwan and in all the leading industrial countries.

Meanwhile, concern is focused on the larger number of developing nations where fertility rates remain far too high. Current trends indicate that the world's population will still grow mightily in coming decades—from 5.7 billion today to over 8.3 billion in 2025, according to the Population Reference Bureau. And virtually all of that growth will occur in developing nations—increasing their share of the world's population to 85% by 2025.

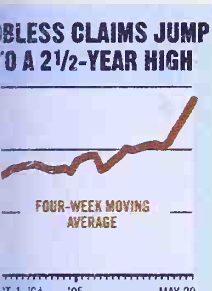
ID THE FED OVERTIGHTEN? OT IF YOU LOOK WITH BOTH EYES

U.S. ECONOMY As the economy's landing gets bumpier, a key question is re-
ing a lot more attention: Has the Federal Reserve
rtightened?
ost economists still say no. A few, though, are far
e pessimistic, especially the monetarists—those
depend heavily on various measures of bank re-
ves and the money supply for guidance on future
nomic growth and inflation.

The monetarists make a compelling case, especially with the economy slowing so sharply. First-quarter growth in real gross domestic product was revised down to 2.7% from 2.8%, following the fourth quarter's 5.1% gallop. Monthly data suggest that second-quarter GDP growth will be even less, as businesses pare excessive inventories.
n May, new jobless claims shot up (chart) and con-
er confidence fell. Construction contracts plunged
in April, to a 2½-year low. The Federal Reserve
k of Philadelphia and purchasing managers in Chi-
both reported slower business activity in their
ons in May. And the government's index of leading
cators is falling, pointing to continued weakness
n the road.



BLESS CLAIMS JUMP
'O A 2½-YEAR HIGH

OUSANOS
DATA: LABOR DEPT., BUSINESS WEEK

HE MONETARISTS' VIEW, all this malaise is the
lt of a too-tight monetary policy—and a precursor
e next recession. In today's weak economy, they
short-term interest rates would be falling if the
were not busy draining bank reserves in an effort
aintain its targeted federal funds rate at the cur-
6% level. Reserves are the raw material that
s use to generate money and credit.
e monetarists point to the unprecedented decline in
reserves in the past year as evidence of the Fed's
e hold on the economy (chart). As a result, sever-
easures of money growth look exceptionally weak—
cially the narrow gauges, which include only cur-
y and deposits used for check-writing.
be sure, Fed policy is restrictive. For example,
inflation-adjusted federal funds rate, currently at
nd 3%, is well above its historical average of about
Also, the yield curve has flattened considerably in
nt months as declining long-term rates have nar-
d the spread between long and short rates.

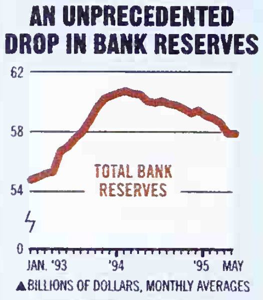
However, these two interest-rate indicators show why there is a vast difference between clamping down to slow the economy and overtightening to squeeze the living daylights out of it. First, the real fed-funds rate remains below the 5%-plus level it hit prior to the 1990-91 recession. The levels touched before the recessions of the '70s and '80s were even higher.

Second, the yield curve, while it is flatter than earlier this year, is by no means flat. For Treasury securities on May 31, three-month bills were yielding 5.81%, 5- and 10-year notes paid 6.07% and 6.29%, respectively, and the 30-year bond yielded 6.66%. One precondition of all past recessions has been an inverted yield curve, in which short rates exceed long rates.

ALL THIS IS WHY Nobel laureate Paul A. Samuelson used to say, "God gave us two eyes so we can keep one on the money supply and the other on interest rates." Besides, money growth alone as a beacon on the economy casts a much dimmer light than it did a decade ago. Financial-market deregulation and globalization have destabilized a once fairly reliable relationship between money and economic activity.

As a result, a given amount of Fed restraint does not squeeze the economy as hard as it used to, especially when measured by reserves and the money supply. Thanks to increased U.S. borrowing from nonbank sources, domestically and from abroad, bank credit accounted for only about a third of private nonfinancial debt last year, down from about half in the mid-1980s.

Moreover, because dollars flow more efficiently through the economy, a given amount of money can support about 15% more output than it used to, based on the turnover rate of the broad M2 money supply, comprised of not only cash and checking accounts but also household money market funds and other short-term savings. So anemic money growth is not the same harbinger of a weak economy that it once was.



AN UNPRECEDENTED
DROP IN BANK RESERVES

▲BILLIONS OF DOLLARS, MONTHLY AVERAGES
DATA: FEDERAL RESERVE

Make no mistake: The Fed is bringing this economy down. But so far, the softness is narrow, concentrated in autos, housing, and home-related durable goods. The other 86% of the economy, fueled by capital spending and exports, continues to perk along nicely. The slowdown appears to be primarily an inventory adjust-

ERIC HOFFMANN/BW

ment, most notably by the auto industry. There is no evidence of the cumulative unwinding of activity that is the classic mark of a recession (chart).

That's the message from the Commerce Dept.'s revision to first-quarter GDP. Final demand grew faster than first estimated, rising at an annual rate of 2.5% instead of 1.8%. And inventories grew less than originally thought, especially at retailers. Stockpiles increased by $52.3 billion, rather than $63 billion.

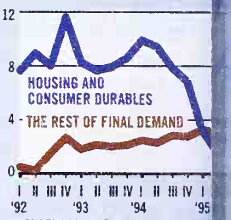
The new mix of GDP lessens the chances of a sharp inventory correction that could severely choke off growth this spring and summer. Still, inventories remain excessive, and many companies will have to work off their extra merchandise. That means further cutbacks in orders and output in coming months.

THE SLOWDOWN, however, is sowing the seeds of its own subsequent pickup. The credit markets, especially the bond market, did a lot of tightening for the Fed last year, and they are now doing a lot of easing. The yield on the benchmark 30-year Treasury bond has fallen from nearly 8% earlier this year to below 6.7%. As a result, 30-year fixed mortgage rates have dropped below 8% for the first time in more than a year, and housing activity is starting to stir again.

Sales of new single-family homes did fall 2.7% in April, to an annual rate of 580,000, but March sales were revised sharply higher. And by mid-May, mortgage applications to buy houses had jumped 44 from mid-January, while refinancing applications also showing some life. After a couple of months of ter sales whittle down builders' inventory of un homes, construction will be set to add to, rather t subtract from, economic growth in the second half.

Consumers are also likely to show more life. Although the Conference Board's index of consumer confidence dipped to 101.6 in May from 104.6 in April, a reading above 100 has typically been associated with a fairly peppy consumer sector. But job growth for this business cycle has probably peaked, and consumer debt levels are up sharply, so shoppers are not likely to regain their 1994 urge to splurge.

WHERE THE FED IS DRAWING BLOOD



▲PERCENT CHANGE FROM A YEAR AGO

DATA: COMMERCE DEPT., BUSINESS WE

In the meantime, this slowdown has a long way run, and it's likely to generate a new round of F bashing, as Washington and various business gro join the monetarists in bad-mouthing the central ba policies. The Presidential candidates will get their l in, too. But economists who look at the world w both eyes may feel more kindly toward the Fed. their tea leaves, the current slowdown is not a fore ner to recession but the pause that refreshes.

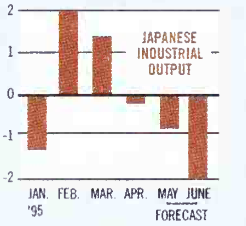
JAPAN

THE YEN IS CLOBBERING THE RECOVERY

Government officials are voicing greater concerns about Japan's recovery, and the reason is the yen. On May 25, Bank of Japan governor Yasuo Matsushita warned a banking group that "the recent additional rise of the yen might stall improvement in corporate profits and business sentiment."

Clearly, the yen-induced weakness in exports is slamming profits and output, causing record unemployment. The Ministry of International Trade & Industry said industrial output fell 0.2% in April. The decline was a surprise, and MITI's survey of manufacturers has projected that output will fall an additional 0.8% in May and 2% in June (chart).

MANUFACTURING IS SET TO CUT OUTPUT



▲MONTHLY PERCENT CHANGE

DATA: MITI, BLOOMBERG FINANCIAL MARKETS

Consumers are also struggling this quarter. Sales at department stores and supermarkets in April were down 1.7% from a year ago, after total household spending fell 0.6% in the year ended in March, the sixth drop in a row. Employment worries are fueling the cutbacks. The jobless rate hit a record 3.2% in April, with only 65 job offers for each 100 applicants.

Household budgets are getting some relief, however, from Japan's spreading deflation. Consumer prices in Tokyo dipped slightly in May, compared with a year ago. That was the third straight decline. Moreover, prices excluding food fell 0.1%, the first drop on record. Price data in Tokyo typically lead trends in the rest of the country In April, prices nationwide fell 0.2% from a year ago.

Falling factory activity and so consumer demand hint that Japan's economy is declining this quarter. Other worries suggest a sluggish second half: The bankin system remains shaky, and fiscal stimulus will be only modest.

In May, the Organization for Economic Cooperation & Develo ment cut its forecast for 1995 growth in Japan to 1.3%, from 2.5% projected in December. The economy expanded just 0.9% in 1994. For now, the Finance Minis try is sticking to its forecast of growth of 2.8% in the year endin next March. But with the yen ris ing and public remarks growing more anxious, Tokyo may have t scale back its rosy outlook soon.

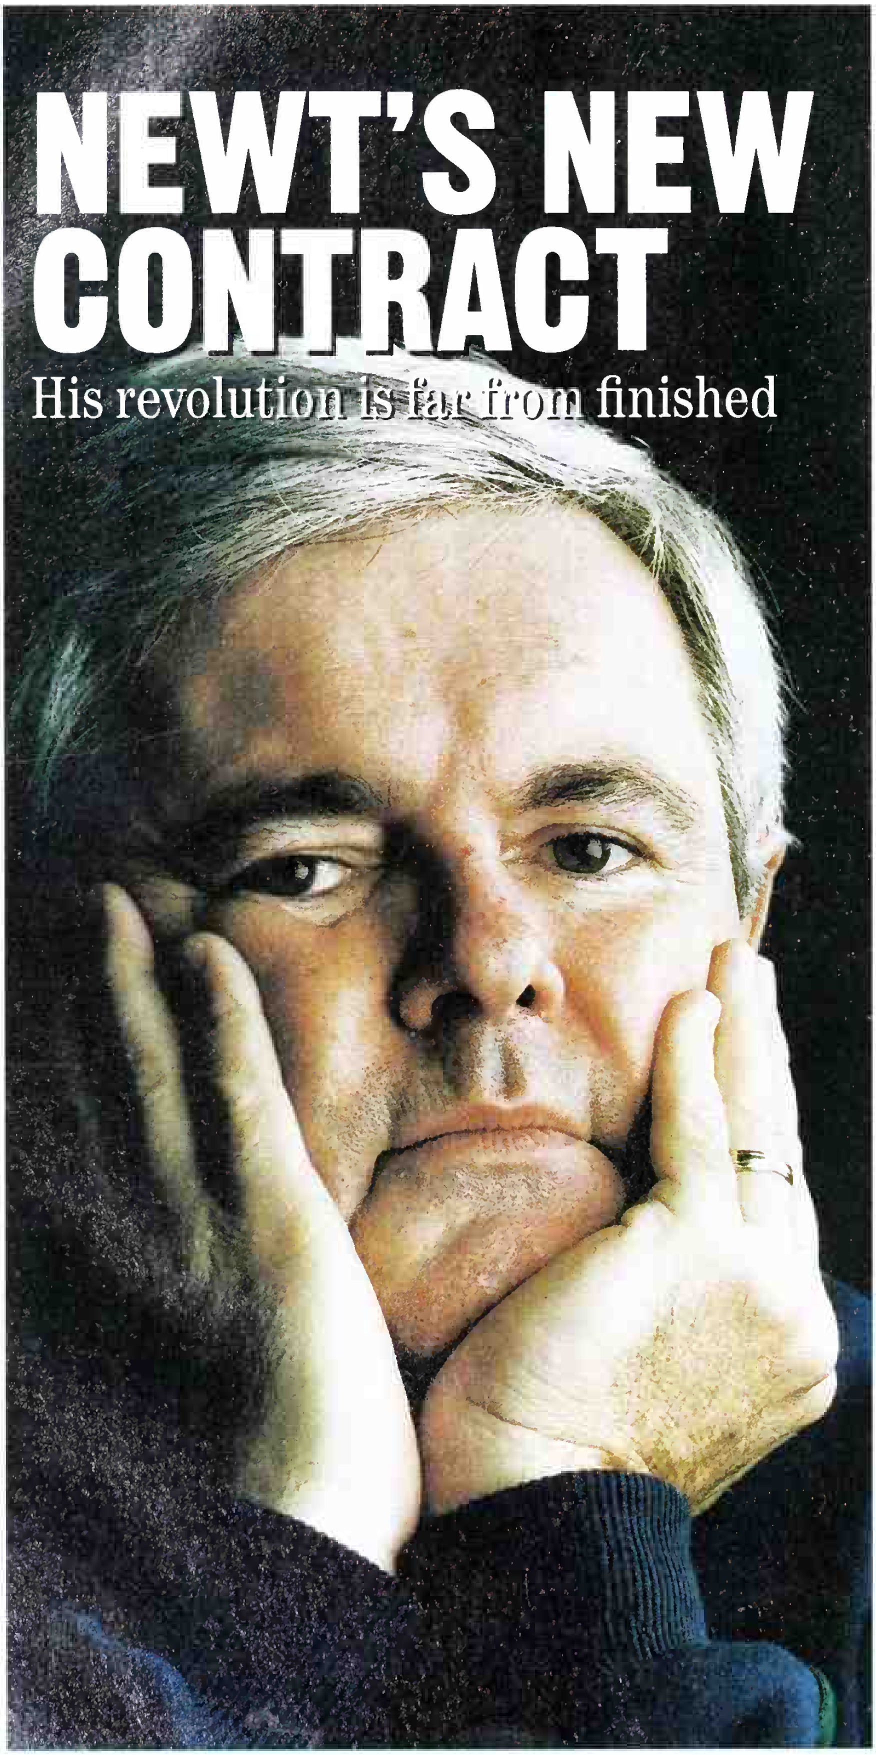
NEWT'S NEW CONTRACT

His revolution is far from finished



KEN LAMBERT/WASHINGTON TIMES/GAMMA-LIAISON

It was a frosty February day,
the rhetoric in House Speaker
Gingrich's office was white-hot.
get Committee Chairman Joh
Kasich (R-Ohio) told House Repub
leaders that he could not simultan
ly erase the deficit and slash taxes
in seven years. Gingrich stood firn
sisting that Republicans neede
deliver on the promises in their
tract With America. Kasich griml
off to do the Speaker's bidding. T
months later, Kasich authored a
anced-budget blueprint that sla
spending by $1.4 trillion—and cuts
es by $353 billion.

If nothing else, Gingrich this
has demonstrated that the convent
wisdom is wrong: It is possible t
shape the public-policy debate in W
ington. Under his iron rule, Hous
publicans approved 9 of the 10 Con
items (term limits flopped) and then opened their second 100 days with a thunderous assault on the very notion of centralized government. Neither the White House nor Congress' minority leadership has been able to counter the GOP juggernaut. "He's setting the agenda," says Democratic consultant Mark McKinnon. "The reality is, there is a huge Republican wave crashing over Democrats, and we are just running around looking for snorkels."

Gingrich shows no sign of letting up.
Indeed, he is determined to dom
Washington through the 1996 elect
and beyond. In the coming six mo
Gingrich says he will turn to socia
budgetary issues that he deferr
focus on the Contract. His goals: to
ish the current welfare and Mec
systems as part of a wide-ranging
to shift power from Washington t
states.

What's more, he hopes to fram
issues for the coming Presidential
tion. Next up: a four-day foray into
Hampshire, beginning June 9. Ev
Gingrich, 51, doesn't run himsel
won't rule it out—all nine GOP
dential wannabes already feel com
to respond to the agenda he's se

NINE TALKIN POINTS

"Renewing
American
civilizatior

1.

STRENGTHEN THE AMERICA WORK ETHIC

Require welfa
recipients and
prisoners to w
force the
unemployed ir
training progr
as a condition
benefits

rich is determined that "the next ident will be Gingrichian in world-" says adviser Grover G. Norquist, dent of Americans for Tax Reform. long as Newt Gingrich is the 800-d gorilla who might roll out of bed norning and run for President, Bob Dole will give us our tax cut and spending restraint."

To force Democrats as well as Republicans to tackle his issues during the campaign, Gingrich is designing a Contract for 1996, advisers say. Major elements include a constitutional amendment requiring a three-fifths vote before Congress could raise taxes, another amendment permitting prayer at some school events, and limits on lawsuit damages.

key is leading the culture, not ng the government," Gingrich told NESS WEEK, "because if you change lirection of the entire dialogue, thing else falls in place behind it" 34).

spite a polarizing style, the Speakas seized the la-setting role ionally played ie President. on no issue is ifluence more ounced than t reduction. years after ge Bush broke read-my-lips e and raised , Congress is engaged in a debate lelights conservative Republicans: ier to balance the federal budget ishing spending by $1.4 trillion, as louse proposes, or by a mere $1 n, as the Senate prefers.

3.

ACCELERATE AMERICA'S ENTRY INTO THE INFORMATION AGE

Deregulate telecommunications, shrink the FCC

ere is virtually no argument in ess over the merit of a balanced t—only over the optimal time in to achieve it and the size of the sed tax cut. With the help of Sen-llies Phil Gramm (R-Tex.) and Lott (R-Miss.), Gingrich has con-d Senate Majority Leader Bob R-Kan.) to embrace at least token lief.

grich has controlled the House a by handpicking committee chairs oling out plum assignments as re-for loyalty and aggressive action. esult is a contest among Republicans to come up with ever bolder proposals to eliminate agencies and even Cabinet departments, to hand over federal programs to states while privatizing others, and to deregulate industries such as telecommunications and pharmaceuticals. "A couple of years ago, you were considered outlandish if you talked about eliminating the Commerce Dept.," says Claremont McKenna College political scientist John J. Pitney Jr. "It's mainstream now."

4.

REPLACE THE WELFARE STATE

End federal programs such as welfare and public housing, let states and charities try new ideas

The meat-ax approach to downsizing government now being practiced comes right out of the postmodern political philosophy of a history professor who has been plotting his revolution for nearly two decades. Gingrich has synthesized the management theories of Peter F. Drucker and W. Edwards Deming and the futurist vision of Alvin and Heidi Toffler to create nine strategic principles that guide his agenda of minimalist government in the new high-tech global economy. With his flair for technology, Gingrich has created the first Information Age political machine—a computer-linked coalition of conservative think tanks, business groups, radio hosts, and Christian conservatives that has mobilized to hand him a series of victories.

5.

DECENTRALIZE

Give states and localities broad power over federal functions, including transportation, school lunches, Medicaid, and the arts

Demoralized Democrats note that even as Gingrich chalks up legislative successes, his negative ratings are soaring, while the President's popularity shows an uptick. "Very few people feel warm and cozy with Newt," says independent Georgia pollster Claibourne Darden. "Newt is an ideologue. He has all the warmth of a pine tree."

And though Democrats admire the Speaker's ability to dominate the national dialogue, they say that many segments of the public are coming to view his vision as extreme. "Everywhere you look, it's tilted toward the billionaires, the corporate special interests," says Representative Rosa L. DeLauro (D-Conn.). "They aren't concerned about kids or working families, veterans or senior citizens. That could help the Democrats."

6.

BRING EXCELLENCE TO GOVERNMENT

Speed purchases of technology, reform civil-service laws to weaken organized labor, and rewrite procurement policies to save money.

7.

BALANCE THE FEDERAL BUDGET

Cut some federal programs, transfer others to states, slow the growth rate of others. Find new options to overhaul Medicare and Social Security trust funds

Indeed, Senate Republican moderates acted on this sense of unfairness by blocking the House's legal reform and regulatory freeze.

Still, the Gingrich offensive has confounded the White House, which has adopted a tepid two-track strategy: a "me too" embrace of some reforms and an attack on others as extremist. Says American University political scientist James Thurber: "Newt's strategy is splitting the Democratic Party, and the President has been eclipsed."

Democrats are convinced that Clinton can reassert his power as President by vetoing hard-right legislation—or merely making the threat to do so. For instance, Clinton's pledge to veto a $16 billion spending-cut plan that exempted GOP pork sent Republicans scurrying to look for compromise, despite Gingrich's grousing that White House staffers reneged on a deal. Responds senior Clinton adviser George Stephanopoulos: "That's patently untrue."

8.

STOP VIOLENT CRIME

Build no-frills prisons, require prisoners to attend classes and learn job skills. Increase penalties for crimes involving guns

Gingrich isn't likely to sit down and make peace with Clinton any time soon. That situation leaves the Democrats hoping that Gingrich will overreach and suffer the fate of other radicals who have been consumed by their own revolutions. But confident Gingrichites believe that they are within reach of their ultimate agenda: the biggest political realignment in America since the New Deal.

9.

LEAD THE PLANET

Increase military readiness, assert American might around the world, and avoid multilateral alliances that submerge U.S. sovereignty

By Richard S. Dunham, with Lee Walczak and Mary Beth Regan, in Washington

INTERVIEWS

PLAIN TALK FROM SPEAKER GINGRICH

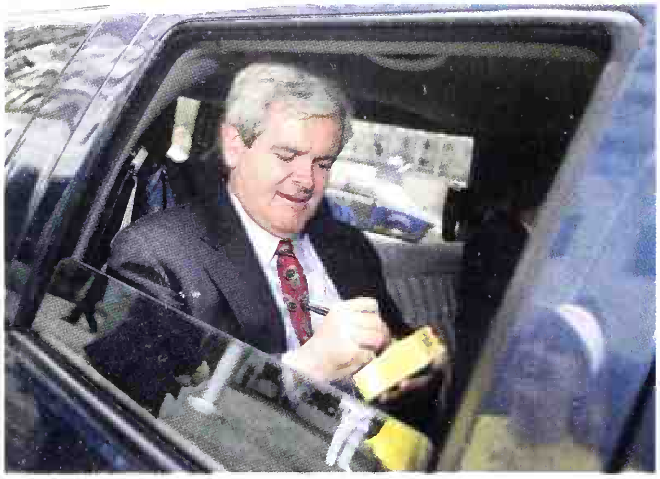
Newt mocks Clinton and expounds on the '96 campaign

Midway through one of the most productive—and polarizing—congressional sessions in history, House Speaker Newt Gingrich (R-Ga.) isn't slowing down. In a May 26 interview with BUSINESS WEEK, he outlined a vision of post-Welfare-State America. The GOP, Gingrich promised, would soon keep its pledge to balance the budget and cut taxes. He also vowed to revamp Medicare and complete a massive shift of power to the states. And then? He was coy: His coming New Hampshire visit, he allowed, could be to build support for his views, or it could be a scouting trip for a Presidential run. Excerpts:

Q: *Some Republicans prefer to balance the budget, then cut taxes. You want to do both at once. What's your rationale?*
A: It is politically impossible to sustain a balanced-budget coalition without cutting taxes. If we are the party that says to the average working American, "In seven years we might get around to a tax cut," and we're competing with a party that says, "What the hell, at least I'll give you something," then we will get beaten.

Q: *That's politics. What's the economic case for cutting taxes?*
A: First of all, unlike the Senate, we [in the House] are prepared to cut spending enough to pay for the tax cuts. Second, if you don't cut capital gains and create economic growth, you never get to a balanced budget. The third reason is that you want to send a signal that we are reestablishing the value of entrepreneurship.

Q: *House Republicans propose to cut taxes by $353 billion and trim $1.4 trillion from spending over seven years. The Senate formula is $170 billion and $1 trillion. Will the two sides, plus President Clinton, get together and reconcile their differences?*
A: [Clinton] is not in the room for reconciliation. The only way he can get in the room is to cross a watershed, and he won't look at the New Paradigm.



DONNA BINDER/IMPACT VISUALS

> “[If] 7 million people show up on Tuesday morning with a draft petition and beg me [I'll run for President]”

Q: *What's your prediction of the key elements of a compromise tax bill?*
A: I cannot imagine a bill coming out of conference without [a cut in] capital gains, a children's tax credit, an [IRA-type] savings account, and a tax credit for adoption.

Q: *And the bottom line?*
A: It might be $250 billion [in tax cuts over seven years] or a little more.

Q: *You're assuming that the Senate, which has made tax relief contingent on future spending reductions, really wants to cut taxes.*
A: We're not adjourning this year without a tax cut. [Senate Majority Leader Bob] Dole has said there will be a tax cut. I trust Dole, and he will deliver. Period.

Q: *Do you worry that taking $1 trillion of stimulus out of the economy might increase the risk of recession?*
A: No. Politicians should quit trying to micromanage the economy. I could make an argument that if the market really does believe that we are going to balance the budget, the drop in long-term bond [rates] will more than offset the loss of fiscal stimulus.

Q: *What if President Clinton vetoes some GOP bills, so you don't get $1 trillion in deficit reduction?*
A: He can veto the rescission bill because it cuts spending. The appropriations bills—if you don't sign them, there is no government. Which of the two of us do you think would be more worried by that?

Q: *So that's your strategy—provoke a showdown?*
A: We have many strategies. One of them is to work with the President. If he'd like to be in the room, he can be in the room. Our second option is to say: "We'll pass the bills that we think are right." But the two most recent [White House] fiascos are like vaudeville. One: the President goes to New Hampshire and says: "I think we can balance the budget in 10 years." His staff says, "What?" and he repudiates what he said. You sit there and you want to cry. Second: The President sends his staff to talk to [Senate Appropriations Chairman Mark] Hatfield and [House Appropriations Chairman Bob] Livingston. The aides say, "There's one thing we'll veto [in the rescission package]: if you block us from implementing the Executive Order on striker replacement." They take it out. We all go to bed thinking we've met the veto requests. We read in the *Washington Post* the next morning they're going to veto the rescission bill. That is just stupid. You say to yourself: "Why would you let them in the room?"

Q: *Do you support the President in his trade showdown with Japan?*

I'm refusing to disagree with the sident when he is directly negotiat- with the Japanese. After we get ugh, I'll comment in retrospect on this was strategically handled.

One tenet of your program is giving e authority to the states. What evi- ce do you have that the states are ly to assume this responsibility?
The states that have education de- ments with the most local autonomy sistently have the highest reading res. Every analysis proves that nized big-city schools fail. For 40 s we have shifted money out of the sroom, hired more labor bureaucracy, it's all garbage. You ought e able to go through every eaucracy and say: "If you t prove you're more valu- than a teacher, you're e."

GAMMA-LIAISON

"[Clinton] is not in the room for [budget] reconciliation. The only way he can get in the room is to cross a watershed"

Yet some state officials worry that they lack the urces to cope.
I don't know of a single essful downsizing CEO who ld agree. They all say, u will be astonished how h water there is in the em."

Why isn't campaign-fi- ce reform higher on your nda?
In a country where chil- are dying of drug addic- where children are illiter- and we have huge lems with Medicaid and icare, I think the prior- are to restructure the rlying system. Eventually, re going to get around to rethink- the campaign system. But I don't v when.

s there a way for government to re- s the rise in income inequality?
Eliminate the welfare state. The est single factor in the rise of in- lity is the collapse of the educa- l system and the rise of anti-en- reneurial, anti-property-acquiring and regulations, and anti-family, uctive rules, which collectively strip poor of their chance to be true ricans.

re you concerned that Americans nore protectionist than they used ?
They're not more protectionist, re more scared. They believe the l economy is a fact. They just don't a clue what we should do about it. [Patrick] Buchanan wing of America is pretty narrow. It won't be if the economy decays radically. You could have a [French rightist politician Jean-Marie] Le Pen movement in this country if you have a bad economy and bad leadership.

Q: *Would you support Buchanan if he were the GOP nominee?*
A: I'm not entertaining that question.

Q: *How do you explain the fact that at the same time you say your vision is taking hold, the President's popularity is rising?*
A: It's true he has risen into the doldrums. But "strong" is Eisenhower, Reagan, Bush at 70%. I don't regard getting to 54% as terrifying. This is a President who always improves his ratings every time he hides.

Q: *Why are your negatives so high?*
A: It's very hard to be a successful revolutionary and not have a large number of people think the things you're doing are not appropriate. Combine with that the transition from being a very partisan Minority Whip to the leader of the House and a national figure. I had unrelentingly negative press. And then, I did some things very clumsily.

Q: *Such as?*
A: One was the $4 million book contract. If I had said from day one, "I can't consider that kind of contract, I'll take $1," we'd have had 90% less flak. And I should have not talked honestly to reporters on Election Night about my analysis of Clinton. It is not the job of the leader of the alternative party. And I probably shouldn't have done daily press briefings. Given the nature of the Washington press corps, they are inherently adversarial sessions.

Q: *Is the current GOP field a strong group?*
A: It's a field that's going to beat Clinton. Any of the major players could.

Q: *Would it be easier to implement your vision if you were President?*
A: Sure. If you waved a wand tomorrow morning—I think that would be cool. First of all, in the current competition for defining where we're going, I'm doing fine. You look at the last six months and tell me which of the two offices [the White House or the Speaker's office] has been more effective. I don't have a clue as to how you'd do what I do in terms of educational leadership, and as Speaker, and run for President at this point in my life.

Q: *Do you foresee any circumstances under which you would run?*
A: Sure. Seven million people show up Tuesday morning with a draft petition and beg me. Even Eisenhower came back from Paris. I don't have any compulsive urge to run for President.

Q: *So why are you headed to New Hampshire on June 9?*
A: There are two ways to look at this. One is that this is a good way to cover your bet. The other is, assume for a minute that I have no intention at all of running, that I really want to shape the debate. Where would you go to maximize the impact of what we're saying? Des Moines and Manchester.

Q: *What is the most important thing you learned in your first months in power?*
A: The key is leading the culture, not leading the government. Because if you change the direction of the entire dialogue, everything else falls in place behind it.

Q: *What's the biggest risk to your agenda?*
A: This is very, very hard. I worry that the number of smart things that we have to do simultaneously over the next year—and the number of dumb things we have to avoid—is so large that sheer exhaustion will break us.

FOREIGN POLICY

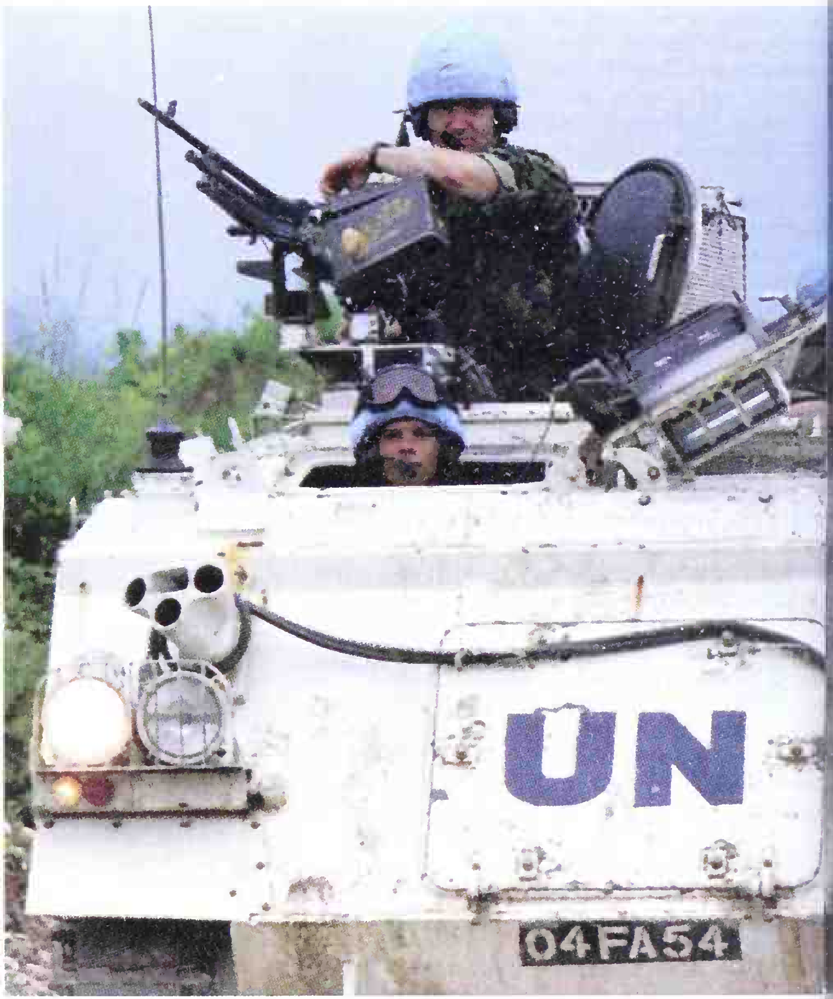
BILL CLINTON'S WORLD OF TROUBLE

From China to Bosnia to Japan, the President's foreign policy is drawing flak

The Foreign Policy President? Not Bill Clinton. He came into office determined to tackle America's domestic problems. Even after Republicans won control of the Congress in 1994, foreign policy remained largely a sideshow to high-stakes political battles over fiscal and social policy being waged from both ends of Pennsylvania Avenue. Now, suddenly, with disputes flaring up in Asia and Europe, the world stage is looking treacherous for Clinton. The question: Can the President maneuver deftly enough to defuse the spiraling crises?

It has been open season on Clinton's handling of world affairs ever since his controversial Moscow summit with Russian President Boris Yeltsin in early May. Clinton made a rookie error: He raised expectations for the meeting, then came home empty-handed. Such muffed maneuvers have become standard, critics carp. After three years in office, the Clinton team still operates ad hoc, often failing to win international backing for its initiatives. "We're always too ramshackle, we've never been smooth," admits Raymond G. H. Seitz, former U. S. Ambassador to Britain.

TAIWAN FLIP-FLOP. That's glaringly obvious as troubles break out around the globe. China, incensed at Clinton's last-minute decision in May to allow Taiwanese President Lee Teng-hui to visit the U. S., has abruptly halted all high-level military exchanges with the U. S. Many China watchers fear Beijing will retaliate further by reneging on pledges to curb missile sales. Clinton's flip-flop, coming after months of insisting Lee wasn't welcome in the U. S., possibly could even cost U. S. companies some juicy contracts in the booming markets of the Middle Kingdom. "We're waiting for the other shoe to drop," says Thomas D. Gorman, chairman of the American Chamber of Commerce in Hong Kong and president of CCI Asia-Pacific, a Hong Kong-based publisher.



The economic stakes are even higher in America's acrimonious dispute with Japan over autos and auto parts. A full-blown trade war could erupt on June 28, when sky-high U. S. tariffs on impo
Japanese luxury cars are set to go
effect. Trade hands are counting on
usual eleventh-hour compromise to a
disaster, and there are rumors of
newed talks. Still, neither side se
willing to blink.

As if that weren't enough, telev

Too often, the Administration launches new policies without shoring up international support ges of French and British soldiers ned to Serbian military installations Bosnia illuminate the lack of cred- U.S. leadership. Washington has n in the awkward position of urging strikes on Serb strongholds without g willing to put U.S. troops at risk. in a May 31 speech, Clinton for the time said he would consider dis- hing ground forces to Bosnia to help eploy or rescue U.N. peacekeepers.

-TOUGH TACTICS. For Clinton, all amounts to a sudden comedown. l Bosnia, his Administration seemed e finding its foreign policy footing af- a series of blunders early on. Last U.S. troops restored Haitian President Jean-Bertrand Aristide to power out firing a shot. U.S. trade nego- 's blunted China's bid for easy en- nto the new World Trade Organiza- and signed an accord with Beijing strengthens Chinese protection of ican intellectual property rights. the President's get-tough tactics Japan are playing to mostly favor- reviews in U.S. business circles— ould yet prove a shrewd gamble. d, top U.S. and Japanese officials alks may resume in mid-June.

t even on Japan, a combination of factors still could trip Clinton up. These days, economic muscle often counts for more than military might. Yet Uncle Sam is broke. That has emboldened Japanese officials to dig in their heels against U.S. demands that Tokyo open up its auto market. Years of writing fat foreign aid checks to its neighbors assures Japan of strong Asian backing for its stance. And having failed to muster European support in advance, Washington finds itself on the losing side of the global public-relations battle.

On Capitol Hill, wholesale micromanagement of foreign policy isn't making the President's job any easier. Take the furor over Taiwan, which China regards as a renegade province. A bipartisan coalition of lawmakers threatened to rewrite immigration laws to let Lee into the country unless Clinton granted him a visa. The President reluctantly acquiesced—blaming Congress for making him do it.

Similarly, draconian legislation championed by Senator Alfonse D'Amato (R-N. Y.) drove the Clintonites to impose a broad trade ban on Iran, to the consternation of the Europeans and Japanese. And many GOP critics of Clinton's Bosnia policy are calling for congressional restraints on further U.S. action, even though they once howled for punitive air strikes on Serb strongholds.

Many in Congress want to go much further in crimping Clinton's ability to act decisively overseas. Pending foreign affairs bills in the House and Senate include provisions that slash foreign aid, direct the President to appoint an envoy to Tibet, and deny visas to foreigners who do business with Cuba. "It's a broad-brush assault on the President's conduct of foreign policy and his foreign policy agenda," says Arnold Kanter, senior associate at the Forum for International Policy in Washington and a top State Dept. official in the Bush Administration.

The Clintonites wouldn't be in such hot water if they had more of a gift for mapping strategy. Case in point: Taiwan. The groundswell of domestic political support for Lee's visit should have been obvious to Administration policymakers months earlier. But U.S. officials failed to prepare the Chinese and did not wring concessions from Taiwan or Congress for their policy flip-flop.

Too often, Clinton launches foreign policies without thinking them through or shoring up international support. For instance, hostage-taking by the Serbs was a predictable consequence of the NATO air attacks in Bosnia. Yet as the leading proponent of using airpower, the Administration didn't have a fallback plan. "Clinton has caused problems for himself and the U.S. by failing to have a consistent plan of action that thinks two or three steps ahead," says former State Dept. policymaker Robert B. Zoellick.

Clinton will get a chance to redeem himself at a summit of the leaders of the seven major industrial countries that starts June 15 in Halifax, Nova Scotia. Bosnia seems sure to be on the agenda. And the President will have a chance to press Japan yet again on its auto market. Getting bogged down in such issues is the last thing Clinton needs as he girds for budget and welfare-reform battles with Congress. But he knows he must do a better job in dealing with them. The global stakes are too high for him to remain just the Domestic Policy President.

U.S. Foreign Policy: Where Sparks Are Flying

CHINA	A yearlong U.S. bid to nurture economic and security ties with Beijing could be derailed by Chinese ire over Clinton's sudden decision to let Taiwan's President visit the U.S.
JAPAN	Washington is poised to launch a trade war with Tokyo on June 28 if both sides fail to resolve a dispute over autos and auto parts. Negotiations may restart in mid-June.
IRAN	Europe and Japan have rebuffed Clinton's call for a broad embargo on Tehran.
BOSNIA	The American-led policy of using NATO air strikes to halt Serb advances collapsed as Serbs took U.N. peacekeepers hostage, straining U.S.-European relations.

DEALS

'THIS IS JUST THE SECOND INNING OF A NINE-INNING GAME'

Will Kerkorian use Wasserstein to strike a deal with Chrysler?

Is Los Angeles billionaire Kirk Kerkorian scrapping his attempts to take over Chrysler Corp.? At first, that's the way it looked on May 31, when Kerkorian announced that he had withdrawn his $20.5 billion bid for the company. But Kerkorian also announced that he had hired Wasserstein Perella & Co. as his investment banker. And Alex Yemenidjian, Kerkorian's right-hand man, sounds every bit as defiant as the day Kerkorian first made his offer for the auto maker: "We're not going away, this is just the second inning of a nine-inning game," Yemenidjian says. "We're in it for the long haul."

EATON: NO QUARTER

KERKORIAN: NO ALLIES

SALES JOB Eaton has convinced the Street that using Chrysler's $7.3 billion cash hoard for a buyout would be a serious mistake

Bluff? Bluster? Or is Kerkorian getting ready for another gambit? Kerkorian's troops contend it's a case of the latter: They say they're still sounding out potential partners and financial sources, including at least one overseas carmaker, and foreign lenders.

Wall Street, which has never embraced Kerkorian's underfinanced $55 a share bid for the nation's third-largest car company, figures Kerkorian may try to use Wasserstein Perella dealmaker Bruce Wasserstein as his emissary to Chrysler Chairman Robert J. Eaton. The goal: to cut a deal to dump Kerkorian's $1.6 billion, 10% stake in Chrysler. "Kerkorian wants to continue conversations with Chrysler, and Wasserstein gives him credibility," says arbitrageur George A. Kellner of Kellner Dileo & Co. "But Kerkorian will have to come up with real backing before anyone is going to pay attention to him." Yemenidjian denies the shares are for sale.

STATE OF FLUX? Sources in the Kerkorian camp say that they're still working on a consent solicitation, which would allow them to directly contact Chrysler's shareholders to oust board members who have so far resisted their overtures. The sources say Yemenidjian has talked with German carmaker Daimler Benz, among others. Wasserstein Perella, meanwhile, will reexplore strategies—everything from a revamped takeover bid to trying to force Chrysler to raise its dividend, which has been doubled, to $2 per share, since December. "We wouldn't take someone on if we felt we were being used as a face-saving device," says Michael Biondi, managing director at Wasserstein. "We know they're in this for the long haul."

The difficulty: Few outsiders believe that Kerkorian ever will mount a credible takeover threat. Daimler Benz and other potential industrial partners deny any interest. Indeed a source close to Chrysler's board claims that in late May Daimler signed a written pledge not to buy Chrysler shares.

Eaton, moreover, has convinced Wall Street and many major shareholders
that using most of the company's
billion cash hoard for a leveraged
out would leave the carmaker dan
ously vulnerable in a downturn. F
bid to succeed now, Kerkorian w
need to double the $3 billion in
tional equity he had planned to
up, says Theodore Shasta, vice-p
dent at Loomis Sayles & Co., a m
shareholder.

Other complications would ma

LOOK WHAT'S NEW AT SEARS HARDWARE!

TOOL TIME: *"Authorized dealers" sell to former Big Book rural customers*

ATEGIES

HERE SEARS ANTS AMERICA TO SHOP NOW

onsumers forsake the mall, it returns to Main Street

hen Earl Jahnke, 78, needs replacement blades for his Sears Craftsman grass trimmer, he drive to the Sears, Roebuck & store at the Hawthorn shopping in Vernon Hills, Ill. Instead, the d plant manager skips the 25-mile and the mall parking hassle and his blades at a local hardware . A lost sale for Sears? Hardly. It the hardware store.

s a major departure from Sears' les-old strategy of locating cavern- eneral-merchandise stores in shopmalls. This year, Sears is opening a of freestanding stores on commer- trips and in small towns. Its think- The number of shoppers visiting has tailed off since 1990, as has construction. "If the company s to grow, we have to look off the ' says Marv Stern, president of Home Group.

SING ROOM. Sears has been playing pieces of such a strategy since when it opened the first of its tanding hardware stores. Now, h, the company says it is fully em- g the new direction. It won't discuss how much it will invest but says it expects to open 50 hardware, 30 furniture, and 80 rural "authorized dealer" stores by yearend. By 2000, it hopes to expand to 500 hardware stores, 250 furniture stores, and 800 dealer outlets.

Such plans are the doing of Arthur C. Martinez, Sears Merchandise Group chief executive. Since taking charge of the division in late 1991, Martinez has renovated hundreds of dated stores and upgraded apparel quality, lifting operating profits to $890 million last year from 1992's $2.9 billion loss. Now, Martinez, who will succeed Edward A. Brennan as company chairman in July, is looking to free up even more space for apparel while finding new avenues of growth.

To do that, the retailer has focused on three new stand-alone chains. One, called Sears Homelife, will sell all of Sears' furniture and mattresses by 1997. Sears also is developing the network of dealer stores featuring appliances, electronics, and home and garden gear to serve the rural areas it largely abandoned when it closed its catalog operation in 1992. And the hardware stores, mainly in urban areas, are aimed at expanding sales of such well-known Sears home-improvement brands as Craftsman tools and Weatherbeater paint.

More store concepts may be on the way. At a May 24 meeting with Wall Street analysts, Martinez said Sears might accelerate the expansion by acquiring a furniture chain—or an auto service chain to complement Sears' mall-based auto business. Analysts applauded the notion. "This [new strategy] has great potential to be a big winner for Sears," says retail consultant Alan Millstein. "Their brand equity is unequaled."

WRENCHES TO GO. Indeed, early results are encouraging. The rural dealer stores are producing average gross sales of over $1 million each in their first year, exceeding expectations. In hardware, Sears says it already has found a lucrative niche by focusing on do-it-yourself home remodelers who want to get in and out of the store quickly. In Columbus, Ohio, where it has opened 10 20,000-square-foot hardware stores in addition to its three full-line stores, Sears claims its home-improvement market share has doubled. All the hardware outlets it has opened in the city are profitable.

Still, the hardware business is hotly competitive, pitting aggressive neighborhood chains such as Tru-Value Hardware and Ace Hardware against the home-improvement behemoths, Home Depot Inc. and Builders Square Inc., which are expanding rapidly into new markets. Sears admits that its furniture stores, meanwhile, haven't been wildly successful: With consumers unwilling to spend consistently on big-ticket items, results of that chain have climbed and dropped with durable-goods cycles.

Which is to say, Sears isn't writing its big department stores off. The retailer says it remains committed to rejuvenating its 800 mall-based stores with better brand-name apparel, cosmetics, and jewelry. And when the spin-off of the Allstate Insurance Group unit is finalized in July, Sears again will be focused purely on retailing, a focus that may be the key part of Martinez' plan. He's proving that in retailing, strategy is more important than scale—and not every sale is made at the mall.

By Susan Chandler in Chicago

ff The all

HARDWARE This year, Sears will open 50 Sears Hardware stores stocking tools, hardware, and garden items. By 2000, it wants 500.

FURNITURE Sears furniture will be sold in Homelife stores. The chain plans to open 30 in 1995 and wants 250 stores by 2000.

SEARS DEALERS Since June, 1993, Sears has opened 301 independently owned rural stores. By 2000, it wants 800.

OMPANY REPORTS

INVESTIGATIONS

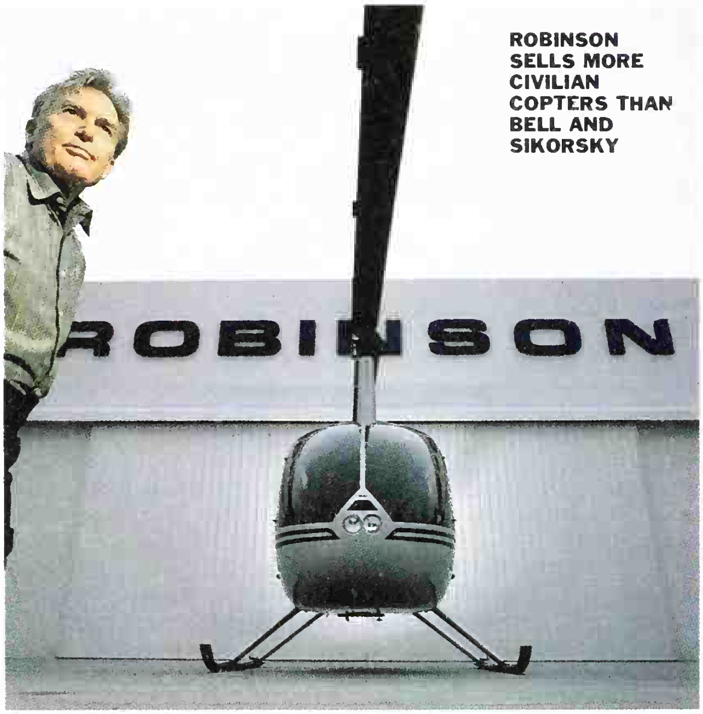
33 CRASHES: DESIGN FLAW OR PILOT ERROR?

The FAA is under pressure to ground Robinson Helicopter

Twenty years ago, Frank D. Robinson was designing helicopters on drafting tables he set up in the living room of his home in Rancho Palos Verdes, Calif. Today, Robinson Helicopter Co., of which he is founder and CEO, produces more civilian choppers than any other maker in the world. Police agencies use the Torrance (Calif.) company's lightweight R-22s for air patrols. Radio stations track traffic with them. Hundreds of executives commute in the two-seaters. Because they're relatively inexpensive—$110,000 each, a fraction of the cost of the bigger models made by rivals Bell Helicopter Textron and Sikorsky Aircraft—8 of 10 flight schools depend on them for pilot training.

But along with the growing popularity of Robinson's aircraft has come a troubling string of crashes. During the past 15 years, 57 people have died in 33 in-flight breakups of Robinson helicopters, according to the National Transportation Safety Board.

The family-run company attributes most of the mishaps to pilot error and inexperience. And the Federal Aviation Administration, which is free to accept or reject recommendations the NTSB makes based on its investigations of accidents, agrees: The agency has consistently refused to ground Robinson copters.



ROBINSON SELLS MORE CIVILIAN COPTERS THAN BELL AND SIKORSKY

Claims by federal investigators that the choppers are faulty are "without any basis in fact," says Robinson

DAVID STRICK

FIGHT OR FLIGHT. On June 6, however, the NTSB board will review a new study of accidents involving the R-22 and its larger cousin, the four-seat R-44. The report's conclusion: The crashes stem from a design flaw. Based on the study, aviation sources predict, the board may renew its call for grounding the helicopters until the company fixes the problem. "The accidents are very similar, and they're still unresolved," says John B. Drake, the NTSB's chief aviation engineer. "We're concerned that we may have more in the future just like them."

An FAA spokesman says the agency hasn't seen the report yet but is still leaning against grounding the 855 Robinson helicopters that fly in the U.S. After the NTSB on Jan. 6 urged the FAA to ground the copters, the agency instead issued an alert, advising pilots not to fly the craft in severe turbulence. Two days later, the FAA made the advisory mandatory, and on Feb. 23 it issued a rule requiring special pilot training for R-22 and R-44 fliers. On May 25, it also issued an order restricting pilots from performing a tricky flying maneuver in Robinson copters.

Frank Robinson argues the FAA is taking the right approach. If NTSB investigators "continue to push that [d flaw] theory, they're doing it wi any basis in fact," he says. Rather ground the helicopters, which he tends have a sound design, the should emphasize "better trainin the part of pilots and more restric on flight instructors." Because his pany has popularized affordable hel ters, it has become a "guinea pig regulators trying to grapple with a trend, Robinson says. Many f schools support his view. Larr Durocher, president of Northeast copters Inc. in Ellington, Conn., pr Robinson copters as among the w safest.

Purchases from such loyal custo pushed Robinson to sal $47 million last year, Frank Robinson says company is profitable. it has attracted NTSB cism almost from its lau In 1982, an R-22 broke midair near Paige, Safety investigators c for the FAA to ground helicopters until cha were made to its rotor tem. The FAA, however, cluded that the R-22 m design requirements an lowed it to keep flying. inson blames the crash pilot error.

STORMY WEATHER. But problems continued. F 1983 to 1994, the NTSB s an additional 32 chop broke up in flight after helicopters' rotor blades the fuselage or tail. And year, R-22s and R-44s v involved in four similar— fatal—crashes, three in rope. The U.S. mishap curred on Sept. 28, whe R-22 piloted by business Robin D. Trogdon, 35 Garner, N.C., broke a shortly after takeoff. Ro son again says the ca was pilot error.

Will the FAA continue to let Robi copters fly? The agency says it's w ing with Robinson on enginee changes to prevent the speed of the tor blades from slowing—a caus many of the accidents. The NTSB, h ever, doubts that will fix the probl It's hoping its report will pressure FAA to take a tougher stand.

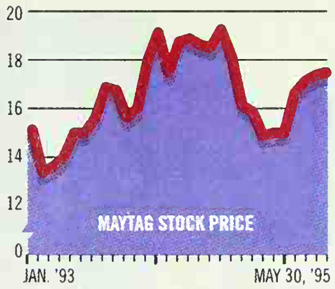
ing a losing unit makes the liance maker buyout bait

ver mistake Chief Executive Leo-
ard A. Hadley for Maytag Corp.'s
'lonely repairman." Since taking
the company's top spot in 1992,
y has poured more than $300 mil-
nto stodgy factories, overhauled
ompany's product line, and re-
rated lackluster marketing efforts.
lay 30, Hadley made his biggest
yet, selling Maytag's loss-plagued
er Europe unit to Italy's Candy
70 million.

fixing so many problems, though,
y may have created another: May-
self may be up for grabs. Shorn of Hoover Europe, some analysts think the company is now an attractive target for a foreign buyer looking to crash the lucrative North American appliance market. Says ex-Hoover Group President Frank Vaughn: "I'm sure there are a lot of companies looking at them."

Indeed, Maytag presents an attractive entrée to the U.S. In Maytag and Jenn-Air, it owns some of the nation's best high-end brands. And last year, its net income rose 189%, to $147.9 million, on sales of $3.4 billion. One Wall Street analyst believes Maytag could be bought by the end of 1995, fetching as much as $3.5 billion. Likely bidders: German appliance maker Bosch-Siemens Hausgeräte, as well as Korean manufacturers Hyundai, Samsung, and LG Group.

SLOSHING AROUND



▲ DOLLARS DATA: BLOOMBERG FINANCIAL MARKETS

Most investors had hoped for a buyer in the early 1990s, when Maytag was floundering. The low point: a promotion that offered British customers, among other premiums, free air travel to the U.S. for a purchase of $375 or more. The deal attracted 200,000 takers, forcing $72.6 million in pretax charges. Two years later, says Raymond A. Perrier, brand-evaluation director for Interbrand Group, "their image still hasn't recovered completely."

That's why nobody cried when Hoover Europe fetched $50 million less than analysts predicted. "It's good the problem is behind them," says Merrill Lynch & Co. appliance-industry analyst Jonathan L. Goldfarb. The problem now: staying independent.

TOLL BROTHERS
HOMESITE
# 24

BOOMERVILLE: *$400,000 buys the cookie-cutter home of your dreams*

Toll Brothers is, in fact, the biggest builder of luxury homes in the U.S. Now, the brothers have begun expanding well beyond their East Coast stronghold by building a modest number of homes in North Carolina, Southern California, and Florida. Texas is next.

Why mess with success by poking around unfamiliar ground? It could be that Toll Brothers is running short of room to grow. Given that new-home sales nationwide fell 2.7% in April, the Tolls are posting respectable results. But after 1993's 44% gain in backlogged orders, their backlog rose just 15% in fiscal 1994. This year, analysts at Montgomery Securities expect it to grow less than 6%—and Chief Executive Robert Toll says traffic and sales are down some 5% in many of his developments.

On its side, Toll has baby boomers—in large quantity. Crows Robert Toll: "The demographics are great for our business." The typical Toll customer, between 35 and 54 years old, comes to the table with a household income of at least $90,000. Like Reginald D. Boone, a 50-year-old self-employed benefits consultant who paid $513,000 in April for a four-bedroom Toll house outside Rockville, Md., such customers haven't backed off big housing buys. "So far, the economy for those people is still fairly strong," says Matthew V. Roswell, a housing analyst at Legg Mason Inc.

CATHEDRAL CEILINGS. The growth of Toll Brothers has a lot to do with sharp, conservative management, too. It scouts out cheap land parcels being unloaded by distressed developers, banks, or other motivated sellers. With low initial outlays, the company can make money on developments of 10 houses or 100. Toll architects borrow ideas from other upscale developments, then incorporate what sells best into a few standard designs. Customers can choose from the basic Federal, the Provincial, or the Chateau, among others, then customize with brick, stucco, or stone facing and a host of add-ons. An additional fireplace goes for $3,400; a master bath complete with a cathedral ceiling and whirlpool costs about $8,500.

Wall Street thinks the Tolls can make their formula work west of the Allegheny River and south of the Chesapeake Bay. With interest rates down again, in fact, Toll shares are up 65% since early December. But finding sites in California isn't as easy as the old days, when the brothers could scoop up parcels just by motoring around New Jersey. Monitoring work a continent away may not be as simple as keeping an eye on the project across town. And gables may not fly in L.A.

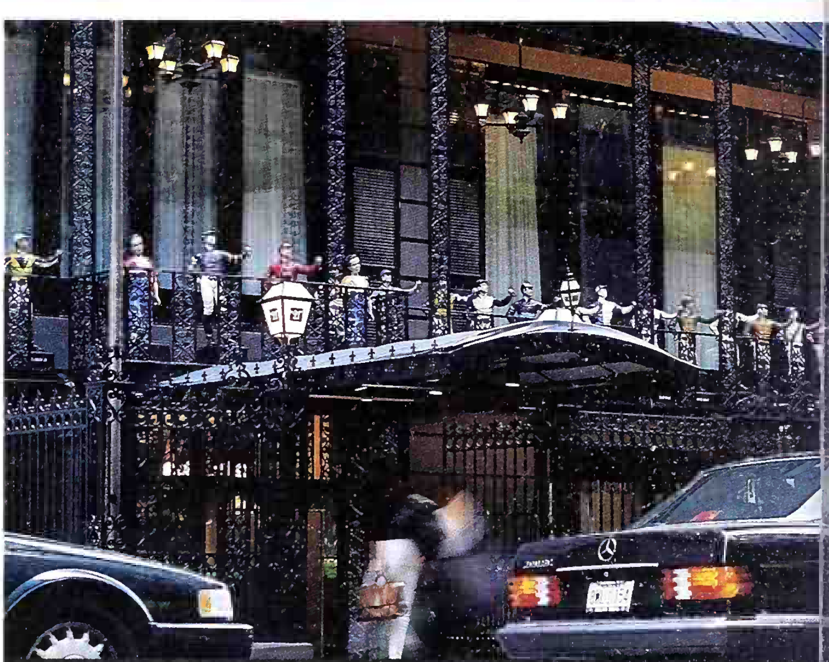
PRICIER THAN THE MENU

Marshall Cogan is selling the '21' Club. Dig deep



KETCHUP IS FREE: *A burger at the famous eatery will set you back $21.50*

Unquestionably, there is an aura to the '21' Club. In 75 years, the former Prohibition-era speakeasy has been the haunt of Humphrey Bogart and F. Scott Fitzgerald, the host to every U.S. President since Franklin D. Roosevelt. In the private-stock area of its musty wine cellar, Elizabeth Taylor's bottle of 1964 Chateau Lafite-Rothschild rests just above Ivan Boesky's favorite red. And its famous hamburger is priced at $21.50—though fries are included.

Little wonder, then, that word on May 24 of the '21' Club's impending sale drew hushed, shocked murmurs in New York's corridors of power. Or less hushed: "Vegas Bigs Eyeing N.Y. Eateries," the *New York Post* headline screamed. Yes, New York industrialist, leveraged-buyout specialist, and '21' owner Marshall S. Cogan was looking to deal his restaurant. "I'm fundamentally interested in what's best for '21,'" Cogan says. Several casino operators, including erstwhile Chrysler Corp.-hunter Kirk Kerkorian, were said to be in the hunt.

THE PITCH. Cogan has retained his longtime buddy, New York investment banker Roy L. Furman of Furman Selz Inc., to locate a buyer. Furman's sales pitch, say those he rang up, is direct: The '21' Club posted a profit of close to $2.5 million last year and should do "better" this year. For $40 million, Cogan would sell the property immediately, Furman confided to at least one casino executive in late May.

In truth, '21' is worth far less. It almost certainly is losing money. Associates say Cogan has tried for years to unload the restaurant. And the casinos aren't interested.

Cogan's numbers fail to reflect any debt service on both the $21 million Cogan paid for the restaurant in 1985 and $10 million in subsequent capital improvements. Since Cogan's private investment vehicle, '21' International Holdings Inc., is closely held, he is able to account for the debt elsewhere. Add in the financing costs on both the original purchase and the improvements, and the '21' Club has never turned a profit, say numerous sources inside and outside his operation. A Cogan associate acknowledges that the profit numbers shown potential investors do not include interest but says they fairly reflect the club's operating value.

Cogan, say casino and restaurant operators, bought near the top of the market and badly overpaid. The millions he has spent since to add two state-of-the-art kitchens and to refurbish the historic barroom, they say, likely will never be recouped. "The '21' Club might be worth half what they're asking," says one casino executive who says he was contacted by Furman. "Marshall bought himself a very expensive toy, and now he's stuck with it."

Since the for-sale sign was hung, Cogan's public-relations executives have eagerly passed on rumors that several Las Vegas companies supposedly were eager to buy the club. Cogan's theory:
the right operator—say, a gamin
hotel business—the '21' Club's r
would have immense franchise val

In the new world of communications networks, one word stands for change.

NORTEL

Dramatic changes are reshaping the communications industry. One company is at the forefront of change. Northern Telecom.

Around the globe, customers rely on us to design, build, and integrate the world's most advanced digital communications networks for information, entertainment, and communications.

For the 57,000 employees of Northern Telecom, 1995 is an historic year.

It's our 100th anniversary. For a century we have been helping our customers bring people together through communications.

To mark the occasion we are introducing this new logo – a graphic expression of our worldwide presence and commitment to innovation.

To discover more about **NORTHERN TELECOM** and how communications networks will change our world, call for our annual report at 1-800-4 NORTEL.

ren and your children's
en will always have forests
ch to experience nature.

ciding how best to use the
's land will be debated for
ies. At International Paper,
g the land better than we
it is an environmental and
nic imperative because the
s of our company depends
ch on the health of our
as anything we do.

WHAT WE ARE DOING.

Every year, we invest millions of dollars to find better ways to manage our land.

One result is a new, stronger family of pine trees. Developed through a process of natural selection, it produces more wood per acre over a 25-year growing period. We're planting 50 million of these SuperTree™ seedlings every year. By the year 2000, we'll have 30% more wood fiber growing on our lands than in 1990.

We've entered into partnerships with groups like The Nature Conservancy and The Conservation Fund, in addition to state and federal agencies.

Results? We're the first U.S. company participating in an inventory and protection program with the Department of the Interior's National Biological Survey. We already protect the habitats of 12 federally listed animals and one plant species on our lands. Of the land we own, 96% is available to the public through leasing and other programs for camping, hiking, hunting or boating.

WHAT IT MEANS TO YOU.

Perhaps Theodore Roosevelt said it best: "The nation behaves well if it treats the natural resources as assets which it must turn over to the next generation increased, and not impaired, in value."

With this ad, we're beginning a dialogue that will raise issues and share viewpoints.

To talk further, please call Dr. Sharon Haines, Manager of Natural Resources, at 1-800-455-1046.

In Business This Week

EDITED BY KEITH H. HAMMONDS

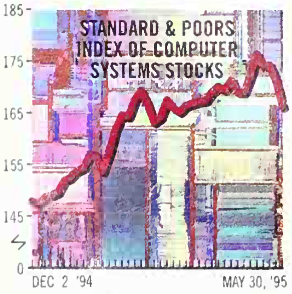
WELCOME TO RECALL COUNTRY

AFTER DROPPING UNTOLD MILlions over the decades to dispel any notion that cigarette smoking is bad for us, Philip Morris is spending a further $200 million to acknowledge a health risk. On May 26, the tobacco giant recalled 8 billion cigarettes after discovering a pesticide and respiratory irritant in some of its filters. One of the largest consumer recalls ever went remarkably well: Philip Morris dispatched 5,000 employees to contain the damage, launched an information campaign in U.S. newspapers, and sent thousands of telegrams to customers. "They did in a weekend what should have taken weeks," marvels Gregg Wellinghoff, president of wholesaler Keilson-Dayton.

CLOSING BELL

SYSTEM CRASH

The eight-month rally in technology stocks hit a wall on May 30. IBM fell big. Microsoft fell bigger. Biggest of all: Semiconductor giant Intel, which dropped 5⅞, to 110⅛, after a 90% runup since Christmas. Why the carnage? "Summer has traditionally been the time demand tends to slow down," says Sanford C. Bernstein analyst Vadim Zlotnikov. And investors fear that shortages of CD-ROMs, memory, and monitors could keep prices high for personal computers and chips.



DATA BLOOMBERG FINANCIAL MARKETS

STEVE BOLJONIS

THE FAA'S FAITH IN BOEING

A COUP FOR BOEING AND ITS president, Philip Condit: On May 30, the Federal Aviation Administration granted unprecedented approval for the company's 777 plane to begin over-water flights without two years of in-service tests. This promises to broaden the immediate market for the 777—and bolster Condit's chance of succeeding CEO Frank Shrontz by yearend. Condit headed the 777 launch, working closely with customers and employing new computer-based design methods and engineering-manufacturing teams. The first 777 arrived on time—May 17.

ICED COFFEE LEARNS NEW TRICKS

LET 1995 BE REMEMBERED AS the year cold, bottled coffee swept America. Or tried to, at least. Coca-Cola and Nestlé Beverage are test-marketing four flavors of Nescafé ready-to-drink iced java in Burlington (Vt.) groceries. PepsiCo, meanwhile, is testing Mazagran, a sparkling coffee drink, in two Santa Monica (Calif.) Starbucks cafés and is planning to try a bottled version this summer. And InterBevNet, based in Dallas, expects to introduce Zydecola, a coffee-cola hybrid, in Louisiana and Texas tests. The limited track record for such products isn't great: "The market is still waiting," says beverage consultant Tom Pirko.

MIGHT ALCATEL FACE A TOTAL REVAMP?

SERGE TCHURUK COULD BE just the guy to take the reins at troubled French telecom giant Alcatel Alsthom. As chief executive of France's Total, he achieved an impressive turnaround in five years, doubling oil and gas revenues while streamlining from top to bottom. At Alcatel, whose board nominated him on May 30 to be CEO, he will assume control of a company whose profits have plunged 40% amid a string of legal scandals. Tchuruk is likely to speed restructuring, wean Alcatel from heavy dependence on cozy government contracts, and devise a new strategy for deregulating markets rapidly.

HEADLINER: JERRE STEAD

SEVERANCE FROM HEAVEN

Nice deal if you can get it: After just five months as chairman of software maker Legent, Jerre Stead stands to collect $15 million. That's the payoff expected from his stock options after Computer Associates' $1.8 billion takeover of Legent, announced on May 25.

It has been a decade of career hopscotch for Stead, 52, known as a charismatic manager. He signed on with Honeywell after college and stayed for 21 years. Next, he spent less than five years as president and chairman of Square D before it was sold in a hostile takeover.

In 1991, he joined AT&T a
devoted four years to tu
ing around that company
telephone-switch business and NCR com
puter unit befo
quitting to he
Legent.

Now what
Stead says he received calls from 14 executive-search firms
the weekend after Legent's sale was announced. But he is deter

Vashington Outlook

TED BY OWEN ULLMANN

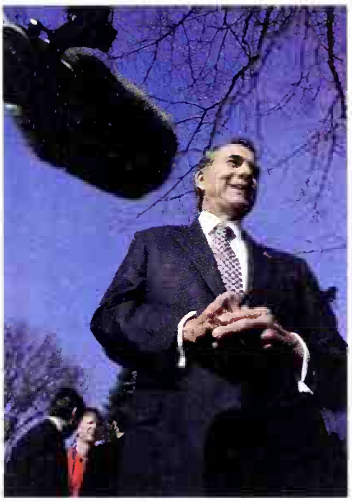
ELECOM REFORM: HE CALL MAY FINALLY GO THROUGH

here are long, winding roads. And then there's the tortuous, obstacle-strewn path toward reform of the nation's communications laws. Five times in 10 years, Congress tried—and failed—to modernize regulation of the rapidly ving business. Each effort sank amid industry squabbles partisan bickering.

ɔ imagine the surprise of regional Bell company execu- s when they visited Capitol Hill recently for a chat with ıte Majority Leader Bob Dole (R-Kan.). ꜝ didn't just promise to bring telecom re- ı to the floor the week of June 5, he con- ıtly predicted final passage of a bipartisan ɔromise. "The prevailing feeling was that is the year it's going to happen," recalls ꜝritech CEO Richard C. Notebaert.

PROMISE. Wishful thinking? Not really. ough a few boulders still block the way, yists and congressional leaders are now ng that telecom reform will finally pass. the consequences will be revolutionary he industry and users.

hile a final House-Senate deal still re- ıs to be crafted, the contours of a com- ıise are taking shape. Simply put, it will something for everyone and finesse is- that tanked past bills. For example, ca- ꜝeregulation—long a deal-breaker—would ɔhieved by removing rate regulation on ut basic service. As an offset against ɘs, the Federal Communications Commission would be al- d to clamp down if rates exceed a national average. ıble and long-distance companies would be freed up to ɔete for local phone business, while the Bells would be to offer long-distance service as soon as their local mo- lies are opened to competition. And every TV station d get extra airwave space to offer up to six new chan- —and for a fee could sell new services such as paging.



DOLE: *Speedy action?*

MARK PETERSON/SABA

Timing is crucial. The industry sees the summer as its last chance before the 1996 campaign subsumes serious legislating. That's why a coalition representing cable, broadcasting, cellular providers, and the Bells are calling for speedy Senate action. "It just shows the broad support for reform," says Beverly McKittrick of Citizens for a Sound Economy.

Reform advocates are convinced that once the bill clears the Senate, it's an easy walk. The House version that is expected to pass handily by July deregulates the industry more than the Senate bill, but differences, such as how much to relax ownership limits on TV stations, appear too small to block passage. House Speaker Newt Gingrich (R-Ga.) is an avid backer who believes reform will trigger major job gains. And he's ready to deal, says spokesman Tony Blankley.

But first, Dole's stewardship is vital. He is caught between GOP deregulators and Democrats demanding more consumer protections. Senator Bob Packwood (R-Ore.), for example, wants to water down the FCC's oversight powers, while liberal Senator Paul D. Wellstone (D-Minn.) is complicating matters by tacking on lobbying reform. Dole, who has delayed a final vote until a compromise surfaced, thinks he has the votes. And the Bells, who scuttled a 1994 bill, are solidly with him. "Dole is as anxious as we are," says Phillip Quigley, CEO of Pacific Telesis Group.

The last roadblock is the White House, which wants more FCC powers to halt rate gouging and covets a bigger role for the Justice Dept. in deciding when the Bells can enter long distance. But President Clinton is unlikely to stall the legislation, aides say. "He might be willing to swallow hard if it's close to what we want," admits one. And for pilgrims on the path to telecom reform, therein lies the highway to heaven.

By Mark Lewyn

CAPITAL WRAPUP

WT'S THEIR BUDGET MAN

ʼhich political leader gets the most dit from Corporate America for ing to achieve a balanced budget? ıse Speaker Newt Gingrich (R-), according to a May 19-23 survey ducted for BUSINESS WEEK by ıis Harris & Associates. Gingrich "excellent" or "pretty good" ꜝks from 65% of 408 senior executꜝs polled. Next came Senate Ma- ty Leader Bob Dole (R-Kan.) at ɔ, followed by Texas Senator Phil mm (38%), California Governor Pete Wilson (22%), and Texas billionaire Ross Perot (16%). Last of six politicians listed on the survey: President Clinton. Just 11% gave him positive grades, while 88% rated him as "only fair" or "poor."

The executives were also upbeat about the payoff of a balanced budget. Ninety-three percent believe the dollar would strengthen, 84% expect interest rates to fall, 81% predict the U.S. would be more competitive overseas and would attract additional foreign investment, 74% think their companies would be more prosperous, and 71% anticipate a rising savings rate. Still, the managers fret about potential downside effects of a balanced budget: Forty-nine percent said it could increase the risk of recession, 42% worried that steep spending cuts might ax many worthwhile programs, and 42% acknowledged that the cuts could have a disproportionate impact on the poor, elderly, and disadvantaged.

Would they support Medicare savings? By 4 to 1 the execs endorsed managed care, tax-deferred medical savings accounts, and higher out-of-pocket expenses for wealthy seniors.

SOUTH AFRICA

DOING WORSE BY DOING GOOD?

U.S. companies that pulled out over apartheid are behind

Simon Steward's Chase Manhattan Bank led many U.S. banks in deciding not to renew loans to South Africa in 1985. The resulting debt crisis helped push apartheid toward its demise, setting the stage for Nelson Mandela's election in April, 1994.

But that hasn't helped Chase reestablish itself in the new South Africa. One day recently, Steward met with a white senior member of the black-led government on the golf course. "Oh, you," said the politician. "You're the ones who pulled the trigger." The comment stung because, even though political power may have shifted to a black majority, "the government doesn't give us business," says Steward, the bank's regional director for southern Africa. The economy remains firmly controlled by white powers-that-still-are.

SEE NO EVIL. A virtual Who's Who of American companies and banks are setting up shop or expanding in South Africa these days. They're attracted by a $122 billion economy growing at a solid 3% rate, as well as by the country's relatively First World banking, telecommunications, and transport infrastructure.

But companies that heeded the anti-apartheid movement's call to divest aren't getting a leg up. It's not just white Afrikaner resentment. Even Mandela's African National Congress, which dominates the government, isn't rewarding those that helped it win power. Morgan Stanley & Co. representative Beth Nandel says companies find their sanctions-era boycotts are "a throwaway line" at best. "You can mention not being here when you see an ANC person in government," she says. "But from a practical business standpoint, you are behind."

The new government says it doesn't want to show favoritism because it is bent on shedding the past inclinations toward socialism and nationalization that made the white corporate sector so jittery. "We cannot turn the clock back," says Alan Hirsch, the Trade, Industry & Tourism Ministry's foreign-investment strategist. "There is no way we can now penalize those companies that defied sanctions. It would be dangerous for us to interfere."

So as ironic as it may be, the more fully a U.S. company pulled out, the more difficult a time it is likely to have coming back in. Some, such as McDonald's, Toys 'R' Us, and Victoria's Secret, lost the rights to their trademarks, which have been usurped by local competitors. In other cases, competitors from Europe and Asia took advantage of U.S. departures to entrench themselves in relationships in South Africa's insular corporate community.

Eastman Kodak Co., the market leader in most photographic products when it pulled out in 1987, is now just a "startup company," says Managing Director Jay C. Smith. AT&T South Africa President Franklin Coleman also describes his operation as a "startup," and so does Monwabisi Fandeso, president of PepsiCo Inc.'s new franchise.

STARTUP: *Pepsi found that Coke spent years locking in suppliers*

> Mandela's government says it can't favor the companies that helped it win power

In all, 209 U.S. companies sold or closed their South African operations, leaving 104 in the country at the nadir in 1991, according to Investor Responsibility Research Center in Washington. But since President Bush lifted the prohibitions on investment in 1991, the number of U.S. companies with direct links has risen to 208, says the IRRC.

As it reenters, Apple Computer Inc. is at a particular disadvantage with respect to IBM, which maintained a b ness presence. These days, the respo to Apple is not always warm beca the company is perceived as hav abandoned its customers. "We thin was the right thing, but there is question that it cost us market sha says Apple General Manager Cha Proudfoot. He says rivals and their compatible systems hav "virtual stranglehold" in personal-computer marke

The way IBM remaine South Africa without alie ing U.S. shareholders wa divest its subsidiary int entity called Information vices Group (ISG) in 1987 made IBM's full product available. Managing Dire Willie Scholtz says there an arm's-length relation because local executives were cut from IBM's cutting-edge technology.

But the connection allowed IB make a rapid and complete reentr paying $260 million to buy back a 5 share. With $414 million in busines South Africa in 1994, IBM already jumped to the head of the IRRC's li U.S. companies by sales. With s growing at a heady 20%, IBM has op a headquarters in suburban Johan

en American giants such as AT&T
phill battles in trying to crack the
m-equipment market. The company will bid to provide 1 million phone lines to previously unserved or underserved regions. But competitors, including Germany's Siemens and France's Alcatel Alsthom, have longstanding relationships with South African buyers, some cemented by 15-year contracts.

DUG IN. In contrast, some American companies maintained a full presence in South Africa. Ingersoll-Rand Co., a maker of mining equipment, never altered its corporate structure despite 17 years of divestment initiatives. When the ANC government took over, Bill Mallory, Ingersoll's local CEO and president of the American Chamber of Commerce, wondered if the new government might create problems for his company. Far from it, judging from the success he has had with state-backed companies. "Our customer base has been extremely positive that we made the effort and sacrifice to stay and continue to support them," said Mallory. Now, Ingersoll-Rand is well situated to make the most of South Africa's new rapport with its African neighbors. Exports make up 35% of the unit's $48 million sales.

There are exceptions to the pattern of rewards for those who stayed vs. difficulties for those who left. One is Compaq Computer Corp., which was absent for several years but now says it is achieving "aggressive growth." And there is optimism that South African markets will open to U.S. products, particularly high-tech ones. "South Africans relate to American technology," says IBM's Scholtz. "Often, people travel to America and say: 'Why don't we have this?'"

American TV shows, filled with free advertising for U.S. brands, have been a window to the world for a country in isolation. And with South Africa "in a state where it needs all the foreign investment and job creation it can muster up," says AT&T's Coleman, "they cannot afford to offend any company."

So it is likely that American companies will make continued inroads. The U.S. already has reestablished itself as the country with the largest number of companies operating in South Africa, edging out the British and Germans. In trade, the U.S. regained its pre-sanctions position as South Africa's top trading partner in 1994, with two-way trade valued at $4.7 billion, just edging Germany's $4.67 billion, according to the South African Foreign Trade Office. Britain was third, and Japan was fourth.

But the way the Americans will compete won't be by talking about their anti-apartheid efforts. Reg Lascaris, whose advertising agency managed the ANC's 1994 election campaign, says "people are saying: 'Forget the past. Show us the future.'" That's precisely what more and more U.S. companies are trying to do.

MEXICO

PULLING THE BANKS FROM THE RUBBLE

Will sell-offs and consolidations save Mexico's system?

On May 29, a quiet revolution occurred. Spain's Banco Bilbao Vizcaya agreed to pay $350 million to buy 70% of a troubled Mexico City bank, Mercantil Probursa. The Spanish institution will be the first foreign financial group to gain control of a Mexican bank. What's more, the Mexican government is swallowing $780 million in bad loans to make sure it doesn't have to pay even more to bail out Probursa later.

Probursa is one of many Mexican banks that have landed in hot water because of the country's economic crisis. Just four years after Mexico raised $13.5 billion by privatizing 18 state-run banks, at least half of them are back on the dole—big time. The government has already ponied up a total of $6.2 billion to shore up the banks and pay off dollar-denominated certificates of deposit. Now, it is introducing an $11 billion program to restructure the loans that can't be paid off at today's astronomical 60% rates.

Impressive as these sums sound, they may not be enough to fix the bad-loan problems. Moreover, the government knows that these are just Band-Aid measures designed to get the banks through the immediate crisis. It is now recognized that indiscriminate lending and failure to streamline operations have contributed almost as much to the banks' problems as the peso
sis. Finance Secretary Guille
Ortiz is determined to fix
banking mess by introducing
eign competition and pushing
banks to seek foreign partr
or consolidate. Says Ferna
Borja, the Finance Secretar
director of commercial bank
"We are going to see a com
restructuring of the banking
tem [this year]."

NOT ENOUGH MUSCLE. T

at a discount, possibly with the help of American investment banks. "The government is willing to enter into loss-sharing with buyers," says Javier Gavito Mohar, vice-president of the National Banking & Securities Commission.

The government seems willing to cut sweet deals to entice foreign buyers, which can now buy up to 100% of all but the three largest banks. Still, while some European and Canadian banks are reported to be checking out properties, most U. S. banks say they prefer to open their own subsidiaries to focus narrowly on corporate lending, private banking, and peso trading rather than retail banking and other activities. "They're living in a fantasyland if they think foreign banks are tripping over themselves to get into Mexico by buying Mexican banks," says John Donnelly, head of Chemical Banking Corp.'s Mexican subsidiary. Jittery Mexicans are flocking to the nine foreign subsidiaries that have already opened and are paying high premiums for scarce funds.

BACKLASH. The government believes that more competition will help rather than hurt Mexican banks—by forcing them to modernize quickly. Officials are also encouraging several Mexican banks to merge operations.

Stronger banks such as Banamex and Bancomer reported earnings better than expected in the first quarter, but they are still scrambling. Banamex, whose earnings dropped 35% from the previous year, cut 15% of its workforce in the first quarter. "The market took the [earnings] news well because it expected them to be much lower," says Banamex CEO Roberto Hernández. "But that doesn't mean they were good."

Even these banks are worried about a growing popular backlash against banks. Thousands of debtors have joined forces in a movement called Barzón, which demands relief from punishing interest rates. Barzón demonstrators—the organization claims it has a membership of 700,000 small-business owners and farmers—have staged countrywide protests that forced some of the banks to shut their doors.

Recognizing the big political risk that such problems pose, President Ernesto Zedillo Ponce de León's chief political minister, Esteban Moctezuma, recently ordered each of the 32 states to set up offices to help debtors negotiate debt relief. It seems likely that the Mexican government will have its hands full with the banking crisis for months to come.

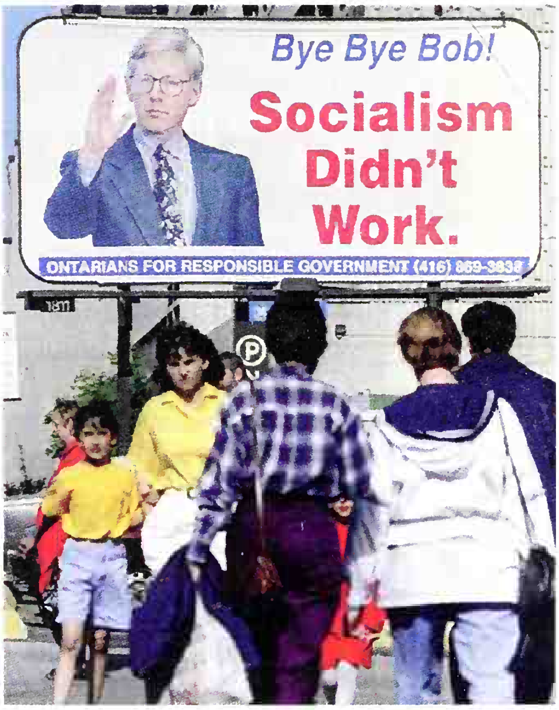
CANADA

SO MUCH FOR SOCIALISM

Voters are mad as hell at Ontario's leftist Premier

Canadian businessman Bill Ross is on a political crusade. The president of Form & Build Inc., a 30-person masonry-supply business in London, Ont., Ross is leading a group of 850 small-business owners determined to defeat Ontario Premier Robert Rae in June 8 provincial elections. "Everything Rae has done has been antibusiness," Ross argues.



BIG FLOP: *Joblessness, deficits, and taxes are up*

MIKE BLAKE / REUTE

In a province that accounts for more than half of Canada's trade with the U. S., Ontario's political debate is echoing the conservative revolution across the border. Voters have soured on Rae, whom they blame for lavish spending, high taxes, and a dismal job market. Since 1990, when Rae's New Democratic Party won with less than 40% of the vote, unemployment has risen to 8.7%, up from 5.3%. Huge deficits have doubled Ontario's debt load. With $72 billion in debt, "Ontario is the world's largest nonsovereign borrower," says Brian Neysmith, President of Canadian Bond Rating Service.

Rae's problems stem in part from a luck. As he took office in 1990, On was plunging into its worst reces of the postwar era. Manufacturers restructuring to compete in the ex ed market created by the 1989 trade agreement with the U. S. By some 300,000 jobs had been wiped

Business argues that Rae's pol have compounded these problems. I nearly five years in power, the we rolls have roughly doubled, to 1.3 mi Ontario's benefits are far more gene than those of other provinces. helped spending soar to $5 billion times higher than at the end of the fiscal year. To pay for it, Rae impose largest tax increases in Ontario his jacking the marginal income tax ra 53%, from 48%. Even so, Rae adde average of $730 million a month t province's debt load.

Business leaders are incensed by Rae's labor cies. One measure ma far easier for unions to nize companies, while ning the use of replace workers. Rae has still a ated many union lea Two of Canada's lar unions, angered by 1993 decision to cut gov ment workers' wages by won't endorse him.

HARD RIGHT. Rae argues wage cuts were necessa keep the deficit from s ing even further out of trol. He also warns that spending cuts advocate his opponents would "c a more punitive and m spirited society." That convincing many vo Rae's NDP could end up fewer than 10 seats in 130-seat Parliament, pre pollster Angus Reid.

The climate has he the Progressive Conservatives, le Mike Harris, a burly former golf Although the Liberal Party, under McLeod, a 53-year-old clinical psyc gist, also promises to balance the get, Harris is espousing a far more matic shift to the right. His plat includes a 30% income tax cut, a reduction in spending apart from h care, and a "workfare" program.

That might slow the growth of tario's debt. But whoever is elected face a daunting challenge. The v may get rid of Rae, but his legacy haunt Ontario for years to come.

COMMENTARY

By Brian Bremner

WHEN WILL JAPAN SET THE BANKS FREE?

Moody's Investors Service Inc. jangled a few nerves recently when it blasted the way that Japan's Ministry of Finance (MOF) is handling the nation's long-running banking crisis. At a meeting in the Ministry's six-story fortress, MOF officials lit into Moody's analysts, suggesting their methods aren't up to snuff. "Moody's should do more research," said a member of MOF's banking bureau.

国際金融局次長

DEPUTY DIRECTOR-GENERAL
OF INTERNATIONAL FINANCE BUREAU
国際金融局長
MR. T. KATO
DIRECTOR-GENERAL
OF INTERNATIONAL FINANCE BUREAU

FORTRESS

For years, the Finance Ministry has resisted the massive deregulation necessary to end the banking crisis

CAROLINE PARSONS

Moody's says it stands by its conclusions. But there's little wonder why MOF is edgy. Nearly six years after the bubble economy burst, the nation's top 21 banks still carry at least $550 billion in bad or restructured loans. Loan-loss provisions cover a third of this sum, figures James Capel Pacific Ltd. analyst J. Brian Waterhouse. Worse yet, the Nikkei stock average has fallen 60% from its 1989 peak—and at its current level of about 15,800 is still seen as overvalued. If that were not enough, plummeting property prices, deflation, and the high yen are pushing Japan into recession.

FLOTATION DEVICES? All of this comes as quite a blow to the elite University of Tokyo graduates who run MOF. For decades, these bureaucrats steered immense sums of domestic savings into Japan Inc.'s war chest. Now, they seem more preoccupied with keeping the financial sector above water. Doing so is rapidly draining the nation's wealth. But a lot more wealth may disappear unless the bureaucrats do what they have been unwilling to do so far—launch the massive deregulation and financial makeover necessary to bring the banking crisis to a decisive close.

To be sure, MOF will probably unveil a new bailout package in July. It's likely to include tax breaks on loan write-offs, government land purchases, and permission for banks to sell off bad loans in packages of securities. These measures are long overdue, yet they are also inadequate. The pity is that MOF can do much more.

A colossus, MOF lords over the U. S. equivalents of the Federal Reserve, the Treasury Dept., the Federal Deposit Insurance Corp., and the Office of the Comptroller of the Currency. It also controls Japan's tax system and the national budget. But it's not hard to understand why MOF is dragging its feet. Fully addressing the banking mess will unleash market forces upon Japan's heavily regulated financial sector—and mean "less influence for the Ministry," says Kenichi Takeshita, a director with Nomura Securities Co.

With deregulation sweeping other countries' markets, Japan's financial institutions are demanding more freedom. Brokerages want to sell more derivatives. Banks, which have already been allowed to begin limited trading and underwriting, are angling for even wider access to the securities business.

"DESCENT FROM HEAVEN." Deregulation would also spur consolidation. But fewer banks and brokers will mean fewer highly paid sinecures for retiring MOF officials, a practice known as *amakudari*, or "descent from heaven." Although major banks and brokers have stopped taking on MOF officials in recent years, smaller institutions—many of them merger candidates—continue hiring MOF hands.

Given MOF's ultraconservative spending habits and Japan's lifetime job security compact, it's understandable that bureaucrats are wary of a U. S.-style cleanup that relies on huge public funding and ruthless bank examiners willing to push weak players under. Yet it's difficult to believe that MOF can put off consolidation much longer.

Back in 1991, the Ministry predicted banks' balance sheets would be cleaned up by 1996. To help the banks along, it pushed up the stock market in 1992 and '93 with an estimated $200 billion in public money. Higher stock prices allowed banks to dip into their vast reserves of equities to raise cash. But the maneuver was no more than a stopgap remedy. The stock market is swooning once again. And business failures and bad debts are rising as the high yen and the cost of the Kobe earthquake sap economic strength. As a result, MOF now says the woeful financial sector will need at least five more years to right itself.

With Japanese growth at a standstill, the country can ill afford another five years of financial drag. MOF officials may have to loosen their grip before the entire economy—as well as what's left of their reputation—takes a thrashing.

"So, you're an 'HP' man, huh! I've heard that stands for Higher Prices!"

FIVE REASONS TO BUY TI PRINTERS.

All kidding aside, a lower price is only one of the advantages we have over HP. Here are some others:

S YOU MONEY. Not only do Pro series printers from Texas Instruments cost less to purchase than comparable HP models, longer-lasting toner cartridges and imaging units mean our printers also cost less to operate. All of which makes them a smart investment.

TANDING SUPPORT. Since the purchase of any printer is a rather significant one, we offer a 30-day risk-free trial*. And because we understand that when your printer stops, so does your business, we provide a repair warranty†, complete with door-to-door pick-up service.

LY COMPATIBLE. Every TI laser printer we make comes DOS/Windows/Mac compatible, at no extra charge.

ER PAPER HANDLING. If you like HP's paper handling, you'll appreciate our Pro series printers. They come standard with not one, but two 250-page paper trays.

FRIENDLY. To simplify your life, we offer a convenient feature which allows you to switch automatically between Windows and Mac environments, at no additional charge. And speaking of simple, nothing's easier to set up than a TI printer. Just follow our step-by-step instructional reference card.

Of course, these are just some of the reasons a printer from Texas Instruments is the right solution for your business needs. To learn of others, call us at 1-800-TI-TEXAS, or e-mail us at ti@msg.ti.com for a free brochure. Or print your own literature rom our new Home Page on the Internet (http://www.ti.com).

EDITED BY STANLEY REED

HONG KONG: BEIJING IS ALREADY MUFFLING THE MEDIA

For the past eight years, American cartoonist Larry Feign has enlivened the pages of Hong Kong's *South China Morning Post* with his hard-hitting comic strip *The World of Lily Wong*. Sparing no one, Feign took on both Beijing's autocrats and Hong Kong's ineffectual British governor, Christopher Francis Patten. But recently, Feign was sacked at the *Post*. Editor-in-chief David Armstrong denies that political pressure played a role and says the strip was the victim of a cost-cutting drive—though the paper is one of the world's most profitable. Whatever the reason, Feign's departure has heightened concerns about the fate of Hong Kong's press after the Chinese takeover in 1997.

If such fears are realized, Hong Kong could be a big loser. One of the reasons that so many international business executives have their offices in Hong Kong is to gain access to the flow of vital information on China. But that attraction could fade if Beijing shows little tolerance for negative press coverage. "If the rest of the world begins to perceive Hong Kong as just another Chinese city, then why do business in Hong Kong?" says one Hong Kong economist.

The battle over freedom of the press and information flows that is looming in Hong Kong will probably be played out in one form or another throughout the region. As Asia modernizes, demand is building in the growing middle class for more accurate information and more accountable government. Wide-open access to information is also increasingly essential for business. But moves toward more liberty are threatening to authoritarian governments that worry about losing control.

STIFF CHINESE SENTENCES. Hong Kong seems to be backtracking on what is permissible in public discourse at an inopportune time. Although they still offer less freedom than Hong Kong, the city's rivals for investment and status show signs of opening up. Taiwan, for instance, is experiencing an explosion in independent media. It now has more than 200 cable-TV stations, more than 30 unofficial radio stations, and scores of nongovernment newspapers. Even restrictive Singapore is linking up to the Internet, adding cable-TV channels, and luring foreign broadcasters to set up regi communications hubs.

Of course, Hong Kong hasn't lost the regional media l yet. The Internet is flourishing there, and the colony has Chinese-language newspapers as well as three English-l guage dailies. Outspoken publisher and retailer Jimmy La critic of China's communist leaders, is about to launch *A Daily*, which promises to be a lively new addition.

But at the same time, Beijing is already sending warni by handing out stiff penalties to Hong Kong journal who have fallen into their clutches. For example, Xi Yan reporter for *Ming Pao*, an independent Hong Kong pa received a 12-year prison sentence in 1994 for reveal such supposed "state secrets" as interest-rate changes international gold transactions. Local journalists also Beijing officials contact key editors and publishers, either rectly or through third parties, when they are displea with a story. "My biggest fear is that even be 1997, China imposes its own standards on says Ivan Tong, *Ming Pao*'s deputy editor-in-c and chairman of the Hong Kong Journalists A

Local reporters shouldn't expect much support from H Kong's business tycoons, who have already come to te with China and don't want to upset its leaders. Many anal expressed concern when Malaysian-Chinese billionaire Rol Kuok, who has sizable stakes in China, bought the *Sc China Morning Post* from Rupert Murdoch. Armstrong, h ever, says Kuok doesn't participate in any way in editorial cisions. Last year, Murdoch, owner of Hong Kong-based S TV, removed the BBC, which has angered China with its p ing reports, from Star's northern broadcast range in an ef to expand his satellite-TV business in China.

But China hasn't squeezed the life out of the Hong K press yet. The *Eastern Express*, an English-language d founded in 1994, is interested in hiring Feign. The cart ist says he isn't sure if he wants to stay in Hong Kong. if he does, his strip will serve as a good barometer of p freedoms in these sensitive times.

N TERRITORY." While
barriers bedevil most
U.S. industries, di-
arketers have practi-
a straight shot into
—and little local com-
n. "We consider it
territory," says Wil-
. Dean, managing di-
of San Francisco
g consultant Bruce, Dean and Co. Direct-marketing experts say the industry in Japan is comparable to that in the U.S. 15 years ago. Direct-marketing sales in Japan reached only $18 billion last year, compared with $300 billion in the U.S. American catalogers generated $1.8 billion of those Japanese sales in 1994, up from $1.5 billion a year earlier.

New efforts by some big-name marketers such as L.L. Bean, Lands' End, and Eddie Bauer should accelerate that growth. With sales flattening in the U.S., a boost from Japan is particularly welcome. Lands' End, battered by higher postal and paper prices and sluggish U.S. sales, saw its first-quarter earnings fall 70%. Its 11% sales growth came almost entirely from Britain and Japan. U.S. merchants also like the different demand cycles in Japan. Back-to-school buying, for example, takes place in March.

Even while Japanese retail sales have tanked during the ongoing recession, direct sales are growing at a healthy 5% to 7% annual clip as strapped consumers look for bargains. Social factors, from more working women to an aging population are also fueling demand for mail-order merchandise. When the U.S. Commerce Dept.'s Osaka office offered 125 different catalogs for sale over the winter, Japanese consumers snapped up 300 a day at $2 and $3 each.

SOCCER SCORE. Bit by bit, savvy marketers are training their sights on this lucrative market. They're setting up toll-free 24-hour international phone and fax lines—a plus for customers who are up to 13 hours ahead of U.S. time—and engineering fast turnaround times. Some marketers, such as San Francisco-based accessory company California Gold, employ Japanese-speaking telemarketers in the States. Others, such as Bean, have set up Japanese offices to handle orders, returns, and complaints. Catalogs are changing, too. Many marketers have added Japanese-language inserts with sizing, tariff, and ordering information, while some, such as Lands' End, provide a complete Japanese-language catalog.

It's not just the big guys that are

/HAT TO DO IF
OU'VE GOT ALL
HE INFORMATION
I THE WORLD.

Just when you thought you already had all the data your existing information system could possibly handle, another whole truckload comes along. It doesn't matter why it happens; it happens. You merge. You move to client/server. You decide to add a new application. You grow. Don't worry. Digital's new AlphaServer™ family is arriving right on time. Offering affordable, high-performance solutions to all kinds of companies. From airlines to financial services, architects to retailers. For example, our new AlphaServer 2100 5/250 system is well within most corporate budgets, yet has the power to perform up to 1200 transactions per second.[1] *And our new AlphaServer 8200 and 8400 systems are the only servers that run the new 64-bit fast Oracle7™ database, yielding performance gains that sound like they belong in another century: up to 100 times faster than conventional 32-bit enterprise systems. But then, that's what 64-bit Alpha power is all about. It lets you do things faster and more affordably than 32-bit systems, along with some things 32-bit systems won't let you do at all. Our servers run thousands of applications, including the ones you need the most. All offer the kind of scalability and investment protection that only 64-bit architecture can give you. And all are truly open solutions, so they'll work alongside virtually any of your existing equipment, while giving your entire information system a firm shove into the future. What more can we say except, hold on. For more information, call your Digital business partner or 1-800-DIGITAL. Or reach us via our Internet address: moreinfo@digital.com.*

ND THEN YOU
ET MORE.

ALPHASERVER SYSTEMS

For the workgroup and the enterprise,
offer a wide range of performance:
Transactions per sec. from up to 150 to
3000 · Max. memory: 192MB to 14GB
Max. storage: 10.1GB to 10TB
I/O bandwidth—132 to 1200MB/sec.
SPECint92—1168 to 3411
SPECfp92—1597 to 5125
All support high-availability clusters.

AAO

getting in on the action. Sports Endeavors, a $30 million North Carolina sports cataloger, started prospecting in Japan two years ago and sold $1.5 million worth of soccer equipment there in 1994. "Sales have exploded in the last year," says Alex L. Greene, director of international operations. He says comparable soccer equipment costs 80% to 200% more in Japan. And while Japanese companies take two weeks to deliver an order, he offers express shipping that can get the goods to a Japanese customer in 72 hours.

In fact, U. S. marketers can build in substantial margins and still beat Japanese competitors on price. Even without the 12% increase in the strength of the yen against the dollar since the beginning of the year, Japan's many-layered retail distribution system jacks up the cost in stores.

In addition, Japanese consumers ordering from American companies get a personal exemption on import tariffs of up to 10,000 yen ($115 at the moment) per order, though the average order runs 25,000 yen ($287). Foreign marketers also have an edge when it comes to mailing catalogs. Unbelievably, it costs less to mail across the sea than across Tokyo, though new international rates that take effect in January, 1996, will erase some of that advantage.

PLEASANT SURPRISES. The market's youth and peculiarities require some creativity. Few mailing lists are available. Most magazines are sold on the newsstand, so there are no subscription lists to buy. Companies that have developed their own lists guard them jealously. "In the U. S., companies will exchange and rent lists. In Japan, that's just not the case," says Donna Bhatia, vice-president for marketing at J. Crew Group's Clifford & Wills Inc. The lists that are available are expensive, poorly maintained, and not well-focused. Thus, response rates are a paltry 1%, compared with about 3% in the U. S.

There are pleasant surprises, though. "I'm constantly amazed at what does and doesn't sell here," says Robert Feeley, president of the Japanese subsidiary of Franklin Mint, the $800 million direct marketer of collectibles. "The biggest shock was that we can sell $2,000 pieces of jewelry through newspaper coupons." He says jewelry accounts for roughly 40% of direct marketing sales in Japan, compared with 5% to 8% in the U. S. As long as U. S. marketers keep offering their diamonds and outdoor gear at bargain prices, customers such as Yukio Arai will keep their orders coming.

HEALTH CARE

'ADAM SMITH TO THE ER'

How "pharmaco-economist" Paul Just cuts hospital cost

ALICE Q. HARGRAVE

JUST CAUSE: *"I tend to be something of a crusader"*

As a pharmacy student in the mid-1970s, Paul Just sat mesmerized one day as his professor unveiled a bulky computer. A similar one, the professor explained, was being used to predict President Nixon's response to drug therapy for blood clots in his leg. It could help physicians determine the right dose of the potentially lethal blood-thinner Warfarin. The application of computer technology to pharmacology was in its infancy, and Just was fascinated. "I wondered," he recalls, "what else pharmacists could do like that."

Earlier this year, Just stood before a conference of physicians and hospital administrators in Chicago and revealed the latest answer: a small, high-speed 920 Compaq loaded with software that can evaluate a drug's likely effect on a patient population and assess how the use of various drugs will affect a hospital's bottom line. Just, director of clinical pharmacy progr
for Premier He
Alliance, a coop
tive representing
U. S. hospitals, is
of a new breed
is applying "phar
co-economic" an

Leonard Davis Institute of Health
nomics, says that Just's approac
"simplistic."

TAKING NOTICE. In these austere da
managed care, however, pharmaco-
nomics—previously used by manu
turers trying to demonstrate t
drugs' cost-effectiveness—is grab
the attention of hospital administra
and insurers. Just and his ilk are o
ing hospital bean-counters the evid
they need to influence doctors'
choices. "It's physicians' prescri
practices that drive a hospital's
budget," says Just.

Those expenditures are rising.

anaged-care networks negotiate dis- ts from pharmaceutical companies elp hold drug price inflation below the cost of drugs remains a bitter or hospitals. One reason: Insurers' to eliminate long hospital stays ns that patients who are admitted generally sicker and require more costlier drugs than ever. Pharmacy ets, which now constitute just un- 0% of hospitals' total budgets, are cted to rise to 25% over the next years. Costly new biotech prod- coming to market will help drive ncrease.

unt among Just's boosters Wil er, the director of pharmacy at ral DuPage Hospi- a 370-bed facility de Chicago. Early year, Bruner was to losing his job use of spiraling in the pharmacy, n spends $3.5 mil- a year on drugs. n administrators tened to turn man- ent over to outside cutting specialists, ught Just's help.

ter studying the lary and interview- taffers, Just sug- d some quick fix- applying two drugs lass instead of 10, stance, and switch- atients who could om intravenous to nedications. But his concern was that ling with doctors, harmacy was doing nuch pill-counting ot enough advising.

AT STAKE

If one drug is only 1% more effective than another, yet much more expensive, can its use nonetheless be justified when human lives hang in the balance?

CUT. Take Lovenox, a $25-a-dose thinner used mainly for orthopedic y. Just found that physicians were it for less-invasive treatments for they could choose a less potent Heparin, at only $1.50 a dose— os because blood levels of Hepar- st be more closely monitored. The al has since cut its use of Lovenox ore than 15%. Bruner says that changes will reduce the pharmacy's t by about $500,000 over two

ne of Just's recommendations are controversial. Central DuPage ians have rejected his advice that witch from the clotbusting drug plasminogen activator, or TPA, to a eaper alternative, streptokinase. sed to treat acute heart attacks, 2,500 per dose. A well-publicized trial showed that over 30 days, ery 100 patients treated, it saved one more life than streptokinase, which costs $300 per dose. In mid-April, the Food & Drug Administration ruled that drugmaker Genentech Inc. can promote TPA as "superior" if administered in a particular way.

A 1% difference, Just says, doesn't warrant "putting so much resources into TPA." The University of Pennsylvania's Schwartz disagrees. "One percent may not seem like a large number," he says, "but it's significant when you've saved a life." At issue is a basic shift managed care is making from concern for individuals to concern for groups.

Growing up in Pawtucket, R.I., Just once seemed set on a less contentious career as a drugstore pharmacist. He enjoyed the hours he spent at Bartley's Pharmacy, where he worked part-time. After finishing high school, he majored in pharmacy at Virginia Commonwealth University, then earned his doctorate at Philadelphia College of Pharmacy & Science. A board-certified pharmacotherapy specialist, he joined Premier in 1991 and launched its pharmacoeconomics effort in late 1993.

Throughout his schooling, he says, he was struck by how often doctors were swayed by zealous drug salespeople. "I wanted to become an expert in understanding to a minuscule component how drugs work and how to select proper therapy," he says, "so I could work side by side with physicians to do the best that could be done for patients in a cost-effective way."

Nonetheless, becoming the target of doctors' hostility hasn't fazed him. "Unfortunately, there will always be some physicians who don't want to listen to any alternative approaches," he says. "If given the chance, I usually can overcome some of their resistance." But not among the Theodore Lewers of the world. Lewers gripes that he recently prescribed a kidney medicine only to have his patient's health plan refuse to pay for it. "They forced me to change to one of two drugs on their formulary," Lewers says. "That's not right, and it's not in the best interest of my patient." Perhaps not. But as Paul Just can attest, doctors' orders don't pack the punch they used to.

THE FUTURE

Cover Story

In his pinstriped suit and wire-rimmed glasses, Timothy L. Jones looks every bit the traditional British banker. Sure enough, he has spent a dozen years at National Westminster Bank PLC. But ask Jones what he is doing now, and he responds with an intensity worthy of a Silicon Valley entrepreneur. Leaning across a table, he waxes eloquent about his new enterprise, Mondex, and the future of the product he's selling: a new kind of electronic money.

Mondex, which was launched by NatWest, is not alone: A raft of companies are developing their own forms of electronic money, known as E-cash. E-cash is money that moves along multiple channels largely outside the established network of banks, checks, and paper currency overseen by the Federal Reserve. These channels enable consumers and businesses to send money to each other more cheaply, conveniently, and quickly than through the banking system.

Some of the E-cash players are faceless, dubious outfits that exist in cyberspace and can be traced only to a post-office box—in the physical world. But there are plenty of others, ranging from techno-savvy startups with names such as DigiCash and CyberCash, to corporate icons including Microsoft, Xerox, and Visa. Citicorp is even developing what it calls the Electronic Monetary System, an entire infrastructure for using electronic money to be issued by Citi and other banks.

These companies are part of a mass experiment that could transform the way we think about money. In the process, it could change consumers' financial lives and shake the foundations of global financial systems and even governments.

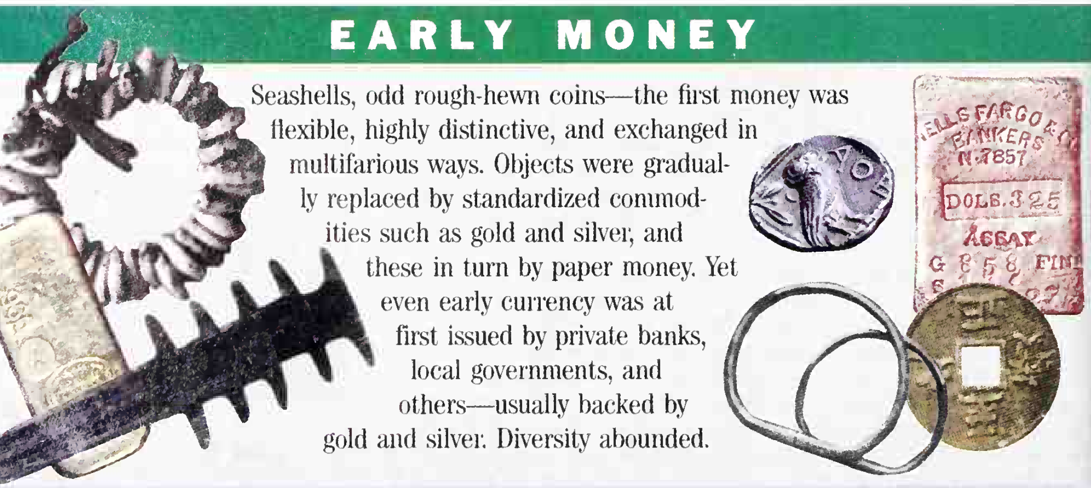
Digital money is the ultimate—and inevitable—medium of exchange for an increasingly wired world. With E-cash, you'll no longer need to carry a wad of bills in your pocket or fumble for exact change. Instead, you might carry a credit-card-size piece of plastic with an embedded microchip that you "load" up with E-money you buy with traditional currency you might store your digital coins and dollars—downlo over phone lines from your bank or other issuer of E-mon on your PC or in an electronic "wallet," a palm-size de used to store and transmit E-money.

This digital money will let you shop online, zapping m to a merchant over the Internet, or perhaps paying for a vie on demand over an interactive-TV network. It also has potential to replace cash and checks for everyday purchas in stores, restaurants, or taxis that accept E-cash. Busin es could also keep a stash of E-cash on hand for buying supplies, or use it to transact directly with each other ins of going through banks and electronic funds transfers.

THE START OF A REVOLUTION. In many ways, E-cash, w can be backed by any currency or other asset, represents biggest revolution in currency since gold replaced co shells. Its diversity and pluralism is perfectly suited to the archic culture of the Internet and the evolving web of works known as the Information Superhighway. "Electr commerce will literally change the way business is worldwide," says James G. Cosgrove, vice-president and eral manager for business multimedia services at AT&T. "V about to see another revolution similar to the Industrial olution." Adds Richard K. Crone, senior manager in the financial-services group at KPMG Peat Marwick: "We're in the beginning stages of the cash-replacement cycle."

But the advent of E-cash raises all sorts of questions, most of which remain unanswered: Who should be allowed to issue E-cash, and who will regulate those issuers? How will taxes be applied in cyberspace, which transcends physical boundaries? Who will set the standards? How do you ensure that payments made over the Net will be secure? How will consumers be protected?

EARLY MONEY



Seashells, odd rough-hewn coins—the first money was flexible, highly distinctive, and exchanged in multifarious ways. Objects were gradually replaced by standardized commodities such as gold and silver, and these in turn by paper money. Yet even early currency was at first issued by private banks, local governments, and others—usually backed by gold and silver. Diversity abounded.

F MONEY

E-cash could transform the world's financial life

w will regulators police money laundering and counterfeit-
on private networks?
Vhile regulators wrestle with these questions, technology
emaking the monetary system. That's what Microsoft CEO
liam H. Gates III had in mind when he bid for personal-fi-
ce software maker Intuit Inc. He saw programs such as
iit's as the gateway that would draw millions of consumers
) his online network where they could pay bills, get finan-
advice, or shop, perhaps paying him for access. But the
tice Dept. worried about Microsoft's reach, and he aban-
ed the deal on May 20.
'ough break, but it will hardly slow Gates down. Microsoft

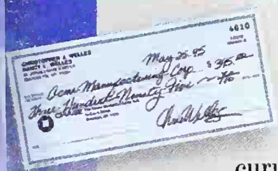
han P. Myhrvold, Microsoft's top advanced-technology
ert, "we're very interested in the area."
hey should be. The stakes are enormous. Seamus McMa-
a vice-president at Booz, Allen & Hamilton, sees as

BANK MONEY



The current money system is largely monolithic. Nearly all major countries have a single system of national currencies and bank checks. Most have elaborate infrastructures built around commercial banks and a central governing body such as the Federal Reserve Board. That entity is usually the only facility allowed to issue money. Perhaps because of their monopoly structures, money systems tend to resist change and innovation. Traders can move millions of dollars around the globe at the touch of a button. But the small check-based transactions of consumers can take days to clear. And chartered airplanes physically transport billions of checks around the country every workday.

100% Gold-Backed
Medium of Exchange

E-cash may be technologically light-years ahead of early money. But in many ways, it is closer to seashells than greenbacks. E-cash is digital money that moves through a multiplicity of networks instead of the current bank system. It comes in lots of guises, is created by lots of individual parties, and is backed by anything constituents demand as an accepted medium of exchange: gold, dollars, yen, whatever. It is the ultimate, and inevitable, currency for the wired world. Competition is intense, producing rapid innovations. Using money downloaded to your PC or a palm-size electronic "wallet," you'll be able to zap money to merchants on the Net—or buy a newspaper faster than you can grab a greenback. If you're a business owner, you can bypass banks and move E-cash directly to customers and suppliers. The advantages: convenience, speed, cost savings. The technology is complex, but to the user, E-cash is as easy as pushing a button.

EARLY MONEY (CLOCKWISE FROM FAR LEFT) PHOTOGRAPHS BY FPG, GABE PALMER/PALMER/KANE/ INC/STOCK MARKET, TED MAHIEU/STOCK MARKET, FPG (2)
PAMELA DEWEY/NATIONAL MUSEUM OF THE AMERICAN INDIAN, FPG, FEDERAL RESERVE BUILDING PHOTOGRAPH BY JEFF SPIELMAN/IMAGE BANK

much as 20% of total household expenditures taking place on the I-way just 10 years from now. If any operation, whether Citicorp or a startup such as Mondex, gained control of a new medium for even part of those exchanges, it would have the opportunity to charge royalties or fees for its use and earn interest on the E-money sitting in its accounts. Even a tiny charge, when applied to millions of transactions, would be highly lucrative.

E-cash could also create a competitive free-for-all. Because the Internet knows no boundaries, a company offering E-money can gain direct access to millions of consumers and businesses—no matter what state or country they are in. "The retail banking market will collapse and give way to global competition," says Eric Hughes, president of Open Financial Networks, a Berkeley (Calif.) consulting firm. "Those [regional] separations don't work on the Internet."

WINNING CONSUMERS' TRUST. Governments' and central banks' control of money flows has already been loosened, as shown by recent currency and market crises in Mexico and elsewhere. But with the growth of E-cash, money could flow in and out of countries at lightning speed without being traced, weakening governments' ability to monitor and tax. "Over the long haul, this is going to lead to the separation of economy and state," declares Bill A. Frezza, president of Wireless Computing Associates and co-founder of the advocacy group DigitaLiberty.

The growth of E-money could also be bad news for banks. If other companies successfully offer their own brand of digital cash, they could bypass banks as primary providers of consumer financial services. The companies, not the banks, might be consumers' first contact when they wanted to obtain some digital money. "Banking is essential to the modern economy, but banks are not," says J. Richard Fredericks, senior managing director at Montgomery Securities.

This could be bad news for banks. What if phone companies offered their own brand of E-money?

Commercial banks are, of course, entrusted with the creation of money through the fractional reserve system. They lend out more than they have on deposit, and they are the only companies authorized o do so. If each unit of E-ca had to be backed by a cor sponding unit of traditional c rency, that would mean th lending out E-cash would t create new money. But if n bank money suppliers star backing just a fraction of th digital cash with traditio money—just as commer banks today keep on hand o a fraction of the deposits their books—nonbanks, wh are largely unregulated, co create money just as comm cial banks do now.

Bankers must move fast keep up. Ronald A. Bra head of electronic banking Chemical Bank, estimates t banks have less than five ye to come up with viable E-m ey products before other players carve out the biggest chu of the market for themselves. "No question, it's for real," s Richard M. Rosenberg, chairman and CEO of BankAmer Corp. In a couple of years, "it will take off fairly dramati ly." The issues now: winning consumers' trust and gett them to change their buying habits.

The first step in that direction could be to get consum used to using credit cards for purchases on the Internet. O that happens, the thinking goes, they may be willing to st using E-cash systems.

One of the first purveyors of a Net credit-card systen First Virtual Holdings, run by onetime celebrity manager l Stein. Stein has launched a relatively simple system using mail that lets consumers use credit cards on the Inter without fear that their account numbers will be misappro

The New World Of E-Cash

THE GOOD

- E-cash is more convenient and flexible than traditional money. It can be used by consumers and businesses, and for everything from buying wares on the Internet to lending a pal five bucks.
- Banks that issue E-cash could find it much cheaper than handling checks and the paper records that accompany traditional money.
- Consumers doing business on the Internet will find some forms of electronic money afford much greater privacy than using ordinary credit cards.

THE BAD

- Uncontrolled growth of E-cash systems could undermine bank- and government-controlled money systems, giving rise to a confusing and inefficient Babel of competing systems.
- E-cash may be less secure than bank money: Money stored on a PC could be lost forever if the system crashes.
- E-cash could foster a have and have-not society: Those with PCs would have ready access to the stuff, while those without, many of them low-income consumers, would not.

AND THE UGLY

- Money laundering and tax evasion could proliferate in stateless E-money systems as criminals use untraceable cyberdollars to hide assets offshore.
- Counterfeiters could create their own personal mints of E-cash that would be indistinguishable from real money.
- If computer hackers or other criminals were to break into E-cash systems, they could instantaneously filch the electronic wealth of thousands or even millions of innocent consumers.

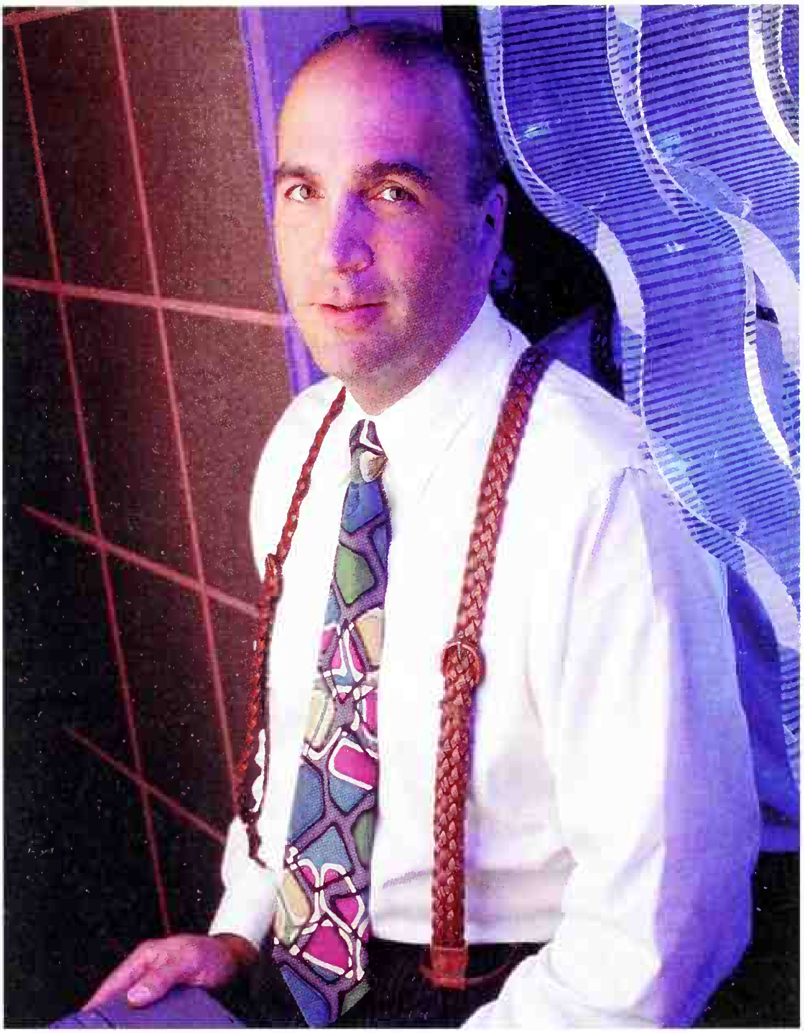
Microsoft a system using encryption technol-
hat they hope will become an industry mod-
Ve want to be sure that the industry as a
e has certain standards," says Carl F. Pasca-
president and CEO of Visa USA. Meanwhile,
erCard has teamed with Netscape Inc., a
r of security and browsing software for the
net, to pursue a similar goal.

SHIRE EXPERIMENT. Credit-card-based sys-
have the advantage of seeming familiar
nsumers. But the card systems don't do
thing cash can: They're not anonymous,
do not work person-to-person, and they
credit limits. They're also not suited for the
roots economy the Internet makes pos-
where any outfit or individual can sell its
s, whether a newsletter or a stock tip.

at's where E-cash comes in. But E-cash
s to be just as secure as credit cards for
e to use it. David Chaum, CEO of pioneer
ash in Amsterdam, has done the most to solve this
em. He has devised a clever system that uses so-called
-key cryptography that, like encryption, makes it pos-
to send sensitive information over the Net. But Chaum's
eakthrough was "blinding" technology, which lets the is-
bank certify an electronic note without tracing whom it
ssued to. The result: Your E-cash, unlike an encrypted
-card transaction, is as anonymous as paper cash.

aum has yet to announce firm deals with companies to
his E-money. But in a pilot, some 5,000 consumers are
of a DigiCash marketplace, using the equivalent of $1
n in E-money to do business with 50 companies, from
lopaedia Britannica Inc. to Ricky's Junk Shop. Chaum's
ology is also at the heart of CAFE, a European Commis-
ponsored project to develop an electronic wallet for
uropean use.

E's setup is similar to Jones's Mondex system. "Imagine
e same as physical money, and you won't be far off," says
Mondex money will be created initially by NatWest
partner, Midland Bank PLC, which will then "sell" it to
ners. The E-money is loaded onto credit-card-size "smart"
with embedded microchips. The cards can be used in
of-sale terminals or fit into electronic wallets that can
transmit money to merchants or—just as with traditional cash but not with credit cards—to other consumers. Mondex money is still in pilot form, but the company has signed up 40,000 consumers and over 1,000 retailers in the Wiltshire town of Swindon to test Mondex money beginning in July.



CREDIT CARDS IN CYBERSPACE

"If you make it simple...people will use it"

— LEE STEIN, CEO, First Virtual Holdings

ROBERT BURROUGHS

CyberCash, too, is experimenting with E-cash in addition to its credit-card-based system. In the E-cash system, consumers will set up E-money accounts at their banks. Then, using proprietary software provided free of charge by CyberCash, they can go about their business on the Net. At the end of the day, CyberCash will clear all the E-money transactions and convert E-cash balances back to dollars.

No matter who develops the best E-cash, consumers and businesses alike stand to reap sizable benefits. No longer will consumers have to wait for change or scurry to automated teller machines for cash—out of sight, they hope, of the nearest mugger. E-cash will let businesses carry out transactions around the world without transferring bank funds—and they will be better able to reach a large population of technologically savvy, often affluent consumers.

Moreover, because E-money is basically software, it can be programmed to do things that paper money could never do. Microsoft's Myhrvold explains that electronic money could be earmarked for special purposes, with conditions on where it can be spent. For example, a business could have an electronic version of petty cash to be used for supplies at an Office Depot—but not a beer at the local tavern. Or parents could wire to a college student E-money that is designated for rent or books. "There will be new forms of smart money and payment systems that can only be done online," says Myhrvold.

Along with the opportunities, though, comes huge uncertainty. Existing monetary regulations don't cover all of the potential uses of E-cash. Nathaniel S. Borenstein, a computer scientist and co-founder of First Virtual, says: "One of the hardest questions merchants ask us is, 'When do we owe taxes?'" That's not a trivial question: With E-money, the merchant could be in Guam and the buyer in Canada, while First Virtual's computers are located in Ohio. So whose sales tax do you pay? Borenstein's advice to merchants: "I tell them to consult a lawyer."

There's also a major potential for crime (page 78). E-money can be easily sent in and out of a country undetected, facilitating money laundering on a grand scale. Tax evasion could become a matter of pushing a button. And without foolproof cryptography, counterfeiters could replicate the series of digits that constitutes E-money. Governments would be hard pressed to monitor or control stateless E-money. "Digital cash is a threat to every government on the planet that wants to manage its currency," says David E. Saxton, executive vice-president of Net1, a startup that has developed a secure way to send electronic checks across the Internet.

BATTLE OF THE LOGOS. Even law-abiding citizens and companies using E-money could be victims of sophisticated hacker attacks. Says Colin Crook, senior technology officer for Citicorp: "We have to assume electronic money will be the subject of sustained attack from all kinds of people."

Another open question—and a large one—is the role of banks in the new electronic world. "E-cash will be offered by both banks and nonbanks," says Chaum. Sure enough, DigiCash or CyberCash could join forces with AT&T or Microsoft just as easily as with Citibank. Having one of those companies dispensing E-cash directly to consumers could do serious damage to banks' main link with their customers.

Even if banks are involved, they could find other players taking center stage. Early entrants to the E-money business could set the operating standards for digital cash. And the nonbanks could even devise systems that would make their the first thing people see. William M. Randle, senior president at Huntington Bancshares, warns that banks become "buttons on a network operated by other entities

Improbable? Not really. Take a look at credit-card pro ing. Twenty years banks owned the transaction-processing ness. Now, close to 80 card transactions are cessed by nonbanks as First Data Resou Inc., says KPMG's Cror

A similar erosion occurred in whole banking, where b have ceded to such o as General Electric I mation Services and tronic Data Systems nearly the entire ma for transferring pay data to corporations, ing themselves the dane, low-margin se of transferring money tween corporations. T says banking consu

Edward E. Furash, although the situation is improving, fewer than 100 banks offer full-service electronic data interchange, as the data part of payments transmission is known. "We should do more of that," says Richard Matteis, head of Chemical Banking Corp.'s Geoserve unit.

Banks have one key advantage: a near lock on consumers' trust when it comes to depositing money. For that reason, many bankers tend to dismiss the threat implicit in E-money. "The reason financial institutions are going to win in the long run is trust," says Kawika Daguio, the American Bankers Assn.'s federal representative on operations and banking. Indeed, many E-cash makers are choosing to partner with banks because of that consumer trust. "We've positioned ourselves to work with the banking industry and make sure that if there are heroes in this, it is the bank," says William N. Melton, CEO of CyberCash.

But Microsoft's bid for Intuit last fall gave bankers a collective scare. And even though the deal did not work out, banks worry that Microsoft could hook its 70 million Windows customers into the electronic-commerce networks at

CALL IT E-MONEY MANAGEMENT

It's a Saturday morning sometime in the not-too-distant future, and you sit down at your PC to do a little end-of-the-month planning. First, you call up the balances from your various accounts—credit-card, checking, savings, and E-cash—and break down your spending by category. Oops, better cut down on those pricey dinners.

Your investments are offsetting some of those expensive habits—at least you hope so. Finding out is as easy as a few clicks of a mouse button, as you call up your investment portfolio. Hmmm, it may be time to get into a more aggressive mutual fund. So you quickly dispatch a software "agent" to rustle up profiles for the top-performing funds. By filling out an online form, you transfer some of your holdings into a hot overseas fund.

Just as technology is revolutionizing money, it is also set to transform the way we manage our money. "Complexity has gotten beyond the level that people can deal with," says Scott D. Cook, the founder and chairman of Intuit Inc. With programs like Quicken, Intuit's best-selling personal-finance software, Cook aims to make that complexity easier to deal with.

"AUTOMATIC AGENTS." Indeed, today's programs for personal-finance management and home banking are giving consumers unprecedented control over their financial life. But this is just the beginning. Gradually, programs are linking users to banks, electronic bill-paying services, and a broad array of vendors of financial advice that is starting to be offered online. Colin Crook, head of technology at Citibank, says software programs will be constantly at work for you, for instance, using information gleaned on the Net to optimize your portfolio. "You're going to hand off your personal affairs in cyberspace to automatic agents who represent you," says Crook.

RICHARD MORGENSTEIN

A QUICKENING PACE

"Complexity has gotten beyond the level that people can deal with"

— SCOTT COOK, Chairman, Intuit Inc.

The competition to supply these services will be heated. Microsoft Corp.'s Bill Gates saw the potential—one reason why he was willing to shell out $2 billion for Intuit. With that deal blocked by the Justice Dept., Microsoft is throwing its considerable resources behind Microsoft Money, a home-grown personal-finance package already offered by Chase Manhattan and others. From Money, Microsoft expects to link customers to a variety of online financial services, including electronic bill-paying. Bank of America and NationsBank recently paid $35 million for Meca Software, which makes Managing Your Money. And Intuit, for its part, has just released new programs for selecting mutual funds and planning for retirement and chi dren's college education.

Expect banks to jump into the fray. They are sitting on a gold min of valuable data: their customers' payment information. The statemen they send out, though, typically offe little value, and consumers' credit-card, checking and savings, and investment accounts are handled separately. "There is an opportunity to consolidate that," says Richard K. Crone, a banking consultant at KPM Peat Marwick.

With so much available to help y manage your financial affairs, someday you may be able to bag those Saturday mornings at the computer and instead just take a long weeker

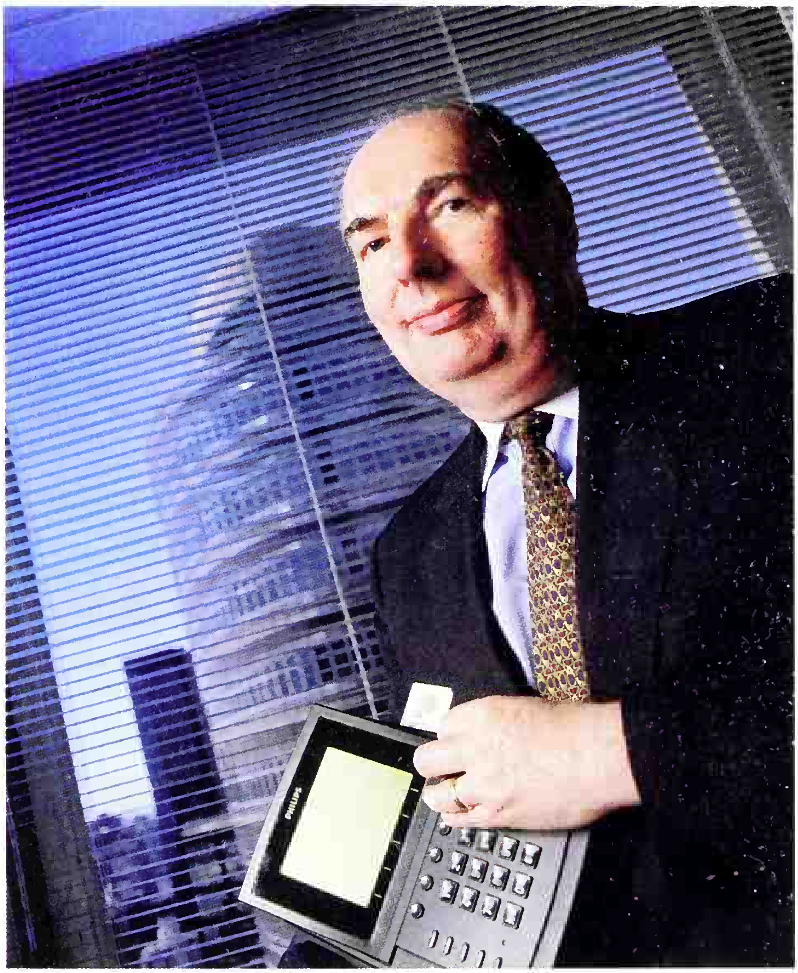
it is developing—with or without banks' help. If Microsoft becomes a utility, "it will take a lot of business from the banks," says Montgomery's Fredericks.

Now several of the biggest banks are pushing hard to develop E-money. Citibank's Electronic Monetary System is one of the most advanced bank offerings, although officials there stress that it is still in development. It would allow retail and business customers of Citi—or any other bank that paid to use Citi's system—to convert money in their accounts to electronic cash. Citi customers would also have access to a credit line they could draw down in E-money, just as they would use a credit card. Banks "should be experimenting," says Sholom Rosen, vice-president for electronic commerce at Citi. "That's what we're doing."

Beside NatWest and Midland, Bankers Trust Co. has a group dedicated to electronic commerce. And even some regional banks see opportunities. There is Wells Fargo's work with CyberCash. First Union Corp., based in Charlotte, N. C., has created an electronic mall for Internet transactions. Even Cardinal Bankshares Inc., a $607 million Lexington (Ky.) bank, on May 24 formed a new subsidiary, Security First Network Bank, which aims to grow into a full-service interactive bank on the Internet. "We'll be a one-branch bank in Kentucky with potential customers all over the U. S.," says CEO James S. Mahan III.

While it's not clear who the players will be 10 or even 5 years from now, it is inevitable that much E-money will originate outside the purview of central banks such as the Federal Reserve or the Bank of England, which are largely responsible for traditional monetary regulation. And that has major policy implications.

To begin with, consumers using the stuff could be extremely vulnerable. When consumers lose their credit cards, they are only liable for the first $50 of charges on the card. But for now at least, if a consumer misplaced, say, a Mondex card, it would be like losing cash. Similarly, if your digital coins are stored on the hard drive of your PC, a system crash could wipe out your electronic savings.



HIP TO HACKERS' HEISTS

Ordinary data processing vs. Unisys information management. Sight vs. insight.

If you need to do data processing, are a lot of companies out there y to take your money. When re done, you may even be able to ess invoices faster. And that's rtant.

ut if you wish that all the mation you collect every day make your company more etitive–and could be used to serve customers better–there's ne real choice: Unisys.

e're the *information management* company. We help companies apply information technology and services to compete effectively and respond with agility to emerging customer needs. That's what we call **CUSTOMERIZE.**

To us, data processing is the beginning of the job, not the end. We're committed to understanding your business and your long-term goals, so we can help you manage information in totally new ways. Which gives you a powerful new strategic weapon.

Sure, we sell information technology and services. But our real business is turning information into management insights that will help you attract and retain customers. And the value of that should be easy for anyone to see.

For more information, or to receive your own "Guide To Information Management" facts kit, reach us on the Internet at http://www.unisys.com/adv or call 1-800-874-8647, ext. 221.

UNISYS

with the advent of E-cash. After a breakfast speech to several hundred business leaders in San Francisco last March, Fed Vice-Chairman Alan Blinder was asked whether the Fed is studying the regulatory issues surrounding digital cash. His answer: "Digital what?" Then, after pausing a moment, he added: "It's literally at the thinking stage."

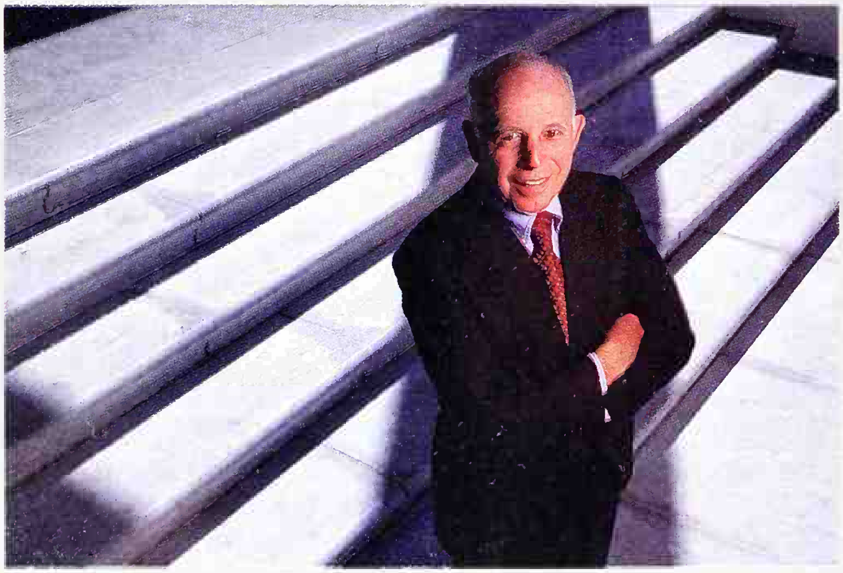
Slowly, though, some regulators are beginning to explore the concept of E-money so they can set policies. The Federal Reserve's payment-systems committee is meeting with Chau DigiCash and other E-money pioneers. State tax collectors looking at the issue of taxing electronic commerce. The Fi cial Crimes Enforcement Network is also weighing in. the White House technology office is taking a big inter

It's not a moment too soon. "There's no going back," DigitaLiberty's Frezza. "The genie's out of the bottle. Internet doesn't have an off switch." And no amount of ing by regulators will change that.

By Kelley Holland and Amy Cortese in New York, bureau reports

PATROLLING THE BLACK HOLES OF CYBERSPACE

At first glance, the offer sounded legitimate. First Bank of the Internet began advertising to Net browsers in March, offering a new way to pay for goods over the Net. By sending First Bank a check for at least $20, cybershoppers would get a Visa automated teller machine card "loaded" with their money—less a hefty 5% commission—which they could then use to obtain cash or pay for their cyberwares.



BARBARA RIES

TANGLES FOR THE TAX MAN

"If you go to a cashless society, it makes it very difficult tracking...reportable income"

— JOHN GIBBONS, President Clinton's top technology adviser

First Bank got numerous inquiries—but it also drew some unwanted scrutiny. State banking regulators warned that it couldn't call itself a bank. The Office of the Comptroller of the Currency sent an advisory to banks and regulators warning them about FBOI. First Bank CEO Vinn K. Beigh, a 34-year-old computer technician in Des Plaines, Ill., says he will soon pull his Net listing. But he is still looking for a way to cash in on the wave of electronic commerce. "There is quite an interest in buying on the Internet," he insists.

He's got that right. First Bank isn't the only upstart trying to cash in on the demand. Consider World Trade Clearinghouse Ltd., which offers a gold-backed cybercurrency with cashlike anonymity that offers "protection from bureaucratic snoops, nasty ex-spouses, and lawsuit-hungry lawyers." And officially opening this month is the Internet Online Offshore Casino, run out of the Turks and Caicos Islands, which says it w accept all manner of E-money and pay customers 10% annual interest on the balances they leave in an off shore bank the company recently bought.

These enterprises may never draw in a meaningful number of cu tomers. And many raise red flags t regulators. But the government is also a long way from getting a goo fix on the activities of the much larger number of ostensibly legitimate E-money players.

MONEY LAUNDERERS. The regulato gaps are sizable. For example, Sta ley E. Morris, director of the Trea ury Dept.'s Financial Crimes Enforcement Network (FinCEN), poin out that there are no laws that lin the balance of electronic currency that can be loaded onto an E-cash card. That could create a major op portunity for money launderers. A no one has determined how to defi whose tax laws apply to transactic in cyberspace (page 8). Says John Gibbons, assistant to the Presiden for science and technology: "If you go to a cashless society, it makes i very difficult tracking cash income or reportable income.

Right now, regulators are simpl trying to understand the new tech nology and how the market is evo ing. Last April, the Federal Trade Commission held a conference to e amine the impact of electronic con merce on consumer protection. FinCEN is organizing a colloquium on electronic currency to be held late this fall. "We are nowhere near th issue of regulating it," warns FinCEN's Morris. "We're one step back Given the speed with which the m ket is advancing, regulators don't have much time to close that gap.

EXPECT GREAT THINGS

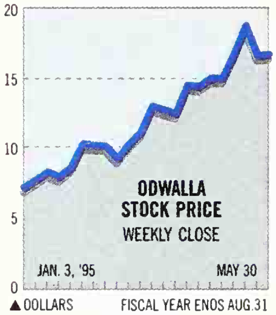
BY GENE G. MARCIAL

ALL JUICED UP AT ODWALLA

Ever heard of Odwalla? Few have. But this producer of all-natural fruit and vegetable juices has caught the eye of market watchers: The stock has more than doubled so far this year.

Odwalla (ODWA) was first featured in this column on Feb. 6, when investment manager F. Van Kasper picked it as a favorite for 1995. Its shares were then trading at a split-adjusted 7. On May 30, the stock closed at 16¾, after May 18's secondary offering of 1 million shares at 19 depressed the price somewhat. Kasper is convinced it will double yet again over the next 12 months. What's so hot about Odwalla?

TEMPTING TO A BIGGIE?



EARNINGS PER SHARE
1996 Est. 45¢
1995 Est. 25¢
1994 8¢
1993 -15¢
1992 2¢

FISCAL YEAR ENDS AUG. 31

DATA: BLOOMBERG FINANCIAL MARKETS, VAN KASPER & CO.

It has developed a niche in the cutthroat world of Coca-Cola, PepsiCo, and Dr. Pepper/Seven-Up. All Odwalla juices are fresh-squeezed and have no chemicals, sugar, or sweeteners. "This is one of the most compelling brand-building stories," says Jean-Michel Valette, an analyst at Hambrecht & Quist. Sales jumped from $9.5 million in 1992 to $18.1 million in 1994—although Odwalla still sells its products only in the West: the Pacific Coast from California up to British Columbia, plus Colorado. Valette foresees revenues of $34 million in 1995 and $49 million in 1996.

Since Odwalla's output is not pasteurized or treated with preservatives, shelf life is 4 to 15 days, depending on the kind of juice. "While this constraint presents challenges, it has also turned national beverage companies away from such products and provided Odwalla a healthy marketing advantage," notes Steve Lidberg of *The Red Chip Review*, a Portland (Ore.) newsletter focusing on small-cap stocks.

Odwalla appears richly priced—at 35 times Van Kasper's 1996 earnings estimate of 45¢ a share. But he expects earnings to grow at about 50% annually in the next few years. And there's yet another big kicker: Many pros don't expect Odwalla will escape for long the ravenous appetite of the biggies. A few years ago, Chiquita Brands expressed an interest in Odwalla, then still in its infancy. The juice maker didn't entertain any kind of combination then.

"Our intention is to grow nationally and become the authority and the last word on fresh fruit and vegetable juices," says founder and Co-chairman Greg Steltenpohl.

STILLWATER'S MINE RUNS DEEP

All that glitters is not gold. Platinum and palladium—metals used in industrial and other applications—have sparkled recently, making little-known Stillwater Mining (PGMS) a star almost overnight. The only major U. S. producer of platinum and palladium, Stillwater has climbed to 22¾ a share—a lofty 108 times estimated 1995 earnings—up from 13 last December, when the company went public.

"Stillwater will continue to outperform both its precious-metals peer group and the general market," predicts Vahid Fathi, a metals analyst at Kemper Securities. He sees the stock hitting 35 by the middle of next year.

A big surge in demand for platinum and palladium last year has driven prices of the metals to four-year highs. Prices could go even higher because both are necessary in auto catalytic converters. Palladium is also used in computer chips. And platinum is popular in jewelry.

Stillwater's mine in the Beartooth Mountains of Montana is the main source for both metals outside Russia and South Africa, notes Leanne Baker, an analyst at Salomon Brothers. For significant proven reserves, says Baker, "there's no other in the U. S."

With 18 million ounces of reserves, "we control the world's richest deposit of platinum-group metals," says Chairman and CEO Charles Engles. The company, which had earnings of 11¢ a share in 1994 on sales of $58.6 million, is expected by Baker to earn 21¢ this year. *By Sandra Dallas.*

Agrees Senate Finance Comm

America's Dueling Tax Plans

THE CURRENT INCOME TAX A top rate of 39.6%, riddled with loopholes, favors consumption and debt over savings and equity. Taxes dividends twice. Simple for most individuals but agonizingly complex for business and anyone who invests.

VALUE-ADDED TAX An integral part of the tax systems of most industrialized countries. Levied at each stage of production and built into the cost of goods. Simple in theory but in practice filled with multiple rates and exemptions. Credited to exports but imposed on imports.

FLAT TAX In its pure form, imposes tax at a single rate for business and individuals, with no deductions or credits. Removes the tax code from investment decisions, favors neither debt nor equity, capital nor labor. A big personal exemption improves progressivity for working families, but the wealthy get the biggest benefit. Top rate about 20%.

USA TAX A hybrid that favors investment over consumption. No tax is paid on savings and investment but is levied on spending. Much like a VAT, except tax is paid annually rather than on individual purchases. Personal tax works like an IRA. Top individual rate is 40%, but workers and employers get credit against payroll taxes.

ss radical proposals

to repair—rather than replace—the current income tax. Senator Bill Bradley (D-N.J.), an architect of the 1986 Tax Reform Act, would like to close loopholes and lower the top rate to below 30% from the current 39.6%. And President Clinton, worried about having to defend the current system in his reelection campaign, is searching for an alternative that aides say would boost savings while preserving progressivity.

While Clinton talks repair, Republicans vow an overhaul. To economists, all the GOP variations are essentially consumption taxes. Unlike the current code, which taxes income, these proposed levies tax you on what you buy—not what you earn. With the sales tax and the VAT, the levy is collected at the time of purchase. With the flat tax and the USA tax, you simply deduct savings and investments from your tax base, so that you're taxed only on what you spend.

While these variations are trivial to macroeconomists, who believe that any consumption tax would spur savings and investment, the differences are vast for taxpayers—and politicians. Exporters would reap a big windfall under the USA and VAT taxes, since they'd get a credit for goods shipped overseas—a benefit not provided by the flat tax.

In contrast, under Armey's flat tax, wages are deductible for business while taxable to workers. But with the Nunn-Domenici tax, companies lose deductions for labor costs, while individuals are taxed only on the wages they spend. “The most interesting dividing line is between labor-intensive and capital-intensive businesses,” says Price Waterhouse Partner Peter Merrill. “Repealing the corporate income tax is not neutral across industries at all.”

LOSERS. Overall, the flat tax would provide a generous tax cut for many individuals, but it would be funded with a big tax hike for nonfinancial corporations (page 86). Companies hooked on debt—real estate developers, homebuilders, and some manufacturers—would lose their most lucrative write-offs under all of the consumption-based rewrites. And no one has yet figured how to tax financial companies, such as banks and insurance companies—a possible deal-buster.

Whatever their specific tax proposal, most reformers agree on two goals: Income should be taxed only once, and the current bias in favor of debt and consumption should be ended. Why? The U.S. national savings rate is among the lowest in the industrialized world. And

How They Stack Up

Depending on which tax-reform scheme U.S. lawmakers choose, individuals and businesses could receive radically disparate tax bills

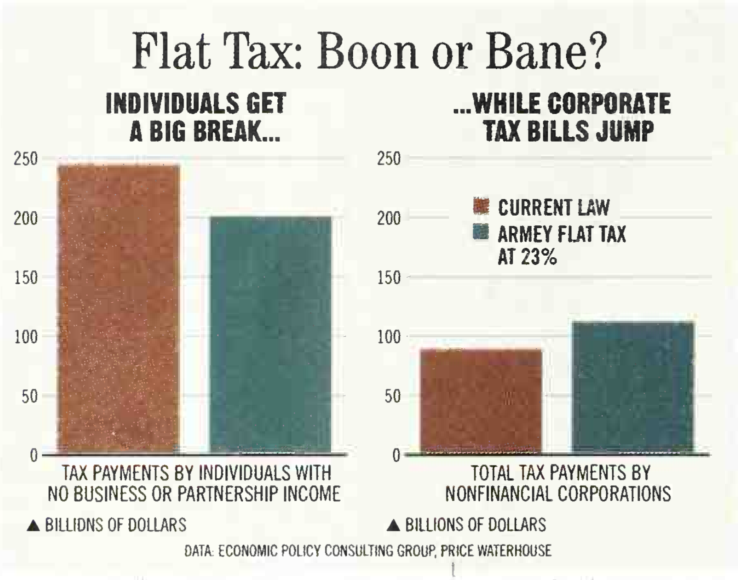
DATA: ECONOMIC POLICY CONSULTING GROUP, PRICE WATERHOUSE

The flat tax ditches cherished deductions for mortgage interest and charitable donations

economists believe stronger savings will translate into increased investment, which in turn is key to future growth.

There is little doubt such economic goals are important. But public support for tax reform is being driven by something quite different—a desire for simplicity and a widespread belief that many payers are shafted by the current system. "First of all, people hate the IRS," says Gingrich flatly. Adds Grover G. Norquist, president of the antitax Americans for Tax Reform: "It's a great idea to eliminate the IRS root and branch."

A new poll for Andersen Consulting reports that 59% of the American public believes it is too difficult to fill out federal tax forms. And even major corporations find the law mystifying. "Our existing system is so overwhelmingly complex that it's draining administrative resources on the taxpayer side and on the government side," says Lisa Norton, tax counsel at Ingersoll-Rand Co.



DATA: ECONOMIC POLICY CONSULTING GROUP, PRICE WATERHOUSE

BOON? Still, much as they hate the current code's complexities, business has learned to live with it—or even profit from it. So while reform may be an economic boon for the country as a whole, the transition could be agonizing for specific industries, such as real estate.

Is radical reform worth it? Many economists think so. Boston University economist Lawrence J. Kotlikoff figures replacing the current code with a savings-enhancing sales tax would boost the nation's stock of capital equipment by as much as 63%. That new investment would spur productivity. The payoff: Living standards would rise by up to 18%, he argues. Such predictions have been challenged by critics, and some reformers concede they can't guarantee major gains. "Will it really increase savings?" asks Domenici. "We have no way to prove that absolutely."

That's one reason the GOP plans differ so much, as each tries to strike the perfect balance between fairness and simplicity while maximizing U.S. economic growth. Just look at the Armey flat tax, tailor-made for a public that is fed up with often-incomprehensible rules and overpriced accountants. Unlike the current IRS maze, it's nothing if not simple—add up what you make, take a big standard deduction, multiply by the tax rate, pay the tax, and get on with your life. But there's a price: ditching some cherished tax breaks, including deductions for mortgage interest, state and local taxes, and charitable contributions. "I want to capture every penny of income in the tax base and subject it to taxation only one time," explains Armey. "The taxpayer would get an honest tax bill that's simple and direct."

For business, Armey's tax would be levied on cash flow. Companies would take total income, subtract capital and labor costs, and pay a tax on the difference. They could immediately write off all costs of producing goods, including capital investment and wages. But the cost of money—raised through debt or equity financing—would not be deductible. Manufacturers that buy lots of new equipment would benefit; companies that are heavily debt-financed would suffer.

Exactly what Armey's flat rate would be is hotly debated. He publicly sets it at 17% but concedes that won't raise the same revenue as current law. The Treasury Dept. figures the rate would have to be about 23% for the tax to be revenue-neutral, while flat-tax guru Hall estimates 19%.

Regardless of which number you use, corporations would take it on the chin.

According to an analysis by Price
terhouse—using 1991 return dat

her, who dismisses even Armey's x as too timid, vows to “tear the e tax out by its roots.” He wants eal the 16th amendment, which ished the federal income tax 82 ago, adopt some type of national ax, and scrap the tax agency. He ints that he would eventually re- the Social Security and Medicare l taxes with a sales levy. Archer's jectives: “Get the IRS out of our lual lives” and exempt exports ax.

ar, there are two sales tax ver- gaining currency—a retail levy European-style VAT, which would at about 5%. It is paid at every of production and is usually hid- the final price of a product. In , though, VATS have become quite x and riddled with exceptions.

national sales tax would be im- only on the retail purchaser. It e collected by the states, thus ting nearly all of the federal tax- on apparatus. It would also be stratively simple—unless it be- empting food, medicine, and oth- ntial purchases. Backers envision of around 20% on all goods and s, even though such a hefty price uld generate substantial sticker among consumers. Archer says ce jump would be offset by a ise in take-home pay, since there e no income tax. But to libertar- o support a sales tax, the shock its great virtue. “I want people the government every time they the 7-Eleven to buy a grape ,” says Cato's Moore.

of people, however, would curse s tax for another reason: It's inherently unfair to the poor, who consume a much larger share of their income than the rich. In fact, the various consumption tax schemes are distinguished by how they attempt to achieve fairness.

The flat tax addresses the problem with two rates: zero on roughly the first $36,000 a family of four earns, and about 20% on everything above that. Such a scheme is great for those at the top and bottom of the income ladder, but Treasury figures that families earning between $20,000 and $50,000 would actually face a big decline in aftertax income—about 4.5% under a 17% rate.

BIGGEST HURDLE. Nunn and Domenici would maintain progressivity with multiple tax rates and with their payroll tax credit. But they also pay a price: a top rate of 40%—twice that of a flat tax—and more complexity. Backers of a retail sales tax are mulling creative ways to provide everyone with about a $5,000 credit—such as sending a check to every American with a Social Security number.

Solving the fairness problem, however, pales compared to the challenge of managing an orderly transition to an entirely new tax code. “One of the biggest hurdles is how you get from here to there,” says Charles W. Rau, who heads the tax department at MCI Communications Corp. One example: Many financially struggling companies, such as LTV Corp., have stayed afloat by relying on old net operating losses, which they can carry over from year to year. Those losses would disappear in a consumption tax, and troubled companies won't easily give them up.

Likewise, there's the shock to the housing industry. This year, residential housing is being subsidized to the tune of $90 billion. Eliminate the deductions for mortgage interest and state and local property taxes, and the real estate market could plunge into turmoil.

The National Association of Realtors is already gearing up to do battle. It's begun forming alliances with commercial developers, farmers, and other business groups that rely heavily on debt financing. Another possible ally: state and local governments, which would lose their tax advantage for municipal bonds in a world where all investment income is treated alike.

The prospect of fierce resistance from such powerful would-be losers convinces some veterans of past tax battles that the current income tax will never die. Bradley, for one, thinks the eventual outcome of the tax debate of the '90s will be a rerun of the '86 overhaul—“lower rates and fewer loopholes.” But, in truth, it's too soon to predict a firm outcome. “Where we end up won't look anything like the original ideas,” says HP's Langdon.

Certainly, the drumbeat for tax reform keeps getting louder. At the very least, the next Presidential election will set the stage for another dramatic reform of the current income tax code. And if the GOP takes the White House in 1996, the next stage in the Republican revolution may be a new federal revenue system. The result: By the turn of the century, the U. S. could well become the world's first industrialized nation that won't have an income tax to kick around anymore.

DISPUTE RESOLUTION

THE EXPLOSION IN PRIVATE JUSTICE

Demand for civil arbitration fuels the rise of an industry

RAUL COLON

After 11 years of legal battles and an estimated $100 million in costs, a small group of investors suing over a failed 1982 merger between what was then Gulf Oil Corp. and Cities Service Co. decided to end their litigation nightmare. The parties turned to arbitration. They hired a retired appellate court judge, rented a large room, agreed to take just three weeks for the case, and forfeited any right to appeal the judge's decision. "This could have dragged on forever," says the investors' lawyer, Thomas H. Moreland, whose clients won $90 million. "From our perspective, common sense finally prevailed."

Not so long ago, such a solution would have seemed radical. But after years of academic study, pilot projects, and judicial debate, alternative dispute resolution (ADR) has come into its own. Individuals and corporations, sick of overcrowded courts and soaring legal costs, are fueling what is fast becoming one of the most successful experiments in privatization. Now Congress is going further with a proposal to make ADR a voluntary substitute for litigation as part of its drive for tort reform. "This is now mainstream," says William K. Slate, president and CEO of the largest ADR provider, American Arbitration Assn. (AAA).

RAPID GROWTH. A whole new industry is emerging to meet the explosive demand for private justice. Judicial Arbitration Mediation Services/Endispute, the largest for-profit private justice provider, is so confident of future demand that it's contemplating a public offering to fuel expansion, says CEO John Unroe. The Orange (Calif.) company, with $43 million in 1994 revenues, has been growing at a 20% rate. And JAMS, with 350 adjudicators in 28 cities, plans to go global this fall with the opening of an outpost in London.

On the nonprofit side, the New York-based AAA manages annually a ci caseload one-fourth the size of th ci il cases filed with the federal cou sy tem. In 1994, AAA boasted reven s around $100 million and handled a 60,000 cases, involving claims v ue at $5 billion. The Center for Publ sources, a coalition of large comp and law firms, is currently man more than 100 disputes over som billion. Says Frank E. A. Sande rector of Harvard Law School's D pute Resolution Program: "ADR ha come so appealing because the ju system has failed so people."

With private justice's found prominence, how critics fear that indiv rights and fairness ma sacrificed to achieve gr efficiency. Arbitrations mediations generally abridged versions of t with truncated disc rights and briefer pres tions of evidence. And judges are not required low established case law. determines the settleme ue of a case, which nee be equated with the me says Kenneth R. Fein who is negotiating for Corning Corp. in the ma breast-implant litigation.

TIMELY BOOM. But to mo gal and business experts, benefits outweigh its s comings. Luminaries su former New York Gov Mario Cuomo, former F rector William Webster once Supreme Court no Robert Bork have sign as highly paid referees. vard Law School is laun a journal this fall de to ADR. Blue chips from eral Mills Inc. to IBM setting up their own dis resolution programs. An torney General Janet Re cently announced that Justice Dept. would a 170,000 civil cases a ye private arbitrators. "The are timeliness, predicta and fairness," says Jam Seifert of Toro Co., a lawn-mower ufacturer that has seen a 70% dr the cost of settling claims since inst a voluntary ADR program. "You get that through the legal system.

The boom in ADR is especially t in California, where the state's t

The Idea Is Spreading

At least 35 states have alternative dispute resolution (ADR) programs. And new ADR options are pending around the country. Here are some existing programs:

CALIFORNIA Judges may refer disputes of $50,000 or less to nonbinding arbitration before heading to court. Standard real estate contract disputes also are handled through ADR.

OHIO State officials have launched ADR programs, including one that teaches dispute resolution techniques in primary and secondary public schools.

FLORIDA The Florida Supreme Court educates and certifies mediators who hear cases referred by trial judges. Also, worker's compensation claims go through court-administered mediation.

s it "even arguably" relates to
spute. "That case sent a chill through the business community," says Rand researcher Deborah Hensler.

Some critics fear that arbitrators have too much unchecked clout

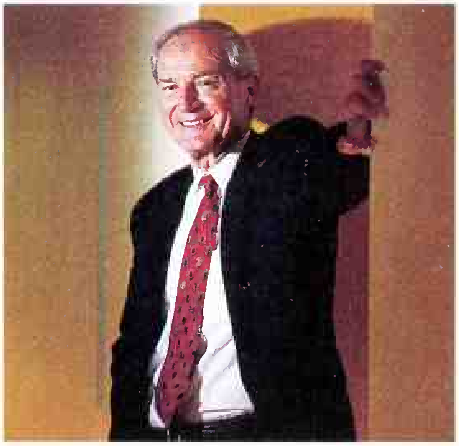
To reassure its critics, industry leaders, in conjunction with the American Bar Assn., are attempting to create a national oversight system and uniform ethical guidelines. A draft proposal is expected to be ready within six months.

But that hasn't satisfied some critics, who worry that in the rush to embrace an alternative legal system, the traditional court system will suffer even more. "We make a strong rhetorical commitment to the public justice system, but we are unwilling to fund it," says Judith Resnik, a law professor at the University of Southern California. "I don't think the answer is letting the private sector pick up the slack." For JAMS and others in the ADR business, though, picking up the slack is proving to be a gold mine.

By Eric Schine in Los Angeles and Linda Himelstein in New York

A RENT-A-JUDGE WHO LOVES HIS WORK

When Justice Edward A. Panelli retired last year from the California Supreme Court, eight years before his term was set to expire, he had visions of leisurely days on the golf course. He would keep his hand in the law by adjudicating a few matters. But mostly, his time would be his own. "A short-lived fantasy," Panelli now recalls.



JAMIE TANAKA

GOLDEN YEARS

The action and the money "can be very seductive," says Panelli, whose income doubled

Then Panelli got an offer he couldn't refuse. John Unroe, CEO of Judicial Arbitration Mediation Services/Endispute, the fast-growing Orange (Calif.) mediation firm, wanted Panelli as JAMS's chief judge. It wasn't just that the 63-year-old jurist would have his pick of cases involving everything from auto injuries to toxic spills. For Panelli, the son of poor Italian immigrants, a big temptation was also the prospect of earning $250,000 a year, double what he was making when he stepped down after 26 years on the bench. The action and the money, says Panelli, "can be very seductive." (Panelli splits evenly with JAMS a $500-an-hour fee.)

In little over a year at JAMS, Panelli has bought and is remodeling a new home in Saratoga, Calif. And like many other judges who have cashed in on private justice, Panelli is working harder than ever. He has handled 250 cases so far, and his calendar is booked through August. "I helped make law that affected 30 million Californians," says Panelli. "But you would never see the results. Here, if you've done your job well, everyone goes home with big smiles."

In his biggest case yet, Panelli, a wiry runner with two New York City Marathons under his belt, bounced between insurers and groups of investors to hammer out a decade-long dispute stemming from a $130 million securities fraud. After only three days, Panelli cracked the case, and investors got 80% of their money.

Panelli says he misses the prestige of the California Supreme Court. Still, he views his current job as a form of public service. "The courts are overburdened and need relief," he says. For Panelli, providing that relief is the best job he has ever had.

STRATEGIES

HAS PAUL KAHN LOST HIS MIDAS TOUCH?

AT&T's credit-card magician wanted his own show. He got it–and a bag full of trouble

Back in 1993, when Paul G. Kahn walked away from the top spot at AT&T's Universal Card Services unit, the credit-card maven could have had his pick of jobs. In less than four years, Kahn had hoisted AT&T into the big-time in the U.S. credit-card industry, creating a $1.4 billion business with 16 million cardholders. Along the way, Kahn also won a Baldrige Quality Award for AT&T—and a reputation as a rising star. When he quit, several industry giants tried to lure him, but Kahn wasn't tempted. "I wanted to be my own boss," he says.

Kahn chose tiny SafeCard Services Inc., a $175 million Jacksonville (Fla.) company with a controversial past and a future full of questions. SafeCard provides a credit-card registry service that notifies issuers when cards are lost or stolen. Since taking over as chairman in late 1993, Kahn has put it through a turbocharged change. He has spent heavily to beef up the core card-registry unit and has moved into a slew of new businesses. To win over shareholders, who had watched the stock stagnate around 10 for years, Kahn bought back 10% of SafeCard's shares while promising 30% compounded annual growth and $500 million in revenues by 1997. By February, shares in the company—since rechristened Ideon Group—soared to 21.

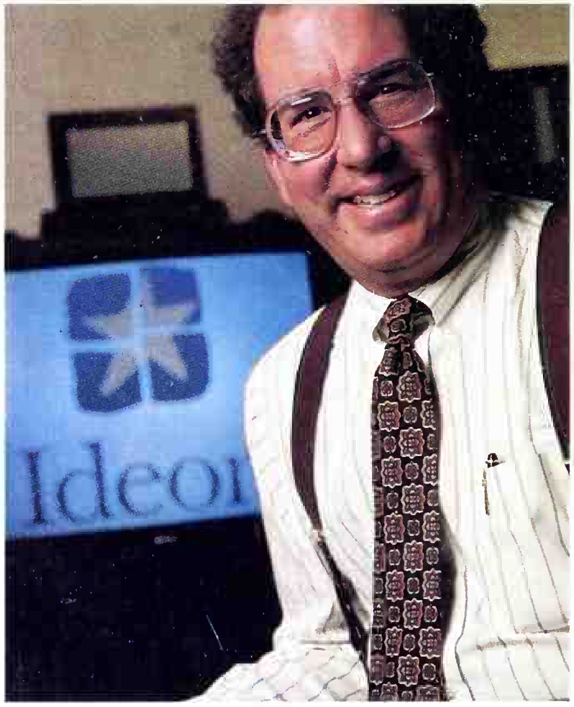
VENDETTA? But Kahn's new life as an entrepreneur has been far from smooth. Former Chairman and co-founder Peter Halmos resigned in 1990 in favor of his brother, co-founder Steven Halmos, after he was targeted in a criminal investigation by the Internal Revenue Service. The probe was later dropped, with Halmos cleared of wrongdoing. But Halmos has slapped the company with five lawsuits charging Ideon's board, and later Kahn, with everything from fraud and stock manipulation to stealing ideas for new businesses. Moreover, in a recent letter to the Securities & change Commission—reprinted in a page *Wall Street Journal* ad—Ha charges Kahn with lavishing com funds on new ventures that are ducing only meager results, while h problems in the core card business shareholders. "At least we made ey," says Halmos.

Kahn calls the charges "ridicu and baseless." So far, the lawsuits not succeeded, and most analysts investors view them as a ven by a man bitter over losing trol of the company, a charge mos denies. But in one way, mos appears to be right: Vi Ideon's revenues grew 11% $173 million, in 1994, hi spending sent earnings down to $18 million. Kahn assured Street in recent months that strong sales of recently launched products about to kick in, Ideon w meet analysts' earnings estimat $17 million to $20 million this year, a big leap in 1996.

But on May 25, Kahn announced weak initial response to two of t

IDEON INVESTS HEAVILY TO DIVERSIFY

- **Family Protection Network:** A database registry to help parents locate missing kids. Cost: $18 million
- **National Leisure Group:** Bought in Feb. 1995, National Leisure offers packaged vacation tours. Cost: $15 million
- **Vatican Art Collections:** Now in test marketing, Ideon wants to sell Vatican art reproductions through direct mail and magazine campaigns. Cost: $1.75 million



- **PGA Partners card:** Th first of Ideon's planned mov into co-branded credit card the Partners card lures golf with Pro-Am clinics and tou naments. Cost: $25 million
- **Wright Express:** Acquir in Sept. 1994, Wright provid gasoline credit cards that h trucking fleets control drive expenditures. Cost: $35 mill

DATA: COMPANY REPORTS, BLOOMBERG FINANCIAL MARKETS

more services to customers. That appears to be working: Ideon's core card revenues grew 11% in 1994, up from the 7% annual rate they had averaged.

At the same time, Kahn moved into new ventures. Last fall he spent $35 million for Wright Express. Wright, which analyst Ned Davis of Oppenheimer & Co. estimates will have 1995 revenues of $21 million, supplies gasoline credit cards to transportation companies to monitor drivers' expenses. In February, Ideon paid $15 million for travel agency National Leisure Corp.

In April, Kahn launched a credit card linked to the Professional Golf Assn. tour—the first of up to a dozen cards he plans. For a $15 to $45 annual fee, cardholders gain special access to golf events such as Pro-Am tournaments and clinics with professionals. Ideon is also spending $18 million to launch Family Protection Network, a registry that allows parents to store their children's pictures, fingerprints, and other data. For fees ranging from $50 to $250, Ideon will notify police and work with private investigators to locate missing kids. In March, Kahn also began test-marketing direct-mail sales of reproductions of Vatican artworks.

Kahn argues these diverse businesses all share one thing: sophisticated computerized marketing techniques. They are linked not by what they sell, but how: "We're a family of service companies that are information technology-based," he says. "We all use database marketing either to sell or deliver our customer service."

MIDAS TOUCH. Kahn argues that by sharing databases and knowhow, all the companies under Ideon will benefit. Alone, Wright Express never had the money or the skills to analyze the data generated by its cards. Now it is using Ideon's computers to develop new financial services for its transportation-company clients. And Kahn argues that Family Protection Network will also benefit from SafeCard's ability to register vast amounts of consumer data, then rapidly notify authorities countrywide of problems.

So far, however, the Midas marketing touch Kahn displayed at AT&T seems to be missing. Although Kahn projected the PGA-linked card would have 500,000 to 1 million subscribers by yearend, it has gotten off to a poor start. "It could be that our offer was just too complex and we need to simplify it," Kahn says.

Nor has Family Protection Network worked. Kahn blames poor marketing. But it has also run into opposition from police forces and nonprofit agencies that work with families of missing children, who say the business simply exploits fears without providing real security.

Meanwhile, costs have soared. With hundreds of additional personnel soon to fill Ideon's new $39 million Jacksonville headquarters, coupled with sharply higher marketing and research-and-development spending, overhead rocketed 47%, to $43.3 million last year. And shareholders complain that they have received scant explanation for why Ideon has gotten so little for its money on the new products. "[Ideon] has offered no defense of their marketing research or of how they went into the new products," says one. "They've essentially said, 'Trust me, it's going to work.'" Analysts say they no longer have a clue what yearend results will look like—and that's why the stock has fallen so far, so fast. Right now, the verdict on this first-time entrepreneur is not good.

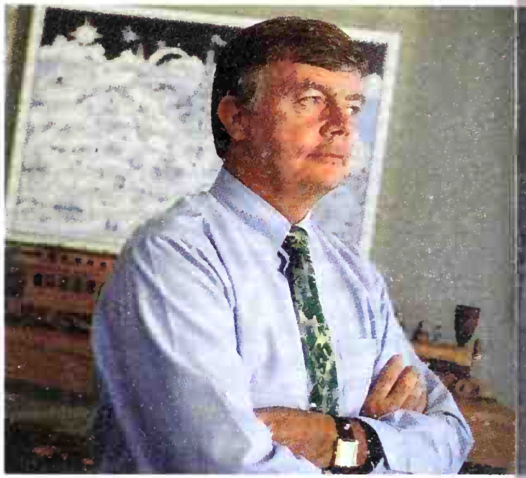
WHAT'S A SATELLITE COMPANY LIKE YOU...

COMSAT's buying spree has Wall Street wondering



Despite its risk and cash demands, entertainment is t fastest-growing part of COM

CROCKETT INTENDS TO MAKE FIVE MOVIES A Y

Bruce L. Crockett and Charlie Lyons were having a ball answering reporters' questions by phone from COMSAT Corp.'s Bethesda (Md.) headquarters on May 25. COMSAT's CEO and president invited suggestions on what to rename the Quebec Nordiques, the National Hockey League team they had just bought for $75 million. They joked about the hoopla announcing a new name could provide.

But Wall Street wasn't exactly laughing. After all, five years of COMSAT's persistent attempts to diversify from satellite communications into various forms of the entertainment business have generated a stock price of around 19—about where it was in 1989. "The question," says Smith Barney Managing Director Charles W. Schelke, "is whether a telecommunications company should be undertaking this kind of diversification in the first place."

If you've never heard of COMSAT, that's because, until recently, it specialized in the prosaic business of delivering other people's data, voice, and video information via satellite. It was created as a publicly traded company by the government in 1963 to link U.S. phone companies to the global network of INTELSAT communications satellites. By 1989, it had grown into a $475 million operation, but that year, COMSAT execs began to see that fiber optics threatened the core business. They needed a hedge.

So, since 1989, COMSAT has used its hefty cash flow to imitate Ted Turner (table). It has bought the Denver Nuggets basketball team, a Hollywood film-production company, one-third of a Denver theme park, and On Command Video Corp., which beams pay-TV programs via satellite to nearly 600,000 hotel rooms. Now, Crockett is adding the Nordiques, which will move to Denver. And with partner Anschutz Corp., he's building a $132 million, 19,000-seat Denver arena to house the sports teams. PepsiCo Inc. will pony up some $70 million to post its name on the building.

With all the acquisitions, COMSAT's entertainment assets provided 19% of the company's $826.9 million in 1994 revenues. Problem is, investors who were used to steady satellite earnings worry about the fickle nature of sports and movies. COMSAT's entertainment assets posted a thin $11 million profit last year on revenues of $157 million. But in the first quarter, entertainment lost $3.2 million because of steep equipment amortization in its On Command business and costs at the studio, Beacon Communications Corp.

ON SALE? The loss dropped COMSAT's overall first-quarter profit to $14.6 million from last year's $20.2 million. Smith Barney Inc.'s Schelke estimates that 1995 earnings will sink to $133 million from $150 million in '94. So investors have been pushing COMSAT to spin off part of the entertainment unit to shareholders or find partners willing to invest. Crockett says he'd consider such options and vows to boost the stock price.

But he also sees promise in what he has. Entertainment is COMSAT's fastest-growing unit, and the company has done a fine job of turning around the Nuggets, which had only 2,500 s ticket holders in 1990. Today, the sells more than 13,000 season t turning a small profit. The Nor offer a similar opportunity. Aner tendance in tiny Quebec City ha diques officials projecting $28 mil losses over the next two years. S crazy Denver, though it once re pro hockey, should be more supp

As for On Command, COMSA doubled the number of hotel ro services, to 590,000, according searcher Paul Kagan Associates, market leader Spectravision Inc chains such as Hilton Hotels Cor Crockett is stepping up TV and production. COMSAT and Liberty a unit of Tele-Communications jointly own a TV studio in Den make local sports programs. COMS boost production at B the maker of *The* *to Wellville* and *The* *mitments*, to five m annually.

All that takes mon patience, and Wall St notoriously short on t ter. "We intend to place where you can to see a movie, a ball or to play," says B Chairman Armayan stein. Sounds great. I vestors prefer a place for steady earnings.

pylobacter, which cause
ases in humans. In Eu-
. as a result, many
ks are fed a substance
derived from excrement.

U. S. Agriculture Dept. researchers Norman J. Stern, J. Stanley Bailey, and Nelson A. Cox Jr. say they have developed an approach that is more focused and efficient: They feed chicks only the kinds of bacteria that compete with salmonella and campylobacter. The bacteria come from secretions along a chicken intestine's lining. The bacteria are collected from slaughtered chickens, cultured, and mixed with water that is then sprayed on chicks and given as drinking water.

In tests conducted at Continental Grain Co., a New York-based poultry producer, the Agriculture team's technique reduced the incidence of salmonella in chicken carcasses to less than 10% vs. 35% in a control group. So far, it's less effective against campylobacter.

Continental Grain has licensed the USDA patent and is seeking Food & Drug Administration approval to use the method commercially.

More recently, the invention earned her nearly $20,000 in prizes at the International Science & Engineering Fair. And that may be just the beginning. Phillips has a patent pending, and she has already negotiated licenses with several companies. Which ones? Phillips demurs: "My lawyer says I shouldn't say."

FROM PHOTOS TO 3-D MODELS—FAST

THE MAKING OF 3-D COMPUTER models of real-world objects is an excruciating process. Hundreds or even thousands of points on the surface of the object—be it an actor's face or a skyscraper—have to be specified and translated into spatial coordinates that the software can read.

Eos Systems Inc. figured the process would be a lot simpler if computers could "stretch" a regular, flat photo into a three-dimensional model. So the Vancouver (B. C.) company devised a simplified approach to photogrammetry—the process used for drawing latitude lines on maps.

Two photos taken from slightly different angles are placed side by side on a computer screen. After the locations of corresponding points in both photos have been ticked off, the computer can create a stereo view. To build a complete model that can be fed into computer-aided drafting (CAD) systems, the procedure is repeated for all sides.

Among Eos Systems' first customers are forensic engineers, who reconstruct crime scenes in 3-D, and TRW Inc., which uses the technique to survey power plants.

THIS ON-SITE LAB SLASHES CLEANUP COSTS

WHEN HAZARDOUS-WASTE areas are cleaned, about 40% of those considerable expenses go toward collecting and testing water, soil, and air samples. In addition to the high cost of the laboratory work, it can often take months to get the results back.

One solution: equipment that can measure contaminants right on site. Tufts University chemist Albert Robbat has developed one such "laboratory in a box." Robbat's kit combines a gas chromatograph and mass spectrometer in a one-cubic-foot metal box that's light enough for two people to lug out to a cleanup site, and it provides quick readouts on the presence of gasoline, pesticides, solvents, and other noxious stuff. The box slashed the time it took to analyze materials at a Navy base in Yuma, Ariz., last year, Robbat says.

Still, only 5% of all samples collected at hazardous-waste sites are analyzed in the field, according to Tufts' Center for Field Analytical Studies & Technology. Why? Manufacturers are reluctant to produce innovative testing gear because it can take years to get lawyer-shy regulators to approve testing done outside of conventional laboratories, say Tufts researchers.

MEDICINE

IS MEDICARE BEING A LITTLE TOO CAREFUL?

Doctors are fuming over its coverage of experimental devices

Dr. David M. Steinhaus hates telling his elderly patients that America's vaunted medical system won't give them the best available care. But that's just what Medicare is forcing him to do, he says.

Until a year ago, the Kansas City (Mo.) cardiologist routinely implanted the most advanced pacemaker or defibrillator into people whose hearts needed the electric shocks those devices provide. Not anymore. Medicare now refuses to reimburse hospitals and doctors for procedures that use so-called investigational devices—those that haven't yet been officially approved by the Food & Drug Administration, but may be accepted by doctors. As a result, Steinhaus' patients over age 65—most of his practice—end up with dated technology. "It's utterly ridiculous," he fumes. "How many patients have to leave the hospital without the best devices, or perhaps even die, before the government does something about this?"

Steinhaus isn't the only one who's livid. The flap over Medicare reimbursement for investigational devices has become a major issue for many medical-device companies. To develop new technology, the industry depends on getting paid for these experimental devices, which can cost thousands of dollars apiece, explains Ronald A. Matricaria, CEO of St. Jude Medical Inc. in St. Paul, Minn. "But all of a sudden, they changed the rules," he says. One example: U.S. hospitals shut down clinical trials of St. Jude's improved heart valves, even though the valves could save Medicare money because they last longer.

HIGH STAKES. Such devices are still in the development and testing stage, of course. But they are typically refinements of proven technology and therefore not as risky as a totally new device. Even so, both types require FDA approval. Increasingly, however, the testing of investigational devices isn't being done in the U.S. A new survey of medical-device makers funded by the Health Industry Manufacturers Assn. (HIMA) shows that more than two-thirds plan to move clinical trials of implantable devices to Europe, Canada, or other countries because of the reimbursement controversy. Industry experts warn that this trend could pull U.S. doctors off the leading edge of medical innovation—and transfer technology and jobs abroad.

Given such high stakes, hospitals, physicians, and medical companies are mounting a legal assault to change Medicare's policy. On May 1, a group of 23 hospitals—including powerhouses such as
Mount Sinai, Johns Hopkins, and
Medical Center—filed suit in U.S
trict Court for the Central Distr
California against the Health & H
Services Dept. (HHS). They charg

To Pay or Not to Pay

Legal fights have led hospitals to obey a long-ignored directive denying Medicare reimbursement for non-FDA-approved medical devices. The policy was designed to protect the elderly from potentially unsafe experimental devices. Instead, physicians, hospitals, and companies say, the policy is having these negative effects:

- Most patients over age 65 no longer have access to the most advanced pacemakers, defibrillators, or heart valves.
- In some cases, costs to taxpayers are higher, since devices that work better and last longer save money.
- Medical-device companies are moving clinical trials of new devices to other countries. As a result, U.S. physicians will be less familiar with the devices when they are eventually approved.

EXECUTIVE PROGRAMS

Beyond news. Intelligence.

covered. The intent was to ensure that people got treatments only after the FDA deemed them safe.

But the policy was almost universally ignored for years. Hospital officials claim they either weren't aware of it or didn't believe it applied to most investigational medical devices. Whatever the reason, many of the nations' top hospitals routinely billed Medicare for procedures using these devices. HCFA claims it had no idea this was general practice.

This cozy mutual ignorance was shattered a year ago when a still-unnamed whistle-blower filed a citizen's suit in Seattle. It accused hospitals of defrauding the government by charging for unapproved devices, leading HHS sleuths to investigate. They subpoenaed a decade of records from 130 U. S. hospitals representing "a real who's who" of cardiac care, says Susan C. Waltman, general counsel of the Greater New York Hospital Assn. The hospitals' response was to halt virtually all clinical trials involving Medicare patients.

"FRUSTRATING." In some cases, the impact on the quality and cost of care was dramatic. Cardiac arrest survivors typically need defibrillators to shock their hearts back to normal whenever the fragile organ races out of control. For several years, the standard device was so large that it had to be implanted in patients' abdomens. But Minneapolis-based Medtronic Inc. built a much smaller version that could fit in the pectoral region. In trials at the Mayo Clinic, says cardiologist Stephen C. Hammill, the new device reduced deaths from the actual operation from 3.8% of patients to zero—and cut hospital costs after implantation from $24,000 to $13,000. Yet Mayo's doctors could no longer use the device for Medicare patients—unless they found another way to pay the bills.

The FDA approved the smaller defibrillator this spring, making it eligible for Medicare reimbursement. But now, Hammill can't use an even better version, which needs only one wire threaded into the heart instead of two. "It's frustrating," says Hammill. "We are falling behind Canada and Europe in what we can provide for our patients."

Meanwhile, the Health Dept. Inspector General's office is finishing its fraud probe, which sources say is largely a fizzle. Investigators appear ready to seek indictments against only a handful of doctors or hospitals that clearly knew about the HCFA policy yet charged for investigational devices. Most of the nations' top medical centers won't be accused of fraud. As outcomes go, it will be small potatoes—and small consolation to patients who, as a result, are now stuck with yesterday's technology.

By John Carey in Washington

COMPUTERS

APPLE'S ASSAULT

CEO Spindler has lots of new products. He'll need ther

Since Apple Computer Inc. nearly ran itself into a ditch two years ago, its future has been in question. With Microsoft Windows becoming increasingly dominant and Apple's market share slipping, rumors surfaced that the company would be sold—to IBM, Motorola, AT&T, Oracle, Canon, or a Japanese consortium. You name it. "This company is not for sale," says Chief Executive Michael Spindler. "I can't comment on rumors that people invent. But some of them are just nuts!"

Not only is Apple not takeover bait, says Spindler, the world's No. 2 PC maker has "its house in order" and is in tip-top fighting shape. This summer, Apple will let loose a fusillade of new Macintoshes and PowerBooks, beefed up with the speedy PowerPC chip and starting at about $1,600—12% cheaper than today's cheapest Power Macintoshes. It has reorganized to zero in on its traditional strength in the home, education, small-business, and entertainment markets. The Windows version of Apple's eWorld arrives this fall, boosting its presence in the online world. And after idling on the side of the road for a year, Apple is nosing back onto the Information Superhighway with orders for 5,000 TV set-top boxes. Vows Spindler: "You will see a very aggressive Apple."

That's critical, since Apple stil
an uphill fight to regain worldwid
ket share, which dipped to 8.3
year from 9.4% in 1993. If the
continues heading south, even the
loyal developers of Mac software
start looking for bigger market

UPHILL FIGHT

Software developers could abandon Apple if Spindler can't deliver new products that will boost market share

TOUGH SELL. Chief Financial Officer Joseph A. Graziano is also predicting big things. He figures the company can boost its market share one percentage point this year—even in the face of Win 95. Analyst Bruce Lupatkin of Hambrecht & Quist Inc. is forecasting 1995 fiscal year net income of $530 million on a 23% jump in revenue, to $11.3 billion. That's up 70% over last year's lackluster showing of $310 million. The stock is around 42, up from the mid-30s late last year. Says Lupatkin: "Apple is doing real well. And Apple management is feeling very good right now. But that doesn't diminish the long-term threats."

The biggest among them remains loss of market share. That's where the clone strategy comes in. So far, only startup Power Computing Corp. sells mainstream Mac clones. It says it will sell 100,000 machines in the next 12 months. By summer, Pioneer and others will join the Apple-cloner ranks. This winter, consumer-electronics maker Bandai is expected to launch Pippin, a $500 multimedia player that plugs into the TV and runs existing Mac CD-ROM titles. Pippin first will be sold in Japan. If it clicks, it will hit the U.S. in the first half of 1996. Rick Shriner, an Apple vice-president, predicts that 500,000 to 1 million Pippins will be sold next year.

Shriner heads Apple's new Interactive Media Group, charged with moving Mac technology into emerging markets—thus giving software developers greater incentive to stick with the Mac. So far, his team is getting into interactive TV with $750 Apple set-top boxes adopted for trials in Britain, Belgium, Sweden, Norway, and Germany. Apple says the boxes won't add much to the bottom line but will extend the Mac's reach.

Are software developers getting the message? It's far too early to tell, but there is anecdotal evidence that Apple is at least holding its own. While Microsoft is pushing Win 95 as a game platform, for instance, Apple is attracting new game developers, too. ID Software, the maker of top-selling *Doom*; Lucas Arts, the company behind the popular *Rebel Assault*; and Virgin Interactive, which sells the hit *7th Guest*, are converts. They say they were won over by Apple's licensing program and multimedia lead—Apple was the No. 1 seller of multimedia PCs last year, according to Dataquest Inc.

Mac may still be a tough sell to hard-core Windows developers focused on productivity programs—the bulk of today's market. Says J. Paul Grayson, CEO of Micrografx Inc., which has no plans for Mac versions of its Windows graphics programs: "I have serious doubts about Mac. It may have peaked." Such remarks drive home Apple's challenge. While Spindler may have put the company in tip-top shape, he still has to win the fight.

LONG JOURNEY, HAPPY ENDING: ADOPTING A FOREIGN CHILD

COMING HOME: *Now, author Kichen finds it hard to remember life without Luan*

It was midnight, July 1, 1994, when our son, Luan, stepped off the plane at Newark International Airport. For Luan, this was the end of a long journey from Vietnam. For my husband, Steve, and me, it was the joyous end of our own journey, which began 12 months earlier, when we decided to adopt a child.

When the time came to have a family, we found out that at ages 42 and 37 it wasn't going to be as easy—or as natural—as we had hoped. We started treatments for infertility but knew we wouldn't try for long. We preferred to spend our time and money building our family through adoption instead of pursuing costly, often invasive, medical treatment. For us, adoption was never a second-best way to have a child—simply a different route to parenthood.

From the beginning, two things were certain: We wanted an agency adoption rather than an independent one, in which a couple makes arrangements directly with the birth mother. And as long as the child was mentally healthy, we were flexible as to sex, race, and nationality.

RESEARCH. I started collecting information from numerous organizations and reading piles of books. I made dozens of phone calls and followed every lead. Speaking with adoptive parents was helpful. We explored adopting through the N.Y. State Social Services Dept. but kept running into dead ends. Some programs were closed to us because of our age or religion. I was interested in adopting from China, but at that time, the Chinese had temporarily closed their doors to outside adoption. (They were reopened at the end of 1993.) Because of obligations at home and work, we were unenthusiastic about spending weeks or months overseas. So we narrowed our focus to countries, such as Korea and India, that allow children to be escorted to the U.S. to complete the adoption.

One of the organizations I contacted was the International Concerns Committee for Children (ICCC) in Boulder, Colo. (303 494-8333). It publishes a monthly photo book with pictures of adoptable children from around the world. The first issue I received contained a photo of a beautiful girl from Vietnam—8 years old, according to the book. There was something in her eyes that drew me. Contacting the agency handling her case, International Mission of Hope (IMH), in Thornton, Colo., I learned that I would need to work through a licensed New York agency, but that IMH could handle the logist paperwork at the Vietr end. I immediately Steve at work to le know I'd found the ac program for us.

The domestic agen chose was America International Aid & Ac (AIAA) in Birmingham (810 645-2211), which censed and has an of New York. On Nov. 1 we sent our completed cation—the first forma

didn't know sooner.
e most frustrating thing was trying to deal with a process going on thousands of miles away, over which we really had no control.

IMH promised to refer another child, and we continued to wait. In April, we got a fax with a blurry photo and sketchy details about a 3½-year-old boy. Named Pham Thanh Luan, he was healthy and adoptable. Soon we received more photos. He was cute, but looked angry and sad. We knew that, given the chance, we could bring a smile to his face. We started to fix up a bedroom.

The Vietnamese officials processed his paperwork in only weeks. Because there were no diplomatic relations between Vietnam and the U.S., Luan waited a month to travel with an escort to Thailand to get his U.S. visa there. Once the Bangkok embassy processed his visa, he was on a plane within hours. So we had a mere 24 hours notice of his arrival. It was eight months from the day Steve and I filed our formal application. Our total cost: around $15,000.

I realized on the way to Newark Airport that, until Luan came off that plane, nothing was for sure for me. Waiting beside the jetway, my legs were like rubber; I felt as if I was going to throw up. But Moti Irani, our contact at AIAA, had given me wise advice. She told me to keep remembering Luan's experience—that after all the unfamiliar people speaking strange languages and the hours of travel, the world must seem scary to him. Thinking about him kept me strong.

Moti's words guided us through those first days, as we worked to deal with Luan's fear, homesickness, and inability to speak our language, as well as his medical problems: He arrived with intestinal parasites and bad skin sores. Luan screamed nightly for his mother; it was weeks before he slept for more than an hour at a stretch. But even through the roughest times, it was clear we had become parents of a strong, sensitive, exceptional son with a sense of humor.

That was 10 months ago. Today, Luan is a healthy, bright little boy who loves his computer, playing Nintendo, eating pizza, and having his mom and dad read to him at bedtime. He understood English words quickly but still struggles to speak the language.

ROOTS. We believe it's important to help Luan maintain a connection to his Vietnamese culture. Against the advice of many, we opted to keep his Vietnamese name. Since he already knew it, I thought it wouldn't be fair to start calling him Henry or John. We read him Vietnamese stories, play Vietnamese music, and have made friends with several Vietnamese. A few months ago, we took him to a celebration of Tet, the Vietnamese New Year. Luan is quickly becoming an American, but we want him to be proud of where he was born.

Our biggest lesson: Adoptive parents must be flexible. If you have always had your heart set on a girl, think again about a boy. And don't restrict yourself to adopting an infant. One of the great things about Luan was that he arrived with a more-developed personality than an infant; part of the experience was getting to know him.

Sure, the adoption process is often filled with anxiety, frustration, and disappointment. But if you persevere, there can be a happy ending. Luan is our son, and Steve and I are his parents. It just doesn't get any better than that. *Ina Kichen*

ADOPTIONS One group publishes a photo book, updated monthly, with pictures of adoptable children from around the world

FINDING A WAY THROUGH THE ADOPTION MAZE

JODY HEWGILL

Adoption is a long and arduous process, fraught with the risk that your child won't turn out the way you hoped. In other words, it has many similarities with giving birth. Despite those high-profile horror stories about toddlers being removed from their adoptive homes, seven-year waits for infants, or exorbitant costs, "adoption works," says Sandra Gosline, a Philadelphia woman who adopted a newborn 2½ years ago. "Just keep plugging away."

If you persevere—and have deep pockets—you can adopt a healthy newborn, says Arline Tannenbaum, director of adoption services at Work/Family Directions, a Boston-based firm offering consultation and referral to nearly 200 corporations. In the U.S., roughly 60,000 children are adopted annually. About half are infants of the same race as the adoptive parents. Also, half are children with special needs, which may simply mean they are older than 2 or have to be placed with siblings.

Before you begin the process, a lot of research and some soul-searching is in order, says Lois Gilman, author of *The Adoption Resource Book*. If, like most people, you are considering adoption because of infertility, "the main question you need to come to terms with is, do you want to have a baby, or parent a child," says Gilman. If it is parenting you are after, there are thousands of children who need you here in the U.S.

First, learn the laws in your state. Contact public and private agencies for information. Read books, join parent groups, attend conferences, and tell everyone you can think of about your plans to adopt as a way to expand your contacts. Also check with your employer: A 1993 study by Hewitt Associates found that 18% of 1,000 large companies surveyed reimburse some adoption costs. Coca-Cola, for example, provides up to $4,000 per adoption.

ADOPTIONS

COSTLY PROCESS. You'll need the help because adoption is getting increasingly expensive. For an infant, expect to spend between $10,000 and $20,000—largely to cover the birth mother's care, says Tannenbaum. Other trends: Domestically, birth parents are getting more say in deciding who adopts their children and demanding more opportunities to stay in touch. And U.S. courts are enforcing birth father rights, so try to make sure the biological father has signed legal documents giving up his rights. Some couples turn to international adoption in part to avoid the risks of birth parents resurfacing.

Since there is most demand for healthy white infants, these are the hardest children to adopt. The

Beyond news. Intelligence.

800-number "baby phone" in your home and wait for pregnant women to call. A lawyer usually acts as intermediary, and you pay the woman's pre-birth expenses. Such adoptions aren't allowed in a few states, such as Connecticut.

While independent adoption may be quicker, it is very expensive and much riskier, since birth parents often back out. But today about half of all infants are adopted this way, estimates the nonprofit Adoptive Families of America. If you pursue this course, hire an experienced lawyer.

RICH REWARDS. To adopt one of this country's estimated 100,000 "waiting" children currently in the foster-care system, you can go through your state's public agency at no cost to you. Subsidies may even be available for mentally or physically handicapped kids. "You need to go into it with your eyes wide open and know that there are additional difficulties" raising a child that may have emotional problems, says Charlotte Vick of the North American Council on Adoptable Children. But seeing such a child thrive in a permanent home can be greatly rewarding.

It's wise to pursue several channels at once, advise Nancy and Ernie Cozadd of Southern California. They suffered the disappointment of having the birth father suddenly appear to protest their long-planned adoption the day they went to the hospital to take their ne
daughter home. "Rathe
keeping this child in

SMART MONEY

SOLACE WHEN ADOPTION DEALS SOUR

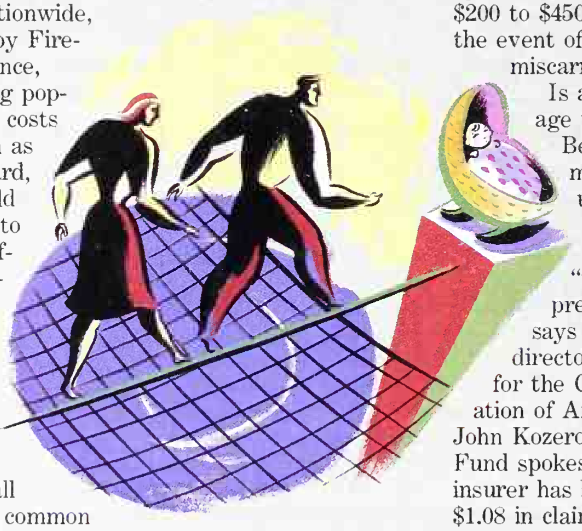
Shayna and Joel Billings thought their long wait to adopt a baby was almost over. They had found a willing birth mother, supported her financially during the last trimester, and were even there to cut the umbilical cord when she gave birth. But 11 days after the Billings took baby Jeffrey home, the biological mother changed her mind. Although the Billings were devastated emotionally, they got a measure of financial solace thanks to a little-known form of insurance that provides protection when adoptions fail.

"SECOND CHANCE." Luckily, after an earlier adoption attempt by the Mountain View (Calif.) couple soured when the father objected, the Billings had bought a $5,000 insurance policy—which recouped half the cost of Jeffrey's failed adoption. "It doesn't make up for the emotional pain of losing the baby," Shayna Billings says, but "this [insurance] gives you a second chance if it doesn't work the first time."

For a fee ranging from $750 to $1,950, adoptive parents can cover $5,000 to $30,000 of certain expenses if a birth parent decides to keep the baby. Developed and sold by San Jose (Calif.)-based Jardine Insurance Brokers' offices nationwide, and underwritten by Fireman's Fund Insurance, the policy is gaining popularity as adoption costs rise and cases such as that of Baby Richard, an Illinois 4-year-old who was returned to his birth parents after a protracted legal battle, draw widespread attention.

Experts estimate that each year, 10% of the nation's 60,000 domestic adoptions fall through. The most common reason: a change of heart by the birth mother or, increasingly, by the father. Jardine says demand for the policy, which became available nationally in 1994, is up 70% this year. Only domestic independent or private adoptions are covered, but Jardine soon hopes to offer coverage for the 8,000 foreign adoptions that take place each year.

Available in 49 states—approval is pending in Virginia—the insurance makes the most sense in areas where medical and legal fees are high and state law does not restrict the amount prospective parents can spend subsidizing birth mothers. In California, for instance, private adoptions can typically cost more than $10,000. For many couples, losing that kind of money means giving up any hope of finding another child. "Many of these people have already paid tens of thousands of dollars for fertility treatments," says Art Adams, the Jardine executive who designed the policy. "They can't afford to take a chance."



LINDA RI

Be careful, though. Adoption insurance is designed to protect the money prospective parents spend on a birth mother's needs—s
as rent, food, medical bi
or counseling. Only 10%
the policy can go towar

IE WEEK AHEAD

MENT CREDIT

ay, June 7 ▶ Consumers probably out $7.5 billion to their debt \pril. That's suggested by the rease in retail sales for the month. debt exploded by $13.8 billion, st advance in seven months. credit, which includes credit the gain, increasing by $6.7 bil- ırch. Installment debt outstanding amounted to 18.1% of disposable ıear the rate of the highly lever- 1980s. Because the Federal oes not report how much of the rise comes from increased bor- d how much reflects smaller debt ts, it is difficult to tell if the recent debt bulges indicate greater use of credit cards for convenience, or, alternatively, if households are struggling to make the monthly payments on old borrowing.

UNEMPLOYMENT CLAIMS

Thursday, June 8, 8:30 a.m. ▶ New filings for unemployment benefits probably fell back for the week ended June 3, to about 330,000. Claims surged unexpectedly from the end of April through all of May. In the week of May 20, claims stood at 380,000. On a four-week moving average, filings were running at their fastest pace in 2½ years. For the forecast week, the number is expected to fall, because state offices were closed for Memorial Day. Despite a growing economy and booming profits, companies continue to pare their payrolls.

PRODUCER PRICE INDEX

Friday, June 9, 8:30 a.m. ▶ Producer prices for finished goods probably increased by a modest 0.3% in May, according to the median forecast of economists surveyed by MMS International, one of The McGraw-Hill Companies. Prices jumped 0.5% in April, because of rising energy prices. Excluding food and energy, core prices probably rose 0.3% in May, the same as in April. Despite recent runups in commodity prices, inflation at the producer level remains tame. Total prices are up just 2.2% over the past year, and the core rate is running below 2%.

A FLAT TAX THAT AMERICA MIGHT BUY

Bet you can't guess how much it costs Americans to file their taxes. The tax code has become so complex (3,458 pages) and so intrusive (the Internal Revenue Service gets more than 1 billion Form 1099s annually to track interest, dividends, and other forms of business income) that the cost of compliance can be measured in billions of hours and billions of dollars. Individual Americans, including the self-employed and the owners of small businesses, spend about 2.1 billion hours each year to do their taxes, while big corporations take a bit longer—3.6 billion hours—to pay their corporate income taxes, according to economists James L. Payne and Arthur Hall. Dollar cost? About $57 billion for individuals and $175 billion for companies. Then, of course, there is the cost of maintaining the small army of government tax collectors—$13.7 billion for 136,000 IRS and other federal agents.

No wonder the drumbeat for a flat tax or some version of a consumption tax is getting louder and louder in Washington. The current tax system has serious problems. It does have a high level of compliance, but it is convoluted, opaque and open to manipulation by special interests. Even the ongoing effort to cut taxes is rife with examples of special-interest lobbying. Social conservatives want a $500 children's tax credit to bolster the family, investors and high-tech startups are pumping for a capital-gains rate cut, Wall Street is championing an IRA-type savings account, and there is even a tax credit for people who adopt. All worthy causes, yet each one further complicates an already arcane tax code and reduces the overall efficiency of the economy.

NO SMOKE AND MIRRORS

Better to simplify. Simplifying the tax code accomplishes two goals. First, it permits the markets to operate more sensibly—boosting growth and jobs—by removing government from the economic decisions of businesses and citizens. Income would be taxed at the same rate no matter what its source, and debt and consumption would no longer be encouraged. Second, tax simplification removes social engineering enacted through the tax system. Political choices become more transparent and accountable. The true cost of government programs becomes much clearer.

The logic of simplification has bred a raft of proposals, some better than others. The current favorite appears to be the radical single-rate flat tax of Representative Richard K. Armey (R-Tex.) that would levy one 17% tax on businesses and individuals, with no deductions or credits. Meanwhile, House Ways & Means Chairman Bill Archer (R-Tex.) favors a national sales tax, perhaps in the form of a value-added tax, which levies taxes on each stage of production. Then there is the more complex USA consumption tax designed by Senate Budget Committee Chairman Pete V. Domenici (R-N. M.) and Senator Sam Nunn (D-Ga.). A less radical Democratic proposal, a son-of-1986 Tax Reform, would close loopholes and lower all tax rates at the same time.

We favor a modified flat tax that would flatten the rate structure into two or three rates and preserve deductions for home mortgage interest contributions. Here's our thinking: Europe has had a VAT in place for decades, and it has become a bureaucratic nightmare, with exemptions that reflect all kinds of social-engineering policies—exactly what the U. S. wants to reverse. Since America already has an income-tax infrastructure in place that people are accustomed to, it's more efficient to streamline it, use it, and not build another one. That way is just simpler.

We also favor making one big political compromise with economic efficiency by allowing deductions for mortgage interest to stand. It is politically unrealistic to believe that Congress would end this deduction for middle-class homeowners. And estimates of the possible loss from fully eliminating the deduction range as high as 15% to 20% of the value of the nation's homes. That adds up to a loss of up to $1 trillion in householders' net worth, the main source of personal savings. These amount to strong arguments for keeping the mortgage deduction but capping the deductible amount of the mortgage at $200,000. Totally eliminating the mortgage deduction would be highly deflationary, not only in terms of actual asset values but psychologically as well.

FOUND MONEY

The flat tax is also economically neutral, while consumption taxes along the lines of the Nunn-Domenici bill favor investment. The tax system should favor nothing. Better to let individuals and families decide how they want to spend their earnings and let the markets determine investment flows.

Finally, by using two or three rates and exempting incomes of, say, up to $36,000 for a family of four, a flat tax can be designed so that it doesn't fall too heavily on the poor. Most flatteners agree that the poor should be totally exempt. In the 1980s, former Representative Jack Kemp (R-N. Y.) and former Senator Robert W. Kasten (D-Wis.) suggested a plan with two brackets—20% on wages and salaries and 25% on other income—that also preserved deductions for home mortgages and charitable contributions. Senator Bill Bradley (D-N. J.) and House Minority Leader Richard A. Gephardt (D-Mo.) came up with a plan with three brackets: 14%, 26%, and 30%. Both plans tried to lower the rates and broaden the tax base while making the tax system more neutral than it is now.

The U. S. was headed in the right direction under Ronald Reagan with the Tax Reform Act of 1986. Unfortunately, policy reverted under both Republican and Democratic Administrations. Tax simplification is an economic and social benefit. It's a wonderful chance to do three things: promote growth while cutting the government, permit individuals and businesses to make economically clean decisions, and give back to Americans billions of hours and tens of billions of dollars that they would otherwise spend on preparing their taxes. Now, that's a sweet springtime thought, isn't it?

The babies take Mom's and Dad's outburst in stride.

Tayler and Tyler may be wondering what the jubilation is about. Toni and Keith know. They're new parents. Of two babies. But it's even more than that. The pregnancy was a tough one, almost as hard on Dad as it was on Mom. So being on the Baby side of it is quite an accomplishment.

Their savings made it through, too, even with lots of travel from their farm to a hospital far away (in South Dakota, most things are far away) and lost wages and intensive care.

In plain language, their AFLAC insurance helped stop the money from flowing out of their pockets through holes in their health coverage. The Halls, old and new alike, are doing just fine.

So here they all are, happy, healthy and over it. (Except for the matter of diapers.) Hallelujah!

AFLAC is *#1 in Payroll Marketing,*℠ with nearly 100,000 payroll accounts in the U.S. For information on this simple, cost-effective way to strengthen your employee health plan, please call toll-free: 1-800-99-AFLAC (1-800-992-3522).

"Basically my swing hasn't changed since I was a kid.

Fred Coupl

Since joining the professional tour in 1980, Fred Couples has dazzled the golfing public with his immense natural talent for the game. Employing a wonderfully rhythmic swing that seems to involve little more than lifting the club and dropping it on the ball, Couples produces a startling combination of power and finesse.

"Fred's swing mirrors his personality, which is totally relaxed and effortless," sa sportscaster Jim Nantz.

Couples has captured the imaginati of the golfing public by achieving t highest level of performance while stayi faithful to a style that is all his own. N surprisingly, he has chosen a timepie whose performance and style are just impressive. Rolex.

HONCHOS

GRACE KEEPS ON AMAZING

DID THE RECENTLY OUSTED CEO of W. R. Grace & Co., J. P. Bolduc, fire a whistle-blowing accountant who questioned his ethics? In a recently filed federal court suit against both Bolduc and the company, a former Grace auditor says he alerted a few Grace board members that Bolduc may have improperly awarded a Grace contract to a construction outfit the ex-CEO had ties to.

BOLDUC: *Conflict?*

Norman Eatough, a 25-year Grace employee who seeks reinstatement and back pay, claims he was canned as audit chief in June, 1994, after telling the board's audit committee about Bolduc's potential conflict. A source close to Grace tells BUSINESS WEEK that this involved the contract to build a new $92 million plant in Milwaukee for 79% Grace-owned Ambrosia Chocolate. The work went to J. A. Jones, based in Charlotte, N. C., on whose board Bolduc sits. The source adds that Ambrosia President John Timson fought the Jones selection but was overruled by Bolduc. There was no comment from Ambrosia or from Jones.

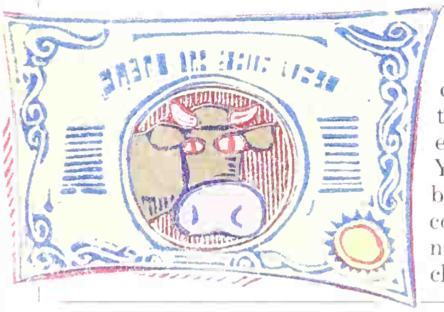
After a falling-out with the Grace family, Bolduc was forced to resign in March amid allegations of sexual harassment. Through an attorney, he denies all allegations, including Eatough's. Grace says the whistle-blower suit is without merit and insists Eatough's dismissal was "valid."

Ambrosia Chocolate is no stranger to controversy. Cannibalistic serial killer Jeffery Dahmer once worked at the company. *Elizabeth Lesly*

TRADING PLACES

MILK FUTURES: A SOUR IDEA?

AH, NATURE'S MOST NEARLY perfect contract. The Chicago Mercantile Exchange and New York's Coffee, Sugar & Cocoa Exchange are seeking Washington's approval for competing futures contracts on fluid milk. Until now, milk prices had little need for hedging—or potential for speculation profit. Federal supports and other regs maintain a price floor. But budget-cutting may remove all this. So some dairy companies, including giant co-op Land O' Lakes, back milk futures.



Others in dairyland, however, are sour on the notion. "There's not a need," contends Howard Dean, CEO of Dean Foods, the No. 1 U. S. milk processor. Unlike soybeans, milk cannot be stored more than a few days. Don't expect a long-lasting New York-Chicago milk-futures bout. In past head-to-head competitions, most business went to one exchange. *Greg Burns*

FOOD FIGHTS

SPAGHETTI WESTERN: THE PASTA SHOOT-

AMERICAN PASTA MAKERS are accusing Italian importers of dumping. Result: Punitive tariffs may be on the way, hiking prices drastically for such Italian brands as De Cecco, La Molisana, and Barilla. Three U. S. pasta potentates—Borden, Hershey, and Gooch—have filed a complaint with the Commerce Dept., accusing 50 Italian rivals of taking government subsidies from Rome to undersell the Americans. If Commerce concurs, as expected, the tariffs could hit by yearend.

While it lacks the drama of the multibillion-dollar U. S.-Japan face-off over autos, the pasta flare-up has a special acrimony. In late April, Canada closed its borders to Italian pasta. Imports account for only 6% of the $3.9 billion U. S. pasta market, but are rising 11% yearly, wit capita consumption record 20 pounds. The ians are looking for ove expansion because cons

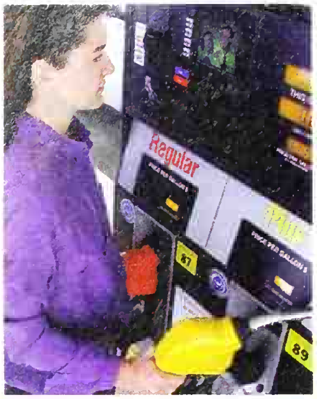
PRODUCT PEEK

ONE MORE PLACE YOU CAN'T ESCAPE ADS



TESTING: *Video pump pitch*

ADS HAVE INVADED MOVIE theaters for years; now they're coming to gas stations. Gilbarco, one of the leading gas-pump makers, is experimenting with 6-inch screens, currently installed at 27 fill-up islands nationwide, beaming commercials at nozzle-gripping motorists.

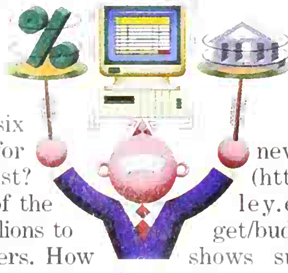
Mostly, these captive audiences are being pitched stuff the station sells, from candy bars to car washes. After the ads, a menu of merchandise pops up on the screen for you to enter your selection. You pay at the pump with a credit card for the gas and other goods.

Gilbarco, a unit of Britain's General Electric PLC, has no reports of driver disgruntlement at getting bombarded by ads. But that may change in a few months when the company rolls out the videos nationally, hoping for deals with the major oil companies. Remember the booing that greeted the first ads to hit movie screens?

Stations with these gizmos don't have to show ads. Andrea Kleopa has been treating customers at her Shell station in Miami to sports programs and CNN at the pump. However, since it costs $31,000 for a video-equipped pump (vs. $12,500 for a regular one), Gilbarco thinks most owners will stick to commercials. ☐

I-WAY PATROL

IF YOU'RE SO SMART, YOU CUT THE DEFICIT

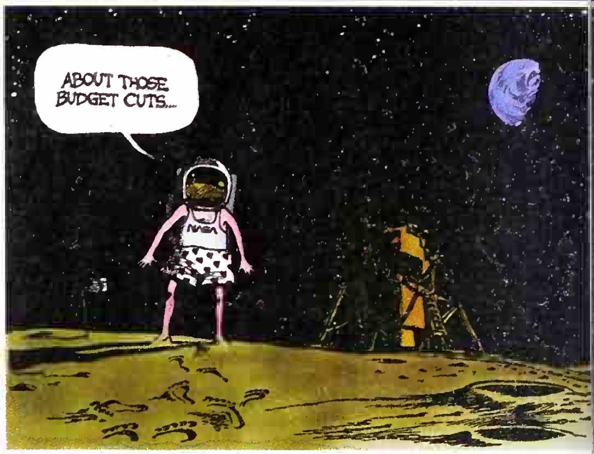


NOW YOU, TOO, CAN BALANCE the federal budget—without lobbyists, demonstrators, and other such democratic distractions. A new simulation game has just come online via the Internet's World Wide Web, allowing fiscal-minded folk to tinker on their PCs with $1.4 trillion in U.S. outlays.

Want to deep-six tax deductions for mortgage interest? Done in a click of the mouse, adding billions to Uncle Sam's coffers. How about beefing up the military? Click. At the end, the system congratulates you if you balance the budget. Actually, it's O.K. to be off by $10 billion, which is peanuts, of course. If there's a big surplus, you get warned that taxpayers will demand a refund. If a deficit still exists, the system says: "Oops."

The game, which began on May 30, is a civics lesson courtesy of the University of California at Berkeley's Center for Community Economic Research. The Center's new Web page (http://garnet.berkeley.edu:3333/budget/budget.html) also shows successfully balanced budgets that others have run through the simulation. According to Web tracking software, 1,200 users have hooked up to try their hand with an ax—one from the White House. *John Verity*

DRAWN & QUARTERED



OVER THERE

DISNEY'S PLAN TO TERRIFY EUROPE

AILING EURO DISNEY HAS A new thrill ride aimed at turning around its theme park by luring thus far elusive teen visitors. The white-knuckle Space Mountain ride just opened amid a massive promotion campaign. Analysts say the ride—a scarier version of the Space Mountains at Walt Disney's U.S. parks—is a make-or-break vehicle that will determine if Euro Disney survives.

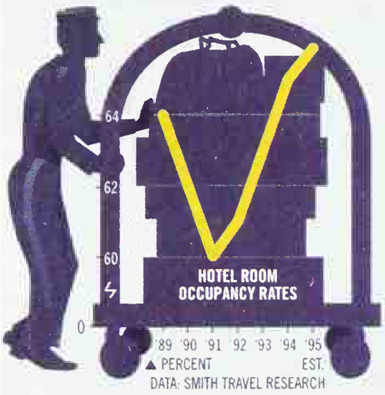
The $120 million ride seems to have the right stuff for teen thrill seekers. You experience weightlessness, hurtle past meteors, flip upside down, and corkscrew in eerie silence through space—all in the dark.

MAGIC KINGDOM? *Just be p*

That's a lot like Eur ney's three years of c tion, which have seen million in losses. Space Mou tain is part of a revam that has led the compa rename the park (from Disneyland to Disne Paris), slash ticket p 20%, and postpone deb se vice. Attendance and Disney stock lately started to nudge up, bu ride isn't over. *Stewar*

THE BIG PICTURE

LESS ROOM AT THE INN



The glut of U.S. h rooms, due to 198 overbuilding, deal the lodging indus a blow in the early 1990s. But with increases in busin and pleasure trave lately—and little new construction occupancy rates have rebounded smartly. So hotel profits are up sha (25% in 1994).

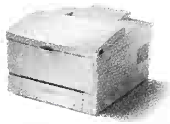
The Mac OS Promise

Macintosh
System 7.5

The Mac™ OS. It's what computer programmers call an operating system. It's what you'll call easy. It's what makes a Macintosh® a Macintosh. It makes you more productive. How can you be sure you're getting everything the Mac OS has to offer? Just look for the logo. On software. On hardware. Everywhere.



Plug and Play. It's a revolutionary concept pioneered by Apple. And promised by many. The difference is, with the Mac OS, you actually get it today. So when you want to connect to a network or set up a printer or a CD-ROM drive or any of hundreds of other peripherals and accessories, all you have to do is plug it in and get right to work. Or play. It's that simple.

What exactly is multimedia? Use a PC running the Mac OS and it's anything you want. You can add music, motion and magic to presentations, school reports, memos and more. You can edit videos. Watch TV. Or run the hottest new multimedia titles.

CLARIS
ClarisOrganizer
MYST

No matter what you want to do, Mac OS helps you do it. How? By providing a consistent way to work with everything you buy. From business software and home finance packages to educational titles and jazzy new games—thousands of powerful (and fun) applications run under Mac OS.

Used to be, the only way to get your hands on the Mac OS was to get your hands on an Apple® Macintosh. Today, you'll find it on PCs from Radius, Power Computing and more. The same places, in fact, where you'll find our new logo. For more information, call **800-472-4342, ext. 100**, today. Or contact us via the Internet at http://www.info.apple.com/macos/macosmain.html.

PUTTING THE RIGHT FACE ON GRACE

"Fall from Grace" (Cover Story, May 29) paints a grossly incomplete picture of J. Peter Grace.

Yes, in fighting for the survival of the company founded by his grandfather, Peter Grace had to scramble for the right mix of businesses to propel W. R. Grace into its second 150 years. But all the businesses that Wall Street fell in love with under J. P. Bolduc's recent restructuring were built by the CEO who provided visionary and entrepreneurial leadership for five decades.

DOW CORNING: FROM CLASS ACTION TO BOYCOTT?

The lawyer from Dow Corning Corp. looked very smug and self-satisfied in "On the firing line at Dow Corning" (News: Analysis & Commentary, May 29). But when he threw a monkey wrench into a commitment made to 400,000 women who are participating in the class action, he perhaps forgot to consider the business ramifications of alienating these women and their families and friends. We will be able to track both the business and its different products through any reorganization. The boycott that will result will amaze even the most astute lawyers and business managers of the company who are so pleased with their recent action.

THIS TRADE WAR ISN'T WORTH THE BLOODSHED

Your Commentary, "Even if Japan breaks down, Detroit won't win much" (International Business, May 29), seems out of touch with the realities of U. S. automotive-parts manufacturers.

In a survey of over 2,300 U. S.
facturer suppliers, more than two-
said that exporting to Japan was
tle or no interest to them. And
said that they had little or no inter
making an investment in Japan i
duction or warehousing facilities
effort to serve that market.

Clearly, the large multinational
manufacturers are anxious to in
their penetration in Japan's ori
equipment market, but these pr
would be supplied from their pr
or future plants in Southeast Asi

So why are we risking a major
war over this issue? It simply
the influence of a few politically m
ed organizations.

AFTER THE WALL
Germany, the Germans and the Burdens of History
By Marc Fisher
Simon & Schuster • 350pp • $25

GERMANY SEEN THROUGH THE PAST, DARKLY

During his four years as Germany bureau chief for *The Washington Post*, Marc Fisher was accused by the local authorities of a consistent anti-German animus. His "minders" at the Federal Press Office, fearful of the impact his stories would have on Washington policymakers during the critical phases of German unification, bent his ear at every turn in an attempt to soften his reporting.

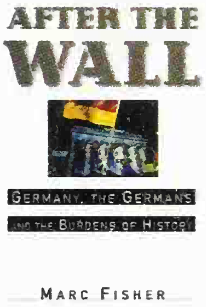
Fisher's offense was to harp on the past too much as he wrote about contemporary events. References to such "burdens" as the Nazi period, the Holocaust, the decades of Soviet-style communism in the east, and the general failure of Germans to confront their history recur in the 800 stories he wrote from between late 1989 and 1993, and in his new book, *After the Wall*. And with much justification: Recent attacks on Turks, whether by confirmed neo-Nazis or drunken louts, bring back ugly memories of prewar persecution of Jews.

Naturally, Fisher resisted the spinmeisters' efforts to inject sanitized official vocabulary into his writing. He called the forced return of Romanian Gypsy refugees to their homeland "deportation" instead of the suggested "readmission" or "retransfer." He also dug up facts that embarrassed the government, such as donations of "several million dollars" offered to the Holocaust Memorial Museum in Washington—conditioned on the addition of exhibits emphasizing democratic developments in postwar Germany.

It is *After the Wall*'s thesis that unless Germans honestly face up to their past—both Nazi and communist—they will not be able to create a new national identity and reunification will remain incomplete. But Fisher's approach has its own problems: Because of its emphasis on the past—and Fisher's brief stay in Germany—the book fails to provide a complete picture of the present.

In his introduction, Fisher tells us that he is Jewish, and his image of Germany had been formed largely by parents and teachers who stressed the Nazis and the Holocaust. Despite several trips to Europe, he had never set foot in Germany before the *Post* assignment, and his family, particularly his father, urged him to refuse the posting.

Despite that intellectual baggage and his pummeling by the Federal Press Office, Fisher reaches some remarkably sympathetic conclusions. Germany needs time to recreate a truly unified country, he says. And, until the nation's new identity is clear, "America's task as an ally is to hold back on the temptation to ask the Germans to act their size" by playing a larger role on the world stage—in international military missions, for example.



Still, Fisher can't shake his preoccupation with the past—a "yoke" that he argues "no one has the right to lift...now, later, ever." And this hang-up does not help the reader understand recent developments. For example, despite the scares about resurgent neo-Nazism that Fisher details, not one fascist was elected to Germany's Bundestag last year. In contrast, 15% of French voters this year supported the presidential bid of Jean-Marie Le Pen, an ultranationalist prone to anti-Semitic remarks.

The strength of Fisher's book is its reporting. He sought out those whom reporters sometimes patronizingly call "real people"—those without title or position. These interviewees talk perceptively about the drama unfolding around them. Long before Bonn officials concede how far apart the peoples of the two Germanies had grown, a schoolgirl from near Bonn tells Fisher si "We're two extremely different of people." In Rangsdorf, a fam East German "Ossis" peer out fro hind curtains, fearing that Fishe "Wessi" owner come to reclai house. Later, they confide their "Where have they been for years? We saved this house."

Illuminating and moving as so these anecdotes are, they are n whole story. Fisher arrived in Ge a tad too late for this man-on-the- method to be a complete succes was still studying German in the land on Nov. 9, 1989, the day the came down, so he never saw the ruptcy and oppressiveness of th East German regime. What's mo probably left too soon: His 1993 ture was before this year's tum 50-year anniversaries forced the mans to recall Hitler and the war sively—and before the eastern Ge economy started growing at nea ble-digit rates. His interviews, the slices of life locked in a time span, the raw ma of history—not consi analysis.

After the Wall is weak on economics, are essential to an u standing of current div Contrary to Fisher's tions, Bonn didn't sub East Germany's indu dinosaurs, the *Komb* for long. Through the *handanstalt* privati agency, it broke them up, sold the or closed them down. Instead, west German taxpayers paid sta ing amounts to support was, and i income of east Germans through sions, the dole, and make-work sc

The result: Overnight, the ers super-efficient heroes of the Sovi became a nation of welfare bums cannot understand east and west man attitudes today without t stock of that blow to national s teem. And until the Germans wo their own internal divisions, they be able, as Fisher suggests, "to ahead with honest memory to em the burden of their past as their

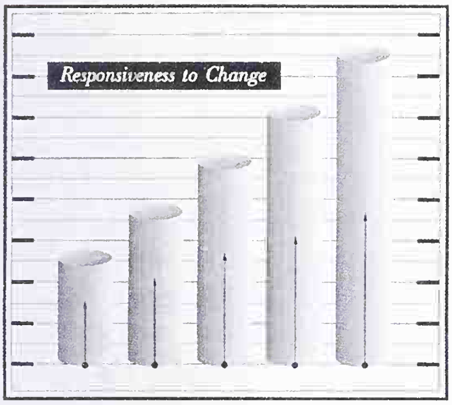
FLEXIBILITY

The varied demands of today's marketplace require small businesses to perform an increasing variety of functions.



Whether it's in sales or finance, realty or retail, flexibility is the new key to long-term success. In these days of doing more with less, the way in which companies allocate resources has changed. In the past, financial clout often determined who came out on top. Today, faced with competitive and market pressures unimagined ten years ago, companies must now find

PICKING THROUGH WEB CLUTTER

Barely a year ago, the World Wide Web was an obscure corner of cyberspace, little known even to many denizens of the Internet. But easier access, including links from Prodigy, CompuServe, and America Online, has brought millions of explorers to the Web. The quality of what they find is getting better.

True, I still find the Web awash in self-indulgent junk, such as the picture of a commons-room coffeepot at Cambridge University. But amid the clutter lurks a great deal of useful, interesting, and entertaining material. Although the Web has always been diverting, it is gradually becoming a tool I—and my less technically inclined colleagues—use regularly at work. While my needs and interests are probably different from yours, a tour of my favorite Web sites may give you some idea of what's out there.

More often than not, I have only a foggy notion of where to find something when I set forth on the Web, so my first stop is usually a site that helps me locate other resources. Carnegie Mellon University's Lycos search index (table) allows me to scan millions of Web documents for key words.

SERVER LINKS. While Lycos points you to specific documents, the Yahoo search tool guides you instead to sites that that specialize in the subject you're interested in. Yahoo offers an opening menu of 18 general categories that are repeatedly subdivided until, with luck, you reach the individual Web server you are seeking. Neither Lycos nor Yahoo offers any cool graphics, movies, or audio clips—just tons of useful information.

One feature of a first-rate Web site is helpful links to other servers. And two of the best starting points are run by the Small Business Administration and the Library of Congress. SBA Online offers a lot of information on federal programs to assist small business. But its real glory is a long, well-organized list of links to other, mostly government-run, servers of value to business, from the Securities & Exchange Commission's EDGAR database of corporate filings to the Central Intelligence Agency's handy *World Factbook*.

The Library of Congress offers a mixture of information and entertainment. Its main attractions are the Library's massive catalog, a database tracking the status of legislation in Congress, and the full text of the daily *Congressional Record*. But it also provides digitized tours of present and past Library of Congress exhibits, including the newly rediscovered Walt Whitman notebooks and Renaissance treasures of the Vatican Library.

If your business is considering putting up its own pages on the Web, you might want to look at some companies that use the technology particularly well. General Electric Plastics offers its customers thousands of pages of specifications and technical information—data that once had to be mailed or faxed. And Novell Inc. provides a wealth of information on its products, including complete online documentation for its NetWare networking software.

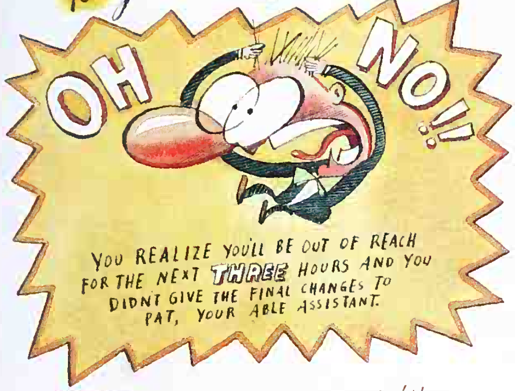
A DAY in the LIFE of a BUSINESS TRAVELER

You get on the AIRPLANE...



YOU REALIZE YOU'LL BE OUT OF REACH FOR THE NEXT THREE HOURS AND YOU DIDNT GIVE THE FINAL CHANGES TO PAT, YOUR ABLE ASSISTANT.

What can I do? I'll look like a fool if those changes aren't made. And, it will be way too late when I land.

You SEARCH for an ANSWER...

HEY THIS IS GREAT!!!
AND IT'S EASY TO USE!!

THEN, THERE IT IS... IN FRONT OF YOU GLEAMING LIKE A BRIGHT LIGHT in the MIDST OF A MURKY MONDAY

the ADVANCED DIGITAL AIRFONE® SERVICE

What would I do without it? For only $2.50 to connect and $2.50 per minute, I can call anyone, anywhere in the U.S. Pat... get ready. I just fell in love with a phone.

Your POTENTIAL has been REALIZED !!!!

Fax & Data at my seat! This is unbelievable. I hook up my laptop and I'm flying (literally) for only $1.50 to connect and $1.50 per minute. This is GREAT! I'm productive... I'm in control... I'm taking care of business!

You become so EFFICIENT it's MINDBOGGLING!!!

WATCH OUT COMPETITION!!!
TAKE THE DAY OFF, PAT, I'M ON A ROLL
HAPPY PEOPLE YOU'VE CALLED from the PLANE...
PAT
YOUR BOSS
YOUR CLIENT
YOUR WIFE

So... this is what they call an "Airborne Office.℠" I'm a believer! With the new, Advanced Digital Airfone® Service from GTE, I'm always in control!

Look for the Advanced Digital Airfone Service when you're flying!

GTE Airfone

RACING

An Idea Without A Customer Goes Nowhere Fast.

At Advanced Micro Devices, we champion ideas that make a difference to our customers. Ideas we transform into microchips that make personal computer and communications systems perform better. As a result, AMD is Number 1 or 2 in the world in every market where we compete–microprocessors, communications circuits, flash memories and programmable logic. Which is not to say we've crossed the finish line. The truth is, we win when our customers win. That's why our 12,000 people worldwide are racing into the future with a singular vision:

If it's a good idea. If it makes a difference. Run with it.

AMD
Run with it.

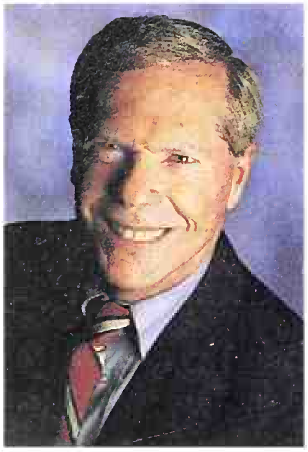
BY PAUL CRAIG ROBERTS

QUIETLY, NOW, LET'S RETHINK THE OZONE APOCALYPSE



DEBUNKED: Studies that show CFCs are not to blame for holes in the ozone have lawmakers questioning the coming ban on production

Paul Craig Roberts is John M. Olin Fellow of the Institute for Political Economy and Distinguished Fellow of the Cato Institute in Washington, D.C.

In this space one year ago ("What's Flying Out the Ozone Hole? Billions of Dollars," June 13, 1994), I raised questions about the scientific basis for the expensive phase-out of chlorofluorocarbons (CFCs) such as freon, the primary cooling agent in air conditioners, that leaves the U.S. and other world economies facing large near-term costs. The column generated a tremendous response. Businessmen wrote to me from as far away as India asking why policymakers are permitting an unproven theory of ozone depletion to impose such heavy costs on the global economy.

It is a good question—and one that is finally beginning to get some response from lawmakers now that the ban on CFC production is only six months away. Representative Tom DeLay (R-Tex.) has introduced a bill, H.R. 475, to repeal the provisions of the 1990 Clean Air Act that regulate the production and use of CFCs. Representative John T. Doolittle (R-Calif.) has asked Administrator Carol M. Browner to revise the Environmental Protection Agency's outdated 1987 cost-benefit analysis in light of new scientific evidence.

The fear of deadly skin cancer, malignant melanoma, is the reason for phasing out CFCs. The public and lawmakers have been told that CFCs destroy stratospheric ozone, which filters out ultraviolet-band (UV-B) radiation. According to an EPA prediction, ozone depletion will result in an additional 3 million skin-cancer deaths by 2075.

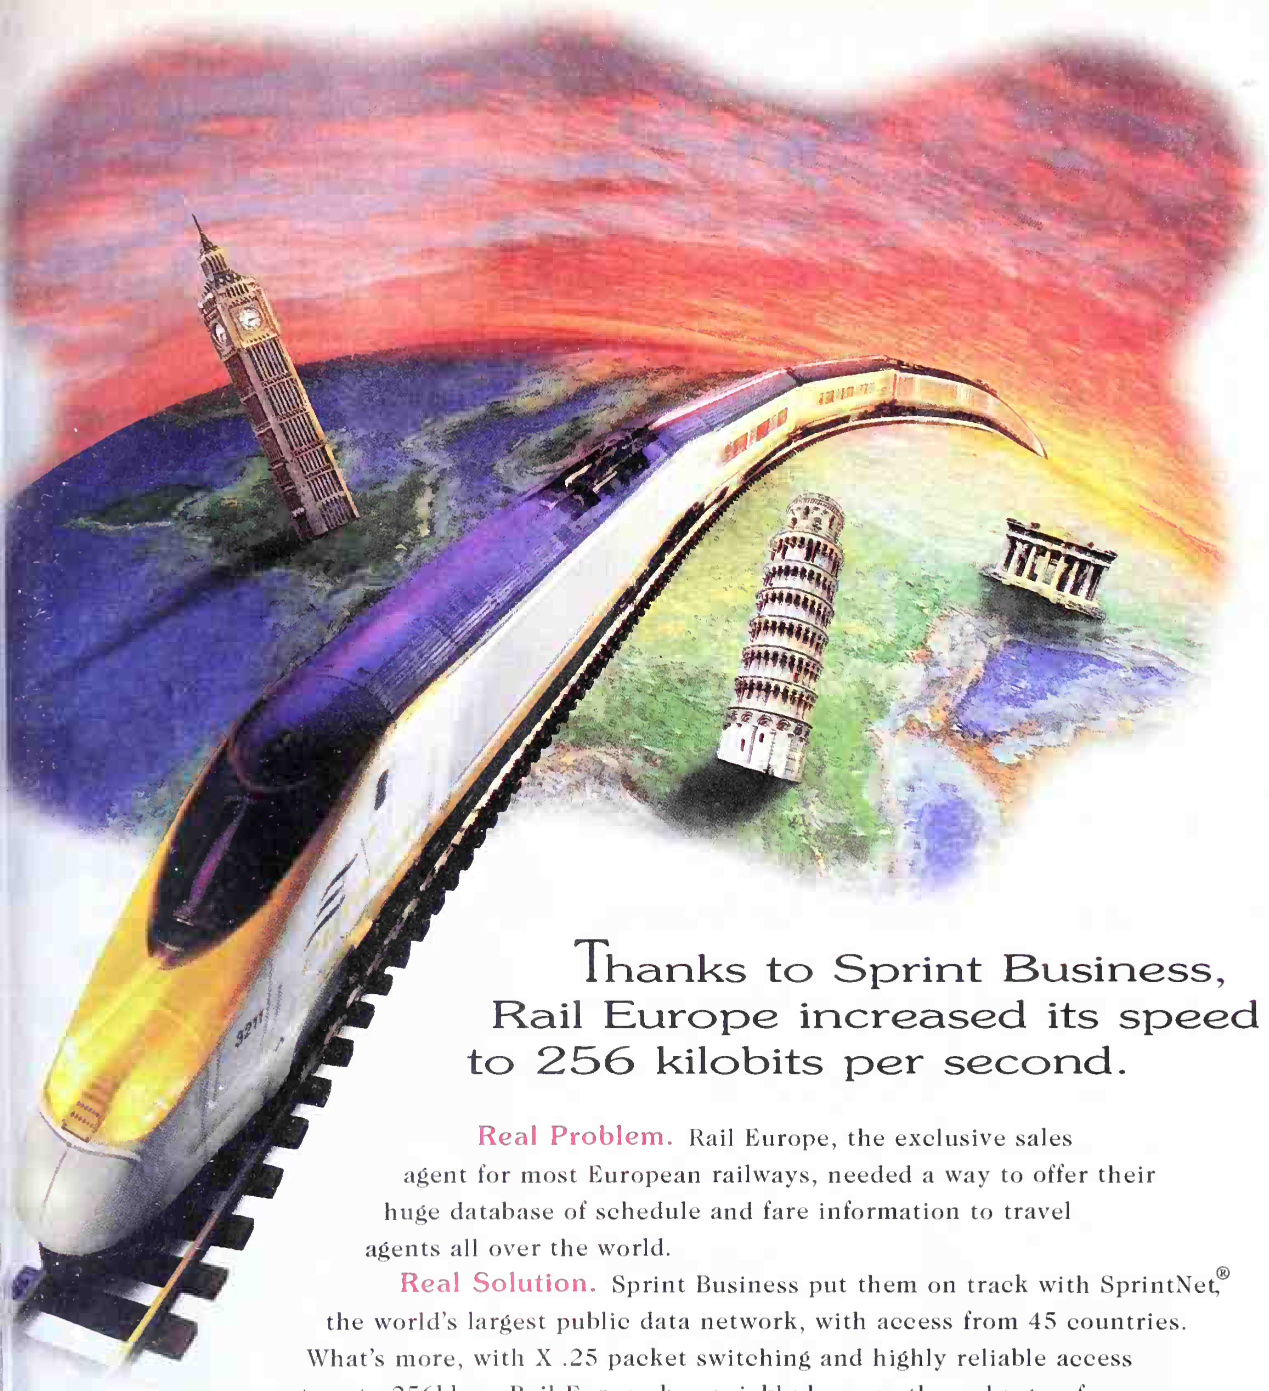
BASELESS HYSTERIA. S. Fred Singer, the scientist who invented the satellite ozone monitor, recently wrote in *Technology: Journal of the Franklin Institute* that the CFC phaseout was "based mainly on panicky reactions to press releases . . . rather than on published work that has withstood the scrutiny of scientific peers." And Sallie Baliunas, an award-winning astrophysicist at the Harvard-Smithsonian Center for Astrophysics, wrote in a paper, "Ozone and Global Warming: Are the Problems Real?": "The scientific facts clearly indicate, first, that there is no observational evidence that man-made chemicals like CFCs are dangerously thinning the ozone layer over most of the world and, second, that the kind of ultraviolet that would be let through by a thinner ozone layer, UV-B, is not the UV that causes melanoma. On two counts, the hysteria and costly regulations are entirely unfounded."

Interested readers can obtain Baliun
per from the George C. Marshall Instit
Washington. She makes the facts acces
and does not equivocate: "There is
served change in global ozone concentr
or mean temperature that is outsid
bounds of natural variability. There is
entific merit to the claim of an ultraviol
tastrophe by precipitous ozone loss. Th
no scientific basis for a catastrophic
warming produced by the buildup of
house gases from fossil-fuel burning." S
lieves the next step could be extremely
ly and unjustified fossil-fuel and c
dioxide restrictions.

MEDIA HYPE. The ozone scare appears
based more on hypothesis than on fact,
fear is too farfetched to be enlisted as a
on against CFCs. Melanie Duchin of the
peace Ozone Protection Campaign ever
ozone-destroying chemicals with "reduc
nis size." Gregg Easterbrook, in his new
A Moment on the Earth, documents th
played by unsubstantiated press releas
February, 1992, NASA scientists sprea
that an ozone hole was opening over po
ed regions of the U.S. and Europe.
magazine hyped the scare to the hilt
cover story, "Vanishing Ozone: The D
Moves Closer to Home." Vice-Preside
Gore gave an impassioned Senate s
about "the greatest crisis humanity has
faced." Duly panicked, the Senate vote
to accelerate the CFC ban by five years

As Easterbrook notes, it was a sp
tive apocalypse, not a real one. When
cized NASA for its scare tactics, Associat
ministrator Charles F. Kennel denie
NASA had predicted a second ozone h
case could be made that the media ig
NASA's hedged language and ran away
the story, but no one at NASA lifted a
correct the phony scare sparked by the
release or to forestall the Senate vot
fear and misinformation propelled.

Dr. Singer believes that ozone policy
on unproven assumptions that are bein
tected by such means as denial of res
funds to dissenting scientists and the m
and dismissal of government scientist
demand evidence before implementing
pensive policy. If we are to be well-gov
Congress must take an objective look at
depletion before we experience the b
tax increase in history.



Thanks to Sprint Business, Rail Europe increased its speed to 256 kilobits per second.

Real Problem. Rail Europe, the exclusive sales agent for most European railways, needed a way to offer their huge database of schedule and fare information to travel agents all over the world.

Real Solution. Sprint Business put them on track with SprintNet,® the world's largest public data network, with access from 45 countries. What's more, with X .25 packet switching and highly reliable access at up to 256kbps, Rail Europe has quickly become the only stop for thousands of travel agents in the U.S., and as far away as Japan and Australia. All they need is a PC and the price of a local call to book virtually any train in Europe and the former Soviet Union. 24 hours a day. Sprint Business technology helped Rail Europe. Let us help *your* business do *more* business.

Economic Trends

BY GENE KORETZ

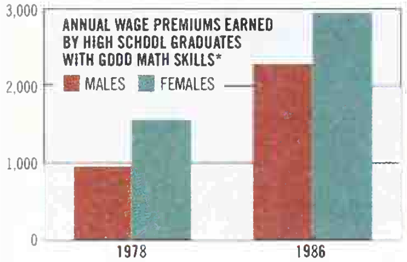
ONE PLUS ONE = HIGHER WAGES

A little math can be a big asset

Few U.S. labor market trends have attracted as much public concern as the dramatic increase in earnings inequality since the 1970s. Most economists have attributed this development to structural shifts in the economy favoring technological skills. They note that the wage premiums enjoyed by college graduates compared with high school graduates took a big leap in recent decades.

But years of schooling and academic degrees are only part of the story, report Richard J. Murnane and John B. Willett of Harvard University's Graduate School of Education and Frank Levy of the Massachusetts Institute of Technology. In a study in the May issue of the *Review of Economics and Statistics*, the researchers show that the lack of math skills themselves have had a growing impact on wage dispersion in the economy.

THE GROWING PAYOFF FROM BASIC MATH SKILLS



▲ CONSTANT 1988 DOLLARS *24-YEAR-OLDS

DATA: RICHARD J. MURNANE, JOHN B. WILLETT, AND FRANK LEVY

Adjusting for race, family background, work experience, and other variables, the researchers analyzed the wage profiles of samples of two groups of workers: 24-year-old high school and college graduates in 1978, and 24-year-old high school and college grads in 1986. Both groups had been tested for basic math skills, such as using decimals and fractions and reading simple line graphs, when they were high school seniors six years earlier.

The study's findings: In 1978, there was only a 5% difference between the wages of young male college graduates who had exhibited a mastery of basic math while in high school and the wages of college grads with weak math scores in high school. But by 1986, young male college graduates with good math skills in high school were earning over 15% more than their peers who had scored poorly. Among young female workers with college degrees, the wage premium widened from 12% in 1978 to 25% in 1986.

The big surprise, however, was that the influence of math skills on wages was just as pronounced among high school graduates with no college attendance at all (chart). By 1986, working 24-year-old high school grads who had scored well on math tests as seniors were earning $2,000 to $3,000 more a year than those with low scores.

To be sure, in 1986, 24-year-old male high school graduates with high math skills were still earning less than 24-year-olds with low skills earned in 1978, a sign of the dramatic decline in demand for less educated males over the 1980s. But the central message of the study, says Murnane, "is that a high school student's mastery of basic cognitive skills like math is an increasingly important determinant of subsequent wages—even if he or she doesn't go on to college."

WHO NEEDS GUM AND PATCHES?

Just pass a hefty cigarette tax

The Clinton Administration's proposed 75¢-per-pack increase in the federal cigarette tax isn't likely to be revived soon, but that hasn't stopped economists Frank Chaloupka and Henry Wechsler from calculating its impact on smokers. Their recent National Bureau of Economic Research study based on a 1993 survey of U.S. college students concludes that the tax hike (if fully passed on to smokers) would have cut smoking among students by 30%.

Factoring in the price responsiveness of all young smokers, the researchers figure that the tax hike would have reduced the number of smokers aged 18 through 24 by more than 1.8 million. It would also have cut eventual smoking-related premature deaths in this group by more than 450,000.

The two economists also find that such a tax hike would lead to large increases in tax revenues, since the smoking population is dominated by older smokers whose habits are less sensitive to price. Although tax receipts would eventually decline, they find that the current tax rate is well below the level producing the highest long-run tax take.

THE TAXMAN GIVETH—TARDIL

Will retail sales get juiced up?

Blame it on the taxman. After consumer spending slowed ear year, observers were quick to not the Internal Revenue Service had unusually late in mailing out tax re and that final tax payments in Ap people with liabilities were up s cantly over 1994 (BW—June 5).

Now, however, the taxman coughed up. Economists at Sal Brothers Inc. observe that a recor billion worth of personal refunds issued on the final Friday of M enough to push the monthly tally above 1994. Since many folks don' for their expected checks to start ping, Solly's experts doubt if the surge will boost retail sales much they're keeping their fingers cross

BLUE-COLLAR BLUES IN JAPAN

Factory jobs are dipping again

The rise in Japan's unemploymen to a record 3.2% in March s more than a pause in the recovery tends economist Shigeki Sakaki of ra Research Institute America Inc economy now seems to be in the stages of a significant downsizing of ufacturing employment.

Just a month ago, reports Sakaki anese manufacturers indicated that had cut costs enough to lower break-even point to around 103 y the dollar. That's still far above the current exchange rate, so a lot more production seems headed overseas.

Whereas factory jobs as a percent of total Japanese employment stayed above 24% from 1979 through 1992, Sakaki notes that the share is now closer to 23% and falling. (The U.S. ratio is 16%.) The big question, he says, is wh hiring by Japan's nonmanufacturing tors will be strong enough to off more rapid erosion in factory jobs.

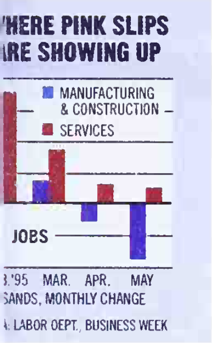
AMES C. COOPER & KATHLEEN MADIGAN

IE DIPS IN THE ROAD ON'T LAST FOREVER

U.S. ECONOMY The economy's goods-producing sector has always been 'ederal Reserve's whipping boy when it comes to ılining an unruly economy—and thereby containing ion. The punishment eventually takes a human especially on workers in manufacturing and contion. This time the pain is coming especially fast. e 101,000 drop in the nation's payrolls in May, ving a slight dip in April, shocked economists, fial markets, and probably even the Fed. It was a sion-size decline, larger than any since the 1990-91 turn. True to form, workers at factories and buildtes took the biggest blow (chart).

ıer downbeat reports: Consumers, faced with high- bills, cut back on spending in April. The nation's ıasing managers said the industrial sector was in sion in May. And a triple dip in the index of leadıdicators is another red flag of trouble ahead.



'HERE PINK SLIPS ARE SHOWING UP

SANDS, MONTHLY CHANGE
A: LABOR OEPT., BUSINESS WEEK

Fueled by new fears of recession, the bond market exploded on June 2 in the largest intraday rally in a decade, before giving back some gains. Yields still closed at a 15-month low. And the latest data, especially the May job losses, place increasing pressure on the Fed to ease policy.

The credit markets are inviting a rate cut. The rate on ear Treasury bills is now more than a quarter below the Fed's 6% overnight federal funds rate. ever, comments by top Fed officials on June 7 ıe markets less certain that a rate cut was immi- Most notably, Fed Chairman Alan Greenspan hat, as might be expected, the probability of ren has "edged up," but he also said that the deng slowdown was a desired result of Fed policy.

THING IS CLEAR: The current slowdown is far the soft landing that most observers had in mind the Fed set out to slow growth from an inflationace of 4% in 1994 down to an inflation-neutral h rate of about 2.5%. Based on the latest numsecond-quarter growth in real gross domestic ct will struggle to clear 1%.

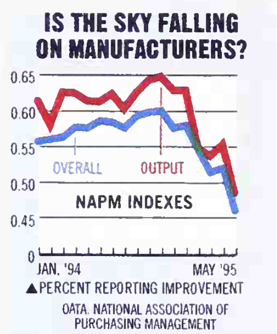
good news, however, is that the weakness still rs to be temporary and unlikely to feed on itself vay that would send the economy spiraling downinto a painful recession (page 76).

So far, the softness is concentrated on the output side of the economy, mainly in the goods-producing sector. The production weakness suggests that what's going on is primarily an attempt by businesses to wrestle their excessive inventories into better alignment with slower growth in demand. Once stock levels are adjusted, manufacturing output will pick up again.

Of course, this assumes that consumer demand doesn't suddenly sink into oblivion. On that score, the news is encouraging. Although real consumer spending on goods and services fell 0.1% in April, retailers reported healthy May sales. Also in May, Detroit announced that sales of U.S.-made cars and light trucks rose to an annual rate of 14.6 million, up from a tepid 13.9 million pace in April.

AT FIRST BLUSH, April's huge 1.1% drop in households' real aftertax income would appear to blight chances for healthier consumer spending. However, special factors were at work. The second installment of the 1993 tax hike on the wealthiest individuals subtracted a huge $50 billion from incomes, at an annual rate.

May incomes will return to normal. Also, by the end of April, the Internal Revenue Service had caught up with its mailing of refund checks, which had been delayed. That may have played a small part in recent consumer weakness. But at the end of May, refunds totaled a record $8.8 billion, twice the year-ago pace.



IS THE SKY FALLING ON MANUFACTURERS?

▲PERCENT REPORTING IMPROVEMENT
OATA. NATIONAL ASSOCIATION OF PURCHASING MANAGEMENT

Those checks may be helping June spending. The *Johnson Redbook* survey of retailers shows strong sales in early June, compared to May. And consumer balance sheets look healthy. Mortgage delinquencies in the first quarter dropped to a 22-year low, and a new wave of refinancing will lift cash flow (page 43).

Besides, the recent slowdown in consumer spending has not been broad. The weakness has been solely in durable goods. In the first four months of the year, the pace of the remaining 85% of outlays has picked up.

And almost all of the decline in durable goods sales was in motor vehicles. That's why the inventory correction, and the need to throttle back output, is heavily concentrated in the auto and related industries.

Detroit's gyrations may also be exerting a disproportionate impact on the purchasing managers' index (chart), which tends to be highly correlated with fluctu-

ERIC HOFFMANN/BW

ations in the output of autos and trucks. The purchasers' gauge of industrial activity dropped in May to 46.1%, from 52% in April. That's below the 50% line dividing recession from expansion in manufacturing.

Almost all of the components fell, including orders, production, employment, and inventories. In particular, the inventory index dropped to a level suggesting factory inventories have stopped growing and may well begin to decline. This hints that, as June began, inventory correction was underway. Official inventory data from the Commerce Dept. run only through April right now, and manufacturing and wholesale inventories were still rising in April.

BUT WHILE THE SLOWDOWN looks to be only temporary, it also is turning out to be sharp. The May employment report was a real head turner. The numbers were weak from top to bottom. Manufacturing lost 56,000 jobs on top of the 25,000 shed in April, and construction laid off 57,000 workers after April's 19,000 decline. Service companies managed to increase payrolls by 36,000, a tiny amount by recent standards.

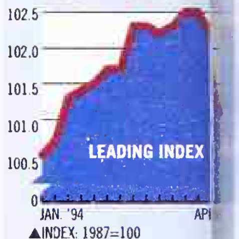
In addition, the May workweek fell by a steep 18 minutes, to 34.3 hours. That drop, plus the relentless rise in jobless claims, portends further weakness for payrolls in June.

In the factory sector, the workweek held at April's reading of 41.5 hours, but because of fewer jobs and less overtime, the data imply that factory production in May declined for the fourth month in a row, likely led by another big drop in car and truck output.

Another eye-popping number was April's 0.6% drop in the government's index of leading indicators, those that point to the economy's future (chart). The April decline was the third in a row, a traditional warning that recession is just around the corner. And based on data so far, the index likely fell again in May.

Bear in mind that the leading index has a spotty record at calling recessions. The problem: Five of the 11 indicators that comprise the index are directly linked to manufacturing, which has shrunk to only about 20% of the economy's GDP and now accounts for less than 16% of total employment. Consequently, the index in recent years has acted more like a coincident indicator, telling us more about where we are and less about where we're headed.

ANOTHER SIGN OF ROUGH TIMES AHEAD



▲INDEX: 1987=100

DATA: COMMERCE DEPT.

Sadly, May's job losses do a much better job of describing where we are right now. But unless consumers suddenly abandon the malls—which seems unlikely—the pain will be short, and the gain will be an extended lift for the expansion.

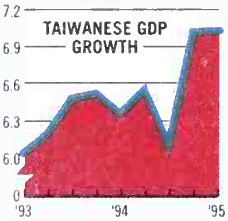
TAIWAN

THE INFLATION BEAST IS RESTLESS

With Taiwan's economy growing like a weed, it's not surprising that inflation is now a critical concern for investors.

Real gross domestic product in the first quarter surged 7% from a year ago, the fastest pace in three years. Consumer spending grew at a 6% clip, but exports soared 23.3%. Exporters sold more to China and Hong Kong, collectively Taiwan's biggest trading partner. And thanks to the strong yen and U. S. expansion, exports rose 32% to Japan and 13.7% to the U. S.

A GROWTH SPURT LIFTS INFLATION FEARS



▲PERCENT CHANGE FROM YEAR AGO

DATA: DRI/McGRAW-HILL

The downside to rapid growth has been the resurgence of inflation fears. In the first quarter, consumer prices grew at a 4.2% annual rate, far above the 3.5% projected by the government in late 1994. In fact, the government has had to raise its inflation forecast for all of 1995, from 3.7% to 3.9%, and private economists think it could top 4%. In response, the stock market plunged 20% from early January until late May.

Inflation has been tamer this quarter, thanks to slowing money-supply growth, high interest rates, and a strong currency. In May, consumer prices rose just 3.3% annually, down from April's 4.3%. Investors voiced approval with an early-June rally in the stock market.

To check inflation, Taiwan's central bank, the Central Bank of China, is likely to rely on tight money growth and a rising currency. In April, the broad M2 money supply grew 11% from a year ago—hefty, but still the lowest rate in four years. Meanwhile, the Taiwanese dollar has climbed 3% against the U. S. dollar so far this year. And with its $97.9 billion in foreign reserve, Taiwan can easily guide its dollar's future direction.

A strong currency, though, may hold back exports—a huge 59% of the economy. Another risk is the slow growth in the U. S. and Japan. Together, the two nations buy 36% of Taiwan's exports, so softer-than-expected upturns in the world's two largest economies could hurt Taiwan's growth later on. Investors, however, are counting on a slowdown to ease their inflation worries.

GERSTNER AT THE GATES

IBM's hostile bid for Lotus signals its resolve to take on Microsoft

Lou Gerstner hates it when he hears people call Microsoft the world's largest software company. It gnaws at him. The fact is, IBM sells $11 billion worth of software a year—more than twice Microsoft's revenues.

The world won't likely slight IBM again if Gerstner pulls off his surprise $3.3 billion cash offer, announced on June 5, for Lotus Development Corp. The bid—Big Blue's first-ever hostile takeover attempt—would not just be the biggest deal in the history of software: It also has the potential finally to make IBM a serious challenger to Microsoft Corp., which owns a staggering 80% of the market for the operating systems and applications suites that run on personal computers.

How? The acquisition could allow IBM to seize the lead in the new era of networked computing. Right off the bat, IBM would get Lotus' cc:Mail and Notes, the top-selling packages for electronic-mail and groupware. More important, IBM has the marketing muscle, financial resources, and technology knowhow to make Notes a widespread "platform" for building networked information systems. "There's an opportunity for leadership in the combined entity," says Gerstner.

SORRY STATE. Just ask Bill Gates. "It's fascinating," says the Microsoft chairman, who, like just about everybody else, was stunned by the boldness of the IBM move. But he warns: "It really has a lot to do with execution." On
of the bid, Gates assembled a six-p
task force to study the impact

l, as Gates points out, it will all
the execution. "They have an $11
software business they can't run.
They're going to run Lotus better? Get out of here," says Marc Butlein, chairman of Meta Group, a computer consulting firm. Nobody is more aware of IBM's shortcomings than Gerstner. So, in a memo sent over the Internet to Lotus employees, Gerstner promised that, postmerger, Lotus will survive intact and become the hub of a new IBM PC software operation. Notes developer Raymond E. Ozzie already sounds like a convert: "I've spent 10 years of my life nurturing this product," he says. "We have a goliath coming into the market with Microsoft. I want to do everything I can to make sure that Notes is a rip-roaring success."

Gerstner has more at stake than his $3.3 billion. For more than a year, he has been telling analysts and customers that the future of the company depends in large measure on its ability to lead in network computing. Notes would help make that happen. Prior to June 5, IBM had been negotiating with Lotus to run Notes on the IBM Global Network, which carries data for 25,000 corporate customers, for example.

With $10.5 billion in cash and a stock that has doubled in the past two years, Gerstner may not stop his shopping with Lotus. Insiders say IBM could make a play for network operating-system maker Novell Inc. or database maker Informix Corp. Gerstner declines to comment on additional acquisitions but

Software's New Playing Field?

How IBM's and Microsoft's operations would stack up

IBM/LOTUS	MICROSOFT
ON THE DESKTOP...	
● Its OS/2 operating system, launched seven years ago, isn't in the same league as Microsoft's Windows. And IBM's few applications never caught on. Lotus would give IBM a presence in applications—particularly with Lotus 1-2-3.	● With 70 million users, Windows dominates the operating-system market–and its base is growing. Thanks to its Excel spreadsheet and word processing package, Word, Microsoft also is the biggest player in applications software.
OFFICE NETWORKS...	
● Lotus' Notes is the key. The groupware package has a huge lead over competitors' products and would fill a hole in Big Blue's product line. Lotus also brings cc:Mail, the leading electronic-mail product.	● Its Windows NT, for networks of personal computers, is gaining market acceptance. But Exchange, a Notes competitor that likely won't appear until next year, has hit repeated snags.
TOP-TO-BOTTOM TECHNOLOGY...	
● The company is the entrenched leader in mainframe and minicomputer software for running corporate-wide systems. The challenge: Moving that "mission-critical" software onto the PC-based networks that are replacing bigger machines.	● The king of PC software hopes to push NT and related programs into IBM's big-system turf. This summer, it will introduce Microsoft Network, an online information and communications service that will compete with IBM's Prodigy.

(L TO R) PHOTOGRAPHS BY LISA QUINONES/BLACK STAR, JIM LEYNSE/REA/SABA

stops short of ruling them out. "Right now we are focusing on this one," he told reporters on June 5.

Manzi may be the only real obstacle to the deal. "It comes down to the ego of [Lotus'] top execs," says John McCarthy, an analyst with Forrester Research Inc. "They don't want to be labeled as selling out to IBM." Lotus executives aren't talking about IBM's bid, but their options appear limited. The most obvious white knights—AT&T, Oracle, and Hewlett-Packard—all are unlikely to top IBM's $60-per-share offer. The best Manzi can do, analysts expect, is to bump Big Blue's bid up to $65 or $70 per share by threatening to exercise Lotus' poison pill, which IBM is suing to dismantle. Beyond that, "it's basically done," says Paul Johnson, an analyst at Robertson Ste Inc. "It's a matter of price and ing." Lotus' directors, whom I seeking to oust, must meet by Ju to discuss their options. Most they will agree to usher their com with IBM, to the forefront of softw new era.

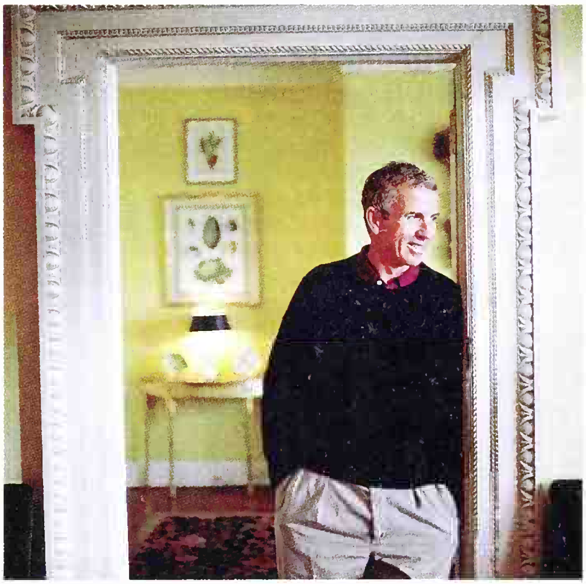
LOTUS: 'NO ONE KNOWS WHO'S IN CHARGE'



REORGANIZER: *Braddock started a shakeup*

JOHN S. AB

Credit IBM with impeccable timing: Its hostile takeover bid has caught Lotus Development Corp. at a particularly vulnerable moment. A stunning $18 million first-quarter loss—its first in years—has sent Lotus reeling. Top managers are feuding, and with layoffs looming, employee morale is in the dumps. It's "like a soap opera," says a former executive.

On May 15, a powerful outside director, former Citicorp President Richard S. Braddock, took over an office at Lotus' headquarters to oversee a major cost-cutting program and corporate reorganization. All of Lotus' four business units now report to Braddock—making unclear, say outsiders, the role of Chief Executive Jim P. Manzi. "It's a battlefield," says one former top executive. "No one's sure who's in charge—Braddock, Manzi, or the business heads."

TURMOIL. Manzi declined to comment. Braddock says "there's no tension" between himself and Manzi, who he says is also overseeing the restructuring. But he admits "there's a certain amount of fragility right now" within Lotus. Indeed, sources familiar with the company say Braddock's arrival has tensions running high among senior managers. Lotus has eliminated 32 high-level positions in the past two weeks, and hundreds of layoffs at lower levels are expected during the next few months.

The turmoil began in January, when the company announced a 50% price cut on a new version of its hot Notes program—well before the software was available. The unusual move temporarily killed demand for Notes, contributing to an 18% first-quarter revenue decline. Lotus' top managers were caught off guard, and its investors more so: Lotus shares, which had traded as high as 85 in March, 1994, fell into the low 30s. Two of Lotus' largest investors told BUSINESS WEEK at the time that they would sell their stakes if offered $50 a share.

Manzi, attempting to restore confidence, announced plans on Apr. 19 to cut costs and reorganize the company. Now, Braddock and Senior Vice-President Robert K. Weiler insist things are going as well as can be expected. But Lotus employees are rattled, and there are those among the rank and file who are sympathetic to a takeover by IBM. "To lots of employees, [the bid] is manna from heaven," says Stephen J. Crummey, a former Lotus sales chief.

One of those who is pleased at the prospect may be the single Lotus employee IBM would want most to keep happy—Note inventor and architect Ray Ozzie. Ozzie already has in cated he would welcome Bi Blue's deep pockets, say as ciates of the developer. Ozz has not been happy about t pace at which Lotus has ex panded demand for Notes, these sources say.

LOTUS-EATERS. Another IB sympathizer: Mitchell D. K or, Lotus' founder. Kapor h been gone from the softwar maker for nine years. But a computer-industry elder who once bore a practiced disdain for IBM and its way his support of Big Blue's bi comes as a surprise. "Something decisive had to happen," Kapor says. He calls IBM's offer a "good deal" th management probably should accep

That feeling isn't universal. Ma employees, accustomed to Lotus' relatively freewheeling culture, re main extremely wary of IBM's bureaucracy—and its dismal track record in personal-computer software. Until IBM offers very favorable terms to key employees, "the prospect of working for IBM is ver unappealing," says Tim Davenport a Notes manager who left Lotus May 19.

Manzi clearly concurs. He likely would not be kept on by IBM and i showing signs he'll fight the takeover. On the other hand, Manzi stands to earn a windfall of at leas $73 million on his stock if the deal goes through. He also would be ex tricated from the latest and most d ficult in Lotus' long string of crises Given his choices, he may opt not t oppose IBM's offer for long.

t should be cause for celebra- if only there were enough parts to und. The most critical component rt supply: the ubiquitous DRAM mic random-access memory) chip. root of the memory shortage is Corp.'s relentless price-cutting on ry-hogging Pentium microproces- he brains of IBM-style PCs. In ad- , to run well, Microsoft Corp.'s ws 95 operating software, due out on Aug. 24, needs a hefty 8 megabytes of DRAM—and many consumers want as much as 16 megabytes.

DRAM makers can't ramp up production now because, following a glut several years ago, Japanese makers of the chips decided against building new plants. The result: "We're sold out pretty much through the rest of this year," says Shigeki Matsue, vice-president of NEC Corp.'s Semiconductor Group. NEC's rivals say they're in the same boat.

Other problems? Apple can't get enough PowerPC chips from IBM. Pentium also is boosting demand for static RAM, another memory chip. "We are in the world market trying to get as many as we can get our hands on," says Compaq Chief Executive Eckhard Pfeiffer. Actually, supplies are tight on just about everything—from capacitors to high-speed CD-ROMs. Taxed by robust TV sales in Asia, Japanese makers of cathode-ray tubes can't keep up with demand for PC monitors.

One of the few exceptions: hard-disk drives. PC makers report they're getting enough of that component, but some computer industry execs worry that the situation could change suddenly. "If PC makers turn around and say they need a couple hundred thousand extra drives, they might have a problem," says Gary S. Marks, marketing vice-president of drivemaker Conner Peripherals Inc.

All this is driving up parts prices, at least temporarily. Some PC makers even are paying cash—often more than quoted prices—for parts up to three months in advance of delivery, says Robert Gunn, sales and marketing vice-president at PC circuit-board maker Micronics Computers Inc.

NICE PRICE. Shortages don't look to ease through at least yearend—and through 1996 for DRAMs. So far, the supply problem hasn't inflated PC prices, because companies such as Packard Bell Electronics, HP, and IBM are keeping them low as they push to gain or regain share or enter new markets. "They're really fanning the flames," says analyst Dan Ness of Computer Intelligence/InfoCorp.

Eventually, though, buyers may be forced to accept less powerful models—or pay up for features they need. That could put the brakes on demand, says Bear, Stearns & Co. analyst Andrew J. Neff. Unfortunately, a cure like that is probably worse than the disease.

By Robert Hof, with Kathy Rebello in San Francisco, Gary McWilliams in Houston, and Larry Holyoke in Tokyo

A Paucity of PC Parts

DYNAMIC RANDOM-ACCESS MEMORIES (DRAMs) NEC, Toshiba, Samsung, Micron Technology, and others can't keep up with demand for memory chips to run new software such as Microsoft's upcoming Windows 95

STATIC RANDOM-ACCESS MEMORIES (SRAMs) PCs based on Intel's new Pentium processor need twice as many SRAMs as the previous generation, making it hard for companies such as Motorola, Hitachi, and Cypress Semiconductor to keep pace

MONITORS The booming TV industry sucked up much of the supply produced by NEC, Sony, and others

CD-ROM DRIVES The need for high-speed drives for hot-selling multimedia games has put heavy demands on drivemakers such as Mitsumi Electric and Sony

HOLLYWOOD

CAN EDGAR BRONFMAN SWIM WITH THE SHARKS?

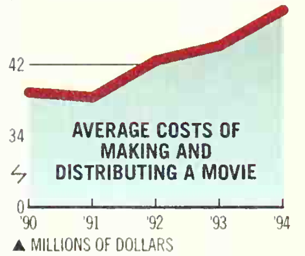
Eye-popping costs are squeezing studio margins

OVITZ: *Pushing the envelope*

He has produced a couple of movies and written a few songs. But the Hollywood education of Edgar Bronfman Jr. apparently began in earnest in the wee hours of June 5. That's when the Seagram Co. chief executive and Michael S. Ovitz, chairman of talent agency Creative Artists Agency Inc., called off their month-long negotiations for Ovitz to run Seagram's newly acquired entertainment giant, MCA Inc. In the end, the issues that kept Tinseltown's premier dealmaker from closing his biggest deal were quintessentially Hollywood—money, control, and ego.

But if Michael Ovitz proved difficult for Bronfman to land, wait until the Seagram scion settles in for a closer look at the economics of the industry he spent $5.7 billion buying into. Partly because of people like superagent Ovitz, Hollywood's salaries are increasing far faster than its revenues—and profits frequently are illusory. "The fact is, the economics of this industry are terribly out of whack," says industry lawyer Peter J. Dekom, a partner in the Beverly Hills firm Bloom, Dekom, Hergott, and Cook. "And they aren't getting any better."

PAINTING TINSELTOWN GREEN



▲ MILLIONS OF DOLLARS

OATA MOTION PICTURE ASSN

Truth be told, Hollywood spending has reached Ramboesque proportions. Last year, the Motion Picture Association of America reports, the industry spent an average of $34.2 million to make a film and an additional $16 million to market it—both figures nearly double the tab of just seven years ago (chart). The result? Despite the growth of cable television and international markets, industrywide operating margins slipped from nearly 10% in 1989 to 6% in 1993, according to investment bankers Veronis, Suhler & Associates Inc.

This year is likely to be even worse. While the box office is just 1.5% ahead of last year, spending is surging faster than the runaway bus in *Speed*. Actress Sandra Bullock, who got $250,000 to star with Keanu Reeves in that flick, will collect $6 million from Warner Bros. Inc. for the upcoming *A Time to Kill*. Demi Moore is getting $12.5 million from Castle Rock Entertainment for *Striptease*. Sylvester Stallone has signed a $20 million contract for a Savoy Pictures Entertainment Inc. opus that doesn't yet have a script. "Everyone is making a bet that they can get the one that beats the odds and is a hit," Armyan Bernstein, chairman of film ducer Beacon Communications.

Bronfman doesn't have to look r farther than his own back lot to that. Profit margins at MCA's $2.7 lion film unit, its largest single busi fell to 4% last year, down from 7 1993. This summer, the studio wil lease two films with $50 million gets, *Casper* and *Apollo 13*, and ready is anticipating tak write-down for Kevin Cost $175 million *Waterworl* July, the company will shooting the $75 million *light*, for which Stallone collect $17 million and 1 of revenues.

Could Ovitz have much to hold MCA's cost line? It seems doubtful. odds that a Costner or a lone would sign with Ovit less than his going rate are low. "It much easier to say yes than no in business," says *Forrest Gump* prod Steve Tisch. "Good talent wants t fairly compensated, and if one st won't pay, another will." With some MCA talent already considering bol Hollywood sources say, Bronfman sought to calm the situation by pro ing to keep the company's current n agement intact.

"NO PLAN B." As for MCA's CEO vac Bronfman told company executive a recent meeting that "there's no B." Names such as former QVC C man Barry Diller and Warner Bros CEO Terry Semel continue to sur But Bronfman's next big deal likely be to sign DreamWorks SKG, the studio being set up by Steven S berg, David Geffen, and Jeffrey zenberg, to a new contract. Sou close to DreamWorks say Geffen is gotiating an agreement that would MCA the right to distribute DreamW films, music, and TV shows, as well use any of its new characters in theme parks. A DreamWorks ac could be completed by late June, sources say.

That would be a sweet deal if it off. But Bronfman will need more a DreamWorks link to make MCA a ner. His failure to land Ovitz, walked away from an offer of more $200 million, taught him just how big money goes in Hollywood t days: not very.

She e the nation's top-ranking Af- nerican state official when Penn- ia Governor Milton J. Shapp her Secretary of State in 1971. or the past three years, she has attling the companies that peddle bums extolling sexual violence t women.

TUCKER: *Picketing the houses of Time Warner execs?*

PULPIT. Now, Tucker's campaign ing clout. Former GOP Education ary William J. Bennett has joined se in an unlikely alliance. (Tuck- agrees with him on just about hing else, from affirmative action control.) And Senate Majority Bob Dole (R-Kan.) also is get- hind her campaign. Tucker is us- newfound bully pulpit to send a blunt message to the entertainment industry. "They're pimping pornography to children for the almighty dollar," she roars. "Corporations need to understand: What does it profit a corporation to gain the world but lose its soul? That's the real bottom line."

Time Warner executives say they're willing to consider the issues behind the group's complaints. But they gripe that they're being unfairly singled out for criticism by opportunistic politicians, even though foreign companies such as Germany's Bertelsmann produce more gangsta-rap recordings than they do. And some Democrats charge that the GOP is singling out Time Warner because of its past support of Democrats.

Unfazed by criticism, Tucker in recent weeks has gone for Time Warner's jugular: She took the floor at its May 18 shareholders' meeting in New York to blast the company as "devoid of social conscience and citizen responsibility." In late May, Tucker and Bennett launched TV ads attacking Time Warner. The campaign runs in Los Angeles, New York, San Francisco, and Washington, urging parents to "make [Time Warner] feel the heat." On June 4, she demanded the firing of Warner Bros. Records Chairman Danny Goldberg, who called such detractors "a bunch of middle-aged people who don't like the music."

PLASTIC HANDCUFFS. Now, Tucker is threatening to picket the suburban houses of Time Warner execs. "We will march in their neighborhoods and let their neighbors hear the music," she vows. There's also talk of a boycott of Time Warner music, movies, and cable-TV properties. She plans similar tactics against Bertelsmann and other gangsta-rap purveyors.

Tucker may prove a formidable opponent. Since declaring her war of values in September, 1993, she has been arrested twice for blocking access to music stores that sold albums by rappers such as Snoop Doggy Dogg and Tupac Shakur. In her downtown Washington office, she proudly displays a pair of plastic handcuffs that were used to take her into custody—under a photo of her with King during his famous Alabama march from Selma to Montgomery in 1963.

Tucker has her critics. One prominent Pennsylvania Democrat calls her "an opportunist looking for anything that'll get her back in the spotlight." Other Democrats contend she is being used by conservatives to promote "family values" as a 1996 campaign issue.

Nonsense, insists a longtime friend, Democratic National Committee Chairman Donald L. Fowler. "DeLores Tucker is nobody's fool," he says. "She's a dedicated Democrat who is doing something that 99.9% of Americans agree with." Time Warner shows no sign of caving in. But with Tucker involved, it's sure to face the music.

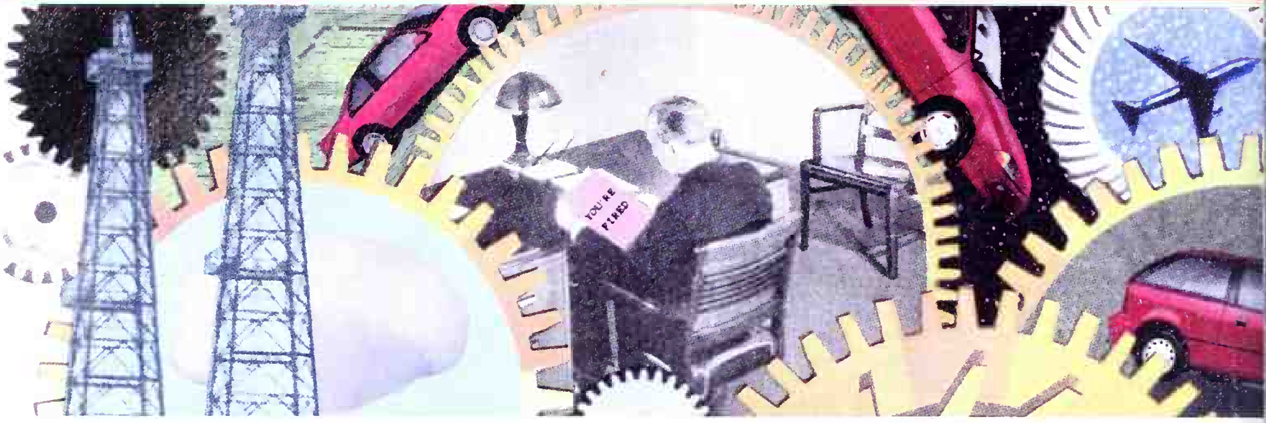
BARBARA RIES



THE ECONOMY

THE JOB MARKET ISN'T REALLY IN THE DUMPS

Gung-ho gains in new industries may be offsetting losses

The latest employment numbers show a surprising loss of 108,000 jobs over the past two months, the biggest drop since May, 1991. Is the job market about to slide into the pits again?

The answer depends on the outcome of a massive tug-of-war that's taking place in the labor market. On one side are the new economy's core industries, such as entertainment, education, computer services, communications, and consulting, which are adding workers at an astonishing clip (chart). On the other is the underbelly of the old economy, where job-shedding continues with fervor. Employers announced almost 60,000 job cuts in May. And the GOP's planned cuts in federal spending will increase the losses. The result: an economy precariously balanced between growth and recession.

CASTING CALLS. Despite the numbers, the latest news from the front lines of the labor market shows that the forces of job creation have an edge. For evidence, just look at the strong market headhunters are facing (page 43) or the continued heavy recruiting on college campuses. If the economy were slowing, "the first place companies [would] turn off the spigot is new hires," says Patrick Scheetz, director of the Collegiate Employment Research Institute at Michigan State University.

Who's hiring? In recent months, entertainment has become the biggest job creator, accounting for 40% of all growth. Moviemakers, casinos, and interactive-game developers are hiring at a rate of 465,000 annually, twice as much as a year ago. The actual number may be far higher: Actors, directors, and screenwriters are often engaged as independent contractors for a particular project, which means they don't show up in the government's payroll data.

The consulting business also has been on a spree since Jan. 1. Consulting firms are growing at an astounding rate of 120,000 jobs annually, as Corporate America looks for help reengineering itself. The consulting arm of Ernst & Young will hire 1,200 this year, an increase of more than 30%. "We plan to continue at this rate for the next two to three years," says Bob McIlhattan, an E&Y partner. Another job generator: education. With elementary and high school enrollment rising by 1 m students a year, demand for new t ers and school support staff is than offsetting any cutbacks in government.

VROOM, VROOM. Even some mar turers are adding workers, despit slowing economy. Harley-Davidsor is boosting its factory and engine ranks faster than last year—d equally by strong overseas and don demand for its motorcycles. And S Corp. in Streetsboro, Ohio, a mak plastic toys, is just completing a plant in Perrysville, Ohio. That wi quire 150 additional workers, says ident Thomas G. Murdough Jr.

Still, jobs are disappearing almc fast as they are being created—anc shows up in the numbers. Job loss concentrated in the usual cyclical i tries, which have only cautiously a new workers during the recovery downdraft is coming in financial ser government, and those parts of n facturing that are still downsizing. includes the planned elimination most 30,000 jobs by NASA over the five years as well as the loss of 5,000 positions brought about by Financial Corp.'s acquisition of in Continental Corp. Also, Boeing C cutting 12,000 jobs this year alone

Almost all nondurable manufact is also shrinking. In the chemical i try, employment has dwindled d the past year despite the strong e my and high profits. The trend sl continue, says Kent A. Dolby, a ma ing partner at Andersen Consultin chemical companies try to improve efficiency by "eliminating a lot of lo value-added tasks."

So far, job creation in growing i tries is managing to offset the losse the two parts of the economy pu opposite directions, the message fo seekers is clear: Be optimistic, but on for a bumpy ride.

ays Michael P. Hindman, a mort-
roker in Houston.

Refi madness it isn't—at least not yet. In 1993, when 30-year fixed rates dropped to 6.8%, a 20-year low, consumers refinanced their homes to the tune of $555 billion, 55% of all mortgage issuances. This year, the MBA expects refinancings to reach a relatively modest $126 billion. If 30-year rates fall to 7.5% nationally, says MBA chief economist David Lereah, refis could hit an annual rate of $231 billion.

JUMPING IN. Most of the demand, brokers say, is coming from homeowners who took on adjustable loans last year and now face their first annual rate increase. "A year ago, people thought these were the best thing since sliced bread," says Philip E. Lipp of Allwest Mortgage in North Hollywood, Calif. "Now their adjustables are higher than market rate."

Indeed, the effective rate on a standard 30-year, fixed-rate mortgage at Countrywide Credit Industries Inc., the country's largest mortgage banker, is now 7.9%. That's well below the 8.6% effective rate—the rate Countrywide figures a consumer will pay, on average, over the life of an annually adjustable loan starting at 6%.

Also feeding the market are homeowners who missed the 1993 refinancing boom. By the time Jim and Sandi Price decided to refinance their Chicago home two years ago, rates already were climbing back up. "I wondered if I would ever get another opportunity," says Jim, an advertising copywriter. Bingo: In May, the Prices found a 30-year mortgage at 8.25%. This time, they grabbed it.

; trying to poach top-notch man-
Companies have long fought to
ı to their CEOs, of course. But
cruiters say, counteroffers more
re being used to retain middle

managers. "Our position is: We'll do everything we can to find, attract, and retain the absolute best employees," says Jim Hebe, CEO of Freightliner Corp., a Portland (Ore.) truckmaker that in the past couple of years has begun routinely making counteroffers. "We'll fight tooth and toenail to keep them."

BIDS. There are no nationwide figures on counteroffers. But search firm Boyden Consulting Corp. says about one in seven candidates now is retained by counteroffers, vs. few before. "The incidence and intensity of counteroffer activity has never been higher in the history of our company," says Gary Williams, a vice-president at Cleveland-based Management Recruiters International Inc.

A major factor in the rise: Restructuring has left management ranks razor thin. Plus, the job market in general is tight. Unemployment during the 1990-91 recession never got higher than 7.8%—vs. a 10.2% rate during the 1982-83 recession. The scarcity of good managers has driven up executive search fees, which run up to 33% of a first year's salary, plus headhunter's expenses. Add to that an average of $50,000 for relocation, and a counteroffer is often cheaper than recruiting a replacement.

Headhunters are fighting the trend. One strategy: point out to employees that they wouldn't have considered taking a new job at all unless they were unhappy in some way. Allen Salikof, president of Philadelphia-based Management Recruiters of Cherry Hill Inc., mails search candidates a list of 10 reasons not to consider a counteroffer. "We're getting in early and hitting hard," he says. "It kills our business to go all the way to the altar and not get married." Maybe so. But employees such as Brousell have found that looking before you leap isn't such a bad idea.

STRATEGIES

A NEW POWER PLAY AT W.R. GRACE

The fate of its health-care unit hangs in the balance

Who's really running W. R. Grace & Co. these days? The new guy, Albert J. Costello, is chairman and chief executive officer. But behind the scenes, Constantine L. Hampers—whom Costello beat out for the top job—appears to be dictating one of the fractious company's most critical decisions.

Hampers heads National Medical Care Inc., the health-care company he co-founded and then sold to Grace. On May 4, he offered $3.5 billion to buy NMC back. Costello responded to the unsolicited bid by promising shareholders to sell the unit to the highest bidder or consider a spin-off.

Shareholders long have hoped for such a restructuring, and word of Hampers' offer sent Grace shares up 10%. Indeed, the likely breakup of Grace was viewed widely as a happy consequence of the turmoil that followed the ouster of former CEO J. P. Bolduc in March. Investors hoped Hampers' offer would flush out other interested buyers for NMC, which, while highly profitable, never has fit well with Grace's core chemical operations (chart). Instead, there has been a deafening silence.

Why? One reason is the hefty tax liability that a sale would entail—an estimated $860 million or more. To justify an outright sale of the unit, Grace needs an offer higher than Hampers' $3.5 billion. That's why many of Grace's advisers and investors favor a spin-off. But another reason, say sources close to the company, is the central role in any deal of Hampers himself—a role that may be precluding a competitive auction of the subsidiary.

ULTIMATUM. In lining up backing for his bid, Hampers reportedly has solicited commitments for financial participation from 70 NMC executives. He has informed Grace that if the unit goes to a higher bidder—or even if it is put on the block—he and other top managers will leave, according to numerous sources. Hampers did not respond to calls or faxed questions. His attorney, Paul Brountas, declined to comment on the prospect of such resignations.

Vivra Inc., one company that is interested in bidding on NMC, thinks Hampers' influence extends as well to information flow. Kent J. Thiry, president and CEO of the Burlingame (Calif.) company, complains that he has not had access to the same internal Grace data Hampers has used to line up financing. Brountas says, "my understanding is that information will be made available to all interested bidders," dismissing Vivra's complaint. Thiry responds: "What we're saying is that if you share data... we may have a better deal for [Grace] shareholders."

It may well. Although Vivra is small, with 1994 revenues of $284 million, it has financial backing from Bain Capital, Texas Pacific Group, and Hellman & Friedman, all management buyout firms with solid track records; and Morgan Stanley corporate finance chief Jo Perella is raising more financing. T group says its bid could be wort a extra $500 million to Grace sharehol

Grace says it will entertain se offers for NMC. Until then, it is eva ing Hampers' bid with the aid of M Lynch & Co. and CS First Boston. bets, though, are that Costello ultin ly will recommend a spin-off to Gr directors, who are ex ed to meet on June 14 vestors point out th spin-off could work in favor: They'd benefit the upside potential in arate stocks that Cost they say, would be h pressed to deliver Grace in its current f And shedding NMC qu would free Costello to on boosting the chem company by cutting cos selling other units.

Hampers could win a spin-off, too, likely re ing control of the com he started 27 years ag has said he would supp spin-off and "under ce conditions" would serv CEO. Sources say Hampers is deman options for as much as 15% of the company for himself and his manag

COMMENTARY

By John Carey

THROWING MONEY AT SCIENCE JUST CREATES A MONSTER

It's one of the rites of spring in Washington—scientists crying wolf over federal funding. Every year, as Congress crafts a new budget, the research community proclaims that the crippling of American technology and competitiveness is at hand. Their beef: disappointing increases for the National Institutes of Health, National Science Foundation, and other sacred research agencies.

The howling is especially intense this year. Instead of merely curbing growth in the science budget, Congress aims to take an unprecedented chunk out of the $50 billion federal research and development edifice. Republican plans would ax more than $2 billion in technology and energy programs, cut hundreds of millions from the NSF, and even shrink the NIH's $11 billion budget by up to 5%. Technopundits predict catastrophe. "These budgets will absolutely destroy the infrastructure of science and technology," says Mary L. Good, head of the Technology Administration at the Commerce Dept.

PHILLIPE LARDY

The lab budget could be sliced in half—without crippling science

Well, not necessarily. Rather than killing American science, drastic cuts could be just the painful medicine the whole enterprise needs. The sad truth is that federally funded research has mushroomed into a grossly inefficient system, hampered by bloated bureaucracies and rising mediocrity. Downsizing "is a golden opportunity," says materials scientist Rustum Roy of Pennsylvania State University.

"A DISGRACE." For example, there are four layers of bureaucrats overseeing the Energy Dept.'s 20 major laboratories, notes former NSF director Erich Bloch. "It's a disgrace," he says. Former Motorola Inc. Chairman Robert W. Galvin, who headed a recent study of the 10 biggest labs, suggests wholesale reform could slice their $6 billion lab budget in half—without touching the science at all.

But taming bureaucracies is only part of the solution. Today's R&D Establishment, based largely on academic scientists receiving government largesse, is a Malthusian nightmare come true. Its institutions sprang out of the gangbusters growth years of the 1950s, '60s, and '80s. And everyone has come to depend on ever-growing budgets.

Over a typical career, an academic scientist cultivates 15 new PhDs—most of whom eventually clamor for federal grants to start their own labs. The resulting system, like the insatiable plant in *Little Shop of Horrors*, only stays healthy when Uncle Sam responds to its incessant demand: "Feed me." Science already is suffering as a result. "Instead of spending my time doing physics, I now spend my time trying to raise funds," says California Institute of Technology physicist David Goodstein. "That change threatens the future of science."

The solution isn't more money. I stead, the science community need to overhaul a system fated to produce more aspiring scientists than Uncle Sam can support. That does necessarily mean training fewer n PhDs. Rather, "not every PhD should be at a university," says Bloch. "Some of them should go t work." At the very least, PhD training should be broadened to make new grads more attractive to industry.

ARTICLE OF FAITH. Fixing the system also means grappling with one of science's dirty secrets: Man researchers aren't worth of funding. "It's a small elite that does most of th work," says Caltech's Go stein. The obvious policy implication: Identify and reward this scientific elit while being careful to nu ture the best young talen Then ruthlessly trim fund ing for the also-rans in u versities and government labs. Painful, yes. But it's no different from the dow sizing already forced on t business world. The resul would be both billions in savings and better resear

In all the current wailin over the GOP budget prop sals, you won't hear leade of American science admit that the system needs fixing. "They have a almost mystical faith in continued e pansion," says Representative George E. Brown Jr. (D-Calif.), former chairman of the House Scienc Committee.

Of course, the GOP has an almost mystical faith in cost-cutting; it shouldn't be trusted to downsize sc ence effectively. But its proposals should be a wake-up call. If they really don't want U.S. science and technology to be crippled, scientist should stop bellyaching and start healing themselves.

Carey reports on science policy from Washington.

In Business This Week

EDITED BY KEITH H. HAMMONDS

YER OUT OF THE GAME, MORRIS

FOR MONTHS, JUSTICE DEPT. officials have huddled around their VCRs during working hours, intently studying reruns of Atlanta Braves baseball games and 49ers gridiron contests. Slackers? Hardly. They've been looking for evidence that Philip Morris was violating the 24-year-old ban on TV cigarette advertising. After finding apparent violations in the form of telegenic billboards placed strategically in ballparks and arenas, the government and the tobacco giant announced on June 6 that the signs will no longer be visible to TV viewers. Philip Morris has admitted no fault. Nonetheless, its Marlboro Man has lost his front-row seat next to the scorer's table at Knicks games.

CLOSING BELL

RYKA'S REPRIEVE

Troubled women's athletic shoemaker Ryka finally found its Prince Charming, in the guise of Michael Rubin, a 22-year-old Philadelphia entrepreneur. Rubin heads KPR Sports International, a privately held footwear distributor claiming 1994 sales of $27 million. He will give Ryka loans and other credit facilities worth $8 million in return for up to 40% of Ryka stock. The deal, which came five weeks after a pact with L.A. Gear collapsed, buoyed Ryka's stock, which had been nearing zero. And it kept founder Sheri Poe employed: She remains Ryka's chief spokesperson and a board member.

STREET CHEERS FOR KMART'S NEW CHIEF

HEADHUNTER THOMAS NEFF says he didn't expect Floyd Hall, who had turned down past overtures, to be interested in the job. He phoned the former Target Stores and Grand Union executive on Apr. 24 to toss around the names of retailing executives who might be right to head Kmart, his client. At conversation's end, Neff asked casually: "What about you?" To his surprise, Hall said he'd think about it. A month later, on June 5, Kmart announced that Hall had accepted the post of chairman, CEO, and president, succeeding deposed chief Joseph Antonini. Wall Street's initial reaction: Floyd Who? Its next reaction: We like Floyd. Investors sent the troubled retailer's stock up 18% over the next two days.

AT THE IRS, IT'S SIMPLIFY, SIMPLIFY

THE INTERNAL REVENUE SERVICE is promising to make paying taxes a little easier—and $1 billion less expensive—for small business. President Clinton planned to announce on June 9 a streamlined filing process as part of his vaunted Reinventing Government campaign. Among the changes: one-stop filing for small companies' tax and wage reporting. Businesses would have to file such data just once, to the Social Security Administration, which in turn would pass the information on to the IRS and the necessary states.

KKR IS HOOKING UP TO TELECOM

KOHLBERG KRAVIS ROBERTS, better known for its investments in such prosaic industries as food and supermarkets, is going high-tech—after a fashion. The buyout firm is plunging into telecommunications, with a $475 million buyout of Rockwell International's Reliance Comm/Tec unit. KKR says Comm/Tec, which had 1994 sales of $458 million, should prosper from the telecommunications industry's bulging investment in infrastructure, especially with its digital loop carriers that link fiber-optic cables with old copper wires. If the acquisition seems racy by KKR's traditional standards, Comm/Tec has its prosaic side, too: Most of the unit's sales come from old-line, stable businesses.

HEADLINER: GEORGETTE MOSBACH

TO LONDON, TO MEET THE PRINTS

Can ex-Washington A-lister Georgette Mosbacher find happiness in floral prints and Victorian taffeta? On June 4, the wife of former Commerce Secretary Robert Mosbacher announced she wants to buy Laura Ashley Holdings, the London-based chain of English country-style clothing and furnishings stores.

Laura Ashley could use help: It has lost money in each of the past four years, dropping $49 million in 1994 alone. And Mosbacher, 48, is something of a turnaround artist: She bought La Prairie, a Swiss cosmetics company, in 1988 and sold it three years later $45 million, reportedly reaping a hefty profit. S now runs Georgette M bacher Enterprise which sells a co metics line called Exc sives on th QVC home shopping net work.

Laura Ashley doesn't want to de though. Sir Bernard Ash the founder's widower an the company's largest sha holder, says he won't sell his 34% stake. A spokesman for PaineWebber, M bacher's adviser, says she will do nothing against shareholders' wishes.

G LABOR'S
NTRACT ON NEWT

sident Clinton isn't the only one who has had to rein-
nt himself in the wake of the Republican takeover of
pitol Hill. Leaders of the U.S. labor movement—whose
ng clout has all but vanished—have been shocked into
ical makeover of their own.
move to oust AFL-CIO President Lane Kirkland is
he most visible sign of the ferment within Big Labor.
ntled unions are crafting feistier forms of political ac-
a last-ditch effort to help Democrats
ure Congress. For labor, "this could
a reinvigoration," says Gerald W.
ee, president of the American Federa-
State, County & Municipal Employees.
ST. Despite labor's vaunted reputation
tics, unions admit that for years they
lone little more than make donations
st-minute calls soliciting member sup-
r endorsed candidates. They've relied
yists to influence Congress while fail-
employ members to pressure officials.
, unions are starting grassroots cam-
to provide members with continual in-
ion on issues and lawmakers' positions.
e staging sit-ins and other militant
ts against GOP lawmakers. Some un-
en plan to withhold money from the
ratic Party when it finances candidates
nore labor's agenda. Labor must adapt,
ervice Employees President John J.
ey, "a new attitude toward rewarding our friends and
ing our enemies."
tics note it will take more than a change in tactics to
years of ebbing influence. But despite its dwindling
of U.S. workers, the 16 million-member movement
ll marshal legions of activists and contributors.
most ambitious plan to unleash this potential is the '95
, which could form the nucleus of the AFL-CIO's political strategy when Kirkland leaves. The AFL-CIO rejected overtures by McEntee, who's leading the effort, to sign on. While unions in the past did little to coordinate political strategies, more than a dozen have joined this project, pitching in $1.5 million for 1995 alone. Past drives concentrated on congressional districts with the most union households, but this one will target the most vulnerable GOP lawmakers—20 freshmen who won by small margins in districts that Clinton carried in 1992. By mid-June, field coordinators will generate mailings, talk-show calls, and letters to editors, detailing incumbents' votes on issues like education.

CLINTON: *Labor's love lost?*

IRA WYMAN/SYGMA

NO MORE NAFTAS. The United Brotherhood of Carpenters & Joiners has also started a $1 million campaign to turn members into political activists in GOP districts. Although Democrats captured 63% of the union vote last fall, turnout by organized labor was low. "If we can get people out who didn't vote before, we can make a difference," says Carpenters' President Sigurd Lucassen.

Union leaders hope the early grassroots organizing will not only elect Democrats but keep them loyal—avoiding a repeat of 1993, when a Democratic President and Congress passed the North American Free Trade Agreement over union opposition. And with business donors shifting to the GOP, Democrats in '96 may feel beholden to labor as unions contribute a bigger share of campaign cash.

Certainly, problems remain. Labor is still dominated by aging white men often out of touch with growing ranks of women, minorities, and younger members. And much of today's public rejects its traditional New Deal agenda. Still, even critics credit Newt Gingrich's GOP Revolution for one thing: forcing labor chieftains to adapt to the new times.

on what to do with the extra rev-
Some officials would aim for
er deficit reduction, while others
to finance bigger middle-class
its than Clinton proposed in
uary. That plan—a child credit,
reaks for education, and expand-
dividual Retirement Accounts—
l cost $100 billion by 2002. Any
on would still be less than the
e GOP's $350 billion cut.

REPUBLICAN RAINMAKER

▶The Republican National Committee has tapped a new finance chairman: San Francisco businessman Howard Leach, a GOP fund-raiser with ties to former President Ronald Reagan. Leach's financial empire includes agribusiness, timber, and an investment firm. In 1992, he was President Bush's top Western fund-raiser. The appointment is a blow to the Presidential campaign of California Governor Pete Wilson: Leach raised $9.4 million for Wilson's 1994 reelection.

SANCTIONS PLAY IN PEORIA

▶U.S. Trade Representative Mickey Kantor frets that opinion-setting elites around the world are siding with Japan against the U.S. vow to double tariffs on Japanese luxury cars. But mainstream America is cheering the Clintonites on. A May 22-26 nationwide survey of 1,000 recent voters by EPIC/MRA of Lansing, Mich., found that 71% favor the sanctions as a way to force Japan to open its market to U.S. cars and auto parts. Only 20% oppose the tariffs.

A WALL STREETER MAKES HIS DEBUT ON THE WORLD STAGE

U.S. Treasury's Bob Rubin faces his biggest test as the G-7 nations convene

The decision came on May 30 in a phone call to Federal Reserve Chairman Alan Greenspan. It was time, Treasury Secretary Robert E. Rubin told him, to spring a trap on the market bears driving down the dollar. Traders were testing the Treasury chief to see if he would defend the greenback—or stay on the sidelines, as he had when the dollar swooned in April.

This time, Rubin found compelling reasons to move. With the Group of Seven economic summit just weeks away, the credibility of the U.S. with its trading partners was increasingly at stake. And Rubin's instincts—formed during 26 years on the trading floor at Goldman, Sachs & Co.—told him that a moment had come when intervention could move the market.

So on the morning of May 31, the Federal Reserve Bank of New York led a sweep through the currency exchanges. The U.S. and 11 other nations dumped up to $1 billion worth of yen and marks. Shell-shockeD bears scrambled to buy dollars, fueling a 3% rally.

Chalk up another exercise in crisis management for Bob Rubin. In five months as Treasury Secretary, he has crafted two rescue plans for the Mexican economy, weathered two sharp runs on the dollar, and endured attacks on Treasury's law-enforcement agents in Oklahoma City and Washington. In the process, he received mixed reviews—from applause for his handling of Mexico's bailout to hisses in Germany and Japan for failing to bolster the dollar.

MEXICO PHOBIA. Now, his ability to manage the Clinton Administration's economic policy is facing a crucial new test. As President Clinton and leaders from other G-7 industrial nations prepare for their 21st summit, in Halifax, N.S., on June 15-17, an array of potential crises confronts them. Growth in the U.S., Europe, and Japan is slowing. The fear that "another Mexico" will trigger market chaos hangs over the financial system. To top it off, the cooperation shown in the May 31 currency intervention masks deep rifts between the U.S. and its allies—from the dispute over auto parts with Japan to anger about Rubin's earlier hands-off approach on the dollar.

Coping with these threats will require more than crisis management. Now Rubin must take a far more assertive role as the Administration's chief economic strategist. At Halifax, he'll unveil his plan for repairing the global financial system, with the U.S. taking the lead. As the world's largest economy, "the U.S. remains the only country in a position to provide real leadership," Rubin told BUSINESS WEEK. "We have to help Americans understand that their economic well-being is directly related to this country's engagement with the global economy."

RUBIN'S AGENDA Treasury-watchers will see whether he can pull it off

Reform the International Monetary Fund by expanding a special short-term fund–the General Agreement to Borrow–to deal with financial crises

Head Off new financial crises by bolstering the IMF's power to monitor borrowing countries' economies and disclose information to private investors

Avoid intervention to support the dollar, except in extreme circumstances

Cut the $200 billion U.S. budget deficit gradually

Win congressional support for funding the World Bank's low-cost loans for fighting poverty in the least developed nations

Force Japan to open its auto and auto-parts market

CHRIS USHER

tion to anticipate problems, he argues.

If crises occur, Rubin wants to tap a special fund to bail out countries rather than patching together an aid package, as he did with Mexico. So he is asking the G-7 to expand the General Agreement to Borrow, a mutual-aid society of 12 rich nations. More countries—especially the newly prosperous Asian economies—will be urged to ante up.

HAWKEYED? At the summit, the G-7 leaders will likely back Rubin's proposals on crisis machinery. But on the larger question of how well the global economy is running, Rubin may find himself out of step. Compared with his European and Japanese partners, who worry about a faltering recovery, Rubin is sanguine about world economic prospects. The Treasury chief believes that "the most likely scenario is continuation of solid growth and low inflation" in the U.S. He's pleased with the progress Mexico has made. And he says the global economy can weather Europe's slowdown.

Critics say Rubin has failed to focus on the U.S. budget deficit—seen as the biggest threat to global economic stability

Indeed, the only area of the world that seriously worries the Treasury chief is Japan. Rubin has long been a hawk on Tokyo, arguing that Japan's closed markets are responsible for its economic slump. Rubin believes the U.S. can best help Japan by pushing it hard to open up. So it was no surprise that Rubin overruled Treasury's traditional arguments against trade conflicts to champion Administration sanctions against Japanese luxury cars.

A major challenge to Rubin's leadership, however, may come at home. By September, the Administration will enter serious budget negotiations with Congress. If Rubin can't deliver significant budget cuts, while protecting social programs expanded by Clinton, he'll have a hard time making a case for his global leadership. In coming months, Treasury-watchers will have a chance to decide whether Rubin has what it takes to play on the world stage.

FACE-LIFT: *Eastern cities are star to resemble modern metropolises*

GERMANY

THE WORST IS FINALLY OVER IN EASTERN GERMANY

After five years of trauma, the region's economy is gaining

Every day, grocery shops throughout eastern Germany get fresh salads shipped to them from Dresden food processor Feinkostfabrik Dr Doerr. The 62-year-old company had moldered under communist ownership until Udo Doerr, son of the founders, bought back the name in 1990, borrowed to build a new factory, and pushed sales ninefold, to $12.9 million, this year.

The Doerr family's comeback is one sign among many that in eastern Germany, the worst is finally over. After a five-year crash course in capitalism, complete with traumatizing layoffs and factory closings, the region's economy is blooming at a 9% growth rate. Exports have started rising after a steady slump, and nearly 500,000 new entrepreneurs are beginning to lay the foundation for a new *Mittelstand* to add to Germany's small-business sector.

STOPGAP TAX. That's not to say the conversion is complete. The official unemployment rate, at 14.2%, is still frighteningly high. Transfer payments from western Germany will top $100 billion in 1995. To keep a cap on the $36 billion deficit, the government is even imposing an unpopular income tax surcharge until payments to the east dwindle.

But joblessness has also stopped its rapid climb. And net subsidies from the west, huge as they are, will decline 16% this year from their peak in 1994. "The transformation phase is over," says Karl Brenke, economist with the German Institute for Economic Development. "Now we need a healthy buildup."

Although that buildup could take another 10 years, the needed infrastructure is falling into place. Highways are being rebuilt and extended. Leipzig and Dresden are beginning to resemble the metropolises of Frankfurt and Munich. Services such as banking and auto leasing are growing rapidly, from 7% of gross domestic product five years a 25% now. Household income is three-quarters that of the west. self-confidence is growing," says Wiltsch, president of his own consu company in Potsdam.

Private investment is also sho signs of life. Siemens is spendin most $2 billion on a center for micr tronics research and production Dresden. Siemens expects its ultra ern chip factory to employ up to people directly and create another local jobs for suppliers and service a smaller scale, Wolfgang Gries, a icist from West Berlin, founded maker LAS in 1992 near Potsdam close to his eastern suppliers. "The real pioneering spirit here to tap he says. Today, 60% of his comp $2.64 million in sales comes from ports, mostly to the U.S. and Ja and he opened a sales unit in S Clara, Calif., this spring.

There remain plenty of problen tackle. Many east Germans just ca get off the dole or move up from o the thousands of make-work jobs cocted by bureaucrats. Robust gr rates also paper over weaknesses. struction is 18% of gross domestic uct, compared with 5.5% in the Tax breaks that encourage wester vestment in real estate are creati glut of office space in the major c And manufacturing makes up only of the eastern economy, versus 28 the west. "They can't just cut hai deliver pizzas," frets Bernard Vel head of a development team in the nomics Ministry in Bonn.

RISING FAST. The key is to develop bally competitive manufacturing. thanks to a politically expedient a ment to bring industry wages sw up to western levels, unit costs are 35% higher than in the west. Produ ity is rising fast, but it remains that of the west, and manufactu cannot pay low wages to compen The Economics Ministry now wan help funnel capital to manufactu One idea: to set up a fund that will investors a nice interest income a tax break, then put the assets to making long-term, low-interest loan eastern companies.

It's easy for Germans to forget eastern Germany is no longer the r was. But six years after the fall o Berlin wall, something remarkab happening.

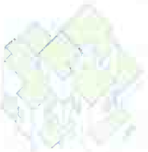
THE BEST-RATED UNIX SYSTEM.

H NO, NOT ANOTHER ONE.)

Recently, IBM was awarded best-rated UNIX system by a noted consultant, D.H. Brown. Now, we're as proud as anyone to be ranked No. 1, but we can't help but notice other companies are being ranked No. 1, too. And proudly telling the world.



Over 10,000 programs from design to data mining.

Which raises a pesky question: If everybody can be ranked No. 1, what should you look for in a UNIX partner?

Good point.

We suggest you look at a number of things. The operating system. Range of applications. Depth of experience in enterprise computing. And perhaps, above all, the ability to run your company using the different computers and platforms you already have in place. Something that, you may have guessed, we're no strangers to at IBM.

RS/6000 is a leader in UNIX midrange sales.

In fact, at the last Enterprise Management Summit, IBM surpassed all other vendors in systems and network management.

On top of that, our RISC System/6000® and its UNIX operating system, AIX,® connects to a wide range of systems, including HP,® Sun,® DEC® and PC LANs, so you'll be able to keep working with your existing business computers.

As for software, with over 10,000 commercial and technical applications, your network can run everything from engineering to accounting to major databases.

RS/6000 keeps United Airlines flying on time.

Not surprisingly, when United Airlines system aircraft maintenance controllers needed to access critical information instantly and communicate it to a fleet of 550 airplanes, they chose RS/6000™ to keep them connected.

The UNIX platform is a very powerful tool. And with our proven RS/6000 system running on AIX, there are hundreds of ways it can help your business stay competitive. We'll be glad to show you how.

Call us at 1 800 IBM-3333, ext. FA116. Or, if you're on the Net, visit our Home Page at http://www.ibm.com.

And see for yourself how we stack up.

BELGIUM

A BELGIAN BREWER'S PLANS COME TO A HEAD

Interbrew's $2 billion Labatt deal is a springboard for growth

Until recently, Belgium's Interbrew epitomized many of the beer industry's most venerable traditions. Interbrew boasts roots dating from 1366 and certain recipes concocted by local abbeys. Beer connoisseurs cherish Interbrew's more than 40 brands, including the lager Stella Artois, the cloudy white Hoegaarden, and an unusual raspberry-flavored malt.

Suddenly, this bastion of tradition is emerging as one of the industry's most aggressive global players. On June 6, Interbrew offered to pay almost $2 billion for Canadian brewing giant John Labatt Ltd. This deal comes on the heels of Interbrew's forays into China, Hungary, and Romania. If it is approved by Labatt shareholders, it will turn Interbrew into the world's fourth-largest brewer, up from just 16th last year, when it earned $100 million on sales of $1.7 billion. What's more, Interbrew will be "far more international" than U.S. giants Anheuser-Busch Inc. and Miller Brewing Co., says Steven Dixon, an analyst at Arnhold & S. Bleichroeder Inc.

MOGUL. Faced with mature domestic markets, leading brewers must go global. But Interbrew would need years of costly marketing to take its main beer, Stella Artois, worldwide. The only option is to buy growth. Labatt would give Interbrew a formidable springboard for further expansion. A North American presence is essential "if you want to be an international beer mogul," says Robert S. Weinberg, a St. Louis beer consultant whose clients include Miller and Anheuser. Labatt will give Interbrew 45% of the Canadian market, a rapidly growing U.S. specialty-beer business, and a 22% stake in Mexico's second-largest brewer, Femsa Cerveza.

These businesses have enormous growth potential. In the U.S., Labatt is already among the top three players in specialty beers, the most promising market segment. Since 1987, its U.S. sales have zoomed ahead at a 21% annual clip, while the market as a whole managed just 1%. Labatt figures it can boost its U.S. sales a further 85% by 2000. And that's not counting the addition of Stella Artois, which Interbrew chief Hans H. Meerloo now hopes to position as an upscale quaff in U.S. bars.

In Mexico, Femsa should enjoy strong growth, once the peso crisis subsides. And analysts are speculating that Interbrew may team up with Quilmes Industrial, Argentina's No. 1 brewer, to expand into the rapidly growing South American market. Quilmes was a major player in the May 18 hostile bid for Labatt led by Onex Corp. In Europe, Labatt owns Birra Moretti, which has an 11.6% stake in the Italian market. And Interbrew
would also get Labatt's 533 British
which would consolidate Stella A

MOTOH KATSUMATA'S BIG GAMBLE

AGE 51

BACKGROUND President of largest private-
held auto dealer in
Japan, selling 75,00(
Toyotas a year

STRATEGY Introduce
more Fords into his
Toyota showrooms,
expanding from curre
five showrooms to 20
within 10 years

GOAL Sell 1,200 For
a year by end of the
decade

JAPAN

ROADBLOCKS, ROADBLOCKS EVERYWHERE

Ford dealer Katsumata isn't moving many Mustangs–for now

Motoh Katsumata, 51, has waited nearly all his life to sell Fords. His grandfather started selling them in 1924. His father switched to Toyota in 1962 and built the largest privately held dealer network in Japan. But Motoh still dreamed of selling Fords. Last year, his dream came true. Now Mustangs gleam alongside Toyotas in his suburban Tokyo showrooms.

Unfortunately for Ford Motor Co., very few of its 126 dealers in Japan are as strong as Katsumata, president of Katusmata Group. With access to dealerships one of the main points of dispute in the current brawl between Washington and Tokyo, his efforts illustrate the huge obstacles Detroit faces in Japan. "The market's open tariff-wise," he says with a sigh, "but behind the tariffs, it's very difficult."

REPAIR RUNAROUND. Most dealers are under intense pressure from Japanese auto makers to keep American cars out. It took Katsumata two years of negotiations just to get Fords into the showroom. His clout helped him persuade Toyota Motor Corp. "Ford's lucky," says a Toyota spokesman. "He's a powerful businessman and that should give [Ford] every chance to succeed."

Once Katsumata started importing Fords, he had the daunting task of assembling a sales team from scratch, since Toyota wouldn't allow salespeople to hawk its cars and Fords at the same time. Moreover, government regulations make it hard for him to open a dealership with a repair shop, meaning that Katsumata's Ford customers often can't get the service support they need.

Still, having a high-profile dealer such as Katsumata is a coup for Ford. The most aggressive of the Big Three in Japan, Ford hopes that Katsumata's gamble will pave the way for others. "His involvement means a lot to the other dealers," says Konen Suzuki, president of Ford Motor Co. (Japan). "Everyone knows his business will set the pace."

But so far, that pace has been very slow. Of the 75,000 cars Katsumata sells a year, 360 are Fords. And he expects to be selling only 1,200 Fords a year by the end of the decade.

Then why bother? There's more to Katsumata's strategy than simple nostalgia. If he can get the reputation for selling foreign cars, Katsumata argues, he'll be well-positioned when they become more popular. That's starting to happen, he says. The market for Fords, while a niche, is growing as the company lowers prices. The base Mustang coupe runs about $27,000 these days, compared with $49,000 10 years ago. "A lot of guys in their 50s longed for a Mustang when they were young but couldn't afford one," says Yasuo S
one of Katsumata's dealers.

Despite talk of U.S. cars not ap
ing to the Japanese, Katsumata's de
say that customers are impresse
the safety features and low cost of
cars. Toyota's Caldina wagon, startir
$22,400, is less than a similar Ford
deo at $23,800. But the dual air
and antilock brakes, standard on
Ford, will tack $1,550 on the Caldi

TRUE BLUE. To get the message ac
Katsumata has started adverti
spending about $50,000 on direct
as well as newspaper and radio
Ford is spending millions more.
takes a while to sink into custon
minds," says Sudo, who spreads
word by driving a Taurus.

Katsumata, a former salesman
Toyota, has little patience for som
Ford's marketing strategies. The co
ny, he says, doesn't offer enough ri
hand-drive models. Moreover, it m
what he regards as petty demands:
showrooms, for instance, must be a
form Ford blue to promote corpo
identity. "It's meaningless," Katsu
gripes. "Toyota wants just one thi
sign." Worse, Ford doesn't take rep
ment orders often enough. "A on
year order system is nonsense," he s

Similarly, Katsumata finds fault
both sides in the trade fight. To
won't deregulate the inspection an
pair-shop rules that favor domestic
ducers. And Americans, he says, ar
bluster. "U.S. carmakers don't rese
anything. Nobody comes to our of
to see what we do," he says. But Ka
mata shouldn't feel ignored. As his
forts to sell Fords continue, indu
officials from both sides of the Pa
will have their eyes on his dealers.

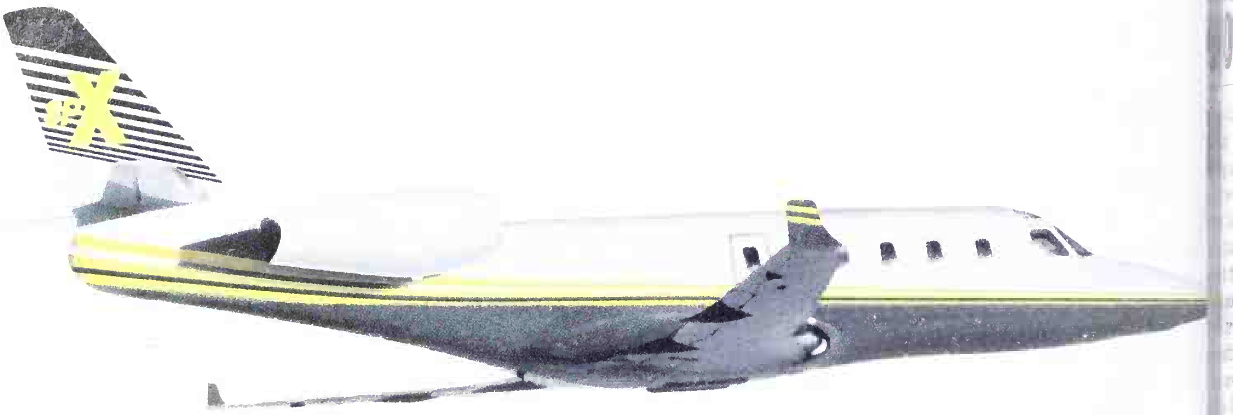
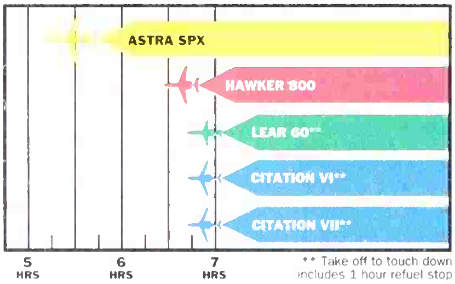
ASTRANOMICS: THE NEW REALITY IN BUSINESS AVIATI

The new Astra SPX. Introducing the practical benefits of advanced technology.



The new Astra SPX brings a whole new dimension to the world of business aviation. Born of advanced technology, the fuselage fits the human form and achieves the highest degree of aerodynamics. Interior space is maximized while minimizing the external frontal drag. As a result, the SPX can fly non-stop* from New York City to Los Angeles at a speed of .82 Mach. That's one hour faster than any other manufacturer's mid-size business jet. The Lear 60, Citation VI and VII require a stop* to complete the mission.

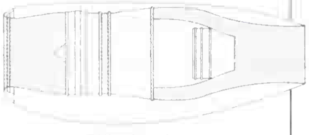
NEW YORK(TEB) to LOS ANGELES(LAX)



** Take off to touch down includes 1 hour refuel stop

Climb to the top

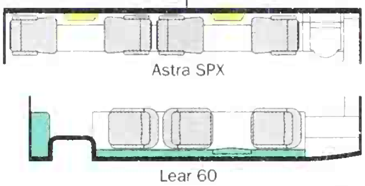
Thanks to the new more powerful, highly efficient AlliedSignal 731-40 engines, the SPX offers a range of 3690 miles, 600 miles greater than the Hawker 800. The digitally controlled engines were derived from AlliedSignal's highly successful turbo fan engines with a history of more than 28 million flight hours. Truly a global performer, the Astra SPX will fly you to London from New York, non-stop. Combining the 731-40 engines with the new wing design, the SPX achieves extraordinary short field performance. On a 1,000 mile mission, it can take off from runways 500 feet shorter than any of its mid-size competitors. In fact, the SPX can take off from shorter fields than the Beechjet 400A and has an operating cost per mile less than the Citation V Ultra. The SPX offers the most advanced digital avionics that will be available on future larger business jets like the Challenger 604, Falcon 2000 and the Astra Galaxy. This advanced Collins avionics package provides your pilots with greater information and reliability.



TFE 731-40

More comfort on the inside

The SPX can cruise above the weather at 41,000 feet for longer periods of time than any mid-size business aircraft, adding to the comfort and quietness of the cabin environment. Henry Dreyfuss Associates designed a cabin interior aroun their human enginee ing philosophy. The SPX offers greater le room than a Lear 60 and has a longer cab



Your stockholders will applaud

The Astra SPX is part of a new gene ation of Astra business aircraft. This comes at a time when large and small corporations are looking at new ways to reduce their overhead and improve their profits. It's something we call Astranomics: the new reality in busines aviation. It's something your stockholders will applaud. Call our president, Roy E. Bergstrom, at **1 609 987-1125** fax us at **1 609 987-8118** for more information.

HY A WIDER WAR IN BOSNIA OULD REAP THE WHIRLWIND

ı June 3, defense ministers from the European Union ınd NATO gathered in Paris to announce plans for sendng a rapid-reaction force to Bosnia. They talked tough, t seemed that at last the pictures of hundreds of U. N. ıs held hostage by Bosnian Serb fighters just might spurred a Western consensus on how to deal with the in the former Yugoslavia.

t committing up to 10,000 fresh British, French, and h troops to Bosnia is unlikely to bring onflict to a conclusion—even though the ; are releasing their U. N. hostages. In :he buildup probably increases the risks of er conflict, with more Western casualties. in turn might well produce a U. N. withal that could rattle the already shaky ern alliance.

e hope in some circles is that the Bosnian ; will now be intimidated into negotiating lomatic division of Bosnia. But the Serbs seen so much Western ambivalence in ast three years that they are unlikely to ıt to the bargaining table unless they are ard. "If the U. N. forces would like the ; to be cooperative, then they need to l to the Serbs they have the will and the ility to take them on," says Zalmay M. lzad, a former Pentagon official now at Corp. But the West probably won't be o put together a strong enough force to score a decisive y over the seasoned Serb fighters.

LY HUMANITARIAN? Still, for their own domestic rea- the Europeans, who are already the main contributors 22,500 strong U. N. force in Bosnia, are going to be in- ngly tempted to battle the Serbs. British Prime Minis- ohn Major, whose grip on power is ever so tenuous, ifted to tough talk on Bosnia—perhaps to offset his rep- ın for indecisiveness. At the same time, the Bosnian debacle presents France's new President, Jacques Chirac, with an opportunity to reassert France's flagging leadership in Europe. A European-led resolution of the Bosnian debacle would also keep alive the French-backed idea of a European security force independent of the U. S.

Of course, the Europeans insist that their mission in Bosnia remains humanitarian; but even using the reinforcements to perform humanitarian tasks will likely lead to clashes. For instance, efforts to fulfill the terms of the U. N. mandate by removing weapons from Sarajevo's demilitarized zone are certain to spark warfare with the Serbs. So would a scheme, pushed by the French, to force open a land corridor for humanitarian shipments from the Dalmatian coast of Croatia to Sarajevo.

If such a confrontation occurs and Western casualties rise, the current consensus would quickly evaporate. In fact, the divisions in the Western alliance that have made resolving the Bosnian crisis so difficult would widen. After all, the U. S. thinks it has much less at stake than do the Europeans. Clinton is assigning helicopter gunships and other support to the new force in hopes of preserving the status quo, in which the Europeans provide the ground troops while the U. S. largely critiques Bosnia policy from the sidelines.

The idea that the only way to handle Bosnia is to withdraw the U. N. peacekeepers and let the war burn itself out is gathering momentum in Washington. Heightened conflict would raise pullout calls to a fever pitch. That and combat losses could undermine the Europeans' newfound resolve to stare down the Bosnian Serbs. Then, the next crisis would be getting the beleaguered peacekeepers out safely and handling the nasty recriminations over a widening war inside Europe.

GLOBAL WRAPUP

OSSIBLE AUTUMN CHILL

ıe strained U. S.-Russian relation- may be headed for more turbu- e. Unless Russia changes its ıce by the fall, the Clinton Admin- ıation will find Moscow in violation 1990 treaty limiting conventional s in Europe—a step that could npt Republicans in Congress to to cut off Russian aid. Moscow's sgressions mostly involve forces hechnya and other tense areas. Administration is likely to move e Chechnya war continues.

NEW LIFE IN THE DEAD SEA

► The Middle East peace process combined with the world auto industry's rapidly growing demand for magnesium has brought Germany's Volkswagen to Israel. On June 6, the giant German auto maker announced that it was taking a 35% stake in a $600 million joint venture with Israel's Dead Sea Works Ltd. to extract magnesium from the Dead Sea. The salt lake holds the world's largest untapped reserves of the metal, which is used in lightweight materials for cars.

TROUBLE FOR SADDAM

► According to reports reaching Jordan, serious violence broke out last month in the Iraqi city of Ar Ramadi, formerly a stronghold of Saddam Hussein. The trouble was touched off by the execution of an air force officer who was accused of participating in a coup plot. When his body arrived back home bearing marks that indicated he had undergone brutal torture, enraged townspeople rioted, burning government offices and a glass works.

STRATEGIES

CAN HALLMARK GET WELL SOON?

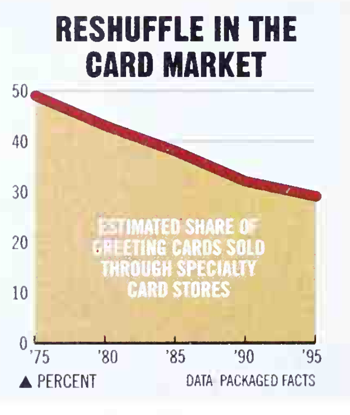
Bogged down by its specialty shops, the card giant is sagging

'Please remember that winter's darkness emerges into spring," penned Hallmark Cards Chairman Irvine O. Hockaday Jr. during a management retreat a few years ago, when asked to write a hypothetical sympathy card for Laplanders. Given Hallmark's recent problems, it's just the kind of consoling message he might want to send employees and Hallmark store owners.

The privately held greeting-card giant, based in Kansas City, Mo., has seen its market share slip from an estimated 50% to 45% over the past five years. Revenue steadily increased, reaching $3.8 billion in 1994, up 40% since 1990. But return on equity sagged, falling to an estimated 8% last year—far below its historical 15% to 20% ROE, as Hockaday concedes.

Part of the problem: Hallmark's cards and merchandise look dated next to hipper upstarts, such as Chicago's Recycled Paper Greetings. Meanwhile, risky new investments in media could divert attention from the core business. But Hallmark's biggest challenge is a changing marketplace that now favors mass retailers over the 9,000 independent specialty shops Hallmark relies on to sell its flagship cards.

Hockaday makes no bones about the fact that the company has made mistakes during his nine-year tenure—in particular, unsuccessful attempts to diversify and failed restructurings. The 58-year-old is only the third chairman in Hallmark's 100- history and the first who isn't a r ber of the founding Hall family, w holds two-thirds of Hallmark's sto



RESHUFFLE IN THE CARD MARKET

DATA: PACKAGED FACTS

NEW COLOR: *Hockaday is diversif into TV and jazzing up card lines*

Just how bad things are is har say. Hallmark's profits are a jeal guarded secret—even from the 2 employees, who own a third of the pany through a profit-sharing plan. they know the news can't be goo 1990, Hallmark's profit-sharing co bution began a slide, from 10% of ries to 6.5% last year.

Hallmark's response? In January company announced yet another rou cost-cutting, this time a merging o administrative, marketing, and proc development functions of the var Hallmark card brands. But that do mean there will be layoffs: "Hallmar have typically held their jobs for lif

Besides trimming overhead, Hock is trying to diversify from the ma greeting-card business. The comp plunged into TV production last year a $365 million purchase of RHI E tainment, best known for Hallmark's *of Fame* productions. Next came an million investment in Flextech, a Eu an satellite-TV company, this sp Where's the synergy with greeting ca Both cards and programming dish emotional content, Hockaday says.

SYNERGY SKEPTICS. Such claims of chic synergy meet with plenty of sk cism. "That's a hell of a stretch. not carry it through to warm and f food?" scoffs one analyst who follows industry. Hallmark's previous flings the media business have ended badl lost $10 million on a five-year inv ment in Spanish-language television cost banks and bondholders $104 mi by the time it was dumped in 1992. it barely escaped another loss last when it unloaded a $1 billion invest in the cable business that was pumm when Congress lim the fees cable op tors could charge.

Nor can Hocka afford to ignore core business. Gr ing cards and rel items still account more than half Hallmark's sales. hopes to jazz up card lines by gi more creative cor to the artists who duce 21,000 Halln card designs in 20

THE NEW GROWTH AT WEYERHAEUSER

The company is drawing kudos from shareholders and greens

How do you please shareholders and environmentalists alike? For paper and forest-products companies, it's traditionally an either/or choice. Make shareholders happy, and chances are you'll send the green crowd up the wall. Please the environmentalists, and shareholders probably will soon be heading for the door.

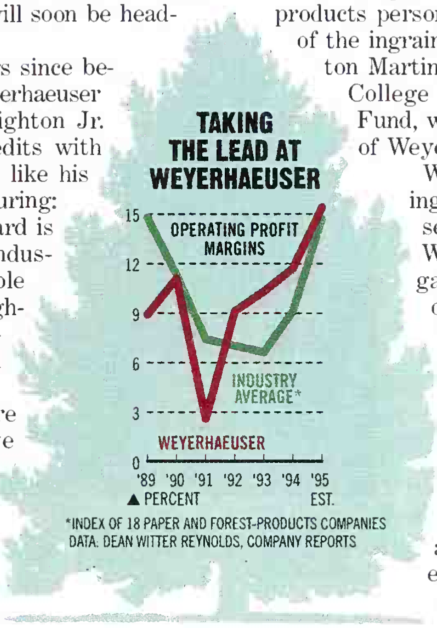
In the four years since becoming CEO of Weyerhaeuser Co., John W. Creighton Jr. has racked up credits with both. Shareholders like his extensive restructuring: The one-time laggard is now among the industry's most profitable players. And Creighton is making inroads with an even tougher crowd: Green activists are beginning to give Weyerhaeuser kudos for going beyond legal obligations to cut pollution and reduce damage to the lands it logs.

A BULLY? It's far from the company Creighton, 62, inherited in 1991, after three years as president under longtime CEO George H. Weyerhaeuser. Lackluster earnings at the Federal Way (Wash.) company had left it near the bottom of the industry. Investors scorned it as unwieldy and paternalistic. It was loaded down with outdated mills, and it also ran a slew of noncore subsidiaries making everything from milk cartons to disposable diapers. Meanwhile, environmentalists saw Weyerhaeuser as a chain-saw-wielding bully, recklessly denuding hills.

Creighton hardly seemed a reformer. A low-key man with a law degree and an MBA, he had been hand-picked by Weyerhaeuser to be the first CEO not related to one of the founders of the 95-year-old company. Creighton also came from the company's tiny real estate group, near-heresy in an industry where top jobs have always gone to paper and forestry execs. But being an outsider has advantages. "Not being a forest-products person, he didn't have a lot of the ingrained habits," says Carlton Martin, portfolio manager at College Retirement Equities Fund, which owns roughly 1% of Weyerhaeuser.

Within a year of becoming president, Creighton set about rejuvenating Weyerhaeuser. He began by dumping many of the noncore units. More important, he led managers through an 18-month reengineering in which each mill and tree farm had to redesign the way it worked. Creighton's goal: to add $700 million to operating earnings by 1995. To eliminate the impact of price fluctuations in the cyclical industry, the gains were measured in constant dollars, at 1989 price levels.

Few gave Creighton much chance of success. But he met his $700 million goal a year early. About $100 million has come out of corporate overhead. Most, however, came as Weyerhaeuser cut costs while boosting output at its aging plants. At a Washington mill, managers upped productivity by simplifying the flow of lumber, then installed computerized lasers that scan logs to determine the highest-value boards that can be cut from them. Now, output from each log is up 15%—and the mill produces 45% more lumber per hour than in 1990. And at a money-losing box plant in Tennessee, employees suggest-



TAKING THE LEAD AT WEYERHAEUSER

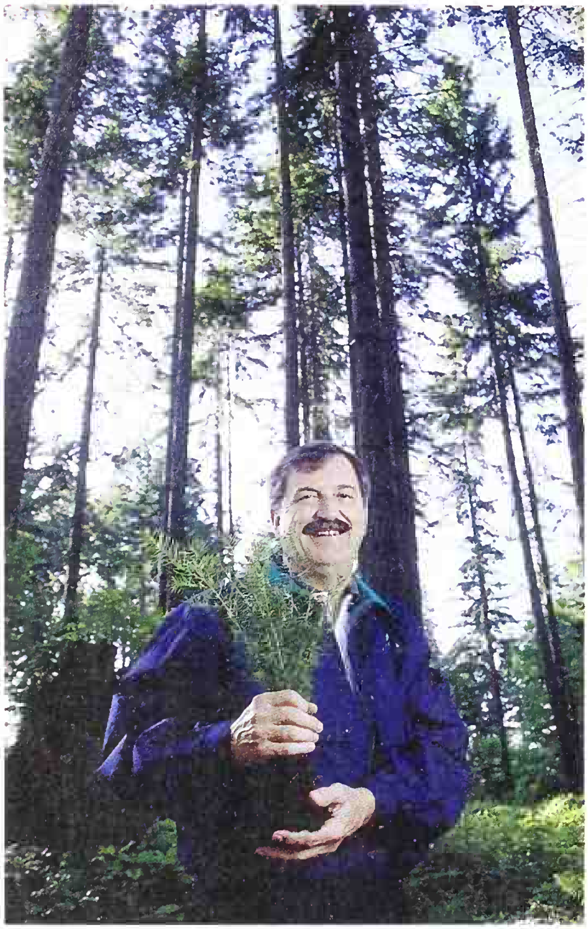
*INDEX OF 18 PAPER AND FOREST-PRODUCTS COMPANIES

DATA: DEAN WITTER REYNOLDS, COMPANY REPORTS

To boost the stock price, Weyerhaeuser raised its dividend by 33% in April and has announced plans to repurchase up to 10 million shares ed buying used machines to speed production. The equipment doubled productivity per worker in two years. "These improvements are going to stick because the [employees] have ownership," Creighton says.

At the same time, Creighton spent $1 billion modernizing three big paper plants. The investments slashed costs while boosting quality and output. At the Longview (Wash.) plant, new pulping equipment raised capacity by 40%, even as it consumes less energy, chemicals, and water.

The changes add up: In 1994, the company's operating income hit $1.2 billion, up 24%, on revenues of $10.4 billion, an 8.9% rise. This year, Prudential Securities analyst Mark Rogers expects operating profits will soar 72%, to $2.1 billion, on sales of $11.5 billion, thanks to both rising paper prices and Weyerhaeuser's improved cost structure.



ALEXANDER MARES-MANTON

Of course, rising paper prices are lifting profits industrywide. Yet Weyerhaeuser is moving to the head of the class. Its operating margin was just 8.9% in 1989—well under the industry's 14% average. By 1994, it hit 11.7%, nearly 30% better than rivals. And while Weyerhaeuser posted record earnings last year, others remain far below the peak profits attained in the late 1980s. Since 1989, net income has fallen 59% at International Paper Co. and 53% at Georgia-Pacific Corp. "[Weyerhaeuser is] one of only three companies out of 18 that exceeded 1989 earnings in 1994," says Evadna Lynn, paper and forest-products analyst with Dean Witter Reynolds Inc.

The stock is also much improved: From a low of 18 in 1990, it hit nearly 49 in early 1994. Fears that slowing construction will dent lumber sales have pushed it to around 43 today. To get it moving again, Creighton boosted the dividend 33% in April and announced plans to repurchase up to 10 million shares. He has also targeted another $600 million in incremental earnings by 1997—and he has pledged not to add capacity for at least two years. "Weyerhaeuser has gone from a build-or-perish mentality to one focused on financial returns," says Michael P. Stack, portfolio manager at Independence Investment Associates in Boston, which owns about 2% of Weyerhaeuser. "They're much more aware today that the shareholder is an important part of the equation."

> "Though we own huge amounts of timberland . . . we operate at the sufferance of the public"
>
> **WEYERHAEUSER CEO JOHN CREIGHTON**

Creighton is also making green concerns a bigger part of Weyerhaeuser's brief. While many in the industry fight regulation, Creighton argues that Weyerhaeuser's long-term interests—and its ability to plan for the future—are better served by a more cooperative stance. "Although we own huge amounts of [private] timberland, to some degree we operate at the sufferance of the public," he says. He has won applause from some greens. "They're never going to do everything environmentalists wish; if they did, they'd go broke," says Alan Copsey, chair of the Washington Environmental Council's forest resou
committee. "But they're one of the
at taking care of the land."

Searching For Bargains Among Quality Stocks.

Small companies can offer big opportunities because they are often positioned for rapid growth. That's why the Templeton Smaller Companies Growth Fund searches the world for quality securities that are selling at unusually low prices in relation to the assessment of their true value.

The fund seeks long-term capital growth by investing primarily in emerging growth companies worldwide.[†] This global investment philosophy is designed to allow for diversification – and maximum bargain hunting.

For over 50 years, the Templeton organization has been an acknowledged leader in the management of international equity mutual funds.[††] To find out if a global investment strategy may be appropriate for you, call your investment representative or Templeton today.

PUBLIC BROADCASTING

DEAD END FOR SESAME STREET?

Stations are hunting for new ventures to help survive a likely federal fund phaseout

Close your eyes in William J. McCarter's office on Chicago's Northwest side, and it would be easy to imagine a battle raging outside his window. McCarter is president of WTTW-Channel 11, Chicago's biggest public-television station. The clamor arises from construction of an upgraded production studio, his first line of defense in the war over the future of public broadcasting.

McCarter doesn't hold out much hope that federal funding for public TV and radio will survive. But he's fighting back with, among other things, the new studio, which he'll rent to commercial producers for a profit. "Handwringing about budget cuts is a waste of energy," he barks against the noise. "This is not a doomsday scenario."

Bill McCarter represents an aggressive breed of public broadcasting executive valiantly preparing for the day when GOP budget-cutters shut off the federal spigot for good. He is searching hard for new sources of revenue, cutting costs, and challenging many of public broadcasting's most cherished traditions—first among them the near-sacred rules about advertising.

DIFFERENT RULES. Most public broadcasting executives find it ludicrous that the U.S. can't afford less than $300 million annually to support commercial-free TV and radio. Many resent what they see as a thinly veiled political agenda behind the proposed cuts: the Republican conviction that public broadcasting is too "liberal." But as they gather in Washington on June 19 for their annual conferences, they also admit that inefficiencies abound within the system. "The ground rules are going to be different," McCarter says. "You're going to have to change your mind-set."

A close look at the business of public broadcasting, however, reveals that even if the system cleans up its act, it will have a hard time surviving as we know it today without federal support. Stations that aren't restricted by state or local charters would likely have to accept ads of some sort. Many small stations and some tough-to-finance programming would simply disappear. Lazard Frères & Co. Managing Director Steven T. Rattner, a media expert and board member of New York's WNET, says there's room for cost-cutting. But without federal funds, "there's no doubt that what the viewer sees would be very different," he says.

To realize how different, one has to understand the outsize impact federal funds have. This year, the Corporation for Public Broadcasting (CPB) will receive $285.6 million from Congress, or about 14% of public broadcasting's $1.8 billion in revenue from all sources. That's a relatively small slice, bu system's interrelated nature mag its importance in several ways.

First, for many small stations, fe money makes up a much higher per age of their budget. Second, those tions use the money to purchase gramming, such as *Sesame Street This Old House*, produced elsewhe the system. Finally, unlike corp grants targeted at specific programs eral funds are discretionary—station use them to fund projects that o wise would flounder. "If that mon lost and can't be replaced," says B Clark, CEO of Seattle's KCTS, "it will a downward spiral."

A recent Lehman Brothers Inc. s for CPB concludes that cost-cutting new revenue sources won't replace

funding (table). Even outright rtising, the report says, would a negative effect, since any ue generated would likely be by revenue lost when irritated ribers bolted. Representative Fields, Republican chairman of ouse telecommunications sub- nittee, charges that when it s to finding solutions, “some e have been ostriches and have their heads in the sand.” But if you distrust the Lehman t as captive of CPB, the evi- available supports most of its usions.

STANDARD. Take the issue of tising. For a while now, Mc- r's WTTW and several other sta- have been selling what they enhanced underwriting,” which s they run a limited number -second promotional spots for ors that look a lot like classy rate-image ads. The practice 't break Federal Communica- Commission rules, but it does foul of stricter standards set e Public Broadcasting Service. hough it has backed off for PBS earlier this year threatened e the stations for breaking its Meantime, national programmers as Boston's WGBH and New York's have complained that national ors for their shows have been ing openly that “advertising” in one of the more accommodating local markets would be a better deal. “We need a consistent standard that everybody sticks to,” says WGBH chief Henry Becton, producer of *Masterpiece Theater* and *Nova*. McCarter's response: PBS should change, not the local stations.

The Dilemma

A recent Lehman Brothers study done for the Corporation for Public Broadcasting concludes that, even using optimistic forecasts, no mix of cost reduction and revenue enhancement could replace lost federal funding.

		MILLIONS OF DOLLARS
1995 FEDERAL FUNDING		$285.6
POTENTIAL COST REDUCTIONS*		
• Station mergers	$34.6

TOTAL		$172.2
SHORTFALL		$113.4

*By year 2000

DATA: LEHMAN BROTHERS INC., CORPORATION FOR PUBLIC BROADCASTING

Given the budget pressures, McCarter will likely prevail. Corporations, besieged by nonprofits for support, are demanding more for their sponsorships and see the opportunity to press their case. Mobil Corp. recently dropped support of WGBH's *Mystery Theater* and told the station it wants to “enhance” its national sponsorship of *Masterpiece Theater*. Says Ameritech Corp. ad director Brian Fitzgerald: “We don't want to turn public broadcasting into normal TV. But we'd like more than seeing our name in fine print.”

Clearly, stations could squeeze more money out of sponsors if PBS eased its standards. But even if that didn't scare off subscribers, most agree the revenue impact for big stations would be in the thousands of dollars, not the millions. Small-market stations would see even less impact, and many outlets, owned by states, cities, and schools, by charter simply can't take advertising. “It's not a silver bullet,” says WNET President William F. Baker.

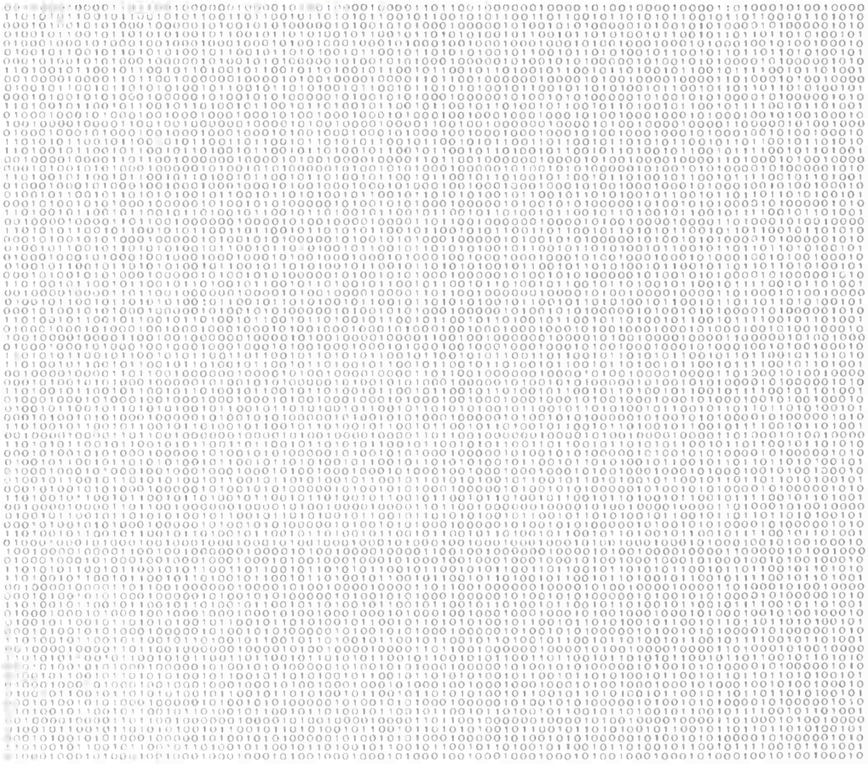
Silver bullets are hard to come by. That's why most smart station managers are trying to create as many new revenue streams as they can. McCarter, who already produces for MTV and Lifetime, lately signed a production contract for his upgraded studio with Walt Disney Co.'s Buena Vista television unit. Seattle's Clark has also pushed heavily into production of shows for others and scored big in 1993 by selling a syndicated program called *Bill Nye the Science Guy* to the Disney Channel.

THE SPINOFF: *Nova's pyramid puzzle kit*

WGBH in Boston and KCET in Los Angeles have both launched chains of retail stores with partners that supplied the initial capital. LearningSmith Inc. and Store of Knowledge Inc. sell educational products based on PBS shows, and both plan to expand by linking with local PBS affiliates. KCET, for instance, has teamed with WHYY in Philadelphia to open a WHYY Store of Knowledge. The Philly station gets a sliver of revenue and in turn promotes the store.

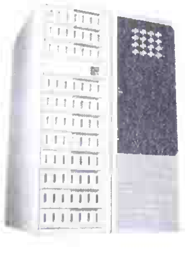
GETTING FLEECED. Other ideas range from creating CD-ROMs and other multimedia products to renting out satellite time on PBS transponders. But while some stations have gotten a solid boost from entrepreneurial endeavors, most of them have not. Finding the resources to start new ventures is out of reach for many stations. Even big ones such as New York's WNET have problems. Bill Baker, the station's president, would love to leverage WNET's rich library of series such as *Nature*. But, he says,

Your customer data has never really given you a clear picture of your customer.



Announcing The Open Paral

Decision support is one promise of information technology that has never been fully realized. Its aim is to help you uncover trends hidden in your databases, so you can manage information to satisfy customers and compete more vigorously.



Unfortunately, there's been no practical technology to make large-scale decision support possible. Companies that have tried haven't offered much beyond some hardware and a handshake.

But now, Unisys presents the most comprehensive decision support solution in the industry. It's built around the *Open Parallel Unisys Server (OPU*
a joint Unisys and Intel initiative in s
able parallel processing. And it can h

based for openness, and offers unsurpassed database independence, with easy growth and cation portability.

PUS supports databases from e, Red Brick and other leaders. Plus, 's already a portfolio of applications to make decision support an instant reality for key industries. And to deliver a complete solution, Unisys is deploying a new service team dedicated to decision support consulting and implementation.

UNISYS

To receive your *OPUS* information, contact us on the Internet at **http://www.unisys.com/adv** or call **1-800-874-8647, ext. 219.** Because once you can manage information instead of just process data, you'll get a clearer picture of what's really important to your success–your customer.

"the rights to many of them were sold up front to fund production."

PBS has been accused of dropping the ball most egregiously when it comes to merchandising its kids properties. The case of *Barney* gives critics some ammunition. PBS is getting fleeced by the show's producer, Lyon's Group. It has gotten only $1.6 million from Barney home video and foreign rights since 1991. Worse, PBS gets no money from Barney toy sales. That makes the show a money-loser for the network since it paid $2.7 million during the same period to acquire the broadcast rights.

POLITICAL MIRACLES. A new contract will improve the take but not dramatically. The problem: PBS doesn't own or produce the character, so even under the best of circumstances, it can't expect a huge gain. The same holds true for *Sesame Street*. Moreover, most public broadcasting fare doesn't lend itself to merchandising. Says WGBH's Becton: "That's not what we're here to do."

The best hope for public broadcasting is twofold. First, it will have to reorganize by eliminating overlapping stations, cutting the system's administrative bureaucracy, and figuring out how small stations can share in the wealth of big ones. Second, it will have to tap the potential of digital technology.

"Are people really going [to cut us off] for the equivalent of $1 a year per citizen?"

Many markets have more than one public-TV station, and viewers in big cities such as Washington, D. C., and New York can see as many as six signals. The system can't afford all the duplication, but because many stations are owned by cities, universities, and other institutions, deciding which should go isn't easy. Even friendly mergers can be difficult. Connecticut Public Broadcasting Corp. actually asked to merge with larger WNET six months ago. So far, talks have gone nowhere. Mergers will happen, though. Most predict that as the pressure builds, CPB will force them to. Also likely to be debated: whether to merge National Public Radio and Public Radio International.

Most promising would be tapping into the digital future. Digital compres will soon allow any television or r station to beam six channels instea one. If regulators let public stations the extra spectrum to commercial grammers, they could pay for non mercial programming easily.

The trouble is, digitization is y away, and solutions currently on the t hold much less promise. They inclu $6 billion federal trust fund that w kick off enough interest income to k CPB going. Where would the money c from? A fee from commercial broad ers, which would require a political m cle, or a tax on TV sets, which w take divine intervention.

That's why many public broadcas executives are quietly hoping bud cutters will simply be kind. "Our fee is, some support will continue," s WGBH's Becton. "My question is, are ple really going [to cut us off] for equivalent of $1 a year per citiz That's not entirely clear. But the w of public broadcasting would do we prepare itself for the worst.

How Frito-Lay Handles
the Decision Making
CRUNCH

With Its Zone Workbench System Created With SAS Institute Software

oritos® and Tostitos brand
ortilla Chips, Lay's® and
uffles® brand Potato Chips,
nd Rold Gold brand Pretzels

s hard to imagine any company that understands consumer tastes
tter than Frito-Lay, a leader in the U.S. salty snack category with
nual revenues of more than $5 billion. Yet Frito-Lay is determined
get even closer to its 400,000 retail customers.

In fact, a decentralization effort begun in 1990 has, in the last five
ars, brought a renewed sense of ownership and empowerment to the
,000 Frito-Lay employees. As part of this ownership, Frito-Lay's
formation/Technology Systems department (I/TS) has created a tactical,
rket-driven decision support system—the Zone Workbench System—
signed to get timely information in the hands of front-line managers.

It's an application built from the customer up, and the SAS® System software has been there every step of the way.

"The Zone Manager is the first line of communication with our Route Sales force," says Tom Nealon, Director of I/TS for Frito-Lay, whose department spearheaded development of the decision support system. "We knew from the start that the Zone Workbench had to provide information that was 'actionable'. It also had to be portable across client/server, workstation, or laptop environments. Equally important was the ability to integrate multiple data sources."

Delivering More than Software Alone

"Given the tight schedule, the software company we chose had to provide superior applications development tools—as well as comprehensive training, consulting services, and documentation," adds Nealon. "SAS Institute came through on every count, proving time and again the value of having a software vendor that's as interested as we are in completing projects on time and on target."

Nealon calls the Zone Workbench "a tremendously versatile business tool proving user-friendliness, power, and portability between platforms can all operate in one package. The old-style EIS systems are antiques. The game today is to provide information that can impact the marketplace each day, for each of our customers. For Frito-Lay, SAS Institute is making sure we have the tools to make an impact."

WHERE TO INVEST

Despite the current slowdown, there are plenty of enticing options

Only six months ago, the pros were lowballing their forecasts for 1995. After the shellacking they took last year, most would have been happy to score single-digit gains in stocks and bonds—and they planned their strategy accordingly. But markets have a way of turning pros into pikers. Indeed, perhaps because expectations were minimal, the markets raced ahead at maximum speed. "Was anybody forecasting 4500 on the Dow, 6.8% on the long bond, 80 yen to the dollar?" asked Nicholas Knight, chief strategist at Nomura Research Institute Ltd., during a speech given to a recent gathering of investment managers in Zurich. The response: a few embarrassed giggles.

There are probably a lot of individual investors who followed the pros, played their cards too cautiously, and missed a good chunk of the markets' progress. But don't despair. It's unrealistic to think the stock market will rack up a further 16.9% increase in the ond half or that long-term U.S. Treasuries will rally other 18%. Nonetheless, the gains are far from ov

BUSINESS WEEK's Midyear Investment Outlook f that the fundamentals for investing are still compel True, the U.S. economy is slowing—so much so that cession talk is rampant on Wall Street and Main Str Yet it's also true that inflation is low and interest r are down, even after the dollar took a severe drubb in the currency market. Our economists conclude the slowdown will be short-lived and that growth pick up again in the fourth quarter (page 76).

Another bullish factor, believe it or not, may Washington. The pols are taking investor-friendly st that could have far-reaching implications. Both house Congress have passed resolutions to balance the fe al budget over the next seven years. Of course, res tions are easy to make. Exactly how legislators

a balanced budget is not yet certain: The senators epresentatives have to iron out the differences be- ı their resolutions, a process that should be fin- by the end of the month.

that time, we'll also get a look at what the tax night look like. What emerges will be much less ·ous than the House's $350 billion bag of goodies. whatever comes up should be much to investors' . A reduction in capital-gains tax is considered a thing, and the restric- aws regulating individu- irement accounts (IRAS) be liberalized.

in all, the investment lrop is especially strong ocks (page 78). Reces- fears may precipitate a ction, but a pullback is what many investors been waiting for—an tunity to get in at lower s. Investors don't even to wait to buy small- any stocks (page 82). of the market's action ear has been in the big- issues, and many high- y smaller companies are g at attractive prices.

you're a do-it-yourself picker, be sure to check test hot-takeover bets side Wall Street (page If you're one of the mil- who prefer to leave that to a mutual fund, find out which funds have been doing the best stockpicking of late (page 106). Funds that went heavy on high tech did well, which is not surprising. Many of the best-performing stocks of the year are tech issues (page 114).

Bond investors have a lot to cheer about this year, and the chances are good for an even further drop in long-term rates (page 100). Those who buy municipal bonds have had a tougher time. Their gains from falling rates have been tempered by talk of tax reform that could wipe out munis' tax-favored status (page 105).

In scouting for investments, be sure to cast a wide net. Most foreign stock markets have lagged behind the U.S. this year, but they're now gaining strength that should carry through the second half of the year (page 94). Even the beaten-up Japanese stock market offers some interesting plays.

It may be hard for some investors to buy when prices seem high already. But prices for investments are relative, and looking at the remainder of the year, they're relatively attractive.

The Sharp Slowdown Should Stop Short of Recession

BUSINESS WEEK foresees growth of 2.5% in the next 12 months

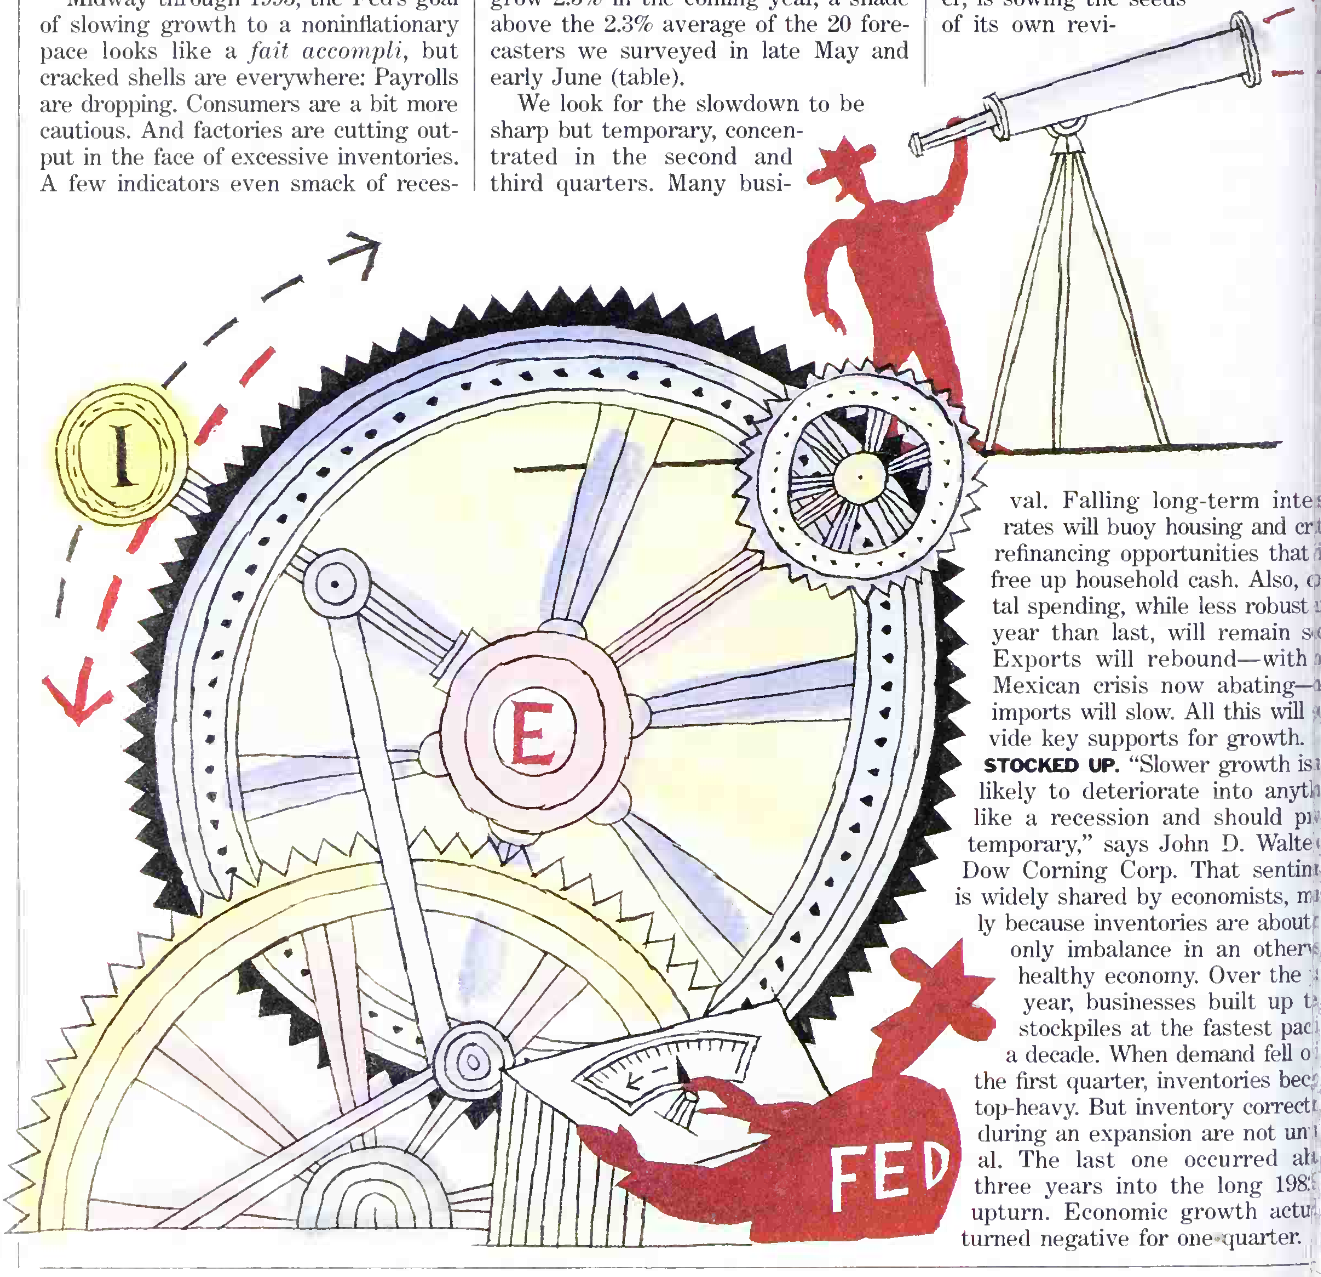
If you want to make an omelette, you have to break some eggs. The Federal Reserve appears to have taken that truism to heart as it attempts to engineer a soft landing for the U.S. economy.

Midway through 1995, the Fed's goal of slowing growth to a noninflationary pace looks like a *fait accompli*, but cracked shells are everywhere: Payrolls are dropping. Consumers are a bit more cautious. And factories are cutting output in the face of excessive inventories. A few indicators even smack of recession, raising a crucial question: Is the Fed serving up a delicacy for the markets or a dish that'll turn your stomach?

BUSINESS WEEK thinks the economic outlook will favor both stocks and bonds. On balance, we expect the economy to grow 2.5% in the coming year, a shade above the 2.3% average of the 20 forecasters we surveyed in late May and early June (table).

We look for the slowdown to be sharp but temporary, concentrated in the second and third quarters. Many businesses are holding excessive inve ries, as the impact of the Fed's rate hikes hits demand. Those e stockpiles must be worked down at expense of orders, output, and jobs

A slower economy, however, is sowing the seeds of its own revival. Falling long-term inte rates will buoy housing and cr refinancing opportunities that free up household cash. Also, c tal spending, while less robust year than last, will remain s Exports will rebound—with Mexican crisis now abating— imports will slow. All this will vide key supports for growth.



STOCKED UP. "Slower growth is likely to deteriorate into anyth like a recession and should pr temporary," says John D. Walte Dow Corning Corp. That sentin is widely shared by economists, m ly because inventories are about only imbalance in an other healthy economy. Over the year, businesses built up t stockpiles at the fastest pac a decade. When demand fell o the first quarter, inventories bec top-heavy. But inventory correct during an expansion are not un al. The last one occurred ab three years into the long 198 upturn. Economic growth actu turned negative for one quarter.

he 1995 inventory realignment
ıld not take long. New control sys-
; let businesses react faster to over-
king. Moreover, the imbalance be-
ɜn inventories and sales is heavily
entrated in the auto industry. De-
's already announced cutbacks

sion in Japan, which could temper
h along the Pacific Rim.

bigger boost to the U.S. economy,
h, will come from the sharp slow-
in imports, as domestic demand
wanes. In consequence, the trade deficit is set to improve—a plus for overall growth.

But even with these solid supports from Corporate America and the global economy, consumers will still play the crucial role in how the economy bears up. Fed tightening has already hit household spending hard. Over the past year, outlays for consumer durables and housing are up only 3.2%, down sharply from the 10.1% pace of a year earlier.

Even so, economists are cautiously upbeat. Despite recent weakness, "we still believe consumers will make one more run at the malls," says Maureen F. Allyn at Scudder, Stevens & Clark Inc. May's job drop was not the start of a recession-like wave of payroll cuts. The layoffs were linked to the inventory correction. Once that imbalance has passed, job and income growth will be sufficient to support a moderate pace of buying.

DATA: BUSINESS WEEK

A healthy consumer balance sheet is another force that should prevent recession. The residential real estate market across most of the country will stay solid, supporting house prices. And the rallies in both the stock and bond markets are boosting consumer wealth. The bond rally has also touched off a new burst of refi madness: Home-mortgage refinancings in late May were triple their early-March volume, putting extra cash into people's pockets.

FEELING SCRAMBLED. Consumers, however, will not spend with the same gusto as in 1994. Job jitters will cool the jets of some shoppers. And households took on a record $130 billion in new installment debt in the past year. Add in higher monthly payments on adjustable-rate mortgages caused by past rate hikes, and some households will feel mighty scrambled by 1996.

Of course, any time the economy slows markedly, it becomes vulnerable to shocks. This time is no different. Anything that knocks the pins out from under consumer confidence—from a sudden escalation in U.S. involvement in Bosnia to an additional plunge in the dollar—could be enough to turn the Fed's would-be omelette into dog food. That happened after the Iraqi invasion of Kuwait in 1990. But barring the unknowable, BUSINESS WEEK is betting that the Fed will prove to be a pretty good chef.

By James C. Cooper and Kathleen Madigan in New York

The Amazing Ride Isn't Over Yet

The stock market may take a breather, but the fundamentals are still strong

Dazzling the bulls and confounding the bears, the U. S. stock market has steadily climbed to heights that only six months ago seemed unreachable. The Dow Jones industrial average, at 4485, has zoomed nearly 17% so far this year, with the broader Standard & Poor's 500-stock index keeping pace. It's no mystery why: The Federal Reserve's yearlong campaign to slow economic growth without causing a recession—the "soft landing"—seemed to be falling into place. Long-term interest rates tumbled, while corporate profits continued to exceed expectations.

But in recent weeks, as evidence of the slowing economy—sluggish auto and new-home sales, declines in industrial production, and a far-worse-than-expected employment report—continued to mount, investors have begun to wonder whether the economy might have a hard landing. "In the coming weeks, we're going to be hearing a lot of talk about a recession and a bear market," warns Byron R. Wien, U. S. equity strategist at Morgan Stanley & Co. Wien doesn't think either will come to pass, but the anticipation of both, he believes, will be enough to roil the stock market and shave several hundred points off the Dow.

LOST GROUND. Indeed, a correction is overdue. The Dow hit a low of 3675 on the day before Thanksgiving, gained 160 points by New Year's—and has shot up more than an additional 650 points since then. All of it came without so much as a 3% pullback. And the market hasn't had a 10% correction since 1990, though the first quarter of 1994 came close.

Odds are that any correction will be short-lived: The vast majority of mutual-fund and pension-fund managers have underperformed the market so far this year, and they may well view a correction as another chance to make up lost ground. And individual investors, who increasingly buy their stocks through equity mutual funds, seem to be fairly steadfast. "The market's resiliency over the years has given investors—especially the baby boomers—the confidence to hold on," says Arnold Kaufman, editor of *Standard & Poor's Outlook*, an investment newsletter.

Some pros think a modest pullback will serve as a much needed reality check. "I worry that investors have become complacent about earnings," says Wien. The dramatic drop in interest rates—nearly two percentage p
since their peak late last year—is t
nancial markets' confirmation of
slowdown in the economy. Yet data
vices that collect analysts' forecast
port that the ratio of upward to d
ward revisions for this year is
nearly 2 to 1, and forecasts for
are going up as well. "There may
lot of talk about a slowdown, but
certainly don't see it in the earn
estimates," says Benjamin L. Zack
Zacks Investment Research. Estim
are rising at a wide array of co
nies, while markdowns are concentr
in cyclical industries such as a
homebuilding, and retailing.

T SHAPE.” Of course, there are
reasons for the upbeat forecasts,
ially from analysts who know the
anies best. After years of massive
fs and restructuring, U. S. indus-
as reduced its overhead, enhanced
ctivity, and learned how to com-
in the global market. “I'm extreme-
llish on America Inc.,” says Tony
el, a portfolio manager on the $11.4
n Putnam Fund for Growth & In-
. “We're in the best shape structur-

ally we've been in for 20 years.” In addition, the weaker dollar gives U. S. companies an edge in foreign markets.

Still, the newly revitalized America Inc. has yet to demonstrate that it can march through an economic slowdown without missing a beat on earnings. The first test of this may come in July, when companies begin to report second-quarter results. A few disappointments from high-profile companies could send many investors heading for the exits.

But if investors are overestimating the power of earnings, they're probably underestimating the impact of lower interest rates on stock market values. Stanley Levine, quantitative research director at First Call, uses the yield on a 10-year U. S. Treasury bond, now at 6%, to calculate a “fair value” price-earnings ratio for the market of 16.7. (He simply divides 1 by the yield.) Then he figures the p-e based on the 12-month earnings outlook by dividing the level of the S&P (now 536) by the next four quarters' earnings forecast ($37.79). That yields 14.2, which indicates the S&P is undervalued. What's a fair value for the S&P? Multiply the earnings by fair value p-e of 16.7. That puts the fair value of the index at 631, nearly 100 points higher than it is now. That's roughly 5000 on the Dow.

Think the slowing economy will force earnings down a few notches? So does Morgan's Wien, who expects 1995 S&P earnings per-share of $34. But even so, Morgan Stanley's valuation model, which uses a 30-year U. S. Treasury-bond yield, still comes up with 616 as the fair-value target. “That's why investors should ride out any correction,” says Wien. “Stocks are undervalued.”

That's also why investors who have missed this rally should start making a shopping list—and then buy on the pullbacks. Here are some suggestions for where to look:

Technology. Investors may be reluctant to buy tech stocks, since the group is already up 40% and tends toward sell-off in the summer. But business prospects are excellent, and analysts say leaders such as IBM, Intel, Micron, Microsoft, and Texas Instruments would be attractive on pullbacks. What's more, IBM's surprise bid for Lotus Development Corp. could trigger more takeover activity and higher prices.

For more cautious sorts, Laszlo Birinyi of Birinyi Associates suggests Baby Bells: Ameritech, BellSouth, Nynex, and Southwestern Bell. Although primarily utilities, they're rapidly expanding into new information and communications technologies. Says Birinyi: “You get nice, healthy dividends and a secondary technology play.”

Financial. Falling rates are a boon to all sorts of financial stocks, and as expected, they have been great performers. But there's still money to be made. Putnam's Kreisel especially likes banks: The fundamentals are sound, deregulation and interstate banking offer new opportunities, and the banks are hiking dividends and buying back shares. Among his favorites are BankAmerica, Citicorp, Fleet Financial, J.P. Morgan, and Wells Fargo.

ACTION

BARGAIN TIME

Get ready to buy high-tech, banking, and maybe even retailing issues on any weakness in the market

Retailing. With the economy slowing, you wouldn't expect to see retailers on anyone's buy list. But several investment pros think they're good bets. Strategist David G. Shulman of Salomon Brothers Inc. is wary of the stock market in general but thinks department-store operators such as Dillards, Federated, and May are smart buys. “Expectations are so low that [even] a little improvement will move the stocks,” he says. Where might that come from? Foreign tourists, lured to the U. S. by the cheap dollar, will head for the stores.

Small-cap stocks. Large-capitalization stocks such as Walt Disney, Merck, and Philip Morris led the way this year. Small-company stocks have fared only about half as well. Well-managed small companies with good niches thrive in almost any economic environment. Which ones? See the story on small-cap stocks (page 82).

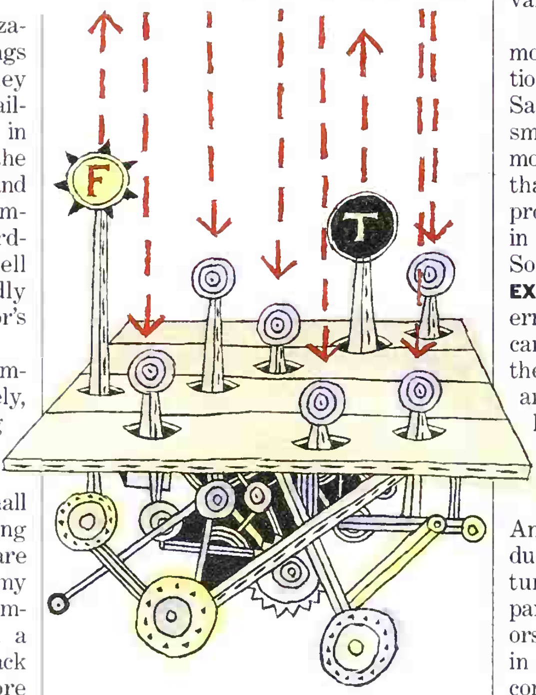
Small Caps: Out of the Tunnel?

As the economy slows, this sector's prospects brighten

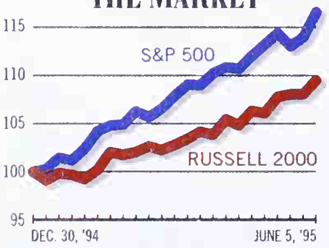
Two years ago, small-capitalization stocks were the darlings of investors. Last year, they stalled, and now they're trailing the pack. The group has suffered in 1995, as skittish buyers moved to the comfort of familiar blue-chip names and as the weak dollar aided larger companies with foreign revenues. Accordingly, such measures as the Russell 2000 Small Stock Index have badly underperformed the Standard & Poor's 500-stock index.



Just weeks ago, prospects for an imminent turnaround appeared unlikely, analysts said. But now, the slowing economy gives small-cap investors cause for optimism. Claudia Mott of Prudential Securities notes that small caps, which began underperforming large companies in February, 1994, are likely to outpace them once the economy stalls. The reason: Although small companies are typically hurt early in a downturn, their earnings bounce back faster, since they can respond more quickly to the business cycle than their big brothers.

"DAMN NERVOUS." Falling interest rates should also help small companies, which tend to do relatively more short-term borrowing than large ones. And the possibility of a cut in capital-gains tax could entice investors toward small companies, because they generally pay little or no dividends. So far, however, these glimmers of hope haven't been enough to set the sector afire. "Pretty universally, people are damn nervous about investing in small-company stocks," says Michael P. DiCarlo, a portfolio manager at John Hancock Funds in Boston. But for value investors such as DiCarlo, this bad news is actually good news. Noting that on a price-to-book-value basis, small-cap stocks are cheaper than they've been since 1990, bargain hunters are finding lots to buy.

SMALL CAPS TRAIL THE MARKET



DATA: BLOOMBERG FINANCIAL MARKETS

CHART BY ROB DOYLE/BW

Technology is the small-cap sector DiCarlo likes best. Dismissing fears that the Russell small-cap technology group, up 13.8% in the first five months of 1995, may be overblown, he says the boom could last till the end of the decade. He particularly likes America Online Inc. Buying shares of AOL, he says, is "like investing in television in the 1940s." (AOL and BUSINESS WEEK are partners in a venture that gives AOL subscribers electronic access to the magazine.) Atmel Corp. and Adaptec Inc. are among his other favorites. Atmel makes integrated circuits, and Adaptec manufactures devices that allow computers to communicate with peripheral equipment.

Energy is another appealing small-cap sector. Greater demand for fossil fuels and industry consolidation are fueling the interest of investors such as Michael A. Berry, managing director of Dre Value Management and an advis its Dreman Small Cap Value Fund. ry especially likes KCS Energy Inc Edison (N.J.) oil-and-gas outfit w shares have been depressed becaus a lawsuit filed by Tenneco Inc. ov 1979 contract. "People overreacted pushed the price down," says Be who thinks that KCS, whose stoc now trading at 18¾, will ultimately vail in the dispute.

Money managers are also pa more attention lately to company tion. According to Merrill Lynch & Satya D. Pradhuman, the prospect smaller companies generally are more closely to their regional econo than those of bigger ones. That proved to be good news for compa in such economically robust areas a Southeast and the Great Lakes.

EXPORT OPENING. A strong Midw ern economy has boosted First An can Regional Equity Fund by 18 the first five months of this year. F ard J. Rinkoff, who manages the f likes Aetrium Inc. in North St. I Minn., a maker of testing dev for the semiconductor industry boasts a 20% aftertax profit ma Another top choice is Automotive dustries Holding, a nonunion manu turer of plastic parts for car interiors. Headquartered in Minneapolis, the company enjoyed a 47% surge in sales last year.

Four Pros Took the $100,000 Challenge. Two Passed

The only stock-picker who decisively beat the S&P chose mostly foreign issues

At the beginning of the year, BUSINESS WEEK invited four top money managers to invest a mythical $100,000 in 10 stocks for one year. Only one of the managers, John R. Horseman of the GAM International fund in London, beat the market decisively, racking up a return of 21.2% excluding dividends, vs. the Standard & Poor's 500's 16.6%. The other winner edged out the market with a 16.9% record. All of the results are of June 5.

Horseman, who is British, did well not only with his non-U.S. stocks, which generally lagged the U.S. market, but with his U.S. picks as well. The other three pros, all Americans who focused mainly on U.S. stocks, which had a big run, did a good deal less well. Horseman's three U.S. stocks—McDonald's, Coca-Cola, and an obscure thrift called Queens County Bancorp—were up an average of 27%. Horseman scored in China, with Shanghai Petrochemical up 30.6%, and with two big Dutch companies, telephone and postal service company KPN, and Fortis Amev, a bank and insurer—up 42% and 32%, respectively. The falling dollar sharply boosted his returns: In their native currencies, Horseman's Dutch and French picks rose about 7.9%, but after taking the dollar into account, they were up 29%. His only blunder was Canon in Japan, down 7.6%.

PLAYING MONOPOLY. Horseman, who declined to be interviewed, said in a written statement that his top pick for the second half is Singapore Press Holdings, already up 12.5% in the first half. It has a monopoly on Singapore's newspapers, and Horseman thinks it will benefit from a strong Singapore dollar, rising ad revenues, and stable paper prices.

What most hurt the American managers was their generally defensive approach to the market. Two of the managers in particular believed that the four-year bull market and the economy had run out of steam. "The move in the first half surprised me," says John R. Gardner, who manages institutional money at Van Liew Capital in Providence. Justin S. Mazzon, a big-cap specialist with American Blue Chip Investment Management Inc. in Larkspur, Calif., expected the market to stay flat all year, causing him to search out stocks with good dividends. Mazzon and Gardner correctly bought into some big-cap consumer stocks, but they missed the technology rally. Ironically, Horseman had predicted an "uninspiring" market for U.S. stocks this year. But that prediction didn't stop him from choosing issues wisely.

The fourth investor, Douglas Johnson, until recently a fund manager with Safeco Mutual Funds in Seattle, favored down-and-out issues that generally formed well. But he bought one Me stock that got hammered by the crisis and had two other substa losers.

Mazzon was the runner-up, wi 16.9% gain. Dividends added anc 1.6%. He concentrated on big-cap st putting 75% of his money into ron, Eastman Kodak, 3M, and S Roebuck, which were up an averag 21.6%, and Woolworth, which wa just 8.1%. Toys 'R' Us Inc. dragged results down by dropping 24%. Mazzon believes it will recover in second half, as a new generation of eo games begins to perk up sales. top pick for the second half is Se Although it has jumped 27% this Mazzon thinks shareholders will be if Sears spins off its Allstate sub ary to them. He thinks Allstate sh could jump 20% more to $35-$36 a s by the end of the year.

Gardner, the most cautious man in the group, gained 14.6%. He ea another 1.1% from dividends, whic sought because of his bearish out Gardner picked companies laden

The tallest recycling story ever told.

Suffice it to say, anything that's 2,232 steps to the top (in lieu of taking one of 104 elevators) is not your average office building.

Everything about Sears Tower is mind boggling. Like enough plumbing (25,000 miles) to go around the world. And enough telephone cable to encircle it 1¾ times.

It's sort of the Mount Everest of recycling challenges. So hopefully you'll have some idea of what it took to conceive a recycling program that now covers some 10,000 people working for sixty different tenants on over 100 floors.

You certainly won't have to use your imagination to appreciate the results. This year alone 1,200 tons of paper will be collected for recycling. An amount that, if baled and stacked, would be three times higher than the world's tallest building itself.

It could be just as surprising to find out what recycling could do for your business. Please call us at 1-800-977-6272. You'll find we don't mind challenges.

What business do we have saying we help the environment? That is our business.

There's Good Hunting on Bourses All Over the World

Inflation is tame, and market gurus are remarkably upbeat for the second half

This was supposed to be the year that global stock investors steered into safe harbors. A slowing economy in the U.S., deflation in Japan, and the Mexican market meltdown had forecasters predicting a yawn of a year, with the world's major markets moving sideways at best. Instead, the Dow Jones industrial average is pushing the 4500 envelope, many of Europe's markets are actually up a bit, and investors are recovering from the "tequila effect" that frightened them away from emerging markets.

Global stock gurus are now remarkably upbeat for the second half. For one thing, the gradual economic slowdown in the U.S. and Europe is being widely heralded as good news: With inflation tame, central banks are increasingly likely to cut interest rates later in the year. And many market watchers believe the worst is over for the dollar. Recent central bank intervention to stabilize the greenback seems to signal that authorities don't want to see it go much below 84 Japanese yen or 1.4 German marks.

CLEAN SHEETS. A stronger dollar would come as good news for Japan (page 98), where the high yen has aggravated a dramatic economic slowdown and helped push the Nikkei stock average down 20% this year alone. A dollar bounceback would certainly help Europe's exporters—the only engines of recovery on the Continent so far. But even if you don't think the buck has hit bottom, there are reasons to be bullish on Europe's markets, down about 10% on average over the past 12 months. Talal Shakerchi, manager of the European portfolio at Old Mutual Portfolio Managers Ltd., thinks equities will get a boost from stronger U.S. cash inflows.

Shakerchi also believes German interest rates will come down—and that will be good news for financial stocks across Europe. His favorites include the Scandina banks—Skandinaviska Enskilda Ba and Svenska Handelsbanken in S den, and Den Norske Bank in Nor After the real estate disasters of early 1990s and government move take bad assets off the books, "t banks have extremely clean bal sheets, and they're unlikely to m the same mistakes anytime soon,'

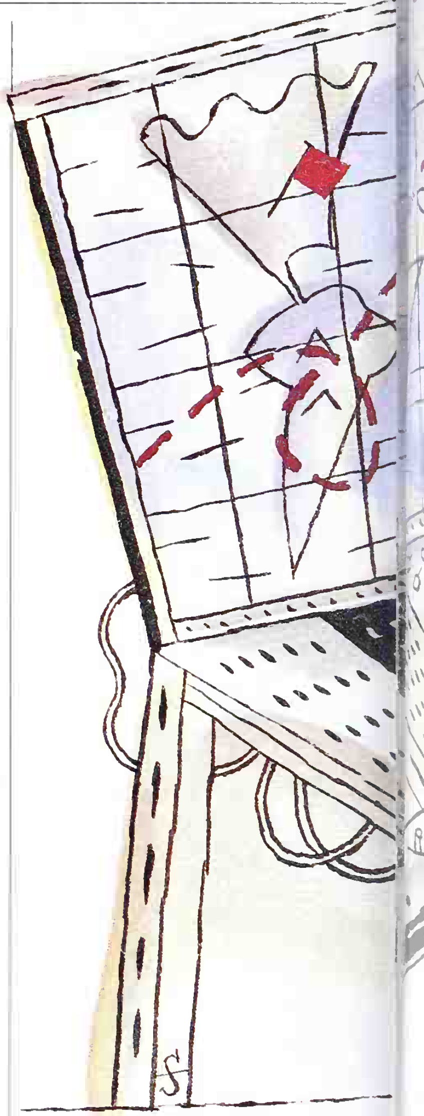
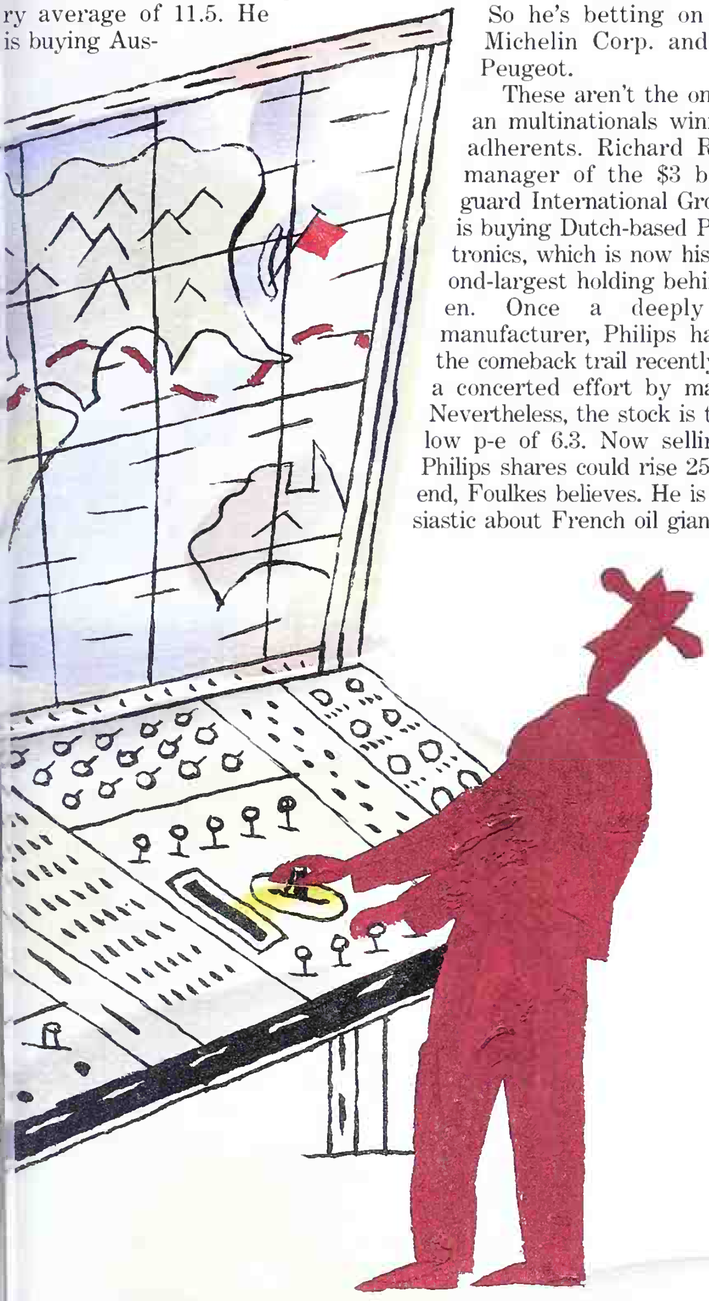
DATA: BUSINESS WEEK SURVEY OF ANALYSTS AND FUND MANAGERS





. S-E Banken and Handelsbanken ently trade at price-earnings ratios 9 and 5 respectively, compared with ıropean bank average of 11.8.

lsewhere in Europe, Shakerchi likes rian power utility Verbund. Its p-e is below 10, vs. a European in- ry average of 11.5. He is buying Austrian brewers Brau Union and Ostbräu ir growth potential. And he rec- nds Swiss insurer Bâloise: It's at a 40% discount to the value of ets and may be a takeover play.

l, Marcus Grubb, who heads glo- uity strategy at Swiss Bank thinks stocks are nicely priced in major European markets. Grubb likes Germany, where Frankfurt's DAX stock index "is due for a catch-up rally." Cyclicals—including Linde, Deutsche Babcock, and Thyssen—get his nod. Grubb also believes the French franc will weaken and falling interest rates will fatten consumers' wallets. So he's betting on tiremaker Michelin Corp. and carmaker Peugeot.

These aren't the only European multinationals winning global adherents. Richard R. Foulkes, manager of the $3 billion Vanguard International Growth Fund, is buying Dutch-based Philips Electronics, which is now his fund's second-largest holding behind Heineken. Once a deeply troubled manufacturer, Philips has been on the comeback trail recently, thanks to a concerted effort by management. Nevertheless, the stock is trading at a low p-e of 6.3. Now selling for $40, Philips shares could rise 25% by yearend, Foulkes believes. He is also enthusiastic about French oil giant Elf Aquitaine, which has finally done some difficult cost-cutting.

Further afield, a number of stockpickers are impressed with Poland, where exports were up 40% in the first quarter from the year-earlier period. Shakerchi admires the stock market there for its high reporting standards and strict regulation, which "make it like a Western market." David Mars, Central and Eastern Europe strategist at Swiss Bank, agrees that "over the next 12 to 24 months, Poland looks to be the market to beat." Mars is playing the Warsaw index, where average p-e ratios, most of them in the 5-10 range, are at half the levels to be found in other low-cost exporting countries such as Spain.

In fact, as the developed world slows, emerging markets are again coming to offer value and growth. Michael J. Howell, strategist at Baring Securities International Ltd. in London, says "emerging markets, at the moment, are a haven for the value investor." Thanks to Mexico's peso crisis, many of these markets are at their cheapest, relative to the developed world, since the Persian Gulf war in 1991. What's more, after last year's U.S. interest-rate hikes and the peso shock sent emerging markets plunging all at once, many have recovered.

ACTION

COMEBACK

Don't slight emerging markets, which are starting to recover from the "tequila effect" of Mexico's peso crisis

In Southeast Asia, for example, the liquidity drain caused by foreigners pulling their money out in 1994 held back stock markets throughout the region, even where corporate earnings kept rising—in Indonesia, Thailand, and the Philippines, for instance. Now, with U.S. interest rates falling and money flowing back in, Asia is the area "I feel most confident about over the next six months," says Vanguard's Foulkes.

CLOSE TIES. Most analysts agree that Hong Kong is in for a growth slowdown—perhaps to 5% from an earlier projected 5.5%—but the market still has some nicely valued regional plays. Foulkes is buying Hutchison Whampoa, the infrastructure conglomerate, as a "major player on the region's general growth and prosperity." Not only does Hutchison have far-flung Asian cargo handling, warehousing, and property development businesses, but its chairman, Li Ka-Shing, also has close ties in Beijing's political circles. At around $5, Hutchison stock is trading at 13 times estimated 1996 earnings per share.

If you'd rather focus on a single fast-growth market, you might want to check out Singapore. Its market drifted aimlessly in the first half. But Merrily Chiam, an analyst at Nomura Research Institute (Singapore), suggests that awesome earnings reports could push stocks up 10% by yearend. She favors Fraser & Neave, an expanding regional food and beverage group with exposure in mature markets such as New

Zealand and emerging ones such as India. Chiam also likes Keppel Corp., a conglomerate with ship repair, banking, and telecommunications businesses, among others. Both Keppel and F&N are blue chips that she expects to trade at higher multiples over the next few months.

Chiam is also a fan of neighboring Malaysia, where the official goal of reaching developed-nation status by 2020 should spell higher profits for infrastructure companies. One beneficiary could be IJM Corp., a construction company with an order book of more than $408 million. She also likes United Engineering (Malaysia), with its exposure to toll-road building, engineering, and cement production.

POISED FOR GAINS. Bank and other financial stocks weigh heavily in most Asian indexes, and they remain useful proxies for markets with good prospects. Thai Farmers Bank and Krung Thai Bank get votes from Sriyan Piterz, a strategist at Capital Nomura Securities in Bangkok, as plays on the Thai economy and U.S. rates. Piterz says Thai Farmers has been broadening its noninterest-income base and getting into debt underwriting. Krung Thai, meanwhile, has Thailand's largest retail network and is poised for further gains as the middle class expands.

What of the tequila hangover in Latin America? Six months after the Mexican peso devaluation, Latin American markets are rebounding, but analysts warn that much uncertainty about the region's economies remains. That's particularly true for the region's three biggest markets. Investors will be watching the effect of Argentina's recession on corporate earnings, the pace of Brazilian economic reform, and the potential for social unrest as Mexico enters the worst of its recession.

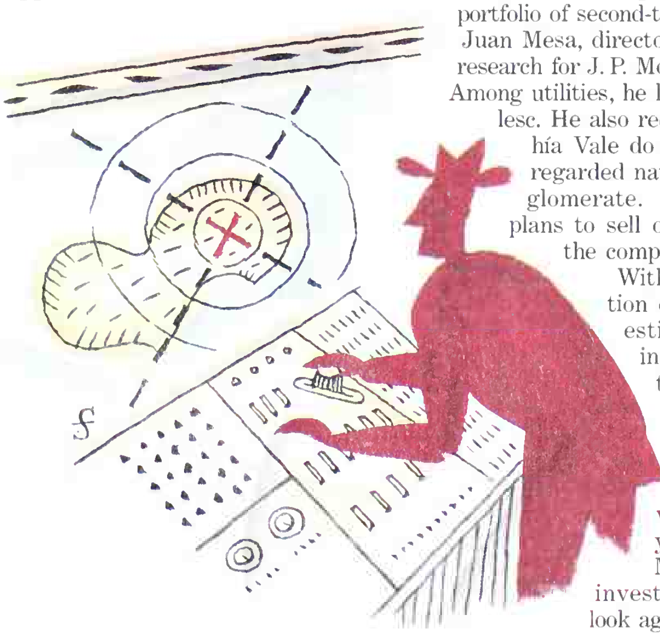
DATA: BLOOMBERG FINANCIAL MARKETS

In Brazil, where a slow start hasn't killed most investors' faith in economic reform, analysts suggest focusing on expected privatizations and companies that will continue to benefit from strong domestic demand. Some stock-pickers are buying Telebras, the national phone company. But others prefer smaller offerings. "If you fundamentally believe in Brazil and know that reform is going well, then it's a good time to build a portfolio of second-tier companies," says Juan Mesa, director of Latin America research for J. P. Morgan Securities Inc. Among utilities, he likes Cemig and Celesc. He also recommends Companhía Vale do Rio Doce, a highly regarded natural-resources conglomerate. The government plans to sell off its 51% stake in the company in 1996.



With an average valuation of about 10.5 times estimated 1995 earnings, analysts argue that there's strong value in the Argentine market, even though earnings growth will be weak this year. J. P. Morgan's Mesa believes that investors will begin to look again at company fundamentals rather than merely tra
on the country's macroeconomic
pects. He is recommending the two
phone companies—Telecom Arge
and Telefónica de Argentina—along
the Buenos Aires electrical utility
tral Costanera. He also likes P
Companc, an energy company
interests in oil exploration and p
chemicals. Its aggressive manage
has taken shares in privatized Ar
na companies.

WHAT ROSES? *Merrill's Morgan wouldn't be surprised by a recess*

KI HO PARK / KISTONE

Deep in the Nikkei, a Few Pearls

Got an iron stomach? Then here's what to bet on

In Japan these days, the bad news never seems to end. The Kobe earthquake, runaway yen, plunging prices, and terrorist gas attacks have dampened consumer confidence, crimped a corporate earnings rebound, and sent the Nikkei stock average tumbling 20% so far this year. With many analysts predicting the average could fall below 14,000—an 1,800-point drop from the current level—trading volume is so low that you could find more action at a penny-ante poker game. "I think the outlook is appalling," grouses David Pike, equity strategist at Barclays de Zoete Wedd.

Most economists believe Japan's gross domestic product will grow no more than 0.5% in the fiscal year ending next Mar. 31. Even the few remaining bulls are getting edgy. One of them, Merrill Lynch & Co. chief Tokyo economist Peter Morgan, recently slashed his GDP forecast from 1.7% to 1% after news that inventories were up for the fourth straight month and unemployment had jumped to a record 3.2%. Unless the yen suddenly weakens, he says, "we are going into a recession."

LOOK FOR CASH. Does this mean you should shun Japan? Maybe not. For the most intrepid of investors, the Tokyo stock market offers a number of plays on companies that will probably come through the hard times in solid condition.

To find them, look for corporations with a technological edge, pricing power, and scads of cash. One such company is Kyocera Corp., whose shares also trade on the New York Stock Exchange via American depositary receipts. Kyocera is the world's largest manufacturer of ceramic packaging material that encases semiconductors. It also makes cellular-telephone handsets and owns 22% of DDI Corp., a fast-growing cell-phone carrier with a stock that is also on many buy lists. S. G. Warburg Securities Ltd. analyst Barry Dargan thinks Kyocera's profits will jump 19% in the curre
cal year. Other pro picks: Rohm
big maker of semiconductor compo
that is riding the global chip boom
Tokyo Electron Ltd., a thriving tr
group and maker of semiconductor
ufacturing equipment.

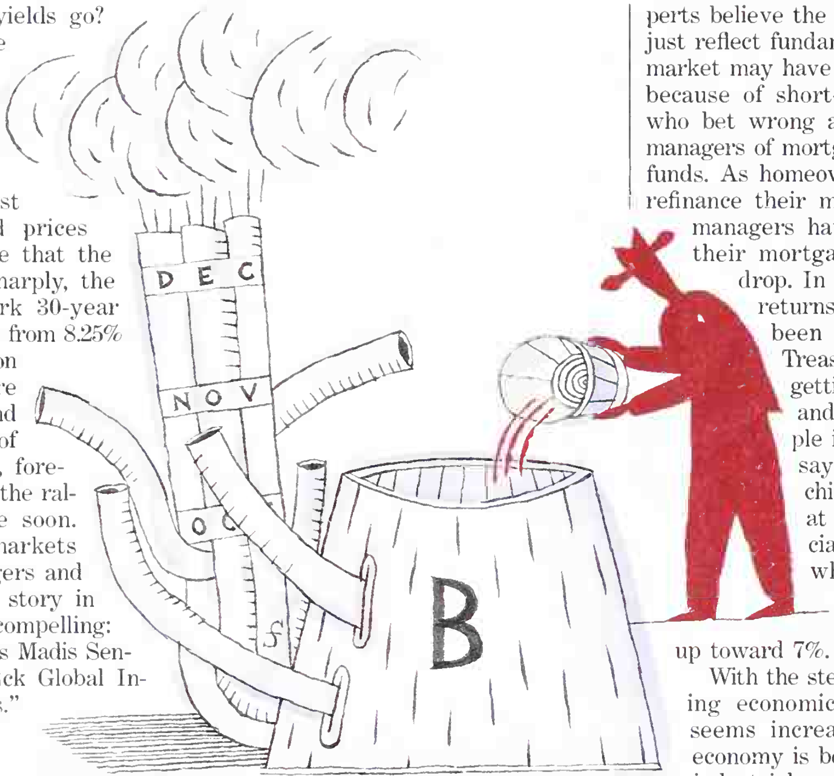
This Rally Still Has a Full Head of Steam

With bearish economic news and few signs of inflation, bond yields are likely to fall mo



How low can yields go? That is the burning question among bond investors, in light of the explosive rally in fixed-income markets since last November. With bond prices soaring on the evidence that the economy has slowed sharply, the yield on the benchmark 30-year Treasury has plummeted from 8.25% late last year to 6.5% on June 6. Bond yields are plunging abroad, too. And with the recent spate of bearish economic news, forecasters are betting that the rally won't end any time soon. While the European markets offer value, fund managers and economists believe the story in the U.S. is the most compelling: "Invest in America," says Madis Senner, manager of Van Eck Global Income Fund. "Buy bonds."

But more may be at work here than just the cyclical slowdown in the economy. Indeed, the current rally may reflect a fundamental change in economic expectations that could have a long-term impact on interest rates. For one thing, economists are becoming convinced that the Federal Reserve has finally tamed the inflation that wreaked havoc during the 1970s and 1980s. Moreover, the markets believe the Republican leadership in Congress will make good on its pledge to slash the deficit.

FAMILIAR REFRAIN. Economists are beginning to argue that bond yields could move back toward the historical range of the 1950s and 1960s—roughly 2.5 to 3.5 percentage points above the inflation rate. That compares with the 5- to 6-point premium investors demanded during the 1980s. With inflation expected to tick up slightly above 3% this year, Philip Braverman, chief economist for DKB Securities Corp., says the 30-year Treasury now has room to dip to around 6%. Other forecasters expect bigger drops over the long run: "Investors are going to see long bond yields drop below 5% over the next five years," says Tokai Bank Ltd.'s chief economist, Robert T. McGee.

Predictions of a 5% long bond sound hauntingly familiar to the refrain bond traders sang a mere 18 months ago before they were caught flat-footed by a series of Fed rate hikes. And some experts believe the current surge do
just reflect fundamentals. They say

There's more to the future
than technology.
Canon

Canon believes that technology's purpose—to help people lead more fulfilling lives—is rendered meaningless when the human factor is ignored. Which is why Canon devotes considerable resources to the betterment of people, especially the young, as well as the preservation of the environment. This support is found in the funding of children's sports programs, sponsorship of disabled athletes, assistance to the needy, and environmental programs. The Canon Greater Hartford Open is testament to Canon's commitment. Through the years, it has become one of the largest charitable contributors on the PGA TOUR. Canon's concern for the earth and the people who live on it are as genuine as its efforts to expand the boundaries of technology. In giving consideration to all, the future is brighter for you, for Canon, and for a small child learning a new game hundreds of years old.

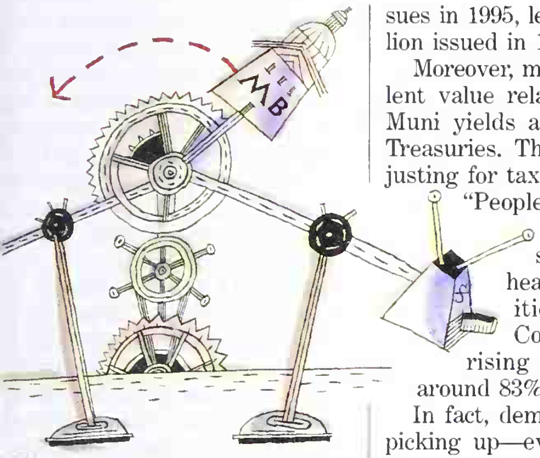
Will Tax Reform Kill Munis' Allure?

laybe–but right now they're still a tasty investment



uni investors had reason to cheer at the beginning of 1995. There were widespread expectations that new muni ɡs would be few and far between, yers raced into the market antic- a scarcity that would drive up

things haven't worked out that ı Washington, there has been se- alk of tax reform, which would the key tax advantages of mu- ıy substantial change is not going ood for the value of an outstand- ɡ-term muni bond," warns James ıer, head of the tax-exempt bond ement division of Bank of New 'o. And in California, acrimoni- gotiations on restructuring the bankrupt Orange County have ɔall over that state's entire muni . Munis, while rising in price vith all bonds, have performed :han Treasuries.

IGHT SIDE. But there are still easons to consider First, predictions nuni issuance have true—in spades. underwriters all all Street are crying heir beer over the of new deals, and ɔod news for Main The Public Secur- sn. expects rough- billion in new issues in 1995, less than half the $292 billion issued in 1993.

Moreover, munis currently offer excellent value relative to Treasury bonds. Muni yields are now close to 86% of Treasuries. That means that after adjusting for taxes, munis yield far more.

"People will recognize the relative value in munis," says Richard J. Moynihan, head of the municipal-securities division at Dreyfus Corp. He sees muni prices rising so that yields fall to around 83% of Treasuries.

In fact, demand for munis is already picking up—even for California securities. One indication: Investors snapped up a $1.25 billion offering at the end of May by California's Foothills/Eastern Transportation Corridor Agency to finance new roads. "The oversubscription [for bonds] was extraordinary," says Paul C. Williams, head of investment strategies and research at John Nuveen & Co.

ACTION

HANG IN

Yields are high relative to Treasuries, so there's every reason to stick with munis

If the economy continues to slow, further declines in overall rates stand to help all muni buyers. Moynihan says investors could take extra advantage of falling rates by buying bonds trading at a premium. These bonds have coupons higher than those on new issues, so issuers might refund them if rates continue to fall. Such a move would boost the price of the high-coupon bonds.

With tax-reform proposals buffeting municipal bonds, the market is likely to remain unsettled throughout 1995. But at this time, the lures of munis are still greater than the pitfalls.

By Kelley Holland in New York

Hang On: More Surprises On the Way

In the first half, funds missed much of the Dow's ascent. What's next?

The first half of 1995 has been full of surprises for mutual-fund investors. The Dow Jones industrial average rose faster and further than anyone anticipated, gaining nearly 17% as of June 6. The bond market stunned investors with a rip-roaring rally that sent the yield on the 30-year Treasury bond down to 6.5%, its lowest point in 15 months. Despite all of the record-breaking, the average equity fund return, at 10.2%, fell far short of the 17.3% total return of the Standard & Poor's 500-stock index. And in a quirk of financial fate, equity funds were outperformed by bond funds that focus on investments that were considered rather humdrum until recently—U. S. Treasury securities.

Much of the gain in equity mutual funds was generated by a narrow slice of stocks, mainly large-capitalization growth stocks and technology issues. Excitement in the volatile tech sector isn't unusual. But the sector still held surprises, as the cycle of demand in the semiconductor industry extended well past analysts' expectations. That persistent outperformance led to some of the year's biggest gains, such as the eye-popping 45.2% total return from the $750 million Fidelity Select Electronics Fund.

NEW FLOW. While individual tech funds produced the biggest total returns, funds that focus on financial stocks had the best average performance—a 20.3% total return. Financial institutions benefited from growth in lending, improved trading profits, and a boost in fee income and credit-card profits as a result of a higher prime rate.

Staying at home was another strategy that paid off for equity players. U. S. diversified equity funds returned 12.9% as of June 2, compared with 0.74% for funds that invest in foreign stocks. Steven Norwitz, spokesman for T. Rowe Price Investment Services Inc., says the biggest shift in fund flow at his firm thus far in 1995 has been out of international funds and into domestic funds. The worst returns showed up in funds targeting Latin America, Japan, India, and gold.

Bond funds did a dramatic about-face from 1994, when virtually every category of bond fund was in negative territory. But in 1995's first half, every category sported positive returns. Only two fund groups—short-term world income and government adjustable-rate mortgage—failed to generate a return of more than 8%. Government bond funds investing in Treasuries took the to with an 11.5% average return, bo by the powerful rally in the bond ket. But many government bond managers, having built up more c vative positions in short and inter ate maturities in the wake of last market rout, didn't participate in of the rally. World bond funds ca second, gaining 10.2%.

"RELATIVELY CHEAP." Indeed, it w cusing on the long term that pro some of the best returns. The $25 lion Benham Target Maturities which buys long-term zero-coupon Treasuries, was the best-perfor fund, up 33.6%. Going long also pa for fund manager Daniel J. Fuss manages the $134 million Loomis S Bond fund, as well as the $27 n Managers Bond fund, both strong formers. The Loomis Sayles fund

EQUITY FUNDS: THE STARS, THE DOGS, THE GIANTS

Tech funds were the stars of the first half, though funds investing in financial stocks fared well. But funds in foreign stocks were duds. And gold bugs got clobbered

erage maturity of ears and is call- ted.

d funds also prof- y going overseas k for profits. The million SEI Inter- al Fixed-Income nd gained 20.5% e first half, thanks ng interest rates a falling dollar. of the fund's hold- e AAA-rated for- onds that benefit- eatly from the e of the dollar t German, Japa- nd other curren- ecently, the fund arted to shift out German market and into the of more peripheral European s such as Italy and Spain.

did the megafunds fare? All but e 25 largest equity funds saw digit gains. The $11.7 billion Van- Windsor fund led the pack with % return. Tech-heavy, $41.8 bil- delity Magellan came in second, ng 18.2%. But only 4 of the 25 funds managed to beat the S&P eturn.

first-half performance numbers many tech investors wondering er they should run for the exits. near term, many fund managers expect a bumpy ride. Paul H. Wick, who runs the second-best performing tech fund, Seligman Communications & Information A, has turned neutral on tech for the short term but is bullish for the second half. (Investors who want to jump into his fund will soon be out of luck: It will be closed to new investors as of July 15.) Barry Gordon, who runs the $85 million John Hancock Global Technology Fund, is another tech bull. "I still feel that technology stocks are relatively cheap," he says. "More products are using more semiconductor chips than ever before." Some of his favorite stocks: Integrated Devices, LSI Logic, and Applied Materials.

Some fund managers are playing it safe, though. Michael W. Powers, who runs the $356 million Columbia Balanced Fund, is underweighting the technology sector compared with the technology weighting of the S&P index. Along with other fund managers, he is moving into energy service and oil stocks. Powers sees the out-of-favor S&P Oil Group as "an unexploited area that won't get bailed out by rising prices but is focusing on cost-efficiency and getting rid of businesses that aren't doing well." Baker Hughes is his fund's largest holding; if he could only hold one oil stock for a long time, however, he'd pick Royal Dutch/Shell Group.

FOREIGN TEST. While technology stocks have some managers nervous, fund managers are still enthusiastic about financial stocks. Ronald C. Ognar, who runs the $330 Strong Growth Fund, has been buying up niche companies such as Green Tree Financial Corp., First USA, MGIC, and MBNA. "These companies are growing at 20%, and most of the public

*As of June 2 **Includes dividends and capital gains hasn't even heard of them," he says.

Equity fund managers with a stomach for risk are venturing overseas, even into Latin America, where they believe the worst is over. The $565 million Robertson Stephens Contrarian Fund plans a slow move into emerging markets. For the long term, fund manager Paul H. Stephens likes Latin America, parts of Southeast Asia, and parts of Africa. Currently, however, many of his holdings are in Canada. His fund's 23.1% return is largely explained by a holding in Diamond Fields Resources Inc., a Canadian mining company whose stock has climbed from about 4 to 71¾ since the company's discovery of major nickel, copper, and cobalt deposits last year. An investment in Diamond Fields also propelled the $8.6 million Excel Midas Gold Shares Fund to a total return of 30%, while many of its peers suffered double-digit losses.

Gold bugs may be depressed, but bond traders are feeling totally flummoxed. Every week, market sentiment seems to shift with the latest economic statistics. There was some "good" news lately for bond investors: Signs of a rapidly slowing economy mean that the possibility of recession cannot be ruled out. That raises the prospect of an interest-rate cut by the Federal Reserve sometime in the year's second half—a boon for many bond funds.

"STAYING POWER." While unwilling to write off a continuing bond rally, many fund managers are taking defensive positions. Loomis Sayles's Fuss says the second half of 1995 will be a "tougher time." He is gradually building positions that aren't so closely tied to gyrations in the U.S. bond market, without giving up potential gains from a further rally in the U.S. He will probably buy more Canadian paper and recently sold some long zero-coupon bonds in Managers Bond and invested the money in 3.5-year BBB-rated paper. But "it's too soon to say that this is it and leave," he says. "This rally has staying power."

Will the laws of gravity hit the financial markets in 1995's second half? Fund managers argue that increased productivity will support continued strong earnings gains in many sectors of the economy, even if growth slows further. And if that happens, an upside for bonds could be in the cards. But only one thing seems clear in today's topsy-turvy financial markets: Investors are likely to experience even more surprises in 1995's second half.

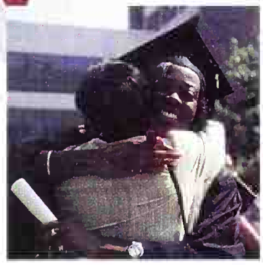
QUALITY EDUCATION - AN INVESTMENT IN GEORGIA'S FUTU



Top left: Georgia's future looks bright. *Bottom left:* Using technology and computers, a Georgia teacher works with young students. *Bottom right:* A college education is just one of the possibilities from the HOPE Scholarship program.

Innovating technology. Revolutionizing lives. Pioneering services. What do all of these have in common? They're investments being made today in Georgia's educational system. Education is the top priority for both Georgia's political and private leadership. Providing a quality education system and access to quality programs has never been more important because Georgia knows investments made today will affect the quality of our people's lives now and in the future.

Right now, Georgia is investing in the future by giving its people access to advanced education through the HOPE Scholarship Program. HOPE (Helping Outstanding Pupils Educationally) is a unique program for high school and college students rewarding hard work with financial assistance in degree, diploma, or certificate programs at any Georgia public or private college, university, or technical institute.

For example, if a Georgia student graduates from high school with a "B" average, he or she can qualify for free tuition and books at any public college. It's that simple. Scholarships can be renewed for your sophomore, junior and senior years if a "B" average is maintained. No other offers a scholarship program with the reach of H In Georgia, we believe the best way you can he student is by giving them hope, so we made it in scholarship. HOPE, it's a good thing.

Georgia is also at the forefront of the nation in use of advanced telecommunications to improve quality of education for its people. One prog made possible by this is Distance Learning, ano aspect of Georgia's investment in the educati system, and a way to revolutionize people's l Using a sophisticated telecommunications netw Georgia is able to link rural sch with urban schools and colle enabling students in remote area take classes that are not availabl their own schools.

Distance Learning puts a Geo teacher in dozens of classrooms at same time via the Georgia Statewide Academic and Me System (GSAMS). A variety of enrichment courses such physics, Russian, and abstract art can now be taken students no matter where they live in Georgia. At a re Distance Learning training session for educators, one tea was so impressed with the benefits of the technology be her, she was prompted to say it would allow her a real ch to make a difference for the future. The *New York Times* Georgia's Distance Learning "the most sophistica program of its kind in the nation." No other state invested as much in Distance Learning — that's Georgia's at the head of the class.

Investing in our greatest natural resource our people. Building an educated and qu work force for the future. Giving students H That's Georgia's goal for today, tomorrow and 21st century. Affecting ordinary people's live bringing a better quality of life to everyone li in the state is just what Georgia does best.

Wouldn't it be nice if the quality of life could outpace the cost of living?

Of course it would be nice. It would be nice, for example, if you could spend less time getting to work and less money doing it. If, say, when you left work, you could spend less than an hour getting from your parking deck to a state park.

Well, that's the way things are in Georgia. It's a nice twist on the old "increased hassle, increased cost" trend that seems to be sweeping so much of the rest of the nation. Not only is the living easy here in Georgia, but the *cost* of living is below the national average. (Compare that to many cities, where costs can be as much as 30% *higher.*)

And of course, when living costs less, doing a thriving business costs less, too. It's our way of life, and we'd be happy to tell you more about it. To find out more, write Charles Gatlin at the Georgia Department of Industry, Trade and Tourism, Dept. BSW, P.O. Box 1776, Atlanta, Georgia 30301. Or call us at (404) 656-9306.

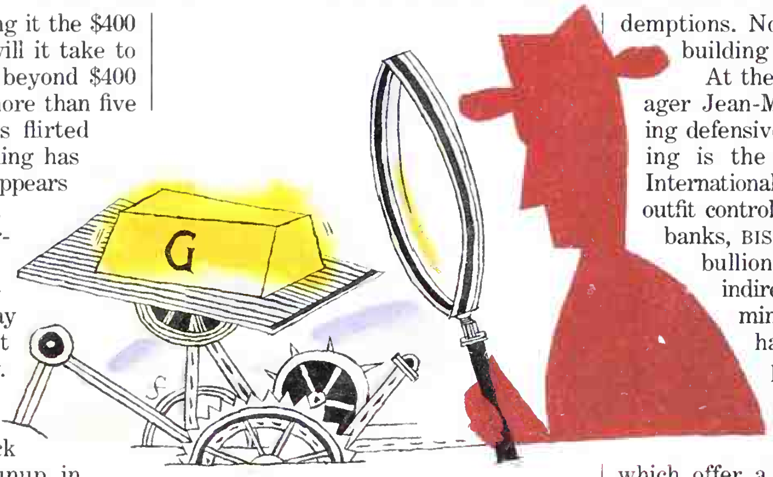
This Metal Has Precious Little Shine

With the price stuck in neutral, gold offers few opportunities—and plenty of risk



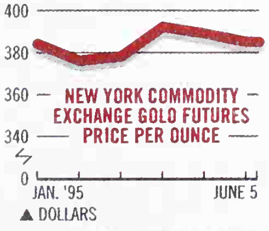
Gold bugs are calling it the $400 question: What will it take to push gold prices beyond $400 per ounce? For more than five years, whenever gold has flirted with that level, heavy selling has slapped it down again. It appears that's not about to change.

Barring some huge surprise—such as war, financial panic, or surging inflation—gold will probably stay within a narrow range just below $400, analysts say. Any rallies will serve as an excuse for producers to sell, driving prices back down. And without a runup in gold prices, most mining stocks will probably trail the broad market. Meantime, mutual funds that specialize in precious metals still haven't recovered from last year's 11.6% decline. Courageous investors seeking to diversify their portfolios might sense a buying opportunity, but these funds may not be worth the risk. "Staying away from them is probably the wisest course for most investors. They're too volatile," advises analyst Eileen S. Makoff, who tracks precious-metals funds at Morningstar Inc.

NO SIGN OF FEVER. With the Federal Reserve steadfast in controlling inflation, the U.S. economy slowing, and Japan facing deflation as the yen soars, economists doubt gold will get a lift anytime soon. Even currency-market turmoil has failed to buoy gold's price. This year's Mexican peso crisis hasn't driven worried investors into gold. Nor has the collapse of the dollar. In terms of yen and German marks, gold prices have plunged.

The only bright spot in the gold market: fundamentals. World gold-mine production dropped 0.6% in 1994, the first decline since 1975, and analysts expect mine supplies to edge up only slightly over the next few years.

GOLD IS GOING NOWHERE



DATA: BLOOMBERG FINANCIAL MARKETS

Even with the addition of scrap gold and sales from central bank stockpiles, the supplies won't keep up with an expected 4% annual rise in demand through 1997. Appetites are growing in China, India, and elsewhere in the developing world, where gold jewelry remains a standard for investment and adornment. Traders report strong buying from the Pacific Rim every time the gold price dips below $375. That demand will continue to limit bullion's downside risk, says Philip Klapwijk, senior analyst at Gold Fields Mineral Services Ltd. But since the demand erodes whenever the prices soar, even strong fundamentals are unlikely to support a speculative surge for very long.

So how can investors participate even with no sign of gold fever? A handful of mutual-fund managers have crafted defensive strategies. At the $125 million Scudder Gold Fund, manager Douglas D. Donald swears by bullion as a less volatile holding than mining stocks. "It has been a savior," he notes. Donald held 24% of the fund's assets in bullion at the end of last year's third quarter. When gold stocks tanked in the fourth, he sold thousands of ounces to meet redemptions. Now, Donald is slowl building his metal cache.

At the SoGen Gold Fund, ager Jean-Marie Eveillard is t ing defensively, too. His largest ing is the Swiss-based Banl International Settlements. A blu outfit controlled by the world's c banks, BIS has 50% of its ass bullion—and thus provid indirect gold play withou mining risk. Eveillard, has "no idea" when b prices may increase likes preferred s of Freeport-McM Copper & Gold which offer a coupon and redem value indexed to gold prices.

"IT'S INSURANCE." Such defensive egies offer too meager an upside, tends Henry J. Bingham, who ma Van Eck Associates' $600 million l national Investors Gold Fund, a h investor in South African stocks. gold funds tend to rise when s and bonds fall, investors se maximum diversification should buy aggressive funds, Bingham contends. "It's insurance," he adds.

Other metals mavens favor mining stocks for similar reasons. But even they recommend caution when panning for bargains among the dozens of small mining issues from Africa, Asia, South America Canada. Instead, they advise inve to stick with well-capitalized, eff producers.

Of the 46 gold funds that Mornin follows, all but four own Placer I Inc., and all but nine hold Ame Barrick Resources Corp. They ma have much pizzazz, but with gold in neutral, the tried-and-true path be the best to follow.

▼ SMOOTH SAILING
Thermolase, whose laser technology removes hair, is one of the hottest high-tech companies

CREAM OF THE CROP

The best investments of the year—so far

This has been a gala year in the stock and bond markets. Lower interest rates, abetted by an ever-softer dollar, have sent stock prices to record levels. The prosperity has been across the board. A few investments, however, have excelled. What follows is a perusal of the best investments of the year to date.

BEST NYSE STOCK

As its name implies, *Acme-Cleveland Corp.* is as Middle American as cherry pie. It is the epitome of no-frills Rust Belt stoicism. Acme makes metalworking equipment, telecommunications test devices, and other heavy-duty gizmos. But its share price has been the epitome of glitz, rising some 140% in the year so far and making Acme the best-performing issue on the Big Board that began the year at more than $5.

Acme is hardly a paragon of growth. Sales have been steadily declining for years. But the company has repositioned itself for growth, selling off its arcane twist-drill subsidiary in recent months and beginning to make acquisitions in the hot telecommunications business.

BEST AMEX STOCK

High-technology stocks have been wowing investors for most of this year. And one of the most explosive niches in the high-tech arena has captured the imagination of appearance-conscious individuals in the U.S.: hair removal. Tweezers? Forget about it. *Thermolase*, a fortunate company with a big stake in this technology, zaps those little suckers with a laser—and Wall Street is suitably impressed. The San Diego company's shares have almost quadrupled, climbing 280% in the year to date.

Thermolase shares got a boost when the Food & Drug Administration O.K.'d its hair-removal system. It's a small company—the last quarter showed sales of $6.1 million—but watch out. There are lots of unwanted follicles out there.

BEST OTC STOCK

Zygo Corp. is based in Middlefield, Conn., a farming community known for its apple orchards. But there's nothing pastoral about Zygo, which sells equipment to semiconductor and disk-drive manufacturers and to optical compa
Propelled by the explosive grow
semiconductors, Zygo's shares

Select Electronics Portfolio, up the year to date. Under portfolio er *Marc Kaufman*, the fund in- heavily in semiconductor manu- ers, particularly Intel.

fman is a shy sort who would not t to an interview. But he did re- to written questions. Kaufman ie looks "mainly for companies enefit from either a new-product r favorable industry trends." And chip stocks are "likely to be vola- er the near term, it is my belief atient investors will be handsome- arded." Impatient investors, too, if st is any guide.

ST BOND FUND MANAGER

ty must be on the rise among nanagers this year. *David W. der*, who runs the top-perform- nham Target Maturity Fund 2020 lio, cheerfully consented to an ew. But he credited market forc- the fund's top-drawer perfor- —up 33.6% so far this year. "It's at the top of the [fund perfor- table or the bottom of the table," the 39-year-old Schroeder frankly observed. So far this year, declining rates have sent the fund to the top. As of last October, he notes, its performance was among the worst.

Target 2020's gyrations—it is among the most volatile fixed-income funds—stem from its portfolio of zero-coupon U.S. Treasuries. When rates shift, prices of zeros tend to move more rapidly than coupon-bearing bonds. The Benham zero funds should continue to do well if bonds keep sliding—but they'll be scraping the barrel-bottom if rates rise.

BEST OVERSEAS MARKET

The hottest market anywhere can be found in the ancient city by the Bosporus. The volatile *Istanbul Stock Exchange* has zoomed 58%, in dollar terms, in the year to date—78% in Turkish currency. A package of spending cuts imposed by Prime Minister Tansu Çiller last May, at the height of a Mexican-style financial meltdown, has begun to reap dividends. Inflation is down to double digits after hitting a numbing 156% early this year, while the economy is expected to expand by 4% in 1995, after a 6% plunge in 1994.

BEST COMMODITY FUND MANAGER

Of all the commodity funds tracked by Barclay Research Group that started the year with over $5 million, none has performed as well in the year so far as Chicago-based KMJ Capital Management Inc. Portfolio Manager *Kenneth M. Jakubzak* boasts a 90% return through Apr. 30 in KMJ's diversified fund.

Jakubzak benefited, as did bond funds, from the decline in U.S. interest rates. But Jakubzak extracted considerably greater returns using leverage, which effectively boosted the fund's $8 million in assets fourfold. Jakubzak is no in-and-out trader. He holds his positions for anywhere from a week to three months. "I'm a systematic technical trader with a heavy discretionary overlay," says Jakubzak. Translation: He follows the charts, but not like a moth to a flame. A principle we all can employ.

By Gary Weiss in New York, with John Rossant in Rome

BY GENE G. MARCIAL

Buyout Bait: PCs, Drugs, Banks...

Mergers and takeovers. Investors have seen lots of them so far this year, and there are more to come. That's what the pros who forecast—and bagged—earlier deals are saying. They think the big fields will be technology, pharmaceuticals, and banking. Case in point: IBM's hostile $3.3 billion offer for Lotus Development.

Mike Metz, chief investment strategist at Oppenheimer, who predicted at the start of the year that acquisitions would become "more frenzied and bigger," says: "To a lot of companies, the pressure is still on to widen distribution networks and bolster research and development of new products."

MIDYEAR TAKEOVER BETS

STOCK	52-WEEK HIGH	52-WEEK LOW	RECENT PRICE	TAKEOVER VALUE
APPLE COMPUTER	48	24⅝	43	60
ALZA	26⅝	17	21	30
FIRST CHICAGO	59¾	42⅝	58	80
HEALTHY PLANET PRODUCTS	10¾	7⅞	9	18
MICROTEL FRANCHISE	6⅞	2¼	6½	13
UPJOHN	38⅛	28⅝	37	50

DATA: OPPENHEIMER & CO., *SPECIAL SITUATION REPORT*, BW

Seasoned buyout spotters spy four that are ripe for picking: Apple Computer (AAPL), Alza (AZA), Upjohn (UPJ), and First Chicago (FNB).

Who's out to snare Apple? Several names are being bandied about, but the "most recent—and most logical—is Sony," says Metz. He argues that the Japanese giant could put its marketing and R&D to great use for Apple. "With its deep pockets and global vision, Sony can wed its entertainment values to Apple's technology to create novel interactive computer products," says Metz. Apple, for its part, needs an alliance with the likes of Sony to stay with the pack in computers, notes Metz.

Alza, a leader in controlled-release drug-delivery systems, is rumored to be a target of Pfizer, with which it developed Procardia XL for angina and hypertension. A European pharmaceutical giant is also rumored to be keen on acquiring Alza. Alza has research and marketing agreements with Marion Merrell Dow—which has agreed to be acquired by Hoechst, Germany's chemical and drug titan—as well as with Glaxo Holdings and Johnson & Johnson.

Upjohn is another drugmaker seen as "compelling takeover bait" for foreigners. Talk is that the stock is trading close to its high this year because some hedge-fund managers have put it on their new list of takeover targets.

First Chicago's stock has also bumped a new ceiling lately, thanks in part to buyout talk. Potential bidders include NationsBank, which analysts say is in a "good position to pay up" for First Chicago in a quest for broader markets, and Wells Fargo, said to be interested in the Midwest market. With its stock trading at a nice premium to many of its peers, the California bank could do a combined stock-cash merger, says Metz.

...Greeting Cards, Motels...

Takeovers could prove at least as lucrative to investors in small-capitalization stocks. "There are legitimate candidates with rapidly rising earnings and revenues that have been virtually ignored by the market so far this year," says Charles LaLoggia, editor of *Special Situation Report* in Rochester, N. Y. His picks: greeting-card maker Healthy Planet Products (HPP) and hotel operator Microtel Franchise & Development (MCTL).

Healthy Planet, the largest cause-related greeting-card company—endorsed by the Sierra Club and the ASPCA, among others—has been growing rapidly. With earnings jumping to 10¢ a share in the first quarter—up from 2¢ last year—and with sales rising 38%, to $885,833, the company is an attractive target for the large outfits such as Hallmark and American Greetings, says LaLoggia. The stock will soon be in play, he says, because one of the big stakeholders, which he declined to identify, wants to sell. The estate of Ludwig Jesselson, onetime chairman of Phibro-Salomon, owns 23.2%, and the family of Charles Bluhdorn, who founded Gulf & Western Industries, owns 15%.

Microtel Franchise, a fast-growing chain of low-priced, no-frills motels, is an ideal target for bigger chains, says LaLoggia. One possible buyer is Hospitality Franchise Systems, which franchises six lodging names, including 1,570 Days Hotels, 765 Ramada Inns, and 615 ward Johnsons. "Such large comp are always looking to buy new b names," says LaLoggia.

...And Casinos on the River

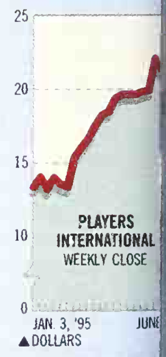
Many gaming stocks have bee a losing streak, even as stock market rockets to highs. An exception is Players Inte tional (PLAY), operator of two river casinos: in Metropolis, Ill., and L Charles, La. Players' shares have n ly doubled—from 11 in mid-Decen to 22 on June 6 (adjusted for a spl

What's the deal? Bulls on Players its growth prospects, healthy bal sheet, strong earnings, and robust flow, which have enabled the compa finance its own expansion.

One more boost: Players is being balled, say some pros, by a coupl major entertainment-and-gaming panies. Players' "strong cash flow a nancial condition makes it an attra acquisition target," says Joseph cimiglio, an analyst at Dean Wi Reynolds. He figures a fair take price is 31-32.

One takeover pro believes tha investor group led by entertainer M Griffin, which already owns 16% of ers, is a potential suitor. Another one: Promus Cos., which has form joint venture with Players on a $200 million casino complex in Maryland Heights, Mo., on the Missouri River west of St. Louis.

COMING UP TRUMPS



DATA: BLOOMBERG FINANCIAL MA

Even without the takeover element, Players is deemed to be way undervalued. David Anders of Raymond James & Associates says the stock is "extremely attractive." He sees Players making $1. share this year and $2 in 1996. R nues, which totaled $223.6 million year, should hit $283 million in 1995 $402 million next year.

Players' future is pegged on the pany's addition of a land-based ca in Mesquite, Nev., by July, and more riverboats.

KIDS' WEAR IS NOT CHILD'S PLAY

Neither is grown-up gear, as OshKosh discovered

BIB LIB: *The baby boom turned an early standby into a bonanza*

Back in the 1980s, every well-dressed yuppie baby wore tiny work clothes from OshKosh B'Gosh Inc. At Hansen's Childrens Shop in posh Lake Forest, Ill., moms snapped up the trademark bib overalls and matching embroidered tops despite prices that hit $60 per outfit. These days, however, store owner Fran Hansen's orders come to less than $500 a season, down from $5,000 in the brand's heyday. "For the newer mother, OshKosh doesn't have the same appeal," she says. "They're going to The Gap."

That isn't news to OshKosh CEO Douglas W. Hyde, who admits the Wisconsin company was "slow to react to consumer changes." Profits plunged from $29.5 million in 1990 to only $7 million last year. Analysts expect a rebound this year, but earnings will still be well below the level reached five years ago.

60-INCH WAISTLAND. What went wrong? First, department stores—OshKosh's biggest distribution channel—cut back on children's clothes in the face of competition from Gap Kids, Kids 'R' Us, Lands' End, and others. Then, discounters started imitating OshKosh styles at far lower prices. Says Carolyn Smith, a Columbia (Md.) mother of 10: "You can get good-quality children's clothing at Kmart for $5 and sometimes even less. It was senseless to me to put money into OshKosh."

OshKosh wasn't always so dependent on toddlers. The 100-year-old company got its start making work clothes—in waist sizes up to 60 inches. Children's wear comprised only 5% of sales in 1974. Then came the "echo boom" of the 1980s, and the baby bib took off. Children's sales grew more than eightfold, to $340 million, by 1990, up from $40 million a decade earlier. "This brand just became magic. Our biggest problem was keeping up with demand," says Michael G. Donabauer, director of corporate marketing and planning.

But that magic had a downside. The children's line came to so define OshKosh's image that the company couldn't sell clothes to anyone else. A line of older kids' clothes flopped because 8-year-olds didn't want to wear baby clothes. Attempts to extend the
Kosh name to women's casual c
and maternity wear also failed.

COMMUNITY SERVICE

A SOCIAL PROGRAM CEOs WANT TO SAVE

AmeriCorps has the passionate support of even GOP execs

TUTORING IN NEWTLAND: *Atlanta's Home Depot is giving $125,000*

ANN STATES/SABA

It's not like Erie Chapman to defend a federal do-gooder program. After all, he's a CEO, a loyal Republican, and a fund-raiser for House Budget Committee Chairman John Kasich (R-Ohio), leader of the GOP budget-cutting effort. Yet the head of Columbus-based U.S. Health Corp. says Kasich is wrong to target President Clinton's national service program, AmeriCorps, for extinction.

U.S. Health has pledged $150,000 over three years to City Year, a nonprofit that sends AmeriCorps members to work at community projects in Columbus and five other cities nationwide. Chapman argues that AmeriCorps will recoup more than its $376 million cost this year by giving youths skills to become productive adults. He has even protested the planned cuts at a Washington press conference and congressional hearing. "It's tragic to cut these programs," he says. "Why shoot a bunch of innocent kids just to get at the President?"

CALLS AND LETTERS. Chapman has plenty of company among execs lobbying their Republican pols to save Clinton's pet program. Since AmeriCorps' creation by Congress in 1993, corporations have ponied up cash, equipment, and employee volunteers to help 20,000 young adults aged 18 to 25 perform services that range from rehabbing low-income housing to cleaning up rivers. A list of donors reads like a who's who of Corporate America: BellSouth, Microsoft, NationsBank, Procter & Gamble, and American Express—to name a few.

It's no accident that execs find the project appealing. Unlike most bureaucratic social programs, AmeriCorps tries to operate like a business. It's run by a nonprofit company—the Corporation for National Service—rather than a federal agency. Moreover, the process of choosing the 350 service programs that are assigned to AmeriCorps participants is competitive. Thousands of local groups submit proposals—with goals and crete ways to measure success- state boards pick the winners.

Besides, business is already inti ly involved in the program. By law government sources—usually busin —must pay at least 25% of opera costs and 15% of the $7,200 stipend AmeriCorps member gets for a ye service. Participants also get a $ education grant at the end of se Says Eli J. Segal, the former exec heads AmeriCorps: "This translate the kind of business buy-in that federal programs not had."

MORE BANG. CEOs ticularly like the AmeriCorps' poc full-time, commu service workers a them to leverage own charitable ef Timberland Co., fo ample, says Ameri participation was k its five-year pled $5 million in cash equipment to City whose youths na wide are dresse Timberland outfits the program gets ger, our invest goes further," exp Ken Freitas, vice- dent for community enterprise.

To save AmeriCorps from the budget scalpel, corporate chiefs ing from Shell Oil's Philip J. Carr Anheuser-Busch's August A. Busc have written letters to Capitol Hill makers. Tenneco Gas's Steve Ches not only sent letters to his two Re lican senators—Texans Phil Gramm Kay Bailey Hutchison—but lobbied er Houston CEOs to kick in mone the local AmeriCorps program. didn't say that we liked big govern or that govern should take care of through handouts, says. "We have that this is produ and proven."

With thousands of mutual funds to choose from, we thought looking to our stars might help you choose a family of funds that's right for your portfolio. As of April 30, 1995, based on 3- and 5-year performance as adjusted by Morningstar, Inc., class B shares of the MainStay Convertible and High Yield Corporate Bond Funds were rated 5 stars out of 335 and 258 in the Hybrid Fund category, and class B shares of the MainStay Value and Capital Appreciation Funds were rated 5 stars out of 1,192 and 893 in the Equity Fund category. Class B shares of the MainStay Total Return Fund were rated 4 stars out of 335 and 258 in the Hybrid Fund category. And, class A shares of the MainStay California and New York Tax Free Funds were rated 4 stars out of 644 in the Municipal Bond Fund category. For a free prospectus which contains more complete information, including advisory fees, other expenses and share classes, please call 1-800-695-9950, Ext. 100. Please read the prospectus carefully before you invest or send money. Ladies and gentlemen, let the lawyers begin...

Past performance is no guarantee of future results. Investment return and principal value will fluctuate so that shares, upon redemption, may be worth more or less than their original cost. Morningstar, Inc. is an independent fund performance monitor. Its ratings reflect historic risk-adjusted performance and may change monthly. Its ratings of 1 (low) to 5 (high) stars are based on a fund's 3- and 5-year average annual returns with fee adjustments and a risk factor that reflects fund performance relative to 3-month Treasury bill monthly returns. The Funds' individual 3- and 5-year ratings for those periods were as follows: MainStay Convertible and High Yield Corporate Bond Funds: 5 and 5 stars; MainStay Value and Capital Appreciation Funds: 4 and 5 stars; MainStay Total Return Fund: 3 and 4 stars; MainStay California Tax Free and New York Tax Free Funds: 4 stars. Only 33% of the funds in an investment category may receive 4 or 5 stars. For the Convertible, High Yield Corporate Bond, Capital Appreciation, Value and Total Return Funds, ratings reflect class B performance only; for the California Tax Free and New York Tax Free Funds, ratings reflect class A performance only. The second class of each respective Fund's shares, introduced 1-3-95, will not be rated by Morningstar until that class of shares has 3 years of operating history. Most MainStay Funds currently offer two classes of shares. You should consider, when deciding whether to purchase a particular class of shares, the investment amount, anticipated holding period, and other relevant factors. NYLIFE Distributors Inc., 260 Cherry Hill Road, Parsippany, NJ 07054, the distributor and administrator of The MainStay Funds, is an indirect wholly owned subsidiary of New York Life Insurance Company. © 1995 All Rights Reserved.

IPS IN THE NUCLEAR AFETY NET?

usading engineer sees a dangerous flaw in plant testing

ow safe is your local nuclear power plant? Constantly assaulted by radiation and temperature variations, nuke plants' steam tubes evelop dangerous cracks. To find before they grow, engineers apply ic currents to the metal and read esults on an oscilloscope. The Nu- Regulatory Commission is highly lent of these tests—so much so operators who produce good test s can seek licenses to run their s for two decades past their origi- intended 40-year life spans.

t now, this so-called nondestruc- valuation is under fire. Terry Old- a 55-year-old veteran of the nucle- dustry, argues that the statistical of verifying nondestructive evalu- is fundamentally flawed. The re- he says, is that there is no way of ing whether nondestructive evalu- as currently practiced is reliable or Says Oldberg: "They've got an in- nent; they can't tell how good it doesn't produce information."

H CALL. If Oldberg is right, the ications are enormous. If nonde- tive evaluation underestimates the ge in a nuclear plant, a catastroph- lure could occur unexpectedly. On ther hand, if the tests overstate ge, a plant could be shut down cessarily. Plant shutdowns related etal damage are frequent. Maine ee Atomic Power Co., for instance, ending $40 million to encase all 0 steam tubes in its Wiscasset ne) plant after tests indicated s. Oldberg argues that the NRC d conduct new tests of the accura- nondestructive evaluation or rean- the raw data from old tests using lard statistical methods. That, he would produce a solid understand- f how accurate nondestructive eval- n actually is.

c officials say their verification ods are logically consistent and re- . As for Oldberg, "it's very difficult s to figure out what he's saying use his arguments don't always make sense," says Lee R. Abramson, senior research statistician in the Probabilistic Analysis Branch of the NRC's Office of Nuclear Regulatory Research.

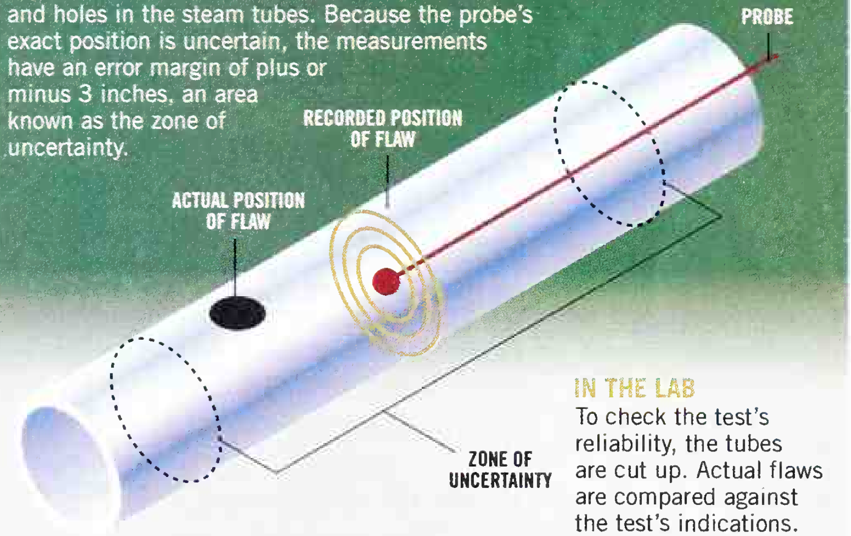
Nonetheless, Oldberg is starting to pick up support in a crusade he has been on since the late 1980s. A key ally is Ronald A. Christensen, president and co-founder of Entropy Ltd., a statistical research and consulting firm in Lincoln, Mass. Entropy's clients have ranged from drug companies to the NRC. Oldberg has also gotten support from Eric Perdijon, director of quality assurance in the department of thermo-hydraulics and physics at France's Commissariat de l'Electricité Atomique. Says Perdijon: "We should have clear laws" for how testing methods are verified.

Oldberg's controversial stance began to get more attention in January when he presented a peer-reviewed paper he co-wrote with Christensen at the annual engineering conference of the American Society of Mechanical Engineers (ASME) in Houston. The ASME writes codes for steam tubes, among other things. Donald E. Bray, a Texas A&M associate professor of mechanical engineering who served as chairman of Oldberg's panel, says he plans to put some of Oldberg's findings in the next edition of a textbook. But he also says he thinks nondestructive evaluation as prac-

THE DEBATE OVER SAFETY

Nuclear engineer Terry Oldberg challenges the statistical method used by the Nuclear Regulatory Commission and others to measure the reliability of nondestructive examination of equipment such as steam tubes.

IN THE PLANT
A probe uses electric current to find indications of cracks and holes in the steam tubes. Because the probe's exact position is uncertain, the measurements have an error margin of plus or minus 3 inches, an area known as the zone of uncertainty.



IN THE LAB
To check the test's reliability, the tubes are cut up. Actual flaws are compared against the test's indications.

CONFLICTING ANALYSES

NRC If an actual flaw is found within three inches of an indication, the NRC deems it a "true positive." The NRC says its test is good because nearly every flaw is called a "true positive" and there are few "false positives"—that is, indications that don't have flaws within three inches of them.

OLDBERG The NRC's verification method is untrustworthy, Oldberg says, because given the uncertainty in position, there is no way to be sure that an indication is pointing at an actual flaw. It could be that the device did not see the actual flaw, but just happened to make an indication in that area.

ALAN BASEDEN

ticed has helped make the nuclear industry "extraordinarily safe." Says Bray: "I don't know who the good guy and bad guy is, frankly."

The man who's stirring up this controversy is hardly an outsider to the nuclear industry. In the 1960s, Oldberg worked for the government's elite Lawrence Livermore National Laboratory, designing a nuclear reactor for outer space. Later, he worked on a fast-breeder reactor for General Electric Co. From 1974 to 1986, he worked for Electric Power Research Institute in Palo Alto, Calif., the R&D arm of U.S. electric utilities. His last job there was to oversee research on the safety of steam generators in pressurized-water reactors.

If Oldberg is right, there could be unnecessary shutdowns—or disaster

It was during that EPRI assignment, Oldberg says, that he discovered the statistical flaw underlying nondestructive evaluation research. He says a disagreement over the issue led to his departure from EPRI, but he won't comment further. After failing to find another job in the nuclear industry, he went back to school to study programming and has been trying to get a job while living off his wife's salary and firing off letters to the NRC and American Society of Mechanical Engineers.

Oldberg is careful to say he doesn't object to nondestructive evaluation itself, only to the statistical methods engineers use when they check the test's accuracy by occasionally cutting steam tubes to compare indications of flaws with actual flaws.

In medicine, verification is simple: The study population consists of every person in a trial. A "false positive" is calling a well person sick; a "false negative" is calling a sick person well. Oldberg favors applying the same approach to steam tubes. Each, say, two-foot length of tube would be a unit, analogous to a patient. The test would label a section positive (that is, sick) if the minimum thickness of its wall appeared to be less than, say, 60% of the original thickness. For verification, the nuclear "doctors" would cut the tubes and measure the actual minimum thickness of each length.

The NRC went wrong, Oldberg
by defining a nonstandard popula
Instead of the units being lengt
tube, the NRC's population units ar
flaws themselves. The NRC doesn
the flaws to any given length of

WHEN YOU'RE LOOKING FOR GROWTH, THINK LONG TERM.

ds have a way of growing up so suddenly. You t out the measuring stick and you realize they've routed several inches right under your nose.

Mutual funds can work the same way. People who vest for the long term with the right money anager can suddenly find that their investments ve grown while they were busy thinking about her things—like work, or their kids.

At Nicholas-Applegate, we have two domestic stock nds for people like you. Both are managed with a oprietary system we've developed to identify stocks believe to be on the verge of rapid price growth…

Emerging Growth Portfolio invests in dynamic "small cap" companies with less than $500 million in total stock market value.

Core Growth Portfolio emphasizes more established companies with over $500 million in total stock market value.

So if you'd like to find out how Nicholas-Applegate can make things grow for you, please give us a call. We'll send you a fact kit with a prospectus containing more complete information, including charges and expenses, to read carefully before you invest. Call today **1-800-551-8043.**

Developments to Watch

EDITED BY NEIL GROSS

PROTECTING THE IMMUNE SYSTEM FROM ITSELF

LIKE SOLDIERS IN WAR WHO turn on their commanders, the body's immune defenses can attack normal tissue, triggering diseases such as rheumatoid arthritis and multiple sclerosis. The problem is a communications breakdown between "helper" T cells and antibody-producing B cells, which normally cooperate to destroy invaders.

Two years ago, Dartmouth Medical School immunologist Randolph Noelle reported that he had halted such autoimmune reactions in mice with a monoclonal antibody—a protein that can bind to cells and block functions. Now, he has extended the technology to humans and licensed it to San Diego-based IDEC Pharmaceuticals Corp., a leader in making monoclonal antibodies for cancer and autoimmune disease.

The protein that Noelle isolated attaches to a site on T cells called gp39, which serves as a kind of communication link between T and B cells. In experiments with mice, Noelle found that the protein interrupts communications when it binds to the gp39 site. The mice then stop producing their own, marauding antibodies, and the disease symptoms vanish. Incredibly, when protein injections are terminated, the mice begin producing antibodies again—but the animals remain disease-free. In effect, Noelle says, the anti-gp39 protein "resets the mouse's immune system."

IDEC plans to "humanize" the anti-gp39 protein by splicing it with human DNA to produce a drug. Clinical trials could begin as early as 1997. The protein should block rogue antibodies in humans, says IDEC CEO William Rastetter. "And we'd also hope to see the suppression continue."

KABOOM! HERE'S AN ALUMINUM MOLD

ALUMINUM HOLDS GREAT ALLURE FOR AUTO COMPANIES that want to boost fuel efficiency by reducing the weight of the car. But unlike steel, the lighter metal tends to tear during molding. To make it more elastic, researchers at Ohio State University are resurrecting a technology from the 1950s, which literally explodes thick sheets of aluminum into forms.

Researchers trigger the explosion either under water or in the presence of a magnetic field. It generates shock waves that fling the metal into the mold at speeds as high as 220 meters per second, according to Glenn S. Daehn, a professor at OSU's Materials Science & Engineering Dept. Another advantage: Instead of the typical two-sided dye-casts, with their male and female parts, this process requires just a single, one-sided dye.

Daehn says that Maxwell Technologies and other companies developed this approach, called electrohydraulic forming, 40 years ago. Then they put it aside while they pursued more lucrative defense contracts. Now, OSU is reevaluating it with General Motors Corp. and Rockwell International Corp. Daehn is also talking with Aluminum Co. of America, which has developed an all-aluminum car with Audi of Germany. Alcoa is investing in a new auto parts plant in Ohio and will consider using electrohydraulic forming as part of the production process.

ELECTRIC CARS ARE SPARKING A DEBATE

ELECTRIC VEHICLES, PRIZED for their environmental virtues, hit a pothole last month: Researchers from Carnegie Mellon University in Pittsburgh publicly fretted about the impact of a grand-scale EV roll-out in "zero-emission states" California, New York, and Massachusetts after 1998. Pollution from manufacturing thousands of large lead-acid batteries, they warned, would offset the benefits of having fewer combustion-engine cars on the roads.

The Electric Vehicle Association of the Americas (EVAA) reacted quickly. To begin with, the association argues, lead-acid batteries will eventually be replaced by nontoxic types. Next year, a General Motors Corp. battery venture called GM Ovon

We'll See You Through.

DIGITAL'S TURNAROUND: TIME FOR PHASE TWO

With its financial house in order, DEC wants to retake the lead in networking

When a man knows he is to be hanged in a fortnight, it concentrates his mind wonderfully.

—*Samuel Johnson*

Around Digital Equipment Corp., they call it Black Friday. Everybody seems to remember where they were when they heard the news. Pauline A. Nist, a top computer-systems executive, was in England when her secretary called to report that back at headquarters in Maynard, Mass., people were "walking around acting like the sky had fallen in." Lawrence G. Walker, now head of Digital's networking unit, says he got the news during the middle of the night in Australia "and literally fell out of bed."

Black Friday—Apr. 15, 1994—was the day Digital stunned Wall Street and even its own executives with the news that it had lost $183 million in the prior quarter. The loss far exceeded DEC's internal projections, exposing a startling weakness in its financial systems. Worse, the quarter was supposed to herald a long-awaited rebound after three years of red ink and restructurings. Instead, it laid bare the ugly truth that Digital was still in an uncontrolled downward spiral. CEO Robert B. Palmer's strategy lay in tatters. Cash on hand was down to $1 billion—when DEC was ordering layoffs and plant closings that would cost $1.2 billion. Industry watchers began to whisper the unthinkable: Digital, once the No. 2 computer company, might not survive.

But if Black Friday was DEC's darkest day, it may also have been a crucial turning point. Facing the corporate equivalent of Johnson's noose, Palmer and his team cobbled together a last-ditch turnaround plan that finally addressed some deep-seated problems. Announced last July, the plan shifted sales from DEC's sales force to hundreds of resellers—in the process, slicing thousands of jobs. It also scrapped Digital's once-innovative matrix management scheme, which had deteriorated into a politicized jumble of inefficiency and finger-pointing. Instead, it has been grouped into a series of mini-DECs, organized by product line, each responsible for its own bottom line and geared toward emulating the best in each industry segment.

The progress since then has been remarkable. Costs are down nearly 20%, and the shrunken workforce is bringing in higher revenues. There are also hot new products, including the AlphaServer 8400, a system for running netw
that uses up to 12 of Digital's speed
pha microprocessors, and the nev
Note laptop, which has garnered
reviews. Digital posted slim prof

THE PALMER METHOD

"I think the future for Digital is very bright... The company kno
more about networked computing than anybody"

SINCE BLACK FRIDAY, PALMER HAS TACKLED DEEP-SEATED PROBLEMS

DONE

- Refocused DEC core Alpha hardware and networking, jettisoning database software, consulting, and disk storage
- Shifted most sales to indirect distribution channels, slashing costs by signing on computer resellers as key selling partners
- Relaunched PC business

IN PROGRESS

- Playing a hardware game but avoiding commodity margins by adding value in networking
- Positioning company to take advantage of key new trends, such as mobile computing and video on demand

CHIP SHOP: *Hardware is Digital's mainstay, until networking pays*

semiconductor-industry veteran who cofounded Mostek Corp. in 1969 and moved to Digital in 1985, says the basic thrust is to leverage DEC's deep expertise in networking.

Digital, he claims, "knows more about networked computing than anybody. You can buy a PC or even a complex system from any number of vendors," he says. "But how do you get all this stuff to work effectively and reliably in your network?" The company, then, will focus its investments on hardware, software, and services that support this overarching ambition. Though he concedes that Digital "is not necessarily the best in specific" product lines, he says its strength lies in "the package—integrating, supplying, and deploying distributed computing environments."

Nobody doubts that there's a need for such expertise. But, says Gresham T. Brebach Jr., a former head of Digital's consulting unit, "There's a clear disconnect between the way they describe the strategy and the way they've arranged themselves to bring products and services to market." If networking is truly the goal, he argues, Digital should have kept an earlier structure that offered "solutions" for specific industries. "Connectivity is a historical core competency," he says. "But a core competency is not a strategy."

Moreover, DEC's claim to network superiority is open to question. A decade ago, it was the acknowledged leader, but the rest of the world has not stood still. "There is no way on the planet that Digital is the best at networking," says Philip C. Anderson, a professor at Dartmouth's Tuck Business School who follows the computer industry. "They can do a good computer network, but the idea that they're better than the next 10 or 15 companies is ridiculous."

Some observers feel that Digital's networking plans, even if successful, will do little more than add a few margin points to what is really a hardware-oriented strategy. The new Digital, argue, looks like the Digital of 1970s—when it was known as a box" company and before it trie take on IBM. Then, as now, it sold performance hardware mostly thr third parties, with services and ware playing a supporting role.

There's nothing wrong with a ware strategy—it made DEC the success it became in the 1980s. B keep up with today's hot-box co nies—Compaq, Silicon Graphics, an Microsystems, to name a few—m gearing the company to a low-ma commodity-like environment. Eve day's slimmed-down Digital may n ready for that. DEC's revenue of $2 per employee looks downright i cient next to IBM's $317,000 or $403,000. "If all they want to be volume hardware player, they still too many people," warns Lynn Be research director at Gartner Grou

COMPUTING ON THE GO. Palmer br at the idea that Digital is reverti simply a hot hardware company. " would leave very little opportunit good margins or to grow the busi he says. Digital executives claim already have many of the pieces to port their networking vision and pr to reveal more in coming months. plan to push a raft of Digital soft products that allow computers ru different operating systems to comu cate and share programs. TSMC
introduces a foundry for the information age.

The fire of yesterday's foundries burns today in our hearts. In our commitment to productivity and technology. • TSMC is the world's leading semiconductor foundry, presently producing one million six-inch wafers annually, representing a major share of the global market. • TSMC is a dedicated foundry, where customers are our number one priority and intellectual property is prized. And protected. We don't manufacture any products under our own brand name, so there are no licensing issues, no conflict of interest fears, no requests for equity. • Instead, there is seamless transfer of data and execution of design specs. With methods and materials that complement customer designs. • In 1995 our new billion-dollar fab will begin production. This fab will be capable of producing 30,000 eight-inch wafers per month at state-of-the-art 0.5 micron technology, migrating to 0.35 micron. More than $400 million in annual investments will enable us to produce two million six-inch equivalent wafers per year by 1997. • Find out what it means to be a partner with the world's leading semiconductor foundry. • TSMC. Forging a future in the information age.

Database Marketing Discovery For Sales Executives!

Imagine finding a hidden universe with 40,000 emerging firms, mainly private but also subsidiaries of public companies. Last year one in six of these companies expanded employment by over 40%. These firms are creating new jobs and they have demonstrated a need for almost every kind of business product or service - everything from office equipment to disability insurance to real estate.

A little known sales tool that tracks these companies is making money for sales/marketing executives who use it. Taken from the CorpTech Directory of Technology Companies, this information on disk or in print can be easily added to a contact manager or other larger database for **unlimited annual use.** It's the only resource available that uncovers America's emerging sector of technology manufacturers. CorpTech gives you their names, geographic location, growth rates for each company, plus names, titles, and responsibilities of their 133,000 key executives.

"Great investment ... made money by quickly and easily identifying customers for specific products," Mike Mueller, Manager, Mitsubishi.

Free fact kit shows 20 money-making ways this sales tool can revitalize *your* selling efforts. Call 1-800-333-8036 or mail name and address to CorpTech, Dept BSW, 12 Alfred Street, Woburn, MA 01801.

tentially hot new markets involving complex networks, notably video servers, the Internet, and mobile computing. The company claims it has won about half of the worldwide contracts for video servers, complex systems that will deliver TV programming on demand. And later this fall, Digital plans to unveil a software program aimed at helping make a mobile PC act like it's connected to a corporate network, even when it's not.

While Digital waits for its still-vague networking approach to pay off, it will have to rely on its mainstay: hardware. Rivals such as Compaq Computer Corp. and HP have cast their fate with the industry-dominant Intel architecture, but Digital has adopted a twin-track approach. The first track is the building of PCs and larger servers using Intel Corp. chips. DEC's PC unit has leapt from an asterisk on industry market share charts three years ago to No. 11 last year and is predicting a sizzling 60% growth rate for fiscal 1996. But Digital executives say they've dialed back their ambition to break into the top five this year, and some concede the PC unit is unlikely ever to show big profits, although it does provide badly needed entry-level products to bring DEC new customers.

DEC is aiming at hot new markets: Video servers, the Internet, and mobile computing

ALPHA AND OMEGA. Digital's second track—its real edge in hardware—remains its super-fast Alpha microprocessor. The chip was the first with 64-bit architecture, which means it grabs data from a computer's memory much faster than industry-standard 32-bit chips. Bringing it out was a gamble for Digital, because the new architecture required software makers to adapt programs at great expense. Alpha also required huge investment in R&D and chipmaking that would not be recouped if the microprocessor didn't catch on in a big way.

After an agonizing lag, Alpha's speed is beginning to attract key software. "The price-performance is impressive," says Ron Robbins, president of RTP Technology Corp., a Fair Lawn (N.J.) reseller. "We're taking databases off mainframes and putting them on Alpha, and crunching data in 2 minutes vs. 22." In April, Oracle Systems released an Alpha version of its popular Oracle 7 database, a combination that Oracle claims produces by far the industry's best performance. John B. Jones Jr., an analyst at Salomon Brothers Inc., expects Digital's Alpha systems sales soar 84% in fiscal 1995, ending Jun to $1.7 billion, and may rise anc 55% by next June. While that's im sive, many of the sales simply re older Digital hardware.

Alpha still faces a long-term lem: The chip hasn't won a singl fluential convert among other com makers. That could ultimately prov tal when it comes time to fund mind-boggling cost of succeeding g ations of chips. Digital executives cede that they will have to find a tion, perhaps by finding a partn share the cost of the next chip But they say a new $450 million pla Hudson, Mass., will carry Alpha the next centu

Meanwhile, count on Micr Corp.'s Window operating syste fuel Alpha sales which is catchir quickly as an ating system network ser runs on a varie chip designs. In theory, that will eliminate Alpha's biggest handicap: of applications software. Then, Al superior performance will really s out, says Ed Caldwell, chief of Dig semiconductor division. "We will be to so outperform Intel and every else that we'll be able to take ove high-end desktop, period."

Will it work? Some outsiders out that the best technology rarely on its own. Such non-technical issu marketing ability, market momen and availability of applications soft usually determine long-term win "There's absolutely no history of t migrating toward the fastest chip able," says Gartner Group's Lynn Computer power is advancing so r ly, she says, that most customers stick with a chip that's slower—as as it runs popular software. Her co sion: "There's a lot of wishful thi going on" at Digital.

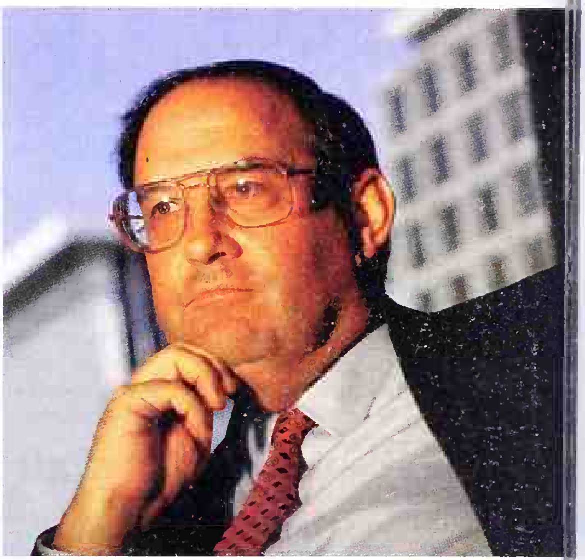
LOBBYISTS

A YANKEE IN TOKYO'S COURT

Bill Duncan champions Japanese carmakers



"DR. BILL": *Duncan prefers discourse to dramatics*

It's not easy being Bill Duncan these days. Usually, the scholarly head of the Washington office of the Japan Automobile Manufacturers Assn. (JAMA) likes to keep a low profile. But in mid-May, Senator Carl Levin (D-Mich.) thrashed Duncan as a hypocrite on the Senate floor. Blasting Tokyo for shutting its markets to U.S. autos and auto parts, Levin quoted liberally from a book Duncan published more than 20 years ago. The book, declared Levin, who had launched a concerted search for the long-out-of-print account of the early rounds of U.S.-Japan auto negotiations, "provides strong historical support for the Administration's decision to pry open markets which have been discriminatorily closed to us for three decades."

As the American spokesman for Japan's car companies at a time when Washington and Tokyo are on the brink of a trade war, Duncan better get used to such treatment. JAMA is jockeying for the spotlight as the June 28 deadline for U.S. sanctions on imported Japanese luxury cars nears. It has already run full-page ads in *The New York Times* and *The Washington Post* excoriating the Clinton Administration's stance as strong-arm tactics that won't work. And on June 2, JAMA launched its first U.S. television commercial, aimed at policymakers and journalists in the Washington metro area.

TWEEDY CREDENTIALS. Such methods are bound to rile America-Firsters. JAMA "is just mouthing the Japanese government's propaganda line," scoffs Pat Choate, author of *Agents of Influence*, a book about Japanese influence-peddling in Washington. But the man crafting JAMA's message belies the stereotype of the slick lobbyist in an Armani suit. Bespectacled, with a faint New England accent, Duncan, 53, looks and sounds like a professor. In fact, he did postgraduate work in international economics at Tokyo's prestigious Keio University and earned a PhD in the subject from Tufts University.

Duncan doesn't speak in sound bites; he lectures. And his background and long tenure at JAMA, which he joined in 1976, impart an intellectual authority to his comments on behalf of Japan's car companies. "I call him Dr. Bill," says Philip A. Hutchinson Jr., president of the Association of International Automobile Manufacturers, of which JAMA is a member. "He has a depth of knowledge of economic subjects that most government-relations people lack."

Duncan spent three years in planning for Mobil Corp. before taking the JAMA post. He says he was drawn to the job because the auto industry, like Big Oil, was undergoing dramatic structural change. "When I was at Mobil, there was a lot of anger at oil companies because prices were going u the industry was still providing a valuable service to the American sumer," he says. "The Japanese ind in the very same way came in as a petitive force. It was providing quality small cars when the U.S not have high-quality small cars."

He denies that Japan's indust closed to foreign players, arguing U.S. carmakers haven't penetrate market because they haven't ma serious effort. But he concentrates of his rhetorical firepower on U.S. tiating tactics. Washington's insis that the Japanese commit to speci creases in purchases of American is "a forced-sales approach," he "It amounts to asking another cap country to do something that this try would certainly never accept."

SMART MOVE. Blasting the world's dard-bearer of free trade for tryi manage trade is a forceful argu that has put the Administration o defensive. JAMA has been "very, skillful in making purchasing ta the whole issue," concedes Greg M senior fellow at the Economic Str Institute, a Washington think tank backs the White House's stance other smart strategic move: JAMA h the heavyweight lobbying to impo dealers and American representa of Japanese transplant factories speak for U.S. workers and empl

As persuasive as Duncan ca however, some say his argument ig the subtleties of U.S.-Japan trade. Ford, General Motors, and Chrysl working harder to sell cars elsewh Asia than in Japan. But as Kevin er, a partner with the Scowcroft

The World According to Duncan

ON THE TRADE IMPASSE "When Japan's auto makers say they're not going to accept what is basically a forced-sales approach... they're not going to do it."

ON THE THREAT OF SANCTIONS "The Clinton Administration has gone to bat for the Big Three and is now on the verge of stealing the bases with a blatant and irresponsible violation of international law."

ON THE BIG THREE "If the European companies can make it in Japan's vehicle market, surely Ford, Chrysler, and General Motors can."

ON JAPAN'S AUTO INDUSTRY "It was the basic principles of competition that made the Japanese automobile industry strong."

One of the "best bond funds for the long haul."

U.S.News & World Report—February 6, 1995

BENHAM GNMA INCOME FUND

Our Ginnie Mae Fund has earned a reputation for consistent performance—and high marks from financial publications.

In the March 1995 issue of *Kiplinger's Personal Finance Magazine*, the Fund was recommended as a core holding for investors seeking steady income. And *Forbes* magazine named it a "Best Buy" for the fourth year in a row.*

High quality and no commissions.
The Fund invests in high-quality securities issued by the Government National Mortgage Association—among the highest-yielding U.S. government securities. And it is *true no-load*, so you pay no commissions or 12b-1 fees.

STEROIDS: A SPREADING PERIL

Thousands of young U.S. athletes are risking their health

If you are a middle-class American and have a serious athlete in the house, odds are that your youngster has at least thought about taking steroids. It doesn't matter if you live in Seattle or Grosse Pointe or Boston. Steroids are everywhere.

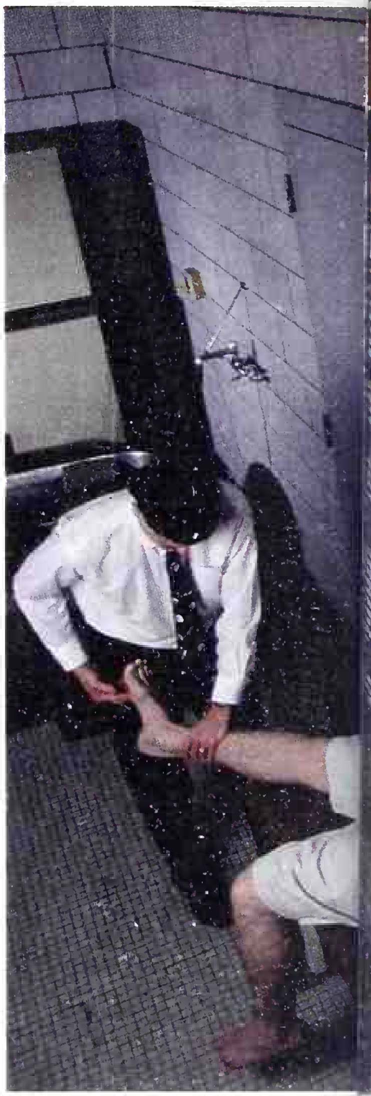
In the four years since anabolic steroids went on the federal controlled-substance list, their legal manufacture in the U.S. has been severely restricted, yet they appear to be more available than ever. It's no mystery why. Domestic demand is enormous, and profits are excellent. A single kilogram of raw testosterone purchased legally at wholesale for $500 can sell for $24,000 on the black market, be mixed with calcium and made into tablets, and produce about $100,000 in illicit steroid sales. Says Gene R. Haislip, deputy assistant administrator of the Drug Enforcement Agency (DEA): "We see factories all over the world producing amounts clearly in excess of any legitimate need, but they're only meeting market demand. This is a consumer-driven operation."

STARTING AT 10. Steroids are being abused not just by elite athletes out to set records, such as the young Chinese swimmers who tested positive at the Asia Games in Hiroshima last October (page 140). They are being taken by jocks all across America and often by young people just out to look good.

WILD HULK

"I had this one kid –15 years old–I made a monster out of him. I took him from 180 pounds to 236 in a year"

KOSTAS, BEFORE AND AFTER: *He now preaches against steroids*



INJURY EXPERT GAA WORKS ON A TEEN WHO DOES NOT DO STEROIDS

How many American teenagers are taking steroids? It's tough to get hard numbers. The University of Michigan's *Monitoring the Future* study, released in December, 1994, reports that more than 200,000 high school males nationwide took steroids within the year. Other estimates between 1988 and 1994 put the number of teens who used steroids as high as 500,000 a year, with confirmed reports of kids starting as young as 10.

"It doesn't matter if the number is 3% or 6%.... Too many parents are simply not alarmed that their kids are taking them," says Alan I. Leshner, head of the National Institute on Drug Abuse (NIDA).

In a world where young people are constantly being bombarded by images of Adonis-like bodies and powerful athletes signing multimillion-dollar contracts, steroids can look like a magic elixir. The problem is: They work. "Juice," as steroids are called by gym rats, can pump you up fast, increase your speed, decrease the time it takes to rebound from a serious workout, and often make you as ferocious as Mike Tyson with a bloodied nose. Anyone who has ever used them or competed against a user knows that. A pumped-up Ben Johnson the power o oids strikingl when he bea Lewis in the 1988 Olympic 100 n

"After Johnson got caught, a n of my colleagues agreed stero would increase," says Charles Y professor of sport science at Penn nia State University. "He was was buff, and he blew Carl doors off. That's still the fastes ever recorded."

The International Olympic Com began testing in 1976, and 10 yea er the National College Athletic started a similar program. But four major sports leagues in A only the National Football Leag quires tests for steroids.

Big-time sports "like the be says Yesalis. "It gives world r bigger-than-life humans with t dous physical capacities they co attain without drugs. That sells sion minutes and endorsements."

It was predictable that the population would eventually war

WHAT, WHEN, WHY, HOW BAD

ORIGIN Anabolic steroids, a synthetic version of the male hormone testosterone that occurs naturally in the body, were developed in the 1930s to help patients malnourished because of disease and war.

MEDICAL USE Today, steroids are used chiefly to treat men who have lost the ability to produce testosterone.

ATHLETIC APPEAL Steroids increase lean body mass and strength, improve muscle definition, quicken acceleration, and decrease recovery time—permitting more frequent workouts and thus even swifter gains in speed, strength, and bulk. They can also induce aggressiveness.

DANGERS The telltale signs of steroid abuse: acne, a deep voice, facial and body hair in women; enlarged breasts in men. More serious is the potential for testicular shrinkage, liver tumors, liver chemistry abnormalities, alterations in tendons, reduction of HDL-cholesterol, and increased total cholesterol. Dependency syndrome is also documented, and users sharing needles risk HIV and hepatitis. Steroids can permanently halt the growth of long bones, causing shortened stature in teenagers.

ROID RAGE. Usage among teenagers is particularly disturbing because it can stop the growth of long bones and curtail height. There is also the potential for testicular shrinkage, liver tumors, liver chemistry abnormalities, alterations in tendons, reduction of HDL-cholesterol, and increased total cholesterol.

Who knows what physical problems lie ahead? Says Dr. Gary I. Wadler of the American College of Sports Medicine and Cornell University Medical College: "I have great concerns for what we're going to see 10 to 15 years down the road."

There is growing evidence that steroids can be a psychological bombshell, too. Harrison G. Pope Jr., assistant professor of psychiatry at Harvard Medical School, warns that such reactions are unpredictable. "These are people with no history of violence or mood swings who will nevertheless go berserk on steroids, in rare cases becoming homicidal," he says.

Greg Kostas, a 35-year-old raw-materials buyer for a gasket manufacturer in Boston, used steroids for 13 years. He went from his natural 183 pounds to 242 within 22 months. The gym was where he bought his first steroids and eventually where he began selling them.

And the gym became his pulpit to preach the steroid gospel to kids—no less than 100 by his own count. That's the pattern in the gyms: First you are inspired by the hulks, then you inspire others. "I had this one kid, 15 years old—I made a monster out of him," says Kostas of one three-year training partner. "I took him from 150 pounds to 236 in a year, and he was out of control, fighting, stealing."

Kostas still works out, but he quit taking drugs years ago. Too many problems: high blood pressure, swollen lymph nodes—and guilt about the kids. "I did wrong for 13 years, and it was time to set it right," says Kostas, who now lectures youngbloods at the gym about the dangers of steroids.

This physical alchemy does not come cheap. Steroids are taken in cycles, 6 to 12 weeks long and usually in groups, a practice called "stacking." Depending on the kinds and number of drugs, a short four-drug cycle can cost about $2,000. A champion bodybuilder in one recent DEA case spent $30,000 a year.

Where are these steroids coming from? Mostly not from America. While legal drug sales have doubled in the past five years, to $71 billion, legitimate steroid sales in the U.S. are down to about $3 million annually at wholesale. That's less than half the figure for 1989, before they were controlled, says Susan Koch of IMS America, a pharmaceutical marketing research firm.

Foreign opportunists have rushed to satisfy illegal demand in the U.S. Steroids' new popularity has spurred production in Greece, India, Poland, and Spain according to the DEA, and recent investigations indicate activity in South Korea. But the results of a six-month BUSINESS WEEK inquiry point to Europe and Mexico as primary sources for the international steroid traffic, a trade generating as much as $750 million a year.

Dr. Tomás Buril, former director of the Czech Republic's national drug intelligence service, observes that political upheaval in Eastern Europe has allowed clandestine steroid labs to flourish. With privatization of the pharmaceutical industry, Buril says, many of the rigid controls of the communist regimes have disappeared, and drug traders have capitalized on cracks in the system.

Russia's Drug Control Dept. reports that steroids reach the black market right from factories and warehouses, to be sold openly on the street. And Buril says that steroids stockpiled by the former Red Army, which encouraged their use, have just disappeared. Of grave concern are potentially more hazardous animal growth hormones coming out of Bulgaria. "It is quite easy to convert these products for human consumption," says Ladislav Koukal, an Interpol officer in the Czech Republic.

The biggest steroid raid ever conducted in Britain points up the international nature of the business. On a cold December day in 1993, authorities hit two innocuous-looking industrial buildings north of London on a tip that the designer drug Ecstasy was being made there. Instead, the raid netted $1.6 million worth of drugmaking equipment and raw testosterone that had somehow been obtained from Roussel Uclaf, a French pharmaceutical company. The mastermind of the operation had fled steroid manufacturing charges in his native Australia, jumping bail with another Aussie to set up shop in Britain. Police closed the friend's plant in rural Scotland last summer, confiscating $852,000 worth of steroids.

"This was an enormous operation...[with] manufacturers supporting wholesalers," says Detective Constable Andrew D. Morter. Professional tableting machines turned out counterfeit Ciba-Geigy Ltd. steroid pills, complete with a stamped "C." Packaging was especially convincing, with batch numbers and bar codes corresponding to products by the legitimate manufacturers. Police cleared out three warehouses of about 1 million items and uncovered evidence that drugs had already been shipped from there to the U. S.

It was a huge operation for Britain—but worth only a few lines in a sche

DOES CHINA FEED ITS ATHLETES 'JUICE'?

In the world of international athletic competition, the medal-laden Chinese are fast becoming the East Germans of the 1990s. The difference: Though long suspected of enhancing the performance of its athletes with drugs, the East Germans never got busted as badly as China's athletes did last October.

On their way to the Asian Games in Hiroshima, seven Chinese swimmers, two canoeists, a hurdler, and a cyclist were tested and caught with an anabolic steroid in their urine. Aided by a sensitive new test, Japanese experts zeroed in on the Chinese swim team, whose record-shattering progress had left a lot of incredulity in its wake. (Last year, China's women swimmers won an amazing 12 of 16 gold medals at the world championships in Rome, after winning no golds in the 1986 Olympics.)

STRICT RULES? Beijing responded angrily—first denying that its athletes were on steroids and then, when evidence was incontrovertible, maintaining that there had been no official involvement. At the same time, Beijing sports authorities announced a so-called Three Stricts drug-enforcement program allegedly designed to keep its athletes clean. China's Foreign Affairs Ministry said the incidents of drug-taking by 11 of the country's star athletes represented only "an act by individuals." Speaking at an antidoping conference held earlier this year, Wu Shaozu, president of the Chinese Olympic Committee, stated the country's official policy: "We will not use drugs even if these are drugs that cannot be detected. We will not
even if others use drugs, and
rather not win medals than u

them Arizona, California, Florida, and Indiana—have been concerned enough to initiate the testing of student athletes for steroids despite the expense of $65 to $150 per test.

The Paradise Valley schools in Phoenix took action after a survey of coaches, parents, and student athletes voiced concern over steroids and overwhelmingly supported testing. (That program is currently on hold pending the outcome of a Supreme Court case challenging testing.) But the defining event was a football game. "I looked at the other school's sidelines," says Horizon High Principal John A. Stollar Jr., "and saw this big poster showing a syringe in a red circle with a line through it and the salutation 'We don't do steroids.'"

Yet while educators and law-enforcement authorities struggle to control the flow of steroids into U. S. high schools and colleges, the rest of the world rushes to create more supply. The brutal fact is that the end of the trail is a pumped-up country seduced by steroids. It's called America.

d for spots on regional
e veterans suggest that far

from being an individual transgression, steroid use is, as one says, "part of the training program" in Chinese sports.

"Taking steroids is common from Shanghai to Xinjiang," says one athlete who claims to have trained for several years in a sports institute program that included steroids. He has since dropped out. Says a second alumnus: "It is common for promising young athletes to start getting steroid injections at the sports institutes at as young as 14 or 15 years of age." The Chinese athletes claim that parents of some trainees have been asked to sign statements promising to take responsibility for the doping if it is discovered.

"IRRESPONSIBLE." The All-China Sports Federation vigorously denies the charges of these athletes, calling their accusations "irresponsible." Says a federation spokesperson: "If we catch anyone administering drugs to athletes, strict punishments will be imposed in accordance with appropriate regulations." According to the federation: "All the sports organizations and sports institutes in China resolutely support and conscientiously implement every antidoping regulation set by individual sports federations."

China points out that it has taken stern action against athletes caught by international authorities: Olympic gold medalist Lu Bin, who won four gold and two silver medals at the Hiroshima Games before having them taken away by the Olympic Council of Asia (OCA), and another swimmer, 400-meter freestyle world champion Yang Aihua, were banned from competition for two years. According to the All-China Sports Federation, the remaining nine athletes nabbed in Japan have been given two- to four-year suspensions from all international and domestic competitions.

Despite the magnitude of the scandal, the leading world sports organizations have been slow to condemn China. FINA, the Swiss-based International Swimming Federation, has taken no action, and in fact barred Dr. Alan Richardson, chairman of FINA's medical commission and organizer of the Hiroshima sting, from talking to the press.

In April, both FINA, which a month earlier had sent a commission to China to investigate its swimming program, and the Kuwait-based OCA, announced that there was "no evidence" that China was systematically doping its athletes. These findings have met with surprise in some quarters outside China. Yoshio Kuroda, head of the OCA's medical commission, says it is impossible for "teenage athletes and their coaches" to use sophisticated drugs like DHT on their own. Even FINA itself concedes that systematic doping in China can't be ruled out—it just can't be proved.

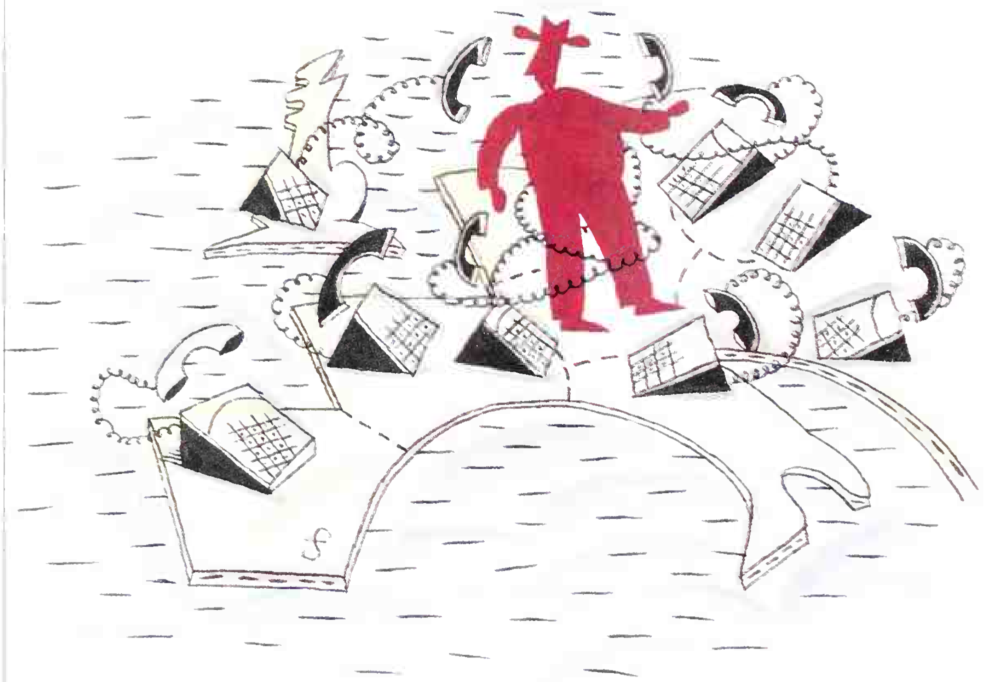
GETTING A LINE ON EUROPE'S TELECOM FREE-FOR-ALL



INVESTING

If you're hoping to cash in on the global telecommunications revolution, there's no need to scour Brazil for cellular-phone investments in the rain forest. The real action these days is in Western Europe, where a wave of privatizations is creating huge opportunities for cautious and risk-loving investors alike.

In the coming year, an astounding $30 billion worth of telecom stock offerings will hit the European market. Most of them will probably be sold as American depositary receipts (ADRs)—instruments traded in the U.S. that represent ownership of foreign shares. And Italy's STET, Spain's Telefónica de España, and the Netherlands' KPN, all of which have shares already trading in Europe and the U.S., each plan to sell more stock later this year. Then will come the mother of all privatizations: Germany's Deutsche Telekom, which is expected to raise $10 billion when it is sold on global markets in early 1996.

Driving the push to privatization is the European Union's plan to open most countries up to competition on Jan. 1, 1998. Analysts think that will turn sluggish state monopolies into a hard-charging bunch of European Baby Bells that will quickly go for new markets and greater efficiency. And while Europe already boasts high phone penetration, customers there use their network half as intensively as Americans do, meaning there's room to grow.

The risk is that too many shares will be hitting the market at once. "There's going to be a lot of paper in one industry for investors to absorb," says Mark Breedon, portfolio manager of the New York Stock Exchange-listed Global Privatization Fund. Breedon thinks that is bound to put pressure on telecom stock prices. But there's little sign of that at the mo

A Heavy Menu of Telecom Stock Sales

as its hand in cellular,
g 60% of the country's
cellular operator, Cell-
ritish regulators recently barred BT from buying the 40% of Cellnet owned by Securicor, a communications and armored-truck group. If the ban is lifted, NatWest Securities' Mark Lambert reckons a BT buyout could boost Securicor's share price by at least 50%.

MERCURY DROP. BT also figures in takeover talk swirling around its cross-town rival, Cable & Wireless PLC. C&W, which owns 57.5% of Hong Kong Telecommunications Ltd. as well as an 80% stake in Mercury Communications Ltd., Britain's No.2 carrier, has long been viewed as prime takeover bait, since the sum of its parts trades below its estimated breakup value. Mercury's recent disappointing results have revived rumors that AT&T might be interested in buying the British unit.

BT, meanwhile, could make a play for C&W's far-flung foreign holdings.

The action in deregulated Britain is spilling over into Germany, where competition-hardened challengers such as BT and C&W are lining up to battle inefficient Deutsche Telekom on its home turf. John Tysoe, an analyst with London broker Société Générale Strauss Turnbull, advises investors to be wary of the initial offering until the German government has worked out a host of regulatory questions that will affect rates and profitability. But not to worry: There's no shortage of investment possibilities elsewhere in Europe. The hard part is sorting through them all.

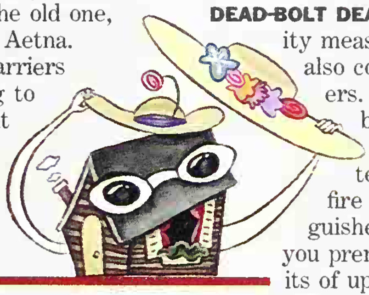
ation homes run
gamut from pa-
al oceanfront es-
s to log cabins
le a lake. Whatever
character, though,
need insurance pro-
on from the elements,
and crime. Typically,
rs insure second
s the same way they
imary residences—
a standard homeown-
olicy that covers dam-
rom fire, windstorm,
eft, as well as person-
operty losses and
-party liability.
ouble is, vacation hide-
s generally cost more
sure than primary
s. That's because
re unoccupied for long
ds and tend to be locat-
remote areas without
access to firefighting
services or near coastlines subject to erosion and flooding. They also don't qualify for preferred rates offered to homeowners who insure their cars with the same company.

Recently, however, Chubb Group has rolled out a separate vacation home policy that can lower premium costs. It's available so far in 14 states, including popular second-home sites such as Arizona and Maine. The new policy squeezes savings of 30% off Chubb's traditional coverage and as much as 20% off competitors' rates by adjusting for differences in the way people use their first and second houses. Unlike a conventional homeowner's plan, which will cover personal property losses equal to as much as half the dwelling's value, Chubb's vacation policy sets a limit of 30%. The reason is most people keep fewer valuables and personal effects at a beach house or country cabin. The policy also cuts replacement living expenses from an unlimited amount to 30% of the dwelling's value. Thus, the owner of a $500,000, seven-year-old vacation home in the Aspen/Vail (Colo.) area would pay $1,005 a year under the new policy, vs. $1,501 under the old one, or $1,220 with Aetna.

Other big carriers aren't planning to follow suit. But even if you buy a regular policy, some accommodations can trim premiums. "Firefighting accessibility is the main thing," says Dan Hattaway, an underwriter with State Farm Fire & Casualty Co. Instead of choosing a place at the end of a long dirt path, settle for one on a paved road a bit closer to town.

DEAD-BOLT DEAL. Security measures are also cost-busters. Dead-bolt locks, smoke detectors, and fire extinguishers can get you premium credits of up to 10% with State Farm, and monitored alarm systems reap bigger savings. Aetna takes 5% off if you buy in a "controlled-access" community. Other tips: Engage a caretaker and install low-temperature sensors that alert you before frozen pipes burst. *Tim Smart*



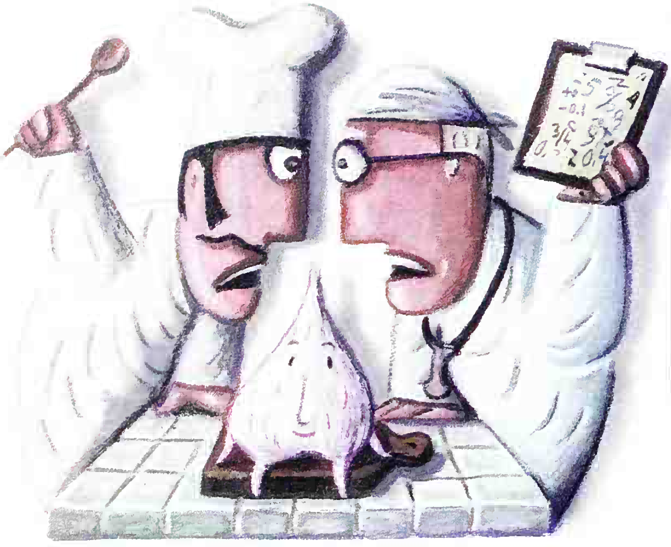
CAROLYN FISHER

Saving on a Second Home

Here are ways to shave insurance premiums on a vacation house:

- Install a theft and fire alarm hooked to a central monitoring station
- Choose a location that's readily accessible to firefighting and emergency services
- Use sensors that sound an alarm if the temperature drops low enough for water pipes to burst
- Ask a neighbor to keep an eye on the place or hire a caretaker
- Compare a price quote on Chubb Group's new vacation home insurance policy against a traditional homeowner's policy

DATA: BUSINESS WEEK



MAYBE MOM WAS RIGHT ABOUT THE SPINACH

It's alluring to think that, one day, a chemical distilled from a source as mundane as sweet potatoes or brussels sprouts could provide the genesis of a cure for cancer. So appealing, in fact, that researchers around the world are studying hundreds of vitamins, minerals, and chemicals found in the plants we dine on. And evidence is mounting that certain foods can play an important role in fighting cancers.

PRESCRIPTIONS. But science has a long way to go before it can definitively proclaim that eating more carrots will protect against lung disease or soybean burgers will ward off breast cancer. "Science is approaching this in a very systematic way," says Carolyn Clifford, chief of the diet and cancer branch of the National Cancer Institute. "In the meantime, the public is looking for a silver bullet."

For now, the medical community's strongest prescription is simply to cut down on saturated fat and eat more fruits, vegetables, and grains. Still, discoveries in the laboratory are moving ever closer to practical application for cancer prevention and treatment—and the public is hungry for more advice.

Take garlic. It's already well documented that eating a clove or two a day can reduce blood pressure, as well as cholesterol levels. But researchers are now zeroing in on chemicals in garlic that may aid in the battle against colon and breast cancers.

A recent study at Pennsylvania State University showed that a compound in garlic, diallyl disulfide, shuts down or kills human colon cancer cells transplanted into mice. "We are still in the beginning stages of exploring," says Sujatha Sundaram, a PhD student who co-led the study. In the meantime, "incorporating more garlic into the diet could probably help," she says. Hopes for garlic are running so high that Cornell Medical Center has established the Garlic Information Hotline (800 330-5922) to field the public's questions about the uses of the pungent herb.

KEEPING THE DR. AWAY. Diallyl disulfide is just one of hundreds of little-known compounds, called phytochemicals, found in fruits, vegetables, and grains. Many have no known nutritional value but some may have medicinal properties, including the ability to inhibit tumor growth, says Barbara Levine, research coordinator of the Clinical Nutrition Research Unit at New York Hospital-Cornell Medical Center.

Phytochemicals appear in the likes of green tea; crucif-erous vegetables, suc

Cancer-Fighting Foods?

Researchers are investigating whether chemical compounds found in plants, called phytochemicals, can help prevent and treat cancers.

FOOD	PHYTOCHEMICALS	POSSIBLE BENEFITS
BROCCOLI, CABBAGE, CAULIFLOWER	Isothiocyanates, thiocyanates, indoles	Could reduce risk of breast cancer or stop carcinogens from damaging a cell's DNA
CITRUS FRUIT	Coumarins, limonene	May inhibit tumor growth, help cells dispose of carcinogens
GARLIC, ONIONS, SCALLIONS	Allium compounds	May make it easier for body to excrete carcinogens or block reproduction of tumor cells
SOYBEANS, DRIED BEANS	Isoflavones, phytosterols	May help prevent colon cancer and reduce risk of breast or ovarian cancer
YELLOW AND ORANGE VEGETABLES	Carotenoids, such as beta-carotene	Contains antioxidants, which may block damage to cell DNA

Nulty, presi-
f Associated
International
a Ana, Calif.

The destination was Phoenix, rather than Paris, for Jerry Finley of Philadelphia and his family when they flew to a figure-skating convention last month. Finley had planned to attend with just his daughter, a champion ice skater, but the companion ticket enabled his wife, Sandra, to tag along. "My wife and daughter's tickets cost a total of $471 round-trip. That kind of nonstop can cost from $900 to $1,200 for each ticket," he says. Finley's two-for-one deal came from a special offer to USAir frequent fliers.

FIRST CLASS
ECONOMY

One of the most popular programs is Southwest Airlines' Friends Fly Free, which started in 1991. It is now marketed in all of the 45 U.S. cities Southwest serves. And it pushed American, Continental, Delta, America West, and other carriers to offer similar packages on many routes where they compete with Southwest and even on some where they don't.

LET'S MAKE A DEAL. For example, you and a friend can buy a round-trip ticket between Chicago and Houston on Southwest—as well as on American and Continental—for a total of $458, a $238 savings off the 7-day advance peak fare and $66 off the 21-day price. Southwest also offers round-trip tickets for two from Chicago to Seattle for $748 and Los Angeles to Phoenix for $138. Without a companion plan, airfare for two between the Windy City and Seattle can cost more than $1,000. A pair of individual tickets between L. A. and Phoenix adds up to almost $250, even when bought seven days in advance.

That doesn't mean a companion fare is always the best choice. Sometimes it pays to buy two separate deep-discount tickets, although that may mean a longer advance purchase requirement. American offers a companion rate of $538 between Chicago and Phoenix. But if you buy two tickets at least seven days in advance, the same flights can cost $376.

You may, however, have to do extra work to find a two-for-one deal. "Companion fares come and go quickly, so they might not come up right away in the computer," says Ivonne Vega, an agent with World Travel in Washington, D. C. "Urge your travel agent to do a bit of investigating or to call the airline."

When it comes to flying overseas, two-for-one options are limited. But that could change later this summer, when business travel slackens and international carriers are anxious to fill seats, especially in first and business classes. Right now, if you buy a business class ticket from Lufthansa using an American Express Platinum Card, you can get a free companion pass. As for the Concorde deal, it still doesn't come cheap. A companion ticket costs $8,310—$4,466 less than the usual price, but enough for 10 round-trip coach tickets on regular flights. *Nelson Schwartz*

Doubling Up For Savings

Airlines offer a variety of domestic and international companion fares. Some current deals:

CARRIER/PLAN NAME	DEALS
SOUTHWEST AIRLINES **Friends Fly Free**	Buy Baltimore-to-San Francisco tickets for two for $798 round-trip; regular fare for two separate seven-day advance purchase tickets is $1,376 round-trip. *Savings:* $578.
DELTA **Family Plan Fares**	If you purchase one round-trip ticket from Salt Lake City to Seattle for $198, you can buy up to seven more for $98 each. *Savings:* up to $700.
AIR FRANCE **Concorde Companion Fare**	Two people can fly New York to Paris on the supersonic Concorde for $8,310 round-trip. Buying two separate tickets would cost $12,776. *Savings:* $4,466.

Pollution Solution.

Energy

EPA POLLUTION PREVENTER

This symbol identifies energy-efficient
computers that save you money and reduce
air pollution by "powering down" when not in use.

Over 2000 computers, monitors and printers have earned the right to bear the Environmental Protection Agency's Energy Star℠ logo. These computers are so smart, they go to sleep when not in use and wake up with a simple touch of the keyboard or mouse. Energy Star℠ Computers don't cost any extra, will save money on your energy bill, and prevent pollution from electricity generation. Be part of the solution and look for this logo when you make your next computer purchase. To receive a list of available products call the Energy Star℠ Hotline at 202 775-6650.

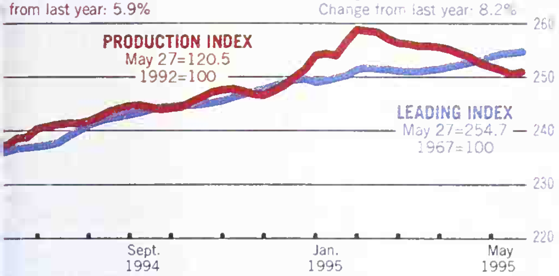
Buy It And Save.

siness Week Index

CTION AND LEADING INDEXES

from last week: 0.2%
from last year: 5.9%

Change from last week: 0.1%
Change from last year: 8.2%



are 4-week moving averages

ction **index** was little changed in the week ended May 27. Before
n of the four-week moving average, the index rose to 121.5, from
ebounds in the seasonally adjusted output of autos, trucks, and rail
lped to lift the index.

ng **index** also was hardly higher in the latest week. The unaveraged
to 254.6, from 254.3. Rising stock prices and faster growth in M2
ing better growth ahead.

E WEEK AHEAD

ALES

June 13, 8:30 a.m. ▶ Retail sales
ose 0.5% in May, says the medi-
t of economists surveyed by MMS
nal, one of the McGraw-Hill Cos.
gested by the rebound in motor
ales and the positive reports from
ilers. In April, sales took an unex-
p of 0.4%, as purchases of dur-
s fell 1.5%.

R PRICE INDEX

June 13, 8:30 a.m. ▶ Consumer
ly grew by 0.3% in May, after
0.4% in April. Transportation
m auto-financing charges to air-
s—were up strongly in March and April, but their gains probably moderated in May. Excluding food and energy, May core prices are also expected to rise 0.3%, after a 0.4% advance in April.

BUSINESS INVENTORIES

Wednesday, June 14, 10 a.m. ▶ Inventories at manufacturers, wholesalers, and retailers likely grew 0.7% in April, the same hefty increase as in March. Factories and wholesalers have already reported large rises in their stock levels. The expected increase suggests that businesses have not adjusted their inventories to fall into better alignment with sales. Indeed, business sales probably fell by 0.6% in April, after no change in March.

INDUSTRIAL PRODUCTION

Thursday, June 15, 9:15 a.m. ▶ Output at factories, mines, and utilities probably fell another steep 0.4% in May, on top of a 0.3% drop in April. That's suggested by the decline in factory jobs and overtime. Auto makers are leading the cutbacks in spring production. Motor vehicle output alone fell 4.3% in April. Given the output drop, the average capacity utilization rate for all industry likely dipped to 83.7% in May, from 84.1%. With production dropping off so fiercely, economists are predicting little growth in the second quarter. The MMS survey shows a median forecast of only 1% growth in the real gross domestic product in the second quarter.

Index to Companies

This index gives the starting page for a story or feature with a significant reference to a company. Most subsidiaries are indexed under their own names. Companies listed only in tables are not included.

CENTRAL BANKS SHOULD TAKE IT EASIER

A global economic slowdown is under way, and it doesn't look like anything the world has recently seen. New structural forces are shaping the slide—forces that monetary policymakers in the U.S., Japan, and Germany should be extremely sensitive to in the months ahead.

There is no reason yet to believe recession is on the way. But policymakers around the world should admit that 1995 is not turning out as well as expected. Rates of growth are dropping everywhere. The second quarter in the U.S. is coming in feebler than anticipated. Around the Pacific Rim, from Singapore to China, economies are throttling back. Japan is teetering on recession. Mexico is still in shock. And much of Latin America is in recession. German manufacturers are hitting a brick wall. And Europe's expansion is stalling out. These disappointments may be symptoms of a deflation in the global economy that policymakers are missing.

This unusual synchronous slowdown suggests that forces beyond the normal economic cycle are at work. Japan, for example, is in its fifth year of a deflationary dive. A bureaucratic elite has been running a tight-money, mercantilist policy—resulting in low growth, an overvalued yen, a looming banking crisis, rising unemployment, and a hollowing-out of manufacturing. Meanwhile, a weak and divided political system offers no guidance.

Similar problems plague Germany and the rest of Europe. A soaring mark and the highest labor costs in the industrialized world are prompting German companies to engage in an investment boycott of their own country.

Powerful new forces are at work in the U.S. as w balanced-budget agreement will probably emerge a signed by the fall. Desirable as this may be in the long boosting savings and investment—the short-run imp deflationary. Today, one out of six working Americans government job. That may fall sharply in the years Just as defense cutbacks proved unexpectedly harsh, the transition to smaller government.

None of this argues for canceling the forecast of a back in the fourth quarter for the U.S. economy and b There are countervailing forces that can more than the negatives on the horizon. The galloping inflation '70s and '80s appears truly dead, thanks to global comp low-unit labor costs, and high real interest rates. Produ has jumped to a higher level thanks to new technolo porations are investing heavily in capital equipment capacity. Indeed, recent records in the stock market imply that investors are confident that corporate prof stay high.

But the current slowdown, particularly because it w expected, highlights the existence of deflationary ec reefs that can sink the global economy. In a world of deflation, running the proper monetary policy become important than ever. The message is clear. Up to this the Federal Reserve, the Bank of Japan, and the G Central Bank have erred on the side of restraint. months ahead, all three central banks should consider on the side of ease.

A BETTER U.S. BUDGET COMPROMISE

As House and Senate budget committees begin summer-long discussions on a balanced-budget compromise, one fact stands out: There is an economically rational way to balance the budget and a political way. Cutting taxes while trying to cut government spending doesn't make a lot of macroeconomic sense—if balancing the budget is really the goal. Better to go with Senators Pete V. Domenici (R-N.M.) and Bob Packwood (R-Ore.), who would first take the pain of balancing the budget and then cut taxes. But given demands by congressional conservatives to "give something back" to voters—for the pain and suffering of having entitlements chopped—tax cuts are going to be part of the budget package whether or not they make economic sense.

The goal, then, of the congressional conferees should be to offer up as small a tax cut as politically feasible. The simplest and most equitable way to do that is to lower the income level of families eligible for the proposed $500 tax credit. In the House budget proposal, couples earning $200,000 could (incredibly) receive the credit. This would cost the government approximately $160 billion over seven years. However, a more equitable and reasonable step is to limit the family cr those making just $50,000 a year. Dropping eligibility d that level cuts the cost of the tax break virtually in ha is a more modest political price to pay for passage of e fiscal legislation.

As for the other major cut in the works, capital-gai economists have been fighting for decades over its e Short term, it appears to generate more investment term, the impact gets cloudy. Politically, a cut in capita appears to be a *sine qua non* of a balanced-budget deal it. The best kind of capital-gains tax cut would go for not past, investments in capital improvements. That cost a mere fraction of the House bill that comes to $7 over seven years.

If Washington blows this chance to get its fiscal h order, the penalty will be severe. Balancing the feder get, finally, is critical to boosting savings and invest America. Making unwise tax cuts based on political rea a price that probably has to be paid. But they must to a minimum.

Silicon Graphics
Computer Systems

These days, a lengthy development process is little more than a shortcut to obsolescence.

But by starting the process as late as possible, you can incorporate the most current technology and the latest information into your product in a way that's fully functional.

And the best way to do that is with Silicon Graphics® computer systems.

Our advanced visualization technology lets your product development groups collaborate to test features and make significant changes in the latest stages of the project.

That means you can design and manufacture a better product, and at lower cost.

And with a reduced cycle time, you can get to market sooner, even if you start later.

It's just one example of how our computer systems are helping improve quality and reduce time-to-market for thousands of companies around the world.

For more information about our workstations, servers and supercomputers, visit us at our World Wide Web site, http://www.sgi.com or call 1-800-450-6054, Dept. SB2.

Just don't wait too long to do it.

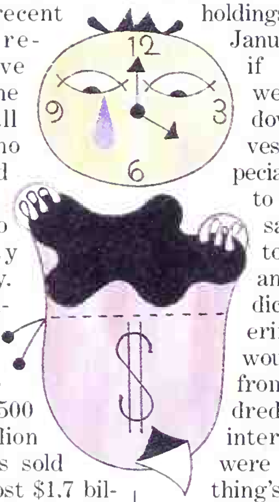
MUNI MADNESS

DID ORANGE COUNTY SELL TOO SOON?

OOPS, TOO LATE. IF ORANGE County had hung on to its battered investment pool last winter, the recent bond market rebound might have saved it. That's the talk among Wall Street types, who figure the fund would be healthy enough today to let the county avoid bankruptcy.

Various estimates say the county's portfolio now would be worth some $500 million to $1 billion more than it was sold for. The county lost $1.7 billion off face value in a fire sale. "They would not have gotten as slaughtered as they did," says Marilyn Cohen, president of Envision Capital, a Los Angeles investment adviser.

Could the county have hung on? Christopher Varelas of Salomon Brothers, the firm hired to sell the county's holdings, argues that in January no one knew if interest rates were headed up or down. The pool's investors—schools, especially—were unable to run the risk, he says. "We decided to close the casino and put away the dice." Plus, weathering the storm would have been far from cheap. Hundreds of millions in interest payments were falling due. One thing's sure: Whoever bought the county's investment instruments has done splendidly. *Nanette Byrnes*



SMALL BIZ

BILL CLINTON: EXILE ON MAIN STREET

TO BE ELIMINATED

GORE: *Piles of axed regs*

THE PRESIDENT'S WOOING OF small business is drawing a tepid response. Oh, Bill Clinton and Vice-President Al Gore got an outwardly enthusiastic reception from some 2,000 delegates at the White House Conference on Small Business by displaying 16,000 pages of government regs being axed. Example: How to cut string beans.

But most of the entrepreneurs were doubtful of his commitment. Why? Consider the Clinton-backed family-leave law, which allows workers to take time off for nursing sick relatives and other obligations. Small-business owners say this strains their limited resources. Then there's the Administration's proposal to up the minimum wage 90¢, to $5.15 per hour. That upsets small-biz folks, even though the GOP Congress likely will block it. Fred Ahle, who runs a Longview (Tex.) printing operation, says this would stop his hiring more workers. Worse, conference-goers still resented Clinton's ill-fated health plan, requiring them to pay for workers. *Amy Barrett*

STREET NEWS

SALOMON MAY HAVE ROOM AT THE TOP

EXECUTIVES AT SALOMON Brothers say it looks as if CEO Deryck Maughan may soon be history. "I just don't think he can survive," says a senior Salomon exec. Signaling discontent at the firm is a talent exodus, which hasn't been stemmed by ditching a controversial pay plan.

And another bad sign for Maughan is that Robert Denham, head of parent Salomon Inc., for the first time is getting more involved in Salomon Brothers matters, such as attending meetings with traders. This "certainly undercuts Deryck," says one executive. The rumor mill picked up steam re-
cently when staffers s

BALLPARK FIGURES

SKIP THE PEANUTS AND CRACKER JACK

YOU THINK THAT BALLPARK attendance is bad? The concessions biz is even worse. Turnout for America's once favorite pastime is down, in most places, as much as 25% from last season. Hot dogs, peanuts, beer, and soda are all off 50% or more, according to a BUSINESS WEEK spot check of parks.

2.85
Kahn's HOT DOGS

FULL PRICE: *Vendors' sales are way down*

Lower attendance, brought on by fans' bitterness over the baseball strike, is only part of the reason. Another factor: the changed post-strike crowd mix. Analysts say the fans who do show up—thrifty old people, for instance—may be more sales-resistant to pricey stadium fare. Bobby Calder, a Northwestern B-school professor, speculates that families with kids, who clamor for treats, are staying away. Plus the long absence from ballparks may have produced sticker shock.

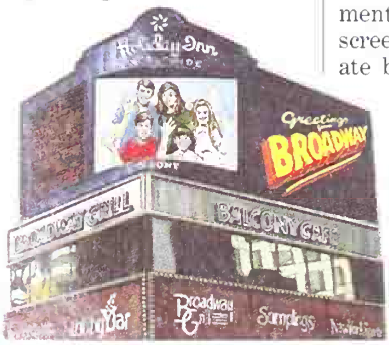
This stuff ain't cheap. Example: Ogden Services, the vendor at parks in Philadelphia, Seattle, and Anaheim, Calif., charges $3 for a large soda. At McDonald's, it's half that.

The prices are no higher than last year, but why not try temporary discounts, as some teams have done with tickets? Few concessionaires even considered this. They figure attendance will bounce back later in the season. That's why Kahn's hot dogs, which were peddled for half off in May at New York's Shea Stadium, just went back to full price. *Ann Therese Palmer*

CITY LIFE

ATTACK OF THE 22-FOOT TOURISTS

A NOVEL INTERACTIVE SIGN is about to open on the Great White Way. Holiday Inn intends to unveil a 100-foot-high megabillboard at its Crowne Plaza hotel in Manhattan's Times Square later this year. It will include a 22-foot-high by 30-plus-foot-wide TV screen, called a "jumbotron," that will beam greetings from passersby.



BIG HELLO: *Hard-to-miss greetings*

Tourists paying around $10 to $15 a shot will videotape a minute-long greeting. Moments later—after a prescreening for any inappropriate behavior—the video will air on the jumbotron for all Times Square to see. Holiday Inn will also sell people postcards of themselves on-screen, as well as copies of the tapes. The sign's proceeds will be funneled to charities through the soon-to-be-created Holiday Inn Foundation. But don't think that this gimmick is all fun and philanthropy. The huge billboard will likely sport the Holiday Inn reservations number. *Maria Mallory*

WRONG TURN ON THE I-WAY?

Regarding "Online investing" (Cover Story, June 5), communicating with analysts by telephone can be risky enough for management, but analysts on the Internet may well present an even greater and potentially more dangerous problem.

Even in cyberspace, companies are likely to be held responsible for updating and correcting any material information previously disclosed that is still considered "live" and which has become misleading. Moreover, although the Internet audience is presumably infinite, the courts and the Securities & Exchange Commission may view disclosures made here as "selective" because they are available only to the "wired" elite.

The vast and unfamiliar territory of the Internet is enough to send shivers down the backs of corporate securities counsel. Given the uncertainties regarding projections disclosed in traditional venues, the changed environment requires that companies be meticulously careful in navigating, or avoiding, the Internet.

How can you expect
them to get a handle
on online services?"

Your story provided very little in the way of worthwhile information for any type of sophisticated online user. If the intention was to educate the masses about online services, forget it! Most people still can't program their VCR or do more than reheat coffee in a microwave. How can you expect them to get a handle on online services—except to make ill-informed investment decisions? If you go with a cover story, provide some meat along with the bones.

Tell me this.

n people do their jobs?

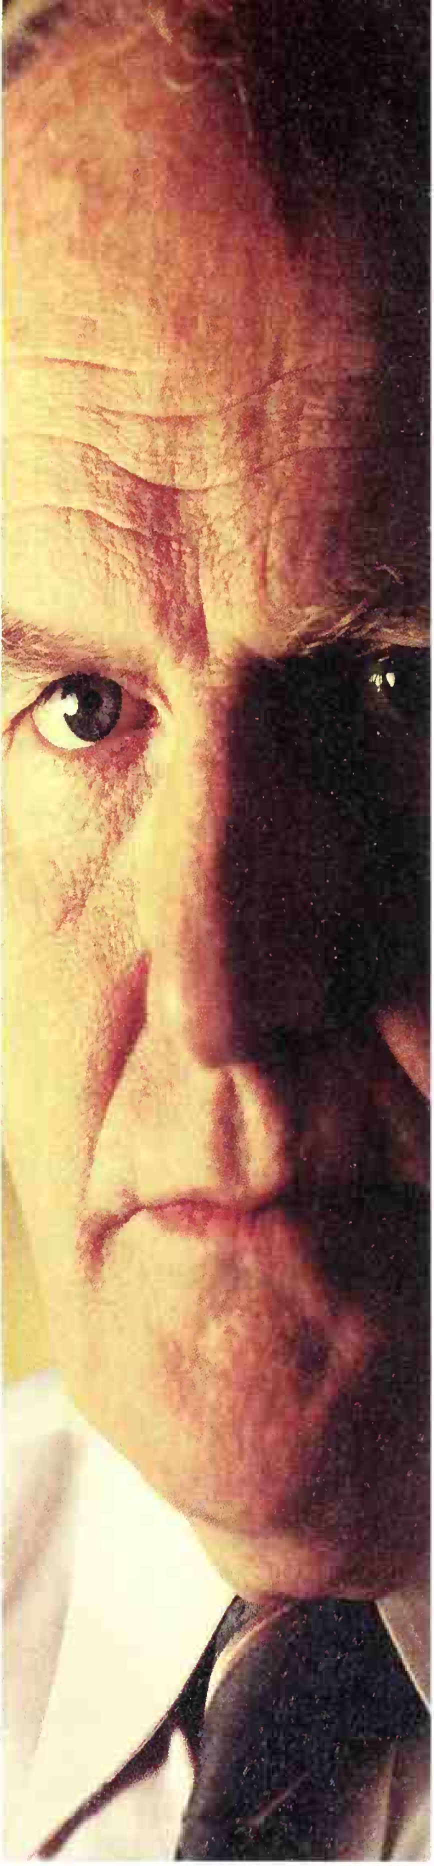
Faster than before.

Easier than last time.

If the answer is yes, we grow.

If the answer is no, we don't.

It's not that complicated.



How do you measure productivity? Here's how Arthur D. Little, Inc., did it. They took two groups of comparably skilled computer users. Sat one group down at Macintosh® PCs. The other at PCs running Windows. They asked all those people to perform identical business tasks. Then they measured the time it took to complete each task. And how accurately it was performed. Their findings? People using the Macintosh were 44% faster than people using Windows. Forty-three percent more accurate, too.[*] Think that's impressive? Imagine if the people using Macintosh had been using Power Macintosh™ PCs instead – they're up to 92% faster than PCs based on Pentium processors.[†] Get information by fax at 800-901-8105. Or visit us on the Net at http://www.apple.com. And discover the power only a Macintosh can deliver. The power to be your best.®

*Productivity comparison: Macintosh versus Windows study by Arthur D. Little, Inc., January 1994. †February 1995 Ingram Labs study, "A Performance Comparison: Apple Power Macintosh Computers vs. Intel Pentium Processor-Based Computers Running Windows." © 1995 Apple Computer, Inc. THE WTO IS NOT THE BIG BAD WOLF

Regarding "Who's afraid of the World Trade Organization" (News: Analysis & Commentary, June 5) on the U.S.-Japan auto dispute: The WTO, like the General Agreement on Tariffs & Trade before it, is a pragmatic organization that favors negotiation over confrontation. The system will do the job designed for it by member governments. It will not "stall," since the procedure is now largely automatic, with clear deadlines at every stage. Yes, it could take more than a year to conclude all stages. But readers of BUSINESS WEEK know very well how much more time is involved getting civil-suit judgments in national courts.

David Woods
Information Director
World Trade Organization
Geneva

A REAL PLAYER IN COLLEGE MERCHANDISING

Even though the University of Nebraska is the national [football] champion, the University of Miami's licensing revenues rank higher, at $2.8 million for the year ending Mar. 31, 1995 ("Fight! Sell!" Up Front, May 22). You should also know that the expenses of running our program are probably the lowest in the country, so we bring virtually all of it to the bottom line.

David A. Lieberman
Senior Vice-President
for Business & Finance
University of Miami
Coral Gables, Fla.

WHY COMPANIES MUST CULTIVATE THE SOUL

Your article "Companies hit the road less traveled" (The Workplace, June 5) accurately describes the challenge of bringing more soul into the workplace.

Overlaying a specific set of spiritual values on people does not sit well with an American workforce that wants less governmental intrusion in its life and certainly doesn't want a manager telling anyone what to believe in. On the other hand, ignoring the subject altogether means businesses are blind to the bottom-line reality that people do want to find meaning in their work. They want to feel appreciated for their contribution, and they want a sense of community in their lives. A growing body of research shows that there is a direct correlation between the lack of soul or "heart" in a workplace and absenteeism, stress-related workers' compensation claims, and health-care costs. Soul is no longer soft.

BruceCryer@aol

CORRECTIONS & CLARIFICATIONS

In "Hang on: More surprises on the way" (Where to Invest: Mutual Funds, June 19), it was stated that Seligman Communications & Information Fund would close to new investors on July 15. The correct date is June 30.

A TRADEMARK IS NOT A PATENT

Nobody can patent a buzzword ("'Buzz off my buzzword,'" News: Analysis & Commentary, June 5). A word, phrase, or design attached to goods or services, whose function is to identify the source of those goods or services, may be eligible for trademark protection but can never be patented.

The distinction is not a trivial one. Patents have a limited term. A trademark, however, can last forever. As long as the mark is properly and continuously used in interstate commerce, the mark remains a valuable company asset indefinitely.

Joseph T. Leone
DeWitt, Ross & Stevens
Madison, Wis.

AN UNBALANCED VIEW OF TRADE

"Trade: Why the experts are wrong" (Editorials, June 5) suffers from an overdose of political correctness. In demonizing Japan as a mercantilist nation (surely news to the many U.S. and European companies doing business there) and in identifying the U.S. as the champion of free trade (see the U.S. Tariff Code—two volumes and 8,000-plus tariff rates), you endorse an exercise in blatant protectionism and an increasing xenophobia in the U.S. Further, you attack economic theory as saying nothing about causation in the case of low U.S. national savings rates, high budget deficits, excessive consumption, and the trade deficit.

The application of bilateral t
sanctions to Japan by the U.S. u
cuts the foundation of both the pre
GATT and present WTO. The correct
would have been to submit a ca
the WTO before, not after, annou
tariffs, risking a trade war, and u
cutting the WTO. Mixing domestic
ical motives with macroeconomi
never effective.

Carla Hills, where are you?

Stephen Jar
Lakewood,

In supporting the Clinton Adn
tration's hawkish trade policy, your
torial derides "experts" for insisting
the trade deficit is connected to th
U.S. savings rate. However, you
not be an expert to recognize tha
trade balance is equal to the differ
between savings and investment.
identity applies in all countries a
times, and its validity does not de
on any economic view.

Unfortunately, there is one me
nism that might allow trade poli
shrink the deficit. By forcing the
nese to consume more, the trade h
could directly reduce the supply of
anese capital available to the U.S.
would raise bond yields, encoura
rise in U.S. savings rates, and de
investment spending. The net r
would be a lower trade deficit. Th
plication is that the trade policies
you applaud can be effective only t
extent that they depress America
ing standards and economic grow
is not surprising that they find
support among "experts."

UMMERTIME—AND HE READING IS SERIOUS

et's see: I've got my towel, my sunscreen, my flip-flops, and of course that featherweight beach Whaaa—it's raining?

ll, maybe summer isn't just for ilers and private-eye stories. For days when you feel like settling with something substantial, here's pling of some recent, more serious backs.

e a vicarious peek through an on microscope—or through the st-powered telescope—via one of ear's many books on scientific top- arry Werth's **The Billion-Dollar ule: One Company's Quest for the t Drug** (Touchstone, $14) trains its n biotech startup Vertex Pharma- als Inc. There we see company er Joshua Boger and his team ing and taking risks to beat com- rs—and screaming, throwing furni- and getting sloshed when they fail. d at publicity given to a key rival, snarls: "I want to rub his nose in irt and step on his head." Cold ispassionate science? Not here.

The Hubble Wars: Astrophysics Astropolitics in the Two-Billion- Struggle Over the Hubble Space ope (Harper Perennial, $15), Eric aisson likewise delivers a tale of leas and petty striving. The au- a former senior scientist at the rtium of universities put together ersee the space telescope's agenda, s NASA for its addiction to "pure, ulterated hype." While Chaisson ests that the megaproject still has ems, he says it represents "a mar- s means to view the cosmos in atically new ways."

inventing the Future: Conversations the World's Leading Scientists by as A. Bass (Addison-Wesley, $14) s less in the way of discord while ering an equally enticing closeup fbeat and strong-willed geniuses. asks the questions, and the re- ses he gets can be mesmerizing. xample, student of evolution Rich- awkins explains what every corpo- primate knows: "In highly social als the most difficult part of the onment involves outwitting fellow es members."

As with these scientists, political observers find the future to be an intensely interesting subject. Daniel Yergin and Thane Gustafson take their shot at forecasting in **Russia 2010: And What it Means for the World** (Vintage, $13). Will Russia become a capitalist powerhouse? Or will today's unemployment, crime, and disaffection undermine democracy to produce a nonideological new version of the old Soviet empire? The authors, many of whose predictions have already come true, suggest in this updated edition that the former is more likely—but only after years of upheaval.

Then there's China, another onetime bad boy of the world community that is now seen as either a budding economic force or an antidemocratic throwback facing a sea of woes. In **The Rise of China: How Economic Reform Is Creating a New Superpower** (Norton, $14), William H. Overholt opts for the former outlook—and how. With the struggle for power having put most of the reforms on hold, the book now seems a bit optimistic. Still, Overholt's account of how China adopted market reforms while avoiding the chaos of *perestroika* remains valuable.

Another major player on the world stage doesn't come off nearly so well in Bruce Rich's **Mortgaging the Earth** (Beacon, $16). What behemoth has, over the past 50 years, plundered global natural resources and impoverished millions, all in the name of progress? Who subsidized the destruction of forests in Brazil along with the forced resettlement of at least 1½ million people worldwide? Give up? It's the World Bank, according to Rich, who backs up his charges with a wealth of detail showing how the bank's development projects have been "a prime accomplice in a quiet war against the diversity of humankind's cultures and our planet's biological inheritance."

But let's get down to business. Big Business—in other words, athletic shoes. **Just Do It: The Nike Spirit in the Corporate World** (Adams, $10.95) steers the reader deep into the culture of a $4 billion company that's as reliant on image-making as any Hollywood dream factory. Author Donald Katz descends on the maturing Nike Inc. as it confronts a set of serious crises: Success is threatening both its underdog image and entrepreneurial ways at the very moment that its prime pitchman, basketball legend Michael Jordan, has announced his retirement from the National Basketball Assn. Take a look to find out how the company and its philosopher-founder, Philip H. Knight, stay the course.

Every day is a crisis—or so it seems—for the men and women in David Dorsey's fascinating **The Force** (Ballantine, $12.50). The members of Xerox Corp.'s Cleveland sales team, whose lives and careers the author profiles for one breathless year, wheedle customers, stroke and berate subordinates, and shortchange their families, all as a part of the race to achieve their annual sales goals. We sweat it out with team members too tense to digest their lunches, so

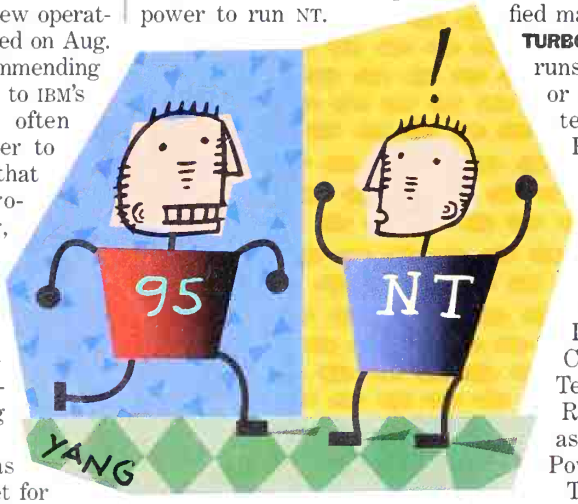
BY STEPHEN H. WILDSTROM

WINDOWS NT: HAS ITS HOUR COME?

If you use a computer at work, you're probably looking forward to Windows 95. The new version offers greater ease of use and more powerful software. For plenty of business users, though, Windows 95 may be the wrong move.

I'm not suggesting that you stay with Windows 3.1 after Microsoft Corp.'s new operating system is shipped on Aug. 24. Nor am I recommending that you jump ship to IBM's OS/2. But if you often push your computer to the limit or find that you need more robust networking, extra security, or crash-free performance, you should take a fresh look at Windows NT—Microsoft's heavy-duty operating system.



Windows NT has been on the market for about two years, but it appeared on few desktops until the 3.5 Workstation version debuted last summer at $319 for a single copy. Although interest has picked up, Microsoft still numbers sales in the hundreds of thousands, compared with 60 million or so copies of Windows 3.1.

EASY UPGRADE. Two factors have hobbled sales of NT. First, it is very power-hungry. When it appeared in 1993, the requirement of 12 to 16 megabytes of RAM looked absurd in a world where most new computers came with 4 megs. Like OS/2, NT can run most Windows 3.1 software, but few programs other than custom applications took advantage of NT's support for long file names or its ability to run many tasks at once. Even Microsoft didn't release a special NT version of its Word and Excel programs until last fall.

All of this is changing. The standard corporate desktop computer will soon be a Pentium with 16 megabytes of RAM, more than enough power to run NT. More important, the NT software shortage is about to end. Microsoft planned Win95 to run the same software as NT. If publishers want the "Designed for Windows 95" logo on their boxes, the programs must be NT-compatible. Under corporate bulk-purchase contracts, an upgrade to either operating system is expected to cost $50 to $100 per computer.

Who should choose NT? Virtually all home users and most smaller businesses can rule it out, because it doesn't provide for no-fuss, plug-and-play hardware installation. NT supports a more limited variety of hardware than Win95, and setting it up to run most effectively requires some expertise. You'll be stuck with a clunky Windows 3.1-style display, including its awkward program and file managers, until NT gets the Win95 desktop in the first half of 1996.

NT's biggest advantage is its robustness. No matter how badly a program crashes, it's almost impossible to produce a system lockup on NT that forces you to reboot—an event that is all too common in Windows 3.1 and is not rendered extinct by Win95. NT is also best at running several programs at once and offers first-rate network security—good enough to meet government standards for sensitive unclassified material.

TURBOCHIPS. Windows 95 runs only on 386, 486, or Pentium-class systems. But if even a Pentium isn't powerful enough for your computing needs, NT comes in versions that run on such hot RISC processors as Digital Equipment Corp.'s Alpha, MIPS Technologies Inc.'s R4000 series, and, as of mid-June, the PowerPC.

The important news for business in all of this is that a flood of updated applications expected this fall will run with either Win95 or NT and allow companies to select the most appropriate operating system for each machine without the compatibility woes created by mixing PCs and Macintoshes or Windows and OS/2. "We don't expect to see many companies that are all Windows 95 or all NT," says Paul A. Maritz, vice-president in charge of Microsoft's Platforms Group, which handles all operating systems. For many businesses, the operating-systems choices may soon be more complicated. But the improvements will be well worth it.

HAT TO DO IF OU'VE GOT ALL HE INFORMATION THE WORLD.

Just when you thought you already had all the data your existing information system could possibly handle, another whole workload comes along. It doesn't matter why it happens; it happens. You merge. You move to client/server. You decide to add a new application. You grow. Don't worry. Digital's new AlphaServer™ family is arriving right on time. Offering affordable, high-performance solutions to all kinds of companies.

ND THEN YOU ET MORE.

From airlines to financial services, architects to retailers. For example, our new AlphaServer 2000 5/250 system is well within most corporate budgets, yet has the power to perform up to 1200 transactions per second. And our new AlphaServer 8200 and 8400 systems are the only servers that can run the new 64-bit pure Oracle7™ database, yielding performance gains that sound like they belong in another century: up to 233 times faster than conventional 32-bit enterprise systems. But then, that's what 64-bit Alpha power is all about. It lets you do things faster and more affordably than 32-bit systems, along with some things 32-bit systems won't let you do at all. Our servers run thousands of applications, including the ones you need the most. All offer the kind of scalability and investment protection that only 64-bit architecture can give you. And all are truly open solutions, so they'll work alongside virtually any of your existing equipment while giving your entire information system a firm shove into the future. What more can we say except, hop on. For more information, call your Digital business partner or 1-800-DIGITAL. Or reach us via our Internet address: moreinfo@digital.com.*

ALPHASERVER SYSTEMS

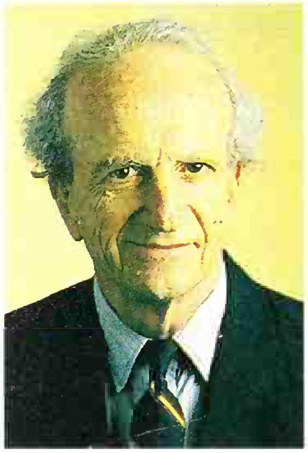
Economic Viewpoint

BY GARY S. BECKER

HOW BAD STUDIES GET TURNED INTO BAD POLICIES



THIN ICE: Politicians are quick to grasp flimsy results to justify actions that can inflict considerable damage on the economy

Gary S. Becker, the 1992 Nobel laureate, teaches at the University of Chicago and is a Fellow of the Hoover Institution

Economists cannot design research projects that decisively answer important policy questions. They have to rely on the limited knowledge that can be extracted from the effects of government policies and other events. Yet politicians are all too quick to grasp preliminary results of these studies as justification for regulations and other interventions that sometimes do damage to the economy.

A good example is a 1992 Federal Reserve Bank of Boston analysis of discrimination against applicants for mortgage loans. The senior author was Alicia Munnell, a respected economist who was then in charge of research at the Boston Fed and recently was nominated by President Clinton to fill a vacancy on the Fed's board. After reviewing what happened to some 4,500 loan applications in 1990 by banks in the Boston area, the authors claimed to have found evidence of extensive discrimination against black and Hispanic applicants.

The publicity that this study attracted led the Comptroller of the Currency to closely monitor banks for evidence of discrimination in their lending practices and to investigations of banks by the Justice Dept. and the Massachusetts Attorney General. Such scrutiny and political pressure resulted in legal actions against a few banks. One involved a consent decree last August with a Maryland bank for supposedly "shunning" loans in urban areas. Another involved settlement of a case against Chicago-based Northern Trust Corp., which alleged the bank gave greater assistance to white applicants who were attempting to qualify for mortgage loans.

Such political reactions would be justified if the Boston Fed found convincing evidence of bank discrimination. But the study—despite being lauded as conclusive—contains many omissions and data errors. An economist at the Federal Deposit Insurance Corp. took a close look at a sample of the actual lending records used by the Fed and concluded that the data are so inaccurate (owing, in part, to errors in copying), that it is impossible to determine whether or not banks had discriminated against blacks and Hispanics. Another analysis found that the Boston Fed's results are dominated by two banks that had relatively high rejection rates of minorities only because they specialized in soliciting loans from marginally qualified minority applicants.

Some of the evidence found by the B
Fed contradicts their claim of discrimin
against minorities. For example, averag
fault rates found in this study were
the same on loans in census tracts w
large percentage of blacks and Hispanics
predominantly white tracts. Yet if the b
had been discriminating against minorit
plicants, default rates on loans to mino
should have been lower than on loa
whites, since banks discriminate in part b
cepting minority applicants only with e
tionally good credit histories and employ
records. They would reject marginally
fied minority applicants while accepting
ginal white applicants. The implicatio
the theory of discrimination for default
and other behavior are spelled out in my
bel prize acceptance lecture entitled "Th
onomic Way of Looking at Behavior,"
lished in 1993.

WAGES OF ERROR. I am not claiming th
the additional studies of bank lending pr
es concluded that banks do not discrimi
nor am I suggesting these studies "p
banks generally do not discriminate. Bu
additional analyses do show the diffic
in reaching recommendations on contr
sial policy questions by generalizing
highly imperfect evidence.

These difficulties are further illust
through recent discussions of the employ
effects of minimum wages. The most
law in economics states that a rise i
cost of labor, capital, or other inputs l
demand for that input, a law that has
verified by the experience of thousan
companies all over the world. Yet Labor
retary Robert B. Reich cites controv
studies that claim to find rises in mini
wages have sometimes not reduced, and
even have increased, employment of
skilled workers. My discussion of some
lems with these claims appeared in BUS
WEEK of Mar. 6, 1995.

The effective responses to the allega
that banks discriminate and that higher
imum wages do not reduce employ
should be a lesson to economists not to
cate major policy initiatives on the ba
very limited and imperfect evidence. P
cians are only too eager to promote re
based on the flimsiest of evidence to at
support for policies that help voters and
est groups they favor.

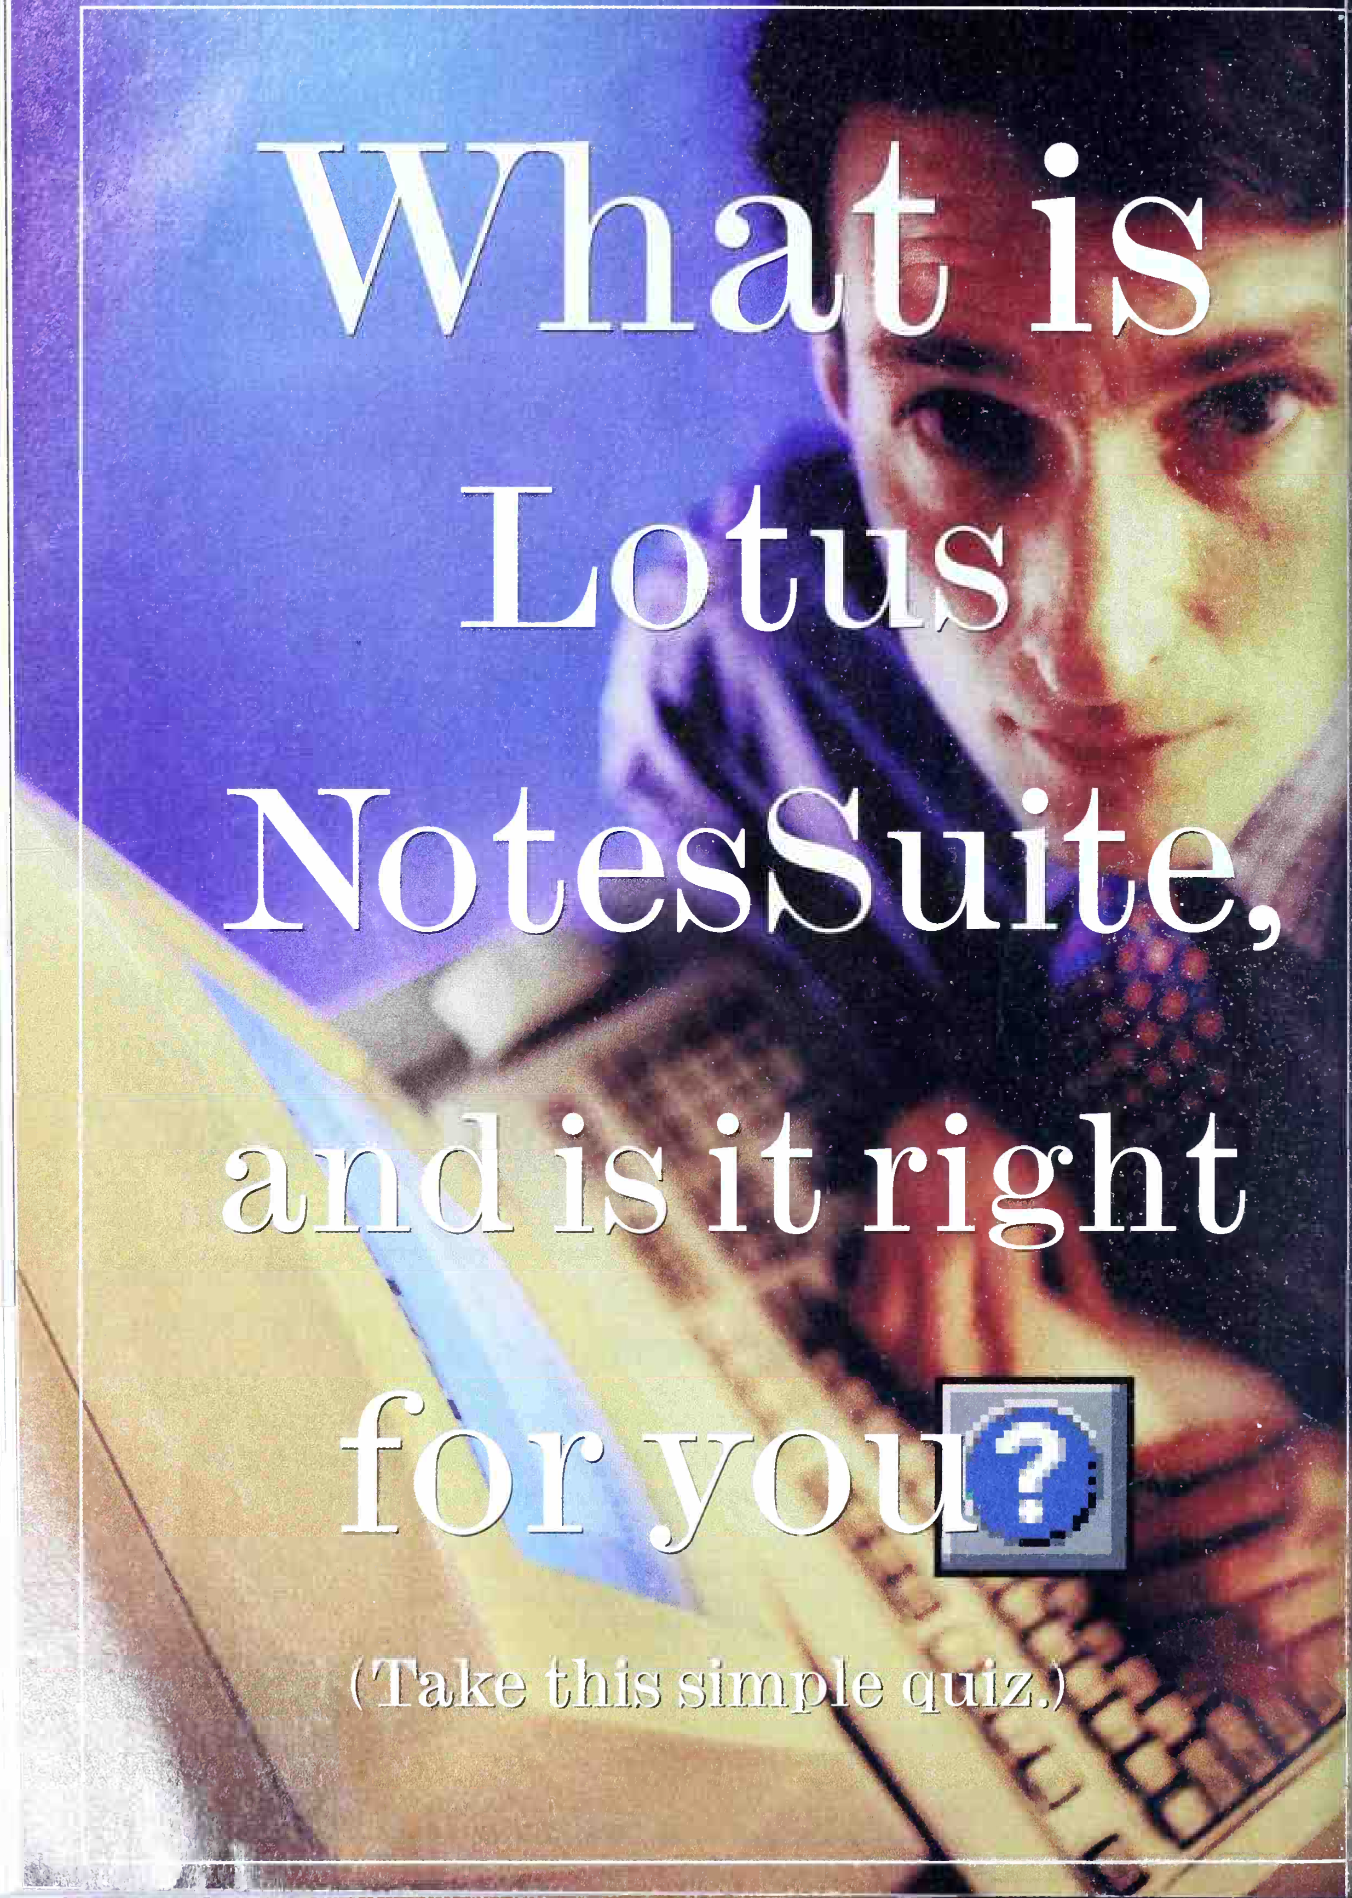
CREATIVE IMPORT FINANCING FOR AN ASIAN TELECOMMUNICATIONS COMPANY

(We Were Their Long Distance Connection)

To get this deal off the ground, we engineered a unique financing structure that matched various components of risk with appropriate partners around the globe. Recognizing risk is easy. It's finding solutions that requires skill.

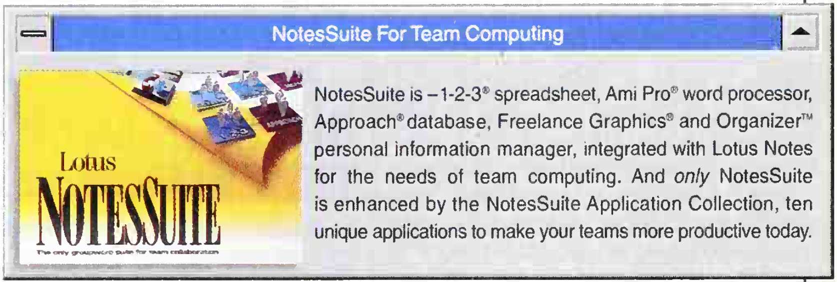
Bank of America

Our client had the benefit of relationship officers specializing in structured trade finance, risk management and the telecommunications industry



What is
Lotus
NotesSuite,
and is it right
for you?
(Take this simple quiz.)

sSuite™ is like nothing you've seen before. It's way to look at the desktop, combining tradi l business applications with the revolutionary r of Notes® groupware and ten unique cations designed to make your teams productive today. The result is a whole vorking environment – as flexible as it is rful. Take a moment to figure out what s NotesSuite so different.



NotesSuite For Team Computing

NotesSuite is – 1-2-3® spreadsheet, Ami Pro® word processor, Approach® database, Freelance Graphics® and Organizer™ personal information manager, integrated with Lotus Notes for the needs of team computing. And *only* NotesSuite is enhanced by the NotesSuite Application Collection, ten unique applications to make your teams more productive today.

ou've invested untold amounts of cash in your uting hardware. There is a PC in front of every idual in your company but you're not con d you're getting the best possible return on investment. What do you do?

rap the machines, give out slide rules and hire typing pool.

et hardware upgrades so the stuff that isn't tting done still doesn't get done.

ire a lot of people just to "show 'em who's boss."

et NotesSuite and begin making the move from roductive individuals to productive teams.

otus Notes is already delivering an average I. of 179%† to companies who use it. Couple power with our five leading desktop applications you can finally use your computer the way ve always wanted to.

I often work out of the office. I sometimes work colleagues, sometimes on my own. Am I trading idual productivity for workgroup capabilities?"

Whether your colleagues are next door or around vorld, Notes provides a level of integration that es NotesSuite more powerful and more effective than any desktop suite before it. Notes becomes a working environment; SmartSuite® provides the working tools, making you and your teams more productive.

3. OK, you've heard a lot about this new way to work but you're wondering, "What can NotesSuite actually do for me?"

A. Route, track and approve paperwork automatically.

B. Expedite the budget process by coordinating, tracking and distributing the same budget spreadsheet.

C. Basically streamline workflow, impress my boss and get me a raise.

D. All of the above.

When you recognize that the biggest potential for gains in productivity comes not from boosting individual performance, but from people working together, you begin to understand how broad an effect NotesSuite can have on the work environment.

Right now you can buy NotesSuite for just $299.†† It puts the value of Microsoft® Office in a whole new light. To find out more about how Lotus NotesSuite is helping successful companies become more competitive, get our FREE video, "Team Computing: The Art and Science of Collaboration," by calling **1-800-TRADE-UP, EXT. A791**,* or explore Lotus on the World Wide Web at www.lotus.com.

BY GENE KORETZ

DETROIT SPIES A CAUTION SIGN

What are used-car prices saying?

Although U.S. car and light truck sales perked up somewhat in May, auto makers are still worried and trimming production schedules. A particular source of concern to some—and hope to others—is this year's unusually hefty surge in used-car prices. At last count in May, they were running 14.4% over May of 1994 (chart), even as new-car prices and sales stayed sluggish.

Ordinarily, strong used-car prices bolster new-car sales because they raise trade-in values and thus make a new set of wheels more affordable. Indeed, auto analyst Ronald A. Glantz of Dean Witter Reynolds Inc. insists "new-car sales will rebound again once people realize how high trade-in values are."

But some industry observers think this year's unusually sharp price hikes signify a basic adverse shift in buying patterns. Economists at the Federal Reserve Bank of Chicago warn that the rapid growth of single-parent households, combined with sluggish income gains, have been gradually eroding underlying demand for new cars (BW—Feb. 13). Jack V. Kirnan of Salomon Brothers Inc. thinks even middle-class shoppers now opt for "nearly new" cars over pricier really new cars.

Several developments seem to be reinforcing this trend. Quality improvements mean cars and trucks last longer than ever. As millions of two- and three-year-old vehicles come off of leases each year, carmakers increasingly resell them with factory warranties. And now late-model used cars are equipped with dual air bags and other goodies that were once available only on new cars. Noting that used cars are being scrapped at an ever slower rate, economist Van Bussmann of Chrysler Corp. reports that he recently lowered his long-term projection of demand growth from 0.7% a year to 0.5%. High used-car prices, he says, are no guarantee that new-car demand will take off.

USED-CAR PRICES HAVE BEEN HOPPING

BIG RIGS KEEP ON TRUCKIN'

Sales continue to break records

Despite the spring slump in car sales, no serious worries are yet afflicting a smaller, highly potent sector of the motor-vehicle industry: heavy-duty trucks. U.S. and Canadian sales of these 16-ton-plus rigs, which cost $50,000 to $150,000, are exceeding last year's record 225,000-unit pace. "The industry is building and delivering around 20,000 trucks a month, which means it's running flat-out," says analyst Frank Prezelski of Ladenburg, Thalmann & Co.

To a large extent, truck builders' stellar performance in recent years reflects the resurgence of American industrial competitiveness and the need for more powerful and efficient trucks to speed deliveries. Indeed, many observers regard truck demand as a sensitive economic indicator. Thus, while orders have been slipping recently, Prezelski notes that the backlog still represents about a year's worth of output. "Truck orders are only saying that the economy has slowed, not fallen out of bed," he says.

U.S. SLUMP: A DOMINO EFFECT?

Why other economies won't topple

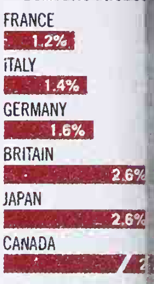
If the U.S. economy slipped into recession, would it drag the rest of the industrial world into a slump? Although many leading economies overseas are already slowing, economist Tony Riley of A. Gary Shilling & Co. doubts whether a U.S. contraction by itself could touch off a worldwide recession.

Riley bases his view on the contribution that merchandise exports to the U.S. make to the economic output of other G-7 countries. While exports account for 15% to 20% of the gross domestic products of Germany, France, Italy, and Britain, for example, exports to the U.S. account for only 1.2% to 2.6% of their GDP. And though Ja sends 30% of its exports to the U exports account for only 8.6% of its put, so the U.S. export share still c out to only 2.6%.

The bottom line: Assuming a 9% decline in U.S. imports (the drop actually recorded during the 1990-91 recession) and a multiplier effect that triples the direct contractionary impact, a U.S. downturn would cut European and Japanese growth by only one-third to three-quarters of a percent.

HOW EXPORTS THE U.S. STACK

PERCENT OF GROS DOMESTIC PRODU



DATA: A. GARY SHILLING &

A U.S. slump, of course, woul bad news for Japan because Jap economy is already in deep trouble. aside from Canada, whose export the U.S. are equal to 24% of its GD major industrial nation is likely to e rience more than a slowdown ca by a U.S. recession. "If their ec mies falter," says Riley, "the fault wi with their own domestic policymak

A NEW WAVE OF *MAQUILADORAS*

The peso's drop spurs expansio

It isn't quite the giant sucking so predicted by Ross Perot, but the little doubt that the impact of the f peso on Mexican wages is spar interest among U.S. companies see sites for low-cost manufacturing an sembly operations. Economist M Leos of WEFA Group Inc.'s Mexican casting unit, predicts that the *maq* *dora* sector close to the U.S. bo will add some 390 plants by 20 boosting the *maquiladora* workf from 579,000 last year to 943,000.

The irony is that proponents of North American Free Trade Agree claimed that its salutary effects on ico's economy and wages would slow growth of *maquiladora* operations. however, Mexican manufacturing pensation is expected to be down this year, to a mere $1.80 per hour, to remain below last year's level the turn of the century. Thus, state complaints about U.S. jobs being sh south of the border could grow shriller in the next few years.

AMES C. COOPER & KATHLEEN MADIGAN

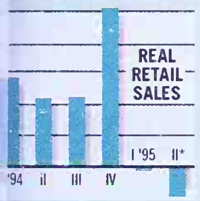
HOPPERS DON'T LOOK READY) PUT AWAY THEIR WALLETS

U.S. ECONOMY Once again, consumers are under the microscope. If they d on a modest but rising trend, the economy will chugging along, the Federal Reserve won't have ıt interest rates, and the Clinton Administration oreathe a little easier as the 1996 election year rolls nd.

ıt what if households decide to pack it in? After he consumer sector is the economy's 900-pound la whose purchases account for two-thirds of U.S. omic activity. That's why the recent downbeat umer-related data have economy-watchers from Street to Washington pacing the floor out of y over a possible recession.

For example, the 0.2% rise in May retail sales was weaker than expected. Jobless claims are trending higher, underscoring the soft labor markets. And the modest pace of consumer inflation indicates businesses are facing lackluster demand and excess inventories, and so cannot raise prices much.

ISUMERS PULL BACK. WILL IT LAST?



ARTERLY PERCENT CHANGE, NUAL RATE *EST.

A: COMMERCE DEPT., BUSINESS WEEK

However, the current weak in the consumer sector is far from alarming, and er-term fundamentals argue that consumers are kely to cut spending drastically and send the econ spiraling downward. Balance sheets appear exıely healthy, helped by rising stock and bond pricınd steady home values. Households show little lems in paying their bills, and consumers still have gh level of confidence.

MAY RETAIL REPORT was a disappointment for e hoping for a clear sign that consumers are on the ound. The news, so close on the heels of the June 2 ort of 101,000 fewer jobs in May, further heightens policy pressures on and within the Fed (page 34). ay's puny rise did not recoup the 0.3% sales drop in il. Car sales rose 0.5%, but building materials purses—a victim of the housing slowdown—plunged . Sales at gasoline stations fell 0.7%. For the first months of the second quarter, real retail sales e down at an annual rate of 1.9%, compared with r first-quarter average (chart).

melling an imminent rate cut, the bond market ralfiercely after the June 13 release of the retail . The yield on 30-year Treasury bonds closed at 6.54%, down from 6.7% the day before, the strongest one-day rally in nearly a year.

That reaction seems a bit hysterical. Despite weak outlays for goods, the data so far suggest that real consumer spending will rise by 1% to 1.5% in the second quarter—mainly because service outlays began the quarter strongly. Even if inventory growth slows substantially, that pace is not consistent with the zero-to-negative expectations for second-quarter economic growth now increasingly popping up.

A LOOK AT HOUSEHOLD FINANCES shows why consumers are not ready to throw in the towel. The Federal Reserve reports net financial assets acquired by households continued to rise in the first quarter, at an annual rate of $556.6 billion.

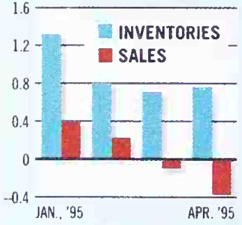
Consumers may not be quick to use their investments as a source of cash during this slowdown, however. One reason is that many investments, such as 401(k) plans and IRAs, cannot be touched. Also, baby boomers are in their saving years, so they may not be willing to cash in their equity windfall. And investors may wait to see if Congress cuts the capital-gains tax, reducing the cost of selling stocks and bonds.

Still, the sense of increasing wealth may be a reason why consumer confidence has stayed fairly high, even amid signs of a softer economy.

Looking at the liability side of their balance sheets, consumers are in much better shape than they were prior to the 1990-91 recession. Consumers have added debt at an explosive rate over the past year. Installment credit alone grew by $11 billion in April.

But the Fed also reports that households needed only 16.1% of their disposable income to make their debt repayments at the end of 1994, and economists at Regional Financial Associates Inc. estimate that percentage has risen to only 16.4% in the second quarter. Both rates are way below the peak 18.4% hit in 1989. In addition, mortgage delinquency rates fell to a 22-year low in the first quarter, and only 1.5% of other debt payments were late.

INVENTORIES GROW, BUT NOT SALES



▲ MONTHLY PERCENT CHANGE,

DATA: COMMERCE DEPT., BUSINESS WEEK

Healthy finances argue that consumers will head back to the malls. In fact, it may already be happening. The *Johnson Redbook Report* says that sales at discount and chain stores for the first two weeks in June

ERIC HOFFMANN/BW

were up 1.6% above their May average. Plus, the Conference Board's May survey of buying plans found that more consumers planned to buy cars and major appliances than at any time in the past year.

A return of shoppers will ease the current production disruption caused by the need to adjust inventories. As of April, that process had not yet begun. Stock levels at manufacturers, retailers, and wholesalers jumped 0.8% in the month, as sales fell by 0.4%. That was the second month in a row that inventories rose strongly amid falling sales (chart, page 31).

By May, though, businesses appeared to be whipping their inventories into better shape, especially the auto industry. The nation's purchasing managers said that inventory growth slowed sharply in May, and car dealers ended the month with a 69-day supply of cars and trucks. That's down from April's huge 78-day supply and closer to the desirable 60-day total, although further output cuts will be needed.

PARING DOWN excess inventories will continue to brighten the already radiant inflation news. Consumer prices edged up 0.3% in May, and excluding food and energy, core prices rose 0.2%—half of the April advance. Smaller increases in the prices of cars, airline tickets, and auto financing led the moderation.

Over the past year, consumer prices have risen 3.2%, and core prices are up 3.1% (chart). Although both rates are slightly above their 1994 performances, speedup is within the range that the Fed will tole

Inflation for goods and services has been mod Service prices have risen 3.5% in the year ende May, and goods prices are up only 2.6%. Goods infla may come under downward pressure in coming mo as retailers cut prices to move merchandise.

Already, the disinflationary effects of slower business activity are evident among producer prices. Producer prices of finished goods were unchanged in May, while core producer prices edged up 0.3%. Both inflation measures are rising by about 2% from a year ago.

Further back in the production process, price pressures showed signs of easing in May. Core prices of inter diate materials and supplies rose just 0.2% in May ter a 0.7% jump in April. And core prices of cr materials fell 0.3%, after a 1.2% gain in April.

Later this year, as consumers pick up their p and inventories grow less burdensome, factories hum again. That rebound will be crucial for keeping economy on an even keel—and preventing inves and policymakers from too many anxiety attacks.

INFLATION: UP A BIT
BUT STILL TAME

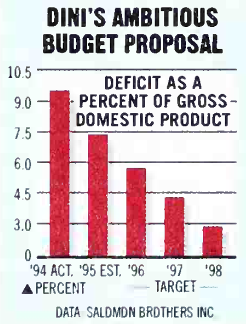
ITALY

A POLITICAL DUEL WITH THE BUDGET AS VICTIM

With inflation heating up, Italy's task of cutting its budget deficit is becoming increasingly urgent. But a new round of political uncertainty is threatening to undermine the government's efforts.

On May 31, Prime Minister Lamberto Dini submitted a tough three-year plan to cut the deficit. However, former Prime Minister Silvio Berlusconi's June 12 victory in a referendum, allowing him to keep all three of his television stations, shifts the political landscape. Recouping some lost clout, Berlusconi has called for early elections this fall, which would cripple Dini's efforts to pass his budget, given his already-slim parliamentary majority. The lira plunged after the vote, forcing the Bank of Italy (BOI) to intervene. Investors believe Dini, a former central-bank director general, is more committed to deficit cutting than Berlusconi.

DINI'S AMBITIOUS
BUDGET PROPOSAL



▲PERCENT
DATA SALDMDN BRDTHERS INC

Dini's 1996 budget is ambitious. It raises 32.5 trillion lire ($19 billion), split between spending cuts and tax hikes. The plan fattens the projected 1996 surplus in the primary budget—all items excluding interest—from 47.5 trillion to 80 trillion lire. Interest on Italy's huge national debt would total 189.4 trillion lire. That yields a 1996 deficit of 109.4 trillion lire, down from 130 trillion in 1995. Dini proposes to cut the deficit from 7.4% of gross domestic pro uct in 1995 to 3% by 1998.

But Dini's blueprint is overly optimistic. Economic growth pro jections—3% through 1998—see too upbeat, and expected inflation—3.5% for 1996, falling to 2.5% by 1998—appears too low. With inflation jumping to 5.5% i May, from 3.6% last summer, an with further hikes in interest rates likely, 1996 interest payments look too low.

The BOI lifted official rates by three-quarters of a point on Ma 26, to 9%, and BOI Governor Ant nio Fazio has set informal inflati targets: If inflation exceeds 5.2% for 1995, or 4% for 1996, the BOI "will not hesitate" to tighten fur ther. But lasting gains on inflatio depend on fiscal reform, and tha requires the Dini government to stay on until 1996.

THE ECONOMY

IN A FIX AT THE FED

It is beset by a sudden slump, a nervous President, and open dissent

SEAL OF THE PRESIDENT OF THE UNITED
E PLURIBUS UNUM

It seemed like the ideal time to be a central banker. Just weeks ago, with economic growth moderating from last year's torrid pace and inflation in check, Federal Reserve Chairman Alan Greenspan was confident he had piloted the economy to a soft landing that would require no change in interest rates over the coming months. After spending most of his tenure coping with a banking crisis, a recession, a low-growth expansion, and a stock market crash, he looked to have a smooth summer ahead.

Forget the beach. A flurry of unexpectedly downbeat economic news, including a jarring June 2 report of May job losses, has put Greenspan on alert. He's feeling heat to pull the sputtering economy out of its current dive by cutting interest rates as early as July.

PANETTA'S SALVO. The pressure is coming from all sides: a Fed colleague who went public with concerns about the economy, a White House nervous about waging a reelection campaign in a weak economy, and corporate executives urging the Fed to reopen the flow of credit. "You turn off the spigot, and you can't turn it back on so easily," says Stanley C. Gault, chairman of Goodyear Tire & Rubber Co. "It would help if they lowered rates." And with yields on two-year and five-year bonds now below the overnight rate the central bank controls, traders have fully priced in a Fed rate cut. "If the Fed doesn't align its policy with the markets, it puts itself in a position of being blamed for exacerbating the slowdown," says David H. Resler, chief economist for Nomura Securities Co.

For Greenspan, there's even more at stake. It is widely assumed in Washington that the Fed chairman would like to be reappointed to a third four-year term next March. But neither Bill Clinton nor the Republican-controlled Senate, which confirms Fed nominees, will be inclined to renew the 69-year-old economist's contract if growth doesn't snap back smartly. "If Greenspan cares about his reappointment, he doesn't want this economy to go into recession," says one former Fed governor.

Just to underscore the political pressures, the White House broke a two-year moratorium on jawboning the Fed when White House Chief of Staff Leon E. Panetta urged the central bank on June 11 to cut the 6% federal-funds rate banks charge one another for overnight loans. President Clinton's advisers insist that Panetta's remarks were spontaneous and not the start of an anti-Fed campaign. "He was careless in how he responded," says Treasury Secretary Robert E. Rubin. "People may slip." Still, others don't regret Panetta's salvo. "It was not a bad idea to send a little signal," admits one White House aide.

There are likely to be plenty more signals if the Fed doesn't get the hint. And if sniping from the White House is not enough, Greenspan has to worry about tensions building within the Fed, which until recently had maintained a united front on monetary policy. Alre some Fed policymakers are second-gu ing their last rate hike—a half-p move in February amid initial signs economy was starting to cool. "If meeting were held again, we would [make] the same decision, knowing w we know now," concedes one insider

Meanwhile, Fed Vice-Chairman

Reading the Fed's Tea Leaves

Will the Federal Reserve cut short-term rates? In public statements and interviews, Fed officials have opposing views. Here is a scorecard:

DATA: DOW JONES INVESTOR NETWORK, BUSINESS WEEK

ALAN GREENSPAN
CHAIRMAN

Says current "pronounced" slo "inevitable but desirable" if it companies to work down high inve Thanks to the slowdown, the "proba an inventory recession...has decreased significantly."

linder, a former Clinton economic
ser, appeared to be lobbying publicly
 rate cut when he told Reuters on
6 that the odds of a recession had
 and that he was "more concerned
 about the downside [risk to the
omy] than the upside" risk of infla-
That candid assessment riled some
s former Administration colleagues, who have maintained an upbeat posture on the economy. His comments were also read by the Clintonites, Wall Street, and former Fed officials as a thinly veiled call on Greenspan to reverse course. "It seems clear that Blinder is beginning to make his case for an early move," says David M. Jones, chief economist for Aubrey G. Lanston & Co.

A proponent of the "preemptive easing" approach, Blinder seems eager for the Fed to begin cutting rates early enough to avert a slump—even if price pressures are still building. "This is a big thing going on between Greenspan and Blinder," says one Administration official, who claims Blinder argued against the February rate hike before grudgingly voting with the majority. "I'm surprised by the recriminations."

Greenspan pursued a preemptive easing in 1989 but was too late to prevent a recession. Now, he appears more optimistic than Blinder that the economy will bounce back from its doldrums, perhaps by fall. At a Seattle press conference on June 7, Greenspan called the slowdown "desirable," reasoning it would probably help the U.S. work off excess inventories that would otherwise tip the economy into recession.

The divergence in Blinder's and Greenspan's views—though carefully nuanced in Fedspeak—was one of those rare differences that spill out into the open. "It is almost reminiscent of the Preston Martin-Paul Volcker days," says former Fed Governor Wayne D. Angell, now chief economist at Bear, Stearns & Co. Like Volcker and Martin, who as chairman and vice-chairman openly argued over policy in the early 1980s, "Blinder and Greenspan are willing to have the public discern a difference in their views," Angell adds.

But if Blinder indeed is leaning toward easing policy, he appears to be in the minority, at least for now. Following his public remarks, other Fed officials hinted that they are in no rush to begin unwinding the seven rate hikes that doubled the fed-funds rate from 3% at the start of 1994 (table). Fed Governor Lawrence B. Lindsey dismissed criticism that the Fed overtightened: "I think we did a pretty good job," he declared in a June 8 speech. The same day, Edward G. Boehne, president of the Federal Reserve Bank of Philadelphia, said he believes the economy will perk up this fall.

MOMENT OF DECISION. Privately, Fed officials say Greenspan doesn't want to be in a situation where he cuts rates prematurely, the economy builds up a new head of steam, and the central bank finds it has to hike rates again in the heat of a Presidential campaign. Fed watchers concur. "Greenspan realizes that going into an election year, he can't reverse any rate cuts without massive criticism from the White House," says Jones. "He wants to be fairly sure of himself before he takes the plunge." Although many analysts believe growth in the second quarter could dip below 1.5%—and even move into negative territory—Fed officials hope the sharp plunge in yields on the benchmark 30-year Treasury, from 8.25% last November to 6.57% on June 14, will be enough to spur the economy.

For Greenspan, the moment of decision for the economy, and his job future, could come in early July. The rate-setting Federal Open Market Committee meets on July 5-6, and the key Labor Dept. payroll survey for June will be released on July 7. Another jobs drop atop the 101,000 May loss is sure to intensify the pressure to reverse course in a hurry.

That's not the prospect Greenspan had in mind in early spring, when all he saw on the horizon were blue skies. But with the economy losing altitude, the pressures are mounting on the Fed to cut rates, and soon. For the chairman, that could mean a long, hot summer.

SENIOR CITIZENS: HOW MUCH PAIN?

THE BUDGET

BILL CLINTON, DEFICIT HAWK

Suddenly, he's in bed with the GOP–and a budget deal is likely

The great Battle of the Budget is over. The hawks have won. Oh, there are details to be thrashed out. And there probably will be another crisis or two before President Clinton signs a Deficit Reduction Act of 1995. But faced with overwhelming pressure from the GOP majority in Congress and a dramatic shift in public opinion, Clinton quit fighting on June 13. In his six-minute prime-time speech, he joined the balanced-budget crowd, producing a plan to eliminate the deficit in 10 years. "Finally," says American Standard CEO Emmanuel A. Kampouris, "the President is coming forward."

The framework of Clinton's plan follows the GOP's lead: He would trim growth in Medicare, Medicaid, and welfare spending and make deep cuts in most other programs. And he would cut taxes. The only major difference: The President insists on more money for education. Although specifics differ from the House and Senate blueprints, the outlines of a megadeal are falling into place. Says Senator Joseph T. Lieberman (D-Conn.): "It is now inevitable that we will have a balanced budget by [a specific] date." Adds Frank Shafroth, chief lobbyist for the National League of Cities: "The shape of the debate is fundamentally changed."

The political landscape is changed as well. In a single week, Clinton has abandoned liberal Democratic orthodoxy. For instance, he only mildly criticized Supreme Court decisions that cut deeply into federal affirmative-action and school-desegregation programs, then cut loose his party's congressional leadership on budget policy. House Democratic leaders and other members of the party's traditional wing are furious. But centrist Democrats argue that it's long past time for Clinton to adapt to a changing electorate. "We need to tell the liberal Democratic congressional wing to shut up," says consultant Brian Lunde. "Their agenda is no longer relevant."

Clinton's political calculus tells him he doesn't need liberals to pass a balanced budget. And while Republicans publicly grumble that his plan is too little, too late, they're privately cheering that he's dealing on their terms. Further, the GOP majority in Congress probably can muster 75 House Democrats and 20 Senate Democrats to back big spending cuts—as long as tax cuts are small. Says Representative Charles W. Stenholm (D-Tex.), a deficit hawk: "For the first time in my years in Congress, we have a majority of the House and Senate and the President all saying that balancing the budget is a priority."

To reach out for a deal, the President has made four key concessions:

■ **Health care.** Medicare and Medicaid are squarely on the table. Clinton had

THUNDEROUS IMPACT' EQUAL OPPORTUNITY

upreme Court decision may gut racial preferences

ix years ago, affirmative action began a giant slide down a treacherous slope. That was when the U.S. eme Court, setting a tough legal dard for state and local minority side plans, tossed out a Richmond program that reserved 30% of the construction work for minorities.

ne decision had a rapid impact: in a year, nearly all of the nation's state and local programs had been antled or suspended, according to Minority Business Enterprise Le- efense & Education Fund. In Rich- l, the minority share of construction rs shriveled from 41.6% to 2.2%. vas devastating," says Deborah L. es, Richmond's minority business rprise administrator. "Diversity in onstruction industry went back to ld ways."

ow, affirmative action may be near- he cliff. On June 12, the Supreme t raised the same hurdle for a fed- program that helps companies clas- l as "disadvantaged." The ruling l affect a panoply of racial prefer- s, from reserving radio spectrum ninorities to the 1965 executive or- equiring nearly 200,000 federal con- ors to adopt affirmative-action hir- plans. The decision "will have derous impact," warns Ronald M. n, a lawyer who represents compa- in affirmative-action disputes.

SURE. Some lawmakers aren't wait- or the ripple effect. Senate Majority ler Bob Dole (R-Kan.) and Repre- ative Charles T. Canady (R-Fla.), man of a key judiciary subcommit- plan to introduce bills to nullify the utive order and other federal pro- ns that help minorities. Even Pres- t Clinton is likely to recommend ailing some preferences.

ome experts say the shift in Wash- on could prompt companies to re- to their old habits. "If we pulled affirmative-action programs tomor- we would revert back to blatant imination in a second," says Donna tte, a consultant who has studied panies' attitudes toward diversity.

mployers such as Sears Roebuck, , and Texas Instruments dismiss fears. If a company depends on loyees for a competitive advantage, 've got to create an environment ttract people from all segments of the population," proclaims Jim Porter, Honeywell Inc.'s vice-president for human resources.

Lawyers advising corporations raise another concern. Government contractors face a conflict between the ruling and the 1965 executive order. If they scrap their affirmative-action plans, they may lose federal contracts. Under the new ruling, though, too aggressive a plan may spawn reverse-discrimination suits. "It really puts business in a bind," says Theodore Wang, an attorney with the Lawyers' Committee for Civil Rights, a San Francisco nonprofit group that consults with large employers.

Now, the feds must prove past discrimination to justify preference—and that's expensive

CONTRACTOR PECH'S SUIT LED TO THE RULING

ED ANDRIESKI/AP/WIDE WORLD

A slew of litigation is expected to resolve the uncertainty created by the Supreme Court ruling. The case was brought by Randy M. Pech, the white owner of Adarand Constructors Inc., a Colorado Springs company. After submitting the low bid for subcontracting work, he lost to a company designated as disadvantaged because of its Hispanic ownership. The high court didn't strike down the preference program but said that, like state and local set-asides, it was subject to "strict scrutiny." The plan could be upheld if the government proves it had a compelling interest, such as correcting past discrimination, and that the remedy was narrowly tailored.

LEGAL LIMBO FOR EMPLOYERS

How the Supreme Court's ruling on federal preference programs may affect corporate affirmative action:

PROBABLY SAFE

- Voluntary hiring and promotion goals for minorities and women
- Recruiting on predominantly minority college campuses
- Advertising job openings in publications targeting minorities

AT RISK

- Special deals with recruiters to bring in only minorities
- Reserving job slots for minorities and women
- Plans based on federal mandates for aggressive minority hiring
- Reserving wireless phone spectrum for women and minorities

DIRTY WORK. Some cities and states have met that difficult standard by introducing race-neutral programs targeting the disadvantaged or flexible goals for minority contracting. But studies that prove past discrimination are expensive. For Uncle Sam to justify all of its programs would require an unprecedented number of studies and discrimination findings. "I can't imagine how they're going to do it," says Gilbert J. Ginsburg, a Washington contracts lawyer.

Advocates of affirmative action are eager to try. But Ralph C. Thomas III, head of small-business contracts at the National Aeronautics & Space Administration, worries that the effort could strain relations with government contractors. To justify programs, "we have to dig up all the dirt" on companies' hiring practices, he says. If the ruling also emboldens more workers to file reverse-discrimination suits, the last phase of the affirmative-action war could be a nasty one. And Corporate America could get caught smack in the middle.

SOFTWARE

OH, MICROSOFT. POOR MICROSOFT

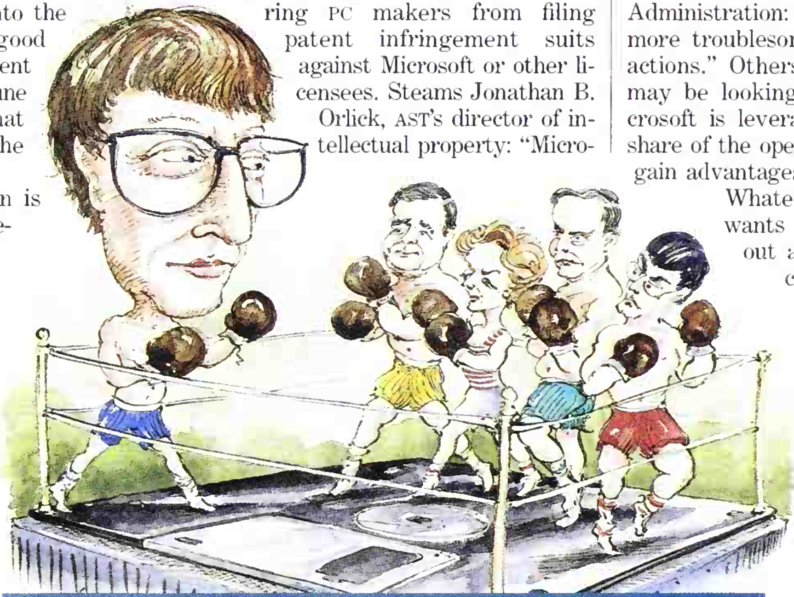
Why even Howard Stern is on its case

It has been a tough 1995 for Bill Gates. On June 8, news broke that the Justice Dept.'s antitrust czar, Anne K. Bingaman, is looking hard at Microsoft Corp.—again. Just days earlier, IBM CEO Louis V. Gerstner Jr. went on the offensive against the software developer by masterminding a merger with Lotus Development Corp. Heck, even radio host Howard Stern got into the act. "I think this is a good move for IBM," the irreverent shock jock sniped on his June 12 show. "I don't want that guy Bill Gates to rule the world."

Whether the motivation is fear, envy, or righteous desire for fair play, Microsoft is under attack. In recent weeks, it has suffered a surprising series of setbacks (table). IBM's June 11 Lotus deal may cause Microsoft real competitive problems down the road. Justice opposed Microsoft's merger with Intuit Inc., which would have made it a powerhouse in personal-finance software. Microsoft awaits word on its appeal of federal Judge Stanley Sporkin's rejection of a July, 1994, consent decree with Justice—which was widely considered a win for Microsoft.

FISHING TRIP. And now, federal trustbusters have launched a fresh investigation into the software giant's new online service, Microsoft Network—with the European Commission mulling a probe, too. The main concern: Will Microsoft gain an unfair advantage if it is allowed to include access to Microsoft Network in its Windows 95 software, due out Aug. 24? Including the two together would mean any user could subscribe to the network with a click of a mouse. Market researcher Jupiter Communications Co. estimates the move would let it sign up 200,000 subscribers per month in its first year, more than double the number if it were sold separately.

Justice, meanwhile, is widening its probe and has subpoenaed computer makers—including Compaq, Apple, IBM, Dell, and AST Research—seeking information on Microsoft's Windows 95 licensing deals. One concern: a clause barring PC makers from filing patent infringement suits against Microsoft or other licensees. Steams Jonathan B. Orlick, AST's director of intellectual property: "Microsoft is trying to set itself up as the worldwide clearinghouse of patents."



GUNNING FOR GATES

Recent events that have put Microsoft on the defensive:

JUNE 11 Lotus agrees to be acquired by IBM for $3.5 billion, creating a formidable rival to Microsoft in the market for software that lets PC users work together on a network.

JUNE 8 Word leaks that the Justice Dept. is again investigating Microsoft. At issue: whether Microsoft is breaking antitrust laws by bundling its new online service with the Windows 95 operating system it plans to introduce in August.

MAY 20 Microsoft abandons its $2.1 billion merger with Intuit after the Justice Dept. files suit blocking the deal.

Microsoft seems unperturbed. "To us, we really try and view this as a nuisance more than anything else," says Russell Siegelman, general manager for online services. The company contends that including access to Microsoft Network in Windows 95 is simply an effi-
cient way to distribute the produc

FT(WARE) IN E HEAD?

I isn't the only one to pay rly for a top program maker

GERSTNER AND MANZI: *Lotus will cost IBM more than 10 times Notes' revenues*

SETH RESNICK

o fine: IBM won. It took just one week of relatively painless negotiations. On June 11, Chairman Louis erstner Jr. cheerfully announced Big Blue would indeed acquire Lo- evelopment Corp. All it had to do keep Lotus Chairman Jim P. Manzi s a senior vice-president—at least orarily. And shell out $3.5 billion.

e deal immediately raised one nag- question on Wall Street: What justify such a lush valuation? After ll, IBM will pay $64 a share for a any whose stock had been stuck e low 30s. The price is four times s' 1994 revenues, and IBM will write ome $1.8 billion in goodwill after a ime charge.

M-Lotus isn't the only software deal ng eyebrows: Valuations in software mergers have gone through the Late last year, database maker Sy- Inc. acquired software hotshot ersoft Corp. in a deal valued at $1.3 n—roughly seven times Powersoft's ected $185 million in 1995 sales. On 25, Computer Associates International Inc. announced it would pay $1.78 n, more than three times revenues, Legent Corp., a developer of sys- management software. Last fall, osoft Corp. tried to buy Intuit Inc. 1.5 billion—almost seven times lag- revenues. The deal fell apart—not use the price was too high, but be- e Microsoft chose to avoid a pro- ed Justice Dept. antitrust probe.

hat's going on? Chalk it up to the lly changing nature of the software ess. Once brimming with small and ize companies, each with a specialty, the industry increasingly is dominated by big players—bent on getting bigger still. "What's clear is that size and scale are becoming critical," says Bruce D. Smith, a technology analyst at Morgan Stanley & Co. Software makers are finding they need a range of products to compete with Microsoft and to provide the soup-to-nuts "solutions" customers prefer.

With ambitious software makers scouring the field for potential targets, demand is driving up prices. Indeed, Sybase shares jumped 14% on June 14, to $28.50, on speculation that it had become a target of either IBM, Sun Microsystems, or Microsoft. Such deals allow big players to get new products in a hurry: It's faster and easier to buy into a new technology than to spend years and huge sums of money developing products. "It's not as much about acquiring a revenue stream as gaining quick entry into markets," says Jeffrey Tarter, publisher of *Softletter*.

That certainly was the case for IBM. Although it sells $11 billion worth of software a year, it has struggled to develop products for the PC and client/server markets. It considered spending hundreds of millions of dollars to develop its own product to compete with Lotus' Notes groupware, say insiders. But such a product would have taken years to complete—and IBM wasn't even sure it could market the package effectively.

With the Lotus acquisition, IBM gained the top spot in the highly strategic groupware segment with the stroke of a pen. It also gained a team of developers with more than a decade of experience developing Notes. However, IBM paid more than 10 times Notes' revenues. The bet is IBM can sell more of Notes than Lotus would have on its own—and that will drive the sale of all sorts of software, services, and even computers.

STRATEGIC VALUE. Ultimately, IBM's stock recovered from the initial hit it took after news of the deal. Not all the recent deals have been as well received, though. Analysts say Sybase overpaid for Powersoft, a maker of development "tools." And Charles H. Federman, chairman of investment bankers Broadview Associates, characterizes CA's buyout of Legent as simply "taking a competitor out." Charles B. Wang, CA's chief executive, says Legent speeds up his move into distributed computing. "It's a fair price," he says.

What determines "fair" value? It comes down to what is strategic. Microsoft, for example, dominates in crucial desktop operating systems and office applications "suites," and its market value is a massive $50 billion—10 times revenues. Novell Inc., the $2 billion leader in network operating systems, has a market cap of $7 billion. In strategic deals, conventional valuations may be meaningless—and IBM's entry into groupware with Lotus just may qualify. "If IBM is successful in driving Notes to dominance, then they stole the company," says Morgan Stanley's Smith. $3.5 billion may be a bargain after all.

CONSULTING

MEMO TO GEMINI: READ THIS BOOK

Has the consultant ignored its own advice?

In two frenetic weeks this spring, Gemini Consulting Co-Chairman James N. Kelly whipped through eight U.S. cities promoting his new book, *Transforming the Organization*. The consultant addressed dozens of attentive audiences on his specialty: How to run a company more effectively.

Before taking Kelly and his co-author, Gemini Senior Vice-President Francis Gouillart, up on their counsel, though, readers might be wise to examine Gemini itself. According to high-ranking insiders, recent internal company projections say 1995 global revenues for the Morristown (N.J.) firm could fall by as much as $100 million in 1995, from last year's $551 million. After earning roughly $40 million before bonuses and taxes in 1994, the sources say, Gemini could lose upwards of $25 million this year.

CLEAR OUT. Now, there are growing signs of management turmoil at Gemini. In mid-May, amid rising tensions between Gemini and Sogeti, its Paris-based parent, David Teiger, Gemini's popular former CEO and chairman and the driving force behind the firm's remarkable earlier success, was given less than a week to clear out his office, say many insiders. Meanwhile, with scores of Gemini's U.S.-based professionals sitting idle, Kelly laid off 8% of Gemini's 1,700 consultants soon after returning from his book tour.

TRANSFORMING
THE
ORGANIZATION
FRANCIS J. GOUILLART
JAMES N. KELLY

Kelly dismisses the turmoil as a "minor blip in the journey of our institution." Gemini Chief Operating Officer William Wallace insists that 1995 revenues will be "flat" rather than down. (He refuses to discuss earnings.) But interviews with more than a dozen former and current Gemini consultants paint a picture of an unhappy young company that has made many of the basic managerial mistakes its consultants are paid to help corporate leaders avoid: It expanded too quickly and too much in the mid-1990s and badly misjudged its core market.

Originally formed by Sogeti from two companies four years ago, Gemini is now the world's fifth-largest consultant, with consulting revenues topping those of better-known rivals such as Boston Consulting Group and Bain & Co., according to Gartner Group, a Stamford (Conn.) research outfit.

At first, Gemini could do no wrong. Winning clients such as Union Carbide, Monsanto, and DuPont in the early 1990s earned it a reputation as a world-class reengineering firm. As global enues grew 88% from 1991 to 199 consulting staff nearly doubled.

Over the past year or so, how Gemini has run into ous problems attrac new American clie U.S. revenues were slightly, to $260 milli 1994—and many insi say they're expecte fall sharply this year. lace denies that, and la ly blames the market Gemini's slowdown: ' U.S. became overcrov with consultants, pote clients began to deal change issues in-house, pricing became very ag sive."

But Gemini is virt alone in this v "There's been absolu no slowdown in the re neering, business-tran mation, change-man ment, or whatever-you-w to-call-it market," says James Cha chairman of consultant CSC Index. ner Group predicts that the reen ing market will more than doubl $8.7 billion, by 1999.

The real problem: Insiders and mer consultants say that Gemini h differentiated itself from its com tors. Although it has successfully he clients cut costs, the firm has strug to move beyond that niche. Expl one former staffer: "You can't weight forever." Current and for officials say that under Chief Ex tive Daniel J. Valentino, Gemini failed to convince potential clients

Practice What You Preach...

Gemini's "Four Rs" of Business Transformation, as outlined in *Transforming the Organization*

CEO VALENTINO AND CO-CHAIRMAN KELLY: A "MINOR BLIP"?

WHAT GEMINI SAYS	WHAT GEMINI DID
"**Reframing** opens the corporate mind and infuses it with new visions and a new resolve."	Gemini's failure to develop a viable strategy to attract new clients is causing earnings and revenues to fall.
"**Restructuring** is a girding of the corporate loins, getting the company to achieve a competitive level of performance."	Despite booming demand for reengineering advice, Gemini's billings tailed off, and competitors grabbed large contracts.
"**Revitalization** is about igniting growth by linking the corporate body to the environment."	Gemini's strategists failed to convince potential clients that the firm could help boost their revenues.
"**Renewal** deals with the people side of the transformation, and with the spirit of the company. It is about investing individuals with new skills and new purposes, thus allowing the company to regenerate itself."	As morale sank because of declining revenues—and fears that bonuses would fall—management was unable to stop defections. As problems deepened, Gemini abruptly cut 8% of its consulting staff.

Decision

"Our research is designed to improve the chances of clients who leave little to chance."

organ research managers, New York

If you want high quality investment performance, you need high quality information. Few firms support their clients with more hard fact and analytical firepower than J.P. Morgan. You get rigorous economic, industry, and company analysis from such publications as *Global Markets*, *Global Data Watch*, *Emerging Markets Outlook*, and *Portfolio Manager's Summary.* You get the tools to assess the value at risk in your portfolio with RiskMetrics™, a fully transparent measurement system. You get authoritative performance benchmarks and trend indicators from our mortgage, commodity, currency, government bond, and emerging markets indices. You get views based on economic fundamentals, not short-lived fashions. So if you prefer to rely on fact rather than fortune, you'll find that our research provides a decided advantage.

JPMorgan

it can implement growth strategies.

Certainly, Valentino has tried. Gemini has repositioned itself not just as a cost-oriented reengineering firm but as a "business transformation" expert. But the shift hasn't caught on. Notes a current Gemini officer: "You don't hear a lot of clients say, 'Whew, I need to be transformed.'"

Valentino and Wallace heatedly deny those charges. Gemini is "actually winning in the marketplace, since it can hit firms with both cost-cutting and growth," says Wallace. But potential clients aren't convinced. One major oil refiner that recently entertained proposals for a $1 million-plus consulting project termed Gemini's bid, "rigid, expensive, and unoriginal."

Teiger's hasty departure—he passed the CEO's title to Valentino in 1992—has done little to help morale. Sogeti Vice-Chairman Michel Jalabert denies that Teiger—who remains chairman emeritus—was forced out. Meanw
current and former partners say

TRADE

BUY OUR CAR SEATS, JAPAN, OR IT'S WAR

The real beef is over auto parts, but suppliers lack solidarity

MADE WHERE? *Californians working on Toyota frames*

For weeks, Japanese and American officials have been exchanging fightin' words in their trade spat over autos. Now, unless negotiators unexpectedly patch together a deal in a last-ditch round of talks in Geneva on June 22 and 23, Washington will impose stinging tariffs on 13 Japanese luxury models in late June. Japanese carmakers and their U.S. dealers—facing layoffs and possibly billions in lost sales—are fuming. But the fireworks obscure the core issue in the dispute. Says Economic Strategy Institute President Clyde V. Prestowitz Jr.: "This is really a parts issue, not a car issue."

That's right: The U.S. is about to enter a trade war over car seats and shock absorbers. Moreover, U.S. parts makers, predictably, are divided about the wisdom of the government's tactic. Some, like Sean Traynor, CEO of Garden State Tanning Inc. in King of Prussia, Pa., say they would rather the U.S. stayed out of their business. The company laid off 650 workers when Toyota Motor's Lexus division, citing the looming tariffs, canceled its leather upholstery contracts. Other suppliers applaud Clinton's stance, arguing that in the long run it will mean more business. "I think the U.S. government is doing the right thing," says Borg Warner Automotive Inc. Chief Executive John F. Fiedler.

Why are auto parts the central issue? The Clinton Administration knows it can do little to ensure higher U.S. car sales in Japan until the Big Three produce more of the right-hand-drive models that sell there. But that doesn't apply to U.S. parts. Even though U.S. companies build plenty of components that easily could be used in Japanese cars, U.S. imports account for less than 2% of Japan's $107 billion parts market for new cars and only slightly more of its $23.3 billion aftermarket. Especially given the dollar's fall vs. the yen, says Kaiser Aluminum & Chemical Vice-President Robert E. Cole, "we ought to be getting more business than we are."

The Administration could get a quick win by forcing open the Japanese afterma

SCIENCE

DARWINISM AND THE INTERNET

Why scientific journals could go the way of the pterodactyl

HARNAD: *He and other scientists say journals are too slow*

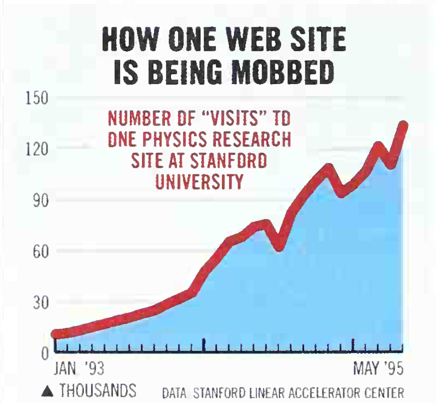
Stevan Harnad does not look like a revolutionary. But this distinguished researcher and director of the cognitive sciences center at Britain's University of Southampton admits he's urging the virtual overthrow of one of science's most cherished institutions: print journals. With Internet usage exploding, Harnad and a growing legion of scientists say the venerable scientific journals are just too slow. They are urging scientists to post research papers electronically first, and only then submit them to journals.

It's a radical notion that is being advanced at conferences and, of course, on the Net. If it succeeds, it could dramatically change—and perhaps weaken—the traditional process by which refereed periodicals vet research and shape entire fields of science.

ON GUARD. Not surprisingly, the publications already are pulling up the drawbridge. On June 22, an editorial in the *New England Journal of Medicine* will lay out its stance. *NEJM* will "apply the same rules to Internet that apply to publishing anywhere else," says editor Jerome P. Kassirer. Translation: It won't consider articles previously published, including on the Internet.

This is no small dispute. The development of electronic publishing is rocking the $4 billion technical publications industry, which includes roughly 50,000 peer-reviewed serials. Journals want to retain their prestige and franchises, yet economics—and agitation by scientists—are pushing them toward electronic formats. "Costs are up, postage is up, and ad revenues are down," notes Larry E. Joyce, president of publishing and multimedia for the American Medical Assn. "You can't grow enough new revenue sources. We've got to look at electronics as the future."

There already are 150 online-only scientific journals, and dozens of publications now exist in both print and electronic forms. In the coming weeks, some of the nation's best-known journals are going electronic. On June 23, *Science* will post its first Web page, offering a table of contents to the current issue, an editorial, and a discussion forum for scientists. Later, it hopes to add other features not found in the magazine. By August, the *Journal of the American Medical Assn.* will electronically publish abstracts of current articles and archived back issues. Britain's Royal Society of Chemistry is developing an electronic journal that will let readers rotate three-dimensional graphics of molecules on their computer screens—a valuable tool for chemists and biologists.



DATA: STANFORD LINEAR ACCELERATOR CENTER

But the trend that's raising hackl the spread of "preprint" Internet s ers—there are about 70 up so far- fering scientific papers that have yet been formally published. Pione by physicists, the preprints' speedy semination of ideas is being adopte scientists in other fields. Patricia K a librarian at the Stanford Linear A erator Center (SLAC) in Palo Alto, C says "the influence o Web on the physics munity has been nomenal," decrea travel and increa collaboration. Mon "hits," or requests SLAC preprint data f physicists, have gr about sixfold since (chart).

BUM STEERS. What ries some scientist the potential for the lication of flawed search if the vetting cess used by the jou is bypassed. Nobel reate and Rockefe University genet Joshua Lederberg tinely posts works progress on his own page, but he wor that no-holds-barred publishing could resu "low credibility, ins regurgitation." Jour such as *Science* and *NEJM* have int and sometimes protracted vetting pr dures that reject 90% of the arti submitted. Losing such procedures not be so bad in some disciplines- error in a physics string theory eventually be found and corrected. in medicine, wide and rapid dissem tion of bad advice could literally deadly.

Still, scientists such as Los Ala physicist Paul Ginsparg contend peer review can be just as rigorous unbiased—and far more efficient—w done electronically. Indeed, Harnad's view, *Psycoloquy*, is both electronic refereed. And many editors of tr tional journals admit they'll have adapt. "We've only begun to scratch surface of how much more effecti we can communicate," says Floyd Bloom, editor of *Science*. The way sc tific use of the Net is growing, he other journal editors will soon themselves scratching pretty hard.

MICHELIN DRIVING TIRE SCIENCE **MICHELIN** DRIVING TIRE S

ENERGY™

MXV4™ from Michelin.

IT'S SCIENCE

that goes beyond magic.

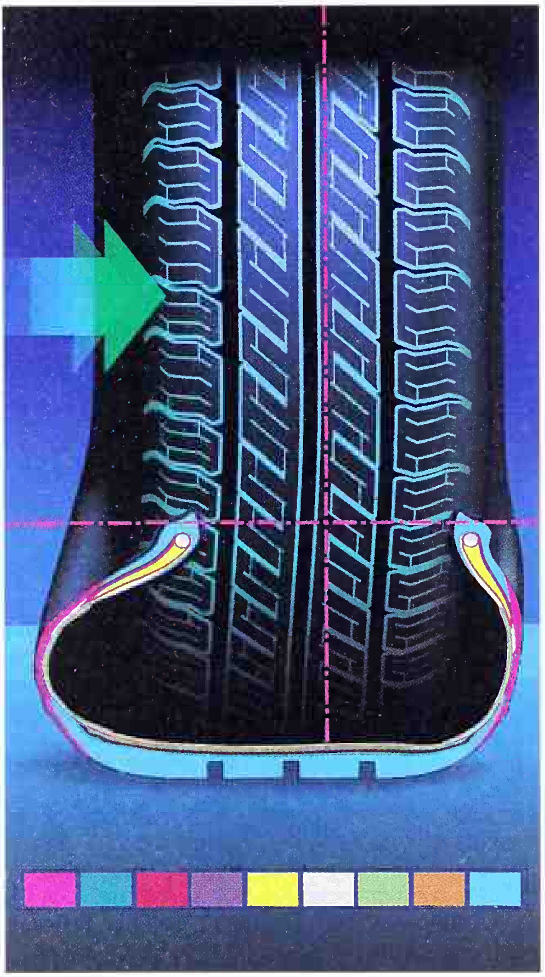
ELIN DRIVING TIRE SCIENCE MICHELIN DRIVING TIRE SCIENCE

INTRODUCING THE ENERGY™ MXV4™ WITH RADIAL XSE TECHNOLOGY.

ur new Energy MXV4 luxury performance touring tire is the first application of adial XSE Technology—our name for a whole set of ichelin breakthroughs in tire making. What do these breakthroughs mean to you? Better tires. So much better, it's as if we'd rewritten the sic principles of tire-making science. (Which we have.)

BUT THERE'S MORE TO IT THAN THAT. LIKE PERFORMANCE. HANDLING. COMFORT.

The advances in the Energy MXV4 tire go even beyond ial XSE Technology. You see, in addition to being a rolling monstration of this important akthrough, we also wanted the Energy MXV4 to offer outstanding performance, dling and comfort. So we've given it a rounded crown o optimize steering precision and forgiveness. Plus our lusive Bead Tension Structure,™ which promotes crisp steering response without sacrificing comfort.



DRAMATICALLY IMPROVED TRACTION IN RAIN AND SNOW. INCREASED FUEL EFFICIENCY. SAME AMAZING TREAD LIFE.

Radial XSE Technology's advances in compounding and casing design help us create tires with combinations of characteristics that you just couldn't get otherwise. For example, in the Energy MXV4, they produce great traction in rain and snow. *And* lower rolling resistance for better fuel efficiency. *And* the long tread life you've come to expect from Michelin.

TIRES THAT KEEP UP WITH THE BEST CARS IN THE WORLD.

Acura. BMW. Mercedes-Benz. Chrysler. Dodge. Honda. Lincoln. Mitsubishi. All of these great carmakers have chosen the Energy MXV4 for their advanced luxury performance touring cars. Which strongly suggests that it's equally perfect for yours. The Energy™ MXV4™ radial. The latest breakthrough from the technological wizards at Michelin.

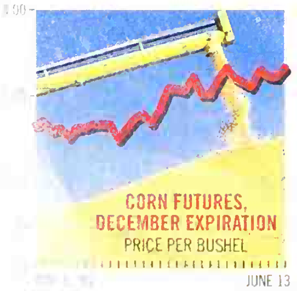
CARVING ITT INTO THREE SLICES

THE DEAL WASN'T A COMPLETE surprise: ITT's breakup had been rumored for at least a year. On June 13, though, ITT finally announced the plan. The conglomerate will be split into three publicly owned companies later this year. CEO Rand Araskog will head the new ITT Corp.—which will house Sheraton hotels, Caesars World casinos, and the information services businesses. What's left: ITT Hartford, the insurance business, and ITT Industries, which will include automotive, defense, electronics, and fluid technologies operations. "The big winners are the shareholders, the bondholders, and the employees," says CFO Robert Bowman. In fact, ITT shares jumped 8%.

CLOSING BELL

CORN SOUP

Missouri farmer Roger Stock usually cheers a rise in corn prices. But this year, floods swamped his 1,200-acre farm. He has plenty of soggy company: On June 12, the Agriculture Dept. cut its corn-production estimate by 8%, to 7.9 billion bushels. The forecast sent December corn futures up 2%, to $2.85 a bushel; they were $2.62 a month ago. That's good news for farmers in states that escaped the rains. Notes Stock: "I guess they can go buy themselves a new pickup."



BLOOMBERG FINANCIAL MARKETS

MESA'S GAS FIELD GOES BEGGING

BOONE PICKENS' MESA HAS $1.2 billion of debt clogging up its books. It also has its rich Hugoton gas field in Kansas. Solution: Sell the field, settle the debt. Problem: No one will pay what Pickens wants. On June 12, Mesa announced it had received no acceptable offers; the highest was $750 million. Now, the company may divvy the property up to attract smaller buyers. It's also reviewing "other financing alternatives," such as debt restructuring. Mesa has enough cash to make debt payments of more than $210 million during the next year, but the squeeze looms in 1998, when $654 million is due.

GRACE SLOUGHS OFF ITS MEDICAL UNIT

CONSTANTINE HAMPERS LOST out again. W. R. Grace opted on June 14 to spin off National Medical Care, its kidney-dialysis and home-health-care subsidiary. In so doing, it spurned a $3.5 billion buyout proposal by Hampers, NMC's chairman, who already lost a bid to head Grace itself. The company also passed over an offer from rival Vivra. Instead, NMC will pay Grace a $1.4 billion dividend, which Grace will use to pay down debt. Hampers and NMC management are expected to remain at the new company: They got stock options worth 6.6% of NMC's shares.

HEADLINER: LARRY SUMMERS

RUBIN'S NEW RIGHT ARM

At MIT and then Harvard, Lawrence Summers, 40, was known for the scope of his economic work: unemployment, taxation, and the efficiency of financial markets. Now, Summers is getting a policy job to match.

On June 13, Summers was nominated to replace retiring Deputy Treasury Secretary Frank Newman. In most Cabinet departments, the No. 2 person runs the bureaucracy. That's not Summers' plan. He intends to hang on to much of his former portfolio as Treasury's top international representative. With his new job, he'll also be involved in budget, tax, and financial policy—all familiar from his pre-Washington life.

Back then, Summers called for boosting savings and creat- ing incentives fo private investment. Now, he'l have to be mor circumspect: Such favorite no- tions as a tax cred it for capital investments won't fare well in a White House hell-bent on reelection. But Summers is tight with Treasury Secretary Robert Rubin, and his interest in the economic aspects of social issues chime with Rubin's strong social conscience. Watch for Summers to spread his wings.

A DREAM DEAL FOR BRONFMAN

GIVE EDGAR BRONFMAN JR. credit for getting back on the horse. Just days after failing to land superagent Michael Ovitz to head Seagram's new MCA entertainment unit, CEO Bronfman and DreamWorks SKG studio signed a deal Bronfman estimates could be worth $1 billion during the next decade. MCA gets a half-interest in two record labels being created by DreamWorks' David Geffen and the overseas and video distribution rights to films made by the studio's Steven Spielberg and Jeffrey Katzenberg. MCA also will pay $54 million for 2% of DreamWorks.

BANKERS TRUST TAKES ITS LUMPS

Washington Outlook

EDITED BY OWEN ULLMANN

BOB DOLE'S DAYS IN THE SUN

Look closely at the granite features of Senate Majority Leader Bob Dole these days, and you'll see the faint contours of a smile. Small wonder. Prognosticators figured June would be Dole's Hell Month, a time when the moderate Senate produced a budget that diluted the House GOP's Contract With America. The predicted result: fresh doubts about the Kansas Republican's Presidential bid and a conservative groundswell for Texas Senator Phil Gramm.

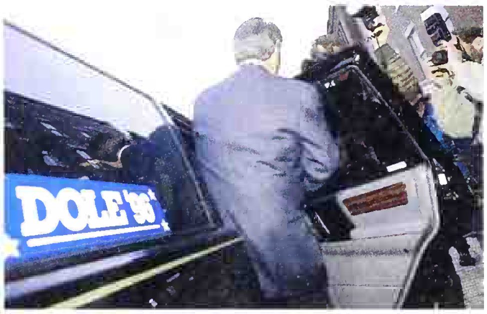
Instead, Dole is basking in the warm glow of what wags call "the Grammless Summer." By maneuvering to keep his rival off the conference panel that's shaping a consensus spending blueprint with the House, Dole has denied Gramm the spotlight. True, the Senate flinched on key Contract items like the House's big tax cut and radical legal reform. But Gramm has failed to turn Dole's pragmatism into a negative with hardliners. "Republicans are now more focused on deficit reduction than tax cuts," says GOP consultant Mark Goodin. "That helps Dole."

"ALL THE RIGHT MOVES." What's more, Dole's calculated shifts to the right on issues such as media morality and affirmative action have weakened Gramm's support among conservative activists—at some cost to Dole's credibility. Another unexpected plus for Dole: the late-starting campaign of Pete Wilson. The California governor once threatened to cut deeply into Dole's moderate support, but a throat operation has kept him out of sight and sound.

To appreciate Dole's surge, consider a June 5-6 Gallup Poll taken for CNN/USA *Today*. Dole led the GOP Presidential pack with 45%, compared with Gramm's 13%. The survey showed Dole beating President Clinton 50% to 46%. The GOP front-runner also holds a huge lead in New Hampshire, where Gramm has sunk to third place, behind commentator Pat Buchanan.

Of course, it would be folly to assume from early polls that Dole has the race sewn up. Cautions one former aide to s eral Republican Presidents: "We still don't know if he' Reagan or a Muskie." But pros who have seen Dole self- struct in previous White House bids are impressed. "H making all the right moves," says a top GOP strategist.

Indeed, Dole is doing so well that his chief worry m be . . . Dole. The moderate has made some expedient conv sions that could haunt him. For instance, the bitter foe supply-side economics has suddenly embraced calls for a t cut. Likewise, Dole was never known for criticizing popu culture, yet in June he took a Dan Quayle-like blast at Ho wood "depravity."



HAPPY TIMES: *But flip-flops may haunt him*

Dole also tried to woo National R Assn. members by vowing to overtu Clinton's 1994 assault-weapon ban. A despite past support for affirmative tion, he now favors eliminating pre rential-hiring programs. "I don't th this is a killer issue for us," scoffs D pollster Bill McInturff. "Our answer 'That was yesterday, this is today. Le talk about America's future.'"

Privately, some Dole aides fret t he'll be hammered by GOP oppone for recent policy shifts, then have square the New Dole with the Old Dole against Democra critics during the general election. "Clearly, Dole has f flopped on issues," concedes one adviser. "That makes hi lot like George Bush—a man without a vision."

Still, the prospects of debating Bill Clinton over flip-fl doesn't exactly make Dole tremble. "Dole's position on thi like affirmative action has evolved," says Bill Lacy, Dole's d uty campaign chairman. "But so have other Republica The main thing is, he has proven that he will not implo and he's alone [among the GOP field] in the Presidential Cir We'll take that for now."

By Lee Walcz

CAPITAL WRAPUP

DEMOCRATS' TOP FUND-RAISER

►Direct-mail donations are pouring into the Democratic National Committee, thanks to . . . Newt Gingrich. Party fund-raising appeals portray the House Speaker as an extremist out to gut Medicare, student loans, and other middle-class benefits. The result, says DNC Co-Chairman Donald L. Fowler: a record 131,000 new donors in the first five months of 1995, up from 90,000 for all of 1994. The gifts—averaging $20—have helped the party make a dent in its debt, which stood at $4 million at the start of the year.

GOP MODERATES BOW OUT?

►Conservatives are rejoicing because three veteran GOP moderates may retire from the Senate next year. Capitol Hill sources say they are Mark O. Hatfield of Oregon, who blocked passage of a balanced-budget amendment; Nancy L. Kassebaum of Kansas, who has long talked of stepping down; and William S. Cohen of Maine, who is openly unhappy with the Senate's sharp shift to the right.

CONSERVING CYBERSPACE

►Conservatives who gripe that liber als control TV, vow to dominate cybe space. On June 29, the Heritage Foundation and *National Review* magazine will launch Town Hall on the Internet, a conclave for conserva tive groups from Americans for Tax Reform to the Family Research Council. Each cybercon will post its own multimedia home page on the World Wide Web. Net surfers will be able to tap into policy analysis, daily events, and political forums.

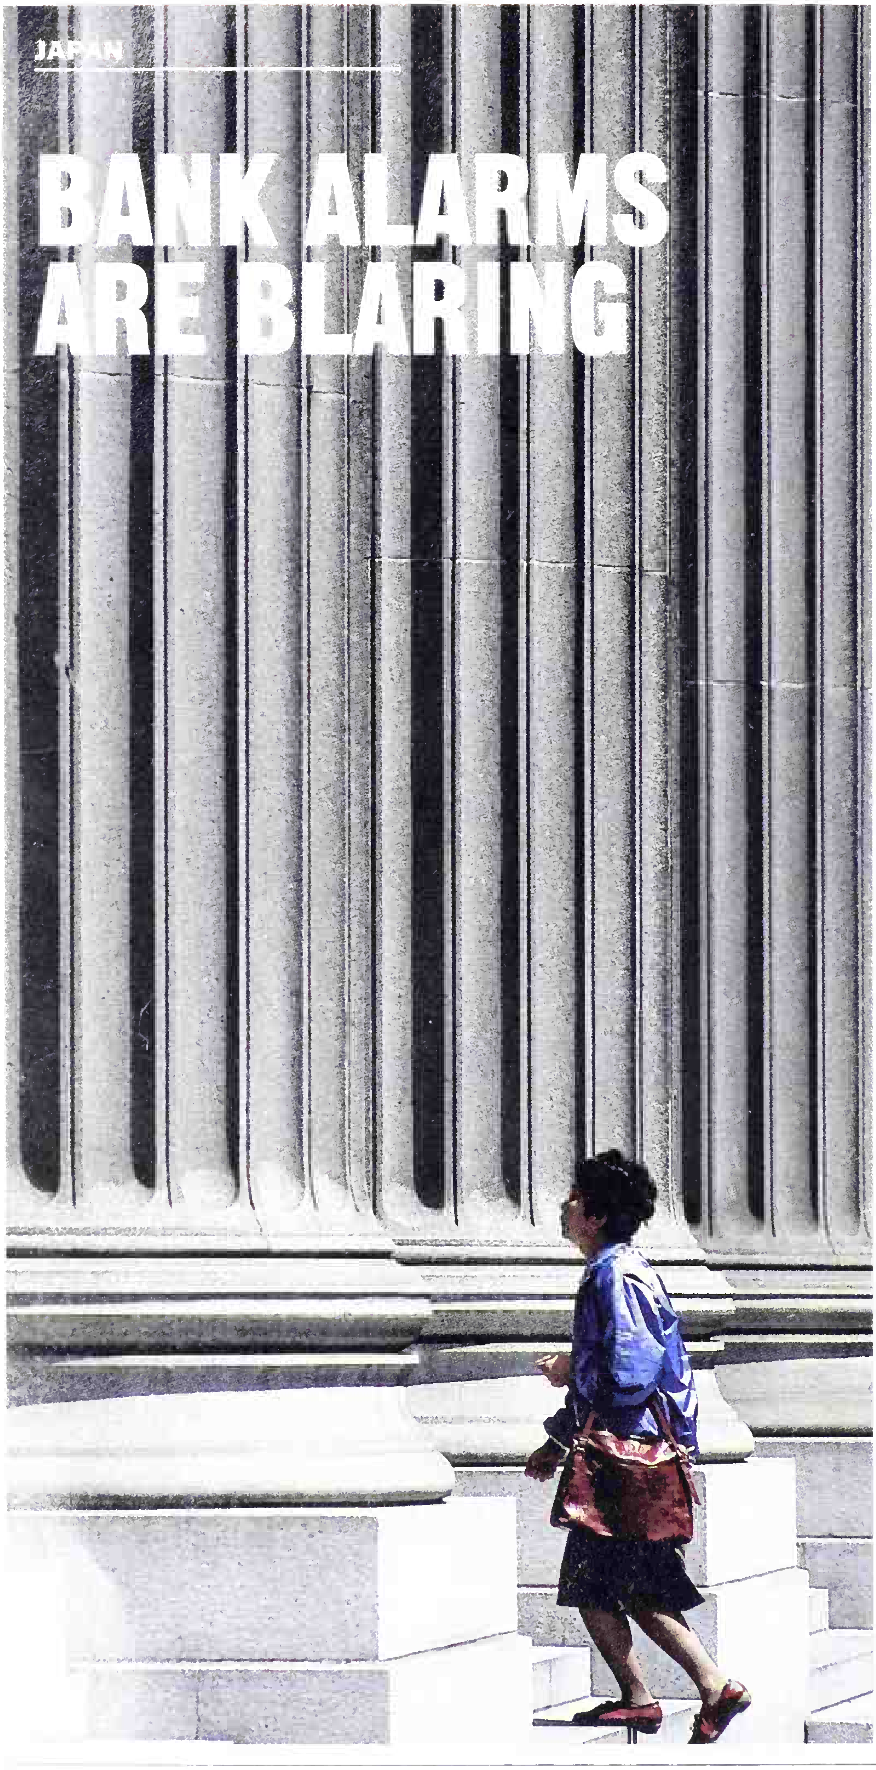
JAPAN

BANK ALARMS ARE BLARING



Tokyo may let the stock market crash to shock the public into supporting a massive bank rescue

Across Japan's banking terrain, la mines are exploding. Deposit are yanking their money out weakened lenders. The $155 lion housing-loan industry—the Ja nese version of America's thrifts—is tually insolvent. And the plunging st market, off 27% this year and 65% si its 1989 peak, has erased the value equity portfolios that big banks ho would help defray the cost of write- on huge quantities of bad and restr tured loans. Even the Ministry of nance (MOF), which spent years cloak the financial system's fragility, is visi more concerned. Among smaller pl ers, at least, "we will see a few ba failures," says Fuji Research Instit Chairman Toru Kisukawa.

So, are MOF's influential bureaucr finally dipping into Japan's $19.6 trill in financial assets to pay for a mass bailout of the nation's troubled lende Well, sort of. An estimated $1 trillion bad or barely performing loans— equivalent of 20% of Japanese gross mestic product—now burden lende books. And as the banking crisis deepened, the possible framework c far-reaching, government-financed p gram to refloat, merge, or restruct scores of troubled banks and hous lenders is starting to emerge.

SELLING WAVE. The rescue effort co involve new tax breaks on loan wr downs, direct infusions of governm cash, and the sale of at least $85 bill in government bonds to finance rel But the plan apparently isn't ready prime time. MOF's June 8 announcem of an emergency banking package, wh drawing parallels between the curr financial mess and the great Showa ba ing panic of the late 1920s, in the contained little substance. "They've nothing concrete on the table," says disgruntled senior banking analyst.

MOF's failure to come up with a f plan touched off a selling wave among cal life insurers and other investors, v hammered the Nikkei stock avera down 7%. That left the Nikkei stock erage below 15,000 for the first time si 1992. It's no wonder they're selling. M Vice-Minister Kyosuke Shinozawa t

CRUMBLING PILLARS: *Some smaller banks may soon go under*

iament on June 12 that the ministry
ld not use Postal Savings System
public pension money to boost the
k market—as it did during 1993—to
banks time to clean up their act.
OF is reluctant to provide further

ic doldrums. That's why analysts
MOF may be ready to let the stock
et crash to convince the public once
for all to support a publicly funded
ing rescue.
be sure, a stock market collapse
ld pose dangers for bourses world-
if Japanese investors start dump-
assets overseas to cover mounting

losses at home. A collapse would also breed more price deflation, even slower growth, and new pressures on the banking system if it were not followed quickly by a financial aid package.

Well aware of these risks, MOF may have to come up with $100 billion in aid to get its rescue plan going, estimates UBS Securities analyst Yukiko Ohara. Japan can certainly afford that much. The Postal Savings System alone has $2.36 trillion in deposits, while the Bank of Japan's cash reserves and government bond holdings exceed $747 billion. What's more, as the economy has slowed, worried consumers have been salting away more of their incomes. The savings rate among salaried households has jumped to 30% recently. That's twice the rate for the nation as a whole.

But tapping public savings won't be easy. Raiding the Postal Savings System would cause a public stir unless the government were able to win parliamentary approval for such a drastic move. And much of Japan's private savings are already tied up in stocks and bonds. Unless the Bank of Japan made certain that short-term rates stayed low, selling large sums of new government debt would probably push long-term interest rates up and tank the stock and bond markets. Indeed, analysts are betting that the central bank will have to start printing more money. It may cut its discount rate, already at a record-low 1%. And under legislation passed during a stock market crash three decades ago, the central bank has carte blanche to turn on its money spigot to help lenders.

In fact, financial authorities are preparing for some heavy lifting. Their first line of attack will be to shore up housing-loan companies—called *jusen*—which were set up in the 1970s to supply credit to homeowners. After a disastrous lending spree to golf-course and condo developers in the late 1980s, roughly 50% of the industry's $136 billion loan portfolio is now under water, figures J. Brian Waterhouse, a senior analyst with James Capel Pacific Ltd.

UNTHINKABLE. Any failures among the eight *jusen* would damage banks that are major shareholders and lenders to the industry. They include Sanwa Bank, Sumitomo Bank, Dai-Ichi Kangyo Bank, and Long-Term Credit Bank of Japan. Japan's 2,700 agricultural cooperatives have themselves lent $65 billion to *jusen*. The prospect of Japanese farmers, a big political constituency, losing their shirts is unthinkable in Japan. At least $40 billion in public money will be needed just to stabilize this sector, says Baring Securities (Japan) Ltd. analyst James P. Fiorillo. Bankers figure that bad co-op debts would be transferred to a vehicle like the Resolution Trust Corp. that would be funded by public money and Bank of Japan loans. Loans with any possible value might be repackaged into government-guaranteed bonds to be sold to the public.

The real trick for financial mandarins will be restarting the moribund real estate market, where commercial property prices have fallen 50% since 1991. But until Japanese leaders summon the will and the cash to get serious, the property market and the entire financial system will continue to sink. Unless a rescue plan gels soon, Japanese lenders, and perhaps global stock markets as well, could face some scary times.

By Brian Bremner in Tokyo

THE PRESSURE POINTS IN JAPAN'S FINANCIAL SYSTEM

USING LOAN CORPORATIONS With funding from banks and
icultural cooperatives, these companies—called *jusen*—made
36 billion in real estate loans. Half those loans are now unrecov-
ble. As many as seven of the eight housing loan companies are
uggling to survive, and the co-ops will need $40 billion to stay
at. The money could come from government bond sales.

RGE BANKS The top 21 lenders are lobbying the Ministry of
ance for huge tax breaks on loan-loss provisions. They also want
-interest loans from the Bank of Japan to cover the cost of tak-
over weaker players.

ALL BANKS Analysts figure $100 billion is needed to shore
the capital base of smaller banks in danger of failing. Funds
uld come from the government and Bank of Japan.

AL ESTATE With commercial real estate prices down 50%
m their 1991 peak, the government may have to start buying
d to restart the property market.

COMMENTARY

By Robert Neff

NEEDED: A WHOLE NEW WAY OF CONFRONTING JAPAN

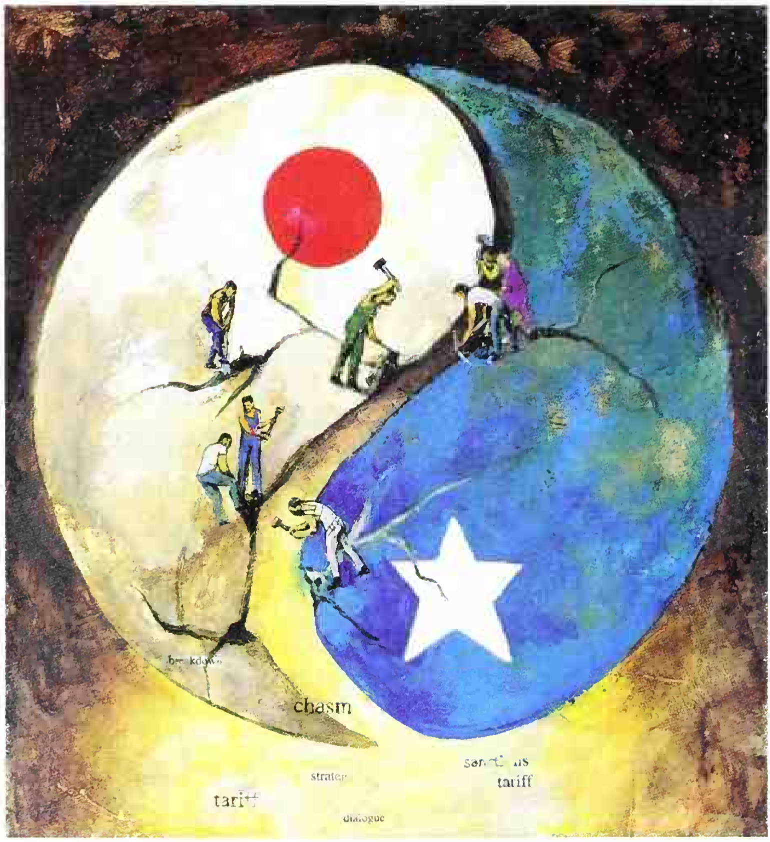
With June 28 fast approaching, the U. S. and Japan appear headed for the worst trade collision in postwar history. On that date, the Clinton Administration has vowed to slap $5.9 billion in tariffs on Japanese luxury-car imports unless Japan throws open its doors to U. S. autos and auto parts. Unlike past standoffs, genuine compromise looks unlikely.

Fifty years after the end of World War II, ugly recriminations, if not an outright trade war, could ensue. "There won't be a deal largely because it has become such an emotional political issue on both sides," says Stephen Usher, director of research at Kleinwort Benson International Inc. in Tokyo.

What has brought these two allies to such an acrimonious impasse? Japan's intractable $60 billion trade surplus with the U. S., at least two-thirds auto-related, is the most proximate cause. But more important is a fundamental shift in how the two countries view each other. Younger generations of a more nationalistic bent are in charge in both Washington and Tokyo, and they are less inclined toward compromise than their elders.

REVISIONIST HISTORY. To understand the roots of this conflict, go back to August, 1989, when BUSINESS WEEK ran a cover story called "Rethinking Japan." In that story, this writer applied the term "revisionism" to a new Western analysis of Japan. I described the revisionists as deviating from orthodox thinking, which held that Japan was only marginally different from the West and would eventually "converge" toward an Anglo-Saxon model. The revisionists argued otherwise, saying that until the U. S. understood just how different Japan was, conventional trade negotiations would never work. Although critical of Japan, the revisionists weren't your typical bashers. They knew and cared a lot about the country.

Perhaps because it suddenly had a name, revisionism's influence spread quickly. Indeed, the joke in Washington is that revisionism now is orthodoxy. That's largely because of its embrace by the Clinton Administration. From former Council of Economic Advisers Chairman Laura D'Andrea Tyson on down, Clinton's economic team started with the premise that Japan manages its economy differently and espouses a different form of capitalism.



But the Clintonite tactics aren't in keeping with the original spirit of revisionism. Why? Because they appear driven by domestic political pressures rather than by any deep knowledge of Japan. If they understood the economics and politics of today's Japan, they would know that tariffs on luxury cars simply aren't going to achieve a dramatic opening of the Japanese market. Despite the undeniable pain Japanese carmakers will suffer, they can survive and adjust. "It will not be a death blow by any means," says Kleinwort's Usher. So in a sense, Washington has taken on the intellectual trappings of revisionism to threaten a one-shot trade action of a very conventional sort.

What some revisionists counsel instead of the tariff club is a subtler, broader approach: Deal with Japanese company officials in the U. S., selectively yank foreign trade-zone privileges, and push more promising trade cases such as Eastman Kodak Co.'s claim that Japan's film market is closed. The U. S. government must be more coordinated and more targeted. In short, the U. S. has to devise a long-term, systematic means of competing with Japan, rather than expecting the Japanese system to suddenly break. "Rather than negotiate, the U. S. should change the environment," says Chalmers Johnson, president of the Japan Policy Research Institute in California and so-called godfather of the revisionists.

Issuing ultimatums to Japan's imperious bureaucrats is a waste of time and even counterproductive. Indeed, several close observers of the auto talks say Japan's carmakers lean toward cutting a "voluntary" agreement with the U. S. to buy

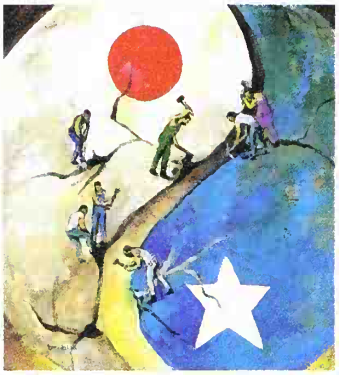
more American parts, but an increasingly militant Ministry of International Trade & Industry is vetoing any such deal.

It's this rise of a new breed of Japanese bureaucrat that's changing that nation's willingness to deal with the U. S. This is especially so at a time when Japanese politics is in disarray and bureaucrats call more of the shots. Senior bureaucratic posts are gradually being vacated by men who were cowed by America's World War II victory and beholden to its generous postwar treatment of Japan. Their posts are going to younger, outspoken nationalists, who don't want to kowtow to the U. S.



“Revisionist” thinkers now believe the U.S. has to devise a long-term, systematic means of competing with Japan, rather than expecting the Japanese system to change suddenly under threat of trade sanctions

Two impending promotions to key economic-relations posts have tongues wagging. Within the next few weeks, Kazuo Ogura, Japan's ambassador to Vietnam, will become deputy foreign minister for economic relations, and Eisuke Sakakibara, author of *Beyond Capitalism*, will move up to the position of director-general of the International Finance Bureau at the Ministry of Finance.

One senior U. S. official says Ogura's and Sakakibara's ascendance will result in a government that is “more contentious, more argumentative, less willing to look at Japan's own policies and own degree of market openness in a balanced way.”

“BEGGING DIPLOMACY.” Ogura, 57, and Sakakibara, 54, have unusual backgrounds as senior bureaucrats because they've written extensively and forthrightly under their own names. Ogura made waves with an article in 1991 that ridiculed America's demands for Japan's financial backing of the gulf war as “Begging Diplomacy.” He went on to write: “As soon as it's said that Japan and the U. S. share common values, Americans expect Japanese are becoming American. They think Japanese will and must act like Americans. But Japanese don't see it that way.”

Sakakibara's *Beyond Capitalism* [illegible] argued that special features of Japan's “noncapitalistic market economy” should be preserved. In this sense, Sakakibara acknowledges the revisionists' line that Japan's system is indeed different.

Uncharacteristic of Japanese officials, both men love debate. That may not be all bad for the U. S. “For the first time the Japanese will start talking turkey,” says E. Barry Keehn, an expert on Japan's bureaucracy at Cambridge University. “They won't be shoving things under the carpet so much.”

Ogura and Sakakibara echo this line. “I think it important that the decision-making process of diplomacy...should be as transparent as possible,” Ogura tells BUSINESS WEEK. “It is regrettable if my reputation is partly due to my un-Japanese outspokenness.” Adds Sakakibara, who earned a PhD in economics at the University of Michigan and later taught at Harvard: “I learned to become assertive and aggressive in the U. S.” More Oguras and Sakakibaras are waiting in the wings.

These men take exception with outside observers who argue that Japan must “change” to more closely resemble other advanced economies. Those outsiders say Japan must do that because the world's economies are being drawn into closer contact. What's more, they look at pressures inside Japan. The Japanese people don't fully share in the nation's wealth, its financial system is on the ropes, and its political leadership is “pre-modern,” in the words of one Japanese scholar. In these areas, Japan almost certainly will change, though slowly. “The Japanese change less quickly than just about anyone,” says Frank Gibney, president of the Pacific Basin Institute in California.

DIFFERENT STROKES. But that doesn't mean Japan will completely converge with other systems. The Japanese have plenty to be proud of. Poverty barely exists. Income is more equally distributed than almost anywhere else in the world. The country still has huge pools of savings and massive trade surpluses. Many emerging economies are adopting Japan's developmental model. “We are different,” says Yotaro Kobayashi, president of Fuji Xerox Co. “It's absolutely wrong to say we'll all eventually behave and think in the same way.”

So until autos, the Kodak case, a mounting civil aviation dispute, and other issues get solved, the two new political forces in Washington and Tokyo mean relations could get even rockier. All of which suggests the need for an evolution of revisionism from mere analysis to the creation of new prescriptions to supplant tired, orthodox tactics.

What might those be? Making sure that U. S. Administrations include senior officials who understand Japan and its language, nurturing an institutional history of U. S.-Japan relations to avoid getting fooled, and becoming much smarter at selling the Japanese people on how they can benefit from U. S. demands. Commonsensical as these ideas may sound, no U. S. Administration has gotten serious about any of them. In so doing, revisionism could help set the stage for quiet, successful U. S. engagement with Japan, instead of pointless trade wars.

Neff is completing an 18-year career with BUSINESS WEEK *and McGraw-Hill to become executive director of the American Chamber of Commerce of Japan.*

CUBA

MEET FIDEL'S FAVORITE CAPITALIST

Sherritt's Ian Delaney is doing big–and risky–deals in Cuba

Ian W. Delaney, chairman of Canada's Sherritt Inc., is probably the only North American CEO who displays in his office a photo of his family with Cuban leader Fidel Castro. It's a fitting tribute to a relationship so close that Delaney is arguably Castro's best-loved capitalist. "Sherritt does business all over the world, but Cuba is my favorite," says Delaney, 51, adding that he is always warmly welcomed in Castro's offices near the Plaza de la Revolución.

THE AUDACIOUS IAN DELANEY

CURRENT JOB Chairman and CEO of Sherritt Inc.

BACKGROUND Born in Winnipeg, Man., in 1943. Finished high school but dropped out of university to go into business.

CAREER PATH Trained as an investment banker, he became president of Merrill Lynch Canada and later CEO of holding company Horsham Corp. He left in 1990 to wage a proxy fight to win control of Sherritt.

MOST DARING MOVE Plunged into Cuba in 1991, defying U.S. trade embargo. Sherritt is Cuba's largest foreign investor and largest oil producer.

No wonder. Since Delaney's first meeting with Castro in 1991, Sherritt has become Cuba's largest foreign investor and a linchpin in Castro's plans to rebuild his economy. Now Cuba's largest oil producer, Sherritt is exploring for "very large" oil reserves there, Delaney says. In December, he also set up a joint venture with Cuba's General Nickel Co. to mine, refine, and market the island's rich nickel and cobalt reserves. The venture, which earned $14.3 million on sales of $131 million in its first quarter of operation, could become "a world leader," Delaney says.

Talk like that has landed Sherritt in the center of Washington's efforts to tighten the noose on Castro. The U.S. Treasury Dept. is shortly expected to list Sherritt's Cuban ventures as "special designated nationals," meaning that they—like Cuban companies—would be barred from U.S. business dealings. On June 14, a Senate foreign relations subcommittee began hearings on a bill that would make it easier for U.S. companies to sue Sherritt for using expropriated Cuban property. Florida-based Consolidated Development Co., which once produced 40% of Cuba's crude, is preparing a suit.

Despite the U. S. trade embargo, Delaney's bet on Cuba has paid off handsomely so far. While U. S. law bars Sherritt from selling nickel or cobalt to U. S. customers, Sherritt's answer is to sell to the Japanese and Europeans. Last year, sales in Sherritt's metals unit rose 76%, pushing metals earnings up to $32.5 million from a loss the year before.

"DESPERATE." That, plus a fertilizer acquisition in Alberta, helped Sherritt earn $58 million on sales of $672 million: the best performance in its 67-year history. This year, earnings should soar 82%, says Toronto brokerage Wood Gundy Inc. Ironically, Sherritt has attracted U.S. investors, who hold some 30% of its stock and most of its bonds.

For all his admiration of Cuba, which he visits monthly, Delaney is hardly a radical. After growing up in Winnipeg,
he became an investment banker a
president of Merrill Lynch Canada
(table). After a stint at Horsham Co
he left in 1990 to launch a proxy fi
for Sherritt. The company was near
solvency because its metals refinery
closed and it had no nickel to refine

Even before the takeover, Dela
saw opportunity in Cuba, which v
facing economic collapse. Winning c
trol of Sherritt in Sept., 1990, he
proached the Cubans about a deal
refine their nickel and cobalt. "Our fir
cial condition was as desperate
theirs," he recalls. The Cubans were
ger to exploit Sherritt's refining tech
ogy, so in a meeting with Castro in e
ly 1991, the deal was sealed.

It was the beginning of a beaut
friendship. Sales of Cuban metal t
off, and last year Delaney propose
formalized joint venture. The 50-50 c
is the most sweep
that Cuba has sig
with a foreign com
ny. It's also a huge s
for Sherritt, which
lowed a Cuban er
neer to serve as
venture's first CEO.

Thanks to Sherri
technology, ore pro
tion at the ventu
plant in Moa R
Cuba, has almost d
bled, to over 20,
tons a year. Dela
may now boost re
ery capacity in Albe
"They'll be one of
world's lowest-cost p
ducers of nickel a
largest producers of
balt," says Tere
Ortslan, president
TSO & Associates,
mining research firm.

Of course, risks remain. Sherritt co
lose everything in Cuba if warnings
Cuban-American hardliners of a revo
tion restoring U.S.-backed national
come true. Even that "would not be
tal," Delaney says, because Sherri
fertilizer business accounts for 56%
sales and has no ties to Cuba.

In any case, Delaney is betting h
come out on top. Last fall, he not
the U.N. General Assembly voted
to 2 for an end to the embargo. W
such world backing, Delaney thi
Cuba will evolve toward a populist g
ernment. "The last people in the wo
those guys can afford to stiff," he s
with a smile, "are foreign investors.

EDITED BY STANLEY REED

WILL ARGENTINA SOON BE CRYING FOR ITS ECONOMIC GURU?

No one in Latin America is as closely identified with a country's success as Argentina's Economy Minister, Domingo Cavallo. His so-called Cavallo Plan, setting the peso at parity with the dollar, buried hyperinflation and contributed to strong economic growth in the early 1990s. Earlier this year, Cavallo headed off a run on the banks by rustling up $6 billion in credits from international lenders.

But the notion that Cavallo is indispensable is starting to haunt Argentina as the economy falters and he comes under fire for not doing enough to revive it. In recent days, the darkening economic outlook and rumors that Cavallo might leave his post have roiled the Argentine markets. Cavallo himself unnerved investors with erratic pronouncements on the economy and by whining that certain influential business figures wanted him ousted.

CAVALLO: *Under attack*

GREAT STRAIN. Predictions of Cavallo's demise have been common since he took office in 1991. He is a prickly man who irritates both executives and fellow Cabinet members. But it would be very risky for President Carlos Menem to allow him to go. Few people in Argentina or abroad believe that the fixed exchange rate against the dollar would survive Cavallo's departure. His going would probably trigger a renewed bout of capital flight like the one Cavallo fought off after the Mexican peso debacle this past December. "It would be traumatic, chaotic," says Buenos Aires-based analyst Carlos Rivas.

Although both Cavallo and Menem have said the Minister will be staying, the relationship between the President and his chief economic official is clearly under great strain as Menem prepares for his second term, which begins on July 8.

Despite Cavallo's accomplishments, Menem's aides, and even the President himself, have long resented Cavallo's receiving the credit for Argentina's big economic strides. C vallo's abrasiveness adds to his problems. Barely a we passes without his clashing with some official or politicia Menem has tried to make peace between Cavallo and his e emies in Congress, but it may not last. Even if the minist stays, Menem may use his new chief of staff to check Ca allo's free rein.

Even as discontent with Cavallo builds, Menem pro ably realizes that he still needs a fiscal and monetary dis plinarian at the helm. With $80 billion in fo eign debt to service, the government is goi to have to keep cutting costs to keep a $2 billion credit package from the Internation Monetary Fund on track. Concern is al growing about the state of provincial gover ment finances.

SEVERE SQUEEZE. But the temptation to bac track on austerity is growing. Cavallo is easy target for executives angry that th are not selling anything. Unemployment h already reached a record 14%.

Menem hoped that his big win in the ele tion on May 14 would boost the economy. A though bank deposits have risen slightly aft last winter's crisis, the swift return of capit and easing of the severe credit squeeze th Menem was counting on for a boost haven materialized.

To foreign investors, Argentina is becoming a critic test case for all of Latin America. With Mexico still flounde ing, if Argentina unravels, "confidence in the region as whole would be damaged almost irreparably for sever years," says Nigel Rendell, emerging-markets analyst f James Capel & Co. Rendell is telling clients to "unde weigh" Argentina. With such pessimism building, Mene would be playing with fire to let Cavallo depart.

By Ian Katz in São Pau

GLOBAL WRAPUP

A SLIMMER DAIMLER

▶ Three weeks after becoming CEO of Daimler Benz, Germany's largest industrial company, Jürgen E. Schrempp pounced. Starting on July 1, he will downsize Daimler's corporate headquarters in Stuttgart radically, axing 200 of its 500 top executive jobs. Headquarters' role in the their operating divisions, including Mercedes-Benz, is likely to be reduced. Zurich-based ABB, often considered the model European company, has already made similar moves.

Schrempp wants to instill an entrepreneurial culture at the $74 billion group as well as cut costs. He has ordered Daimler's 1,700-strong central research and development staff to hike their productivity by 30% in the next three years. Another 1,150 in-house professionals, from lawyers to tax experts, may have to compete with outside providers to sell their services within the company.

VIETNAM BREAKTHROUGH

▶ With President Clinton likely to renew formal diplomatic ties with Hanoi this summer, the State Dept. is rushing to help U.S. businesses land deals in Hanoi. A lobbying boost from State, plus financing from ANZ Banking Group, helped Ellicott Machine Corp. International nail Vietnam's first capital equipment order from a U.S. company. Vietnam will purchase more than $10 million worth of dredg es and spare parts from Ellicott, a Baltimore-based maker of dredging equipment. Although it's tiny, Ellicot has a big name in Vietnam, where prewar vintage Ellicott dredges are still being used.

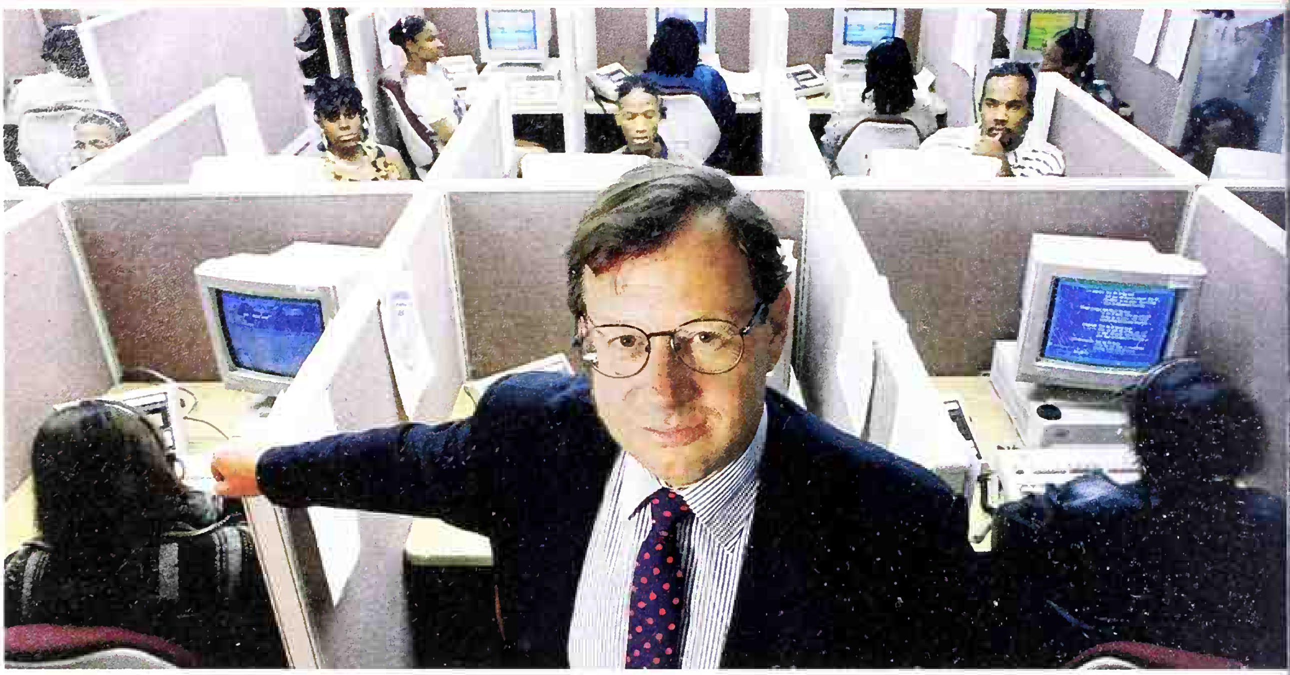
Partnership without compromise.



SHREWD AND DEFIANT: CEO ROSEN REVEL IN HIS TOUGH-GUY IMAGE

INVESTIGATIONS

WILL TICKETMASTER GET SCALPED?

The Justice Dept. and rivals question its dominance

It is just before 10 on Saturday morning in Los Angeles. At Ticketmaster Corp.'s spartan offices on this early-June day, 90 men and women file in to take their places before rows of telephones and computer screens. Suddenly, a flurry of calls begins. In only 10 minutes, sales total $120,000 for tickets to the upcoming Bon Jovi rock concert and other events.

For Ticketmaster, the nation's largest distributor of live-event tickets, this is just another day. But it wasn't always that way. When President and CEO Fredric D. Rosen took the helm in 1982, Ticketmaster was a 25-person operation on its way to bankruptcy. "We rented office space in Los Angeles for six months because we didn't know how much longer we were going to be around," Rosen recalls.

Today, the privately held Los Angeles-based company is an entertainment-industry powerhouse. In 1994, Ticketmaster sold 55 million tickets—valued at an estimated $1.6 billion—to everything from a Barbra Streisand concert to New York Knickerbockers basketball games. Company revenues have grown 20% annually over the past five years, and last year, ticket sales for shows at 3,000 venues around the country brought in $240 million. Ticketmaster exclusively controls an estimated two-thirds of the major stadiums, arenas, and amphitheaters in urban centers—and provides ticketing for more than 50 major professional sports teams. Microsoft Corp. co-founder Paul G. Allen deemed the company so attractive that he paid $300 million for 80% of it in 1993. S Rosen, a blunt-talking ex-New York porate lawyer who is largely credi with the company's turnaround: "I m a business out of something that wa a business."

But it's how Rosen and his al made that business—and are holding to it—that now seems to be taking ter stage. The federal government, st law enforcers, and private litigants all questioning the legality of Tick master's dominance in the ticketing dustry. Would-be competitors say tempts to break into the business met with insurmountable obstacles— nasty intimidation tactics.

SOLO SHOW. Performers such as rock groups Stone Temple Pilots R. E. M. argue that the company's ul uitous power costs fans the most. Alt native rockers Pearl Jam put Tick master in headlines wl band memb appeared bef Congress l year complain that the com ny's steep f made tickets pricey for mostly teen fans. On June the group laun es its first conc

ipment, and promising to spend
),000 a year promoting events.
erybody is in everybody else's pock-
says Peter A. Jablow, the ex-head of Ticketron, a rival acquired by Ticketmaster in 1991.

In addition, Ticketmaster has been shrewd in its selection of partners and licensees, cementing its presence throughout the country by teaming up with big players such as Ted Turner, owner of the Atlanta Braves and Omni arena; former Seattle Mariners owner George Argyros, who controls venues in the Northwest; and Abe Pollin, owner of the Washington Bullets, Washington Capitals, and their home arena.

TICKETMASTER DOMINATES TODAY...

- Controls tickets sold at 3,000 venues nationwide, including Madison Square Garden, Pontiac Silverdome, and Hollywood Bowl.
- Sells tickets to premiere live events, such as The Rolling Stones concerts, via phone orders or sales at 2,800 retail outlets.
- Has grown 20% annually for the past five years, with $240 million in 1994 revenues.

...AND HAS AMBITIOUS PLANS...

- Plans to begin selling airline tickets later this year through a new deal with Reno Air.
- Is selling tickets online in test trials on America Online. A web site offering tickets and show information is in the works.
- Currently in talks with MTV, QVC, and other media companies to launch its own home-shopping channel.

...BUT FACES MOUNTING LEGAL WOES

- Justice Dept. is investigating allegations that Ticketmaster engages in monopolistic, anticompetitive practices. A similar inquiry by the New York State Attorney General is under way.
- Class actions filed on behalf of consumers, including 14 being consolidated in St. Louis, charge the company with price-gouging and antitrust violations.
- Increasing pressure to lower fees from disgruntled performers such as rock bands Pearl Jam, Stone Temple Pilots, and R.E.M.

DATA: BUSINESS WEEK

On its way to preeminence, Ticketmaster went on a buying spree. The company acquired at least 12 of its most adroit rivals during the past decade. In 1985, Rosen bought Ticket World USA, whose clients included Radio City Music Hall and the Pontiac Silverdome in Detroit. It also bought TicketPro in New England and Capital Automated Ticketing in Kansas City, Mo. Finally, Ticketmaster acquired its largest competitor, nearly bankrupt Ticketron—complete with regulators' blessings.

CALLING THE SHOTS. Though other, mostly regional ticket distributors exist, Ticketmaster's aggressive climb has enabled it to call most of the shots in its market. Even by Ticketmaster's calculations, increases in ticket surcharges have outpaced ticket prices over the past five years, from $2.55 to $3.15, or 24%, compared with a 19% rise in tickets. For premiere events, the charge can be more than $6 per ticket. "If you've got exclusive access to two-thirds of the available seats in venues nationally, you're able to exert incredible market pressure in the industry," says Richard Schrader, a former New York commissioner of consumer affairs who investigated Ticketmaster and is critical of its practices. "Consumers pay for that."

What's more, Ticketmaster is often the only operation big enough to land plum contracts. For example, it was the sole bidder this year for the contract to handle ticketing at the Meadowlands, a facility that ushered in 5 million patrons last year. Rosen says renewing the deal included a payment to the Meadowlands of nearly $6 million against future sales. "From where I sit, Ticketmaster is a monopoly that will do what it takes to keep me from entering their market," says Tom Kenan, president of Fastixx, a Portland (Ore.) outfit that recently was outbid for contracts in Tacoma and Seattle.

Rosen sees it differently. "There's nothing wrong with being competitive—with fighting for what you believe in," he says. "If I was a football coach, they'd be writing paeans to me."

It will take the government or a jury to determine who is right. Right now, a Justice Dept. task force is in the midst of an antitrust inquiry. Sources, who claim staffers are pushing for action against Ticketmaster, say the government will announce a decision in the case this summer. The Justice Dept. declines comment. But a memo to clients from Ticketmaster General Counsel Ned S. Goldstein obtained by BUSINESS WEEK indicates that the company is bracing for bad news. "We frankly cannot under-

How Apple is making it easier to move a refrigerator like this.

Today's sales environment is more competitive than ever. Which is why Whirlpool armed its field force with the ultimate sales weapon: the Macintosh® PowerBook® computer.

The reason? Says Erv Barnes, "After evaluating all the notebooks on the market, we chose PowerBook because it was by far the easiest for any salesperson to learn. Instead of becoming a doorstop, the PowerBook is being adopted by the field with unbelievable enthusiasm."

Salespeople are able to tap into Whirlpool's information base at the home office to get competitive information, pricing, inventory data—instantly, during a sales call. This way, they can answer questions more quickly and accurately, make better-informed decisions, appear more professional and, ultimately, close more sales. Plus, with the built-in multimedia capabilities of the PowerBook computer, salespeople can show videos and animations, making a normal sales presentation more persuasive than ever.

All of which can give your salespeople a new power, too. The power to be more responsive, more productive, more effective. The power of Macintosh. The power to be your best.™

Erv Barnes (left),
Director of Information
Technology, and
Ed Herrelko (right),
xecutive Vice President
of Group Sales, at
Whirlpool Corporation,
enton Harbor, Michigan

"Making the sale means having the answer. With this computer, we can get the information our customers need, right on the spot. Making the sale means being persuasive. By delivering presentations on the PowerBook, we can get our point across with enormous impact. Combine this with the fact that it works with our mainframes, Intel-based PCs and Windows, and we're talking about a tool that's not just giving us a competitive edge. It's transforming the way we do business."

–Ed Herrelko

This is Whirlpool's interactive on-screen sales presentation. With it, salespeople can show video clips of Whirlpool commercials and product demonstrations—a more dramatic and impactful way to sell competitive product advantages.

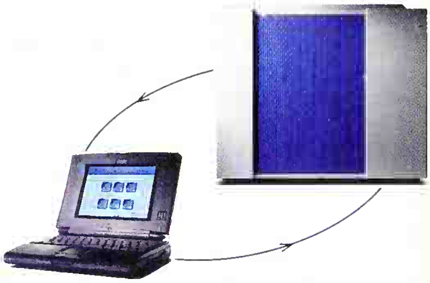
Your salespeople want to sell, without being confused by complex technology. With features like Apple® guide—which takes users step-by-step through the Macintosh—Whirlpool's people mastered the computer with minimal training. Yours can too.



The Macintosh PowerBook is compatible with Whirlpool's PCs and mainframes.* From any remote location, their salespeople can effortlessly tap into Whirlpool's vast store of product information—for immediate answers to customers' questions.

To learn more about how you can arm yourself—and your sales force—with the Macintosh PowerBook, call **1-800-332-2932** (ask for **ext. 100**), to receive the free Apple Mobile Solutions kit.

RUN ON THE COURTS. The feds aren't the only ones giving Ticketmaster the jitters. The New York State Attorney General's office is conducting its own probe, and numerous class actions have been filed against the company by consumers nationwide charging price-gouging and anticompetitive practices. Fourteen of these cases are now being consolidated in federal court in St. Louis.

Rivals, too, are heading to court. In March, MovieFone Inc., the leader in computerized cinema-ticket sales, sued Ticketmaster for antitrust violations. It contends that Ticketmaster illegally erected obstacles to squelch MovieFone's plans to enter the live-event ticketing market and to cripple its existing operations. MovieFone alleges in its complaint that Ticketmaster acquired 50% of box-office-equipment supplier Pacer/CATS Inc. in 1994, which had a contract to provide MovieFone with essential hardware, for the sole purpose of hampering MovieFone's growth.

According to the complaint, MovieFone also alleges that Ticketmaster sought to disrupt MovieFone's initial public offering in 1994 by telling the company's investment bankers at Alex. Brown & Sons Inc. and Salomon Brothers Inc. that they would be removed from a "short list" of bankers considered for a future IPO being considered by Ticketmaster if they continued to work for MovieFone. "This became the story of our IPO," says MovieFone CEO Andrew R. Jarecki, who contends that Ticketmaster's meddling delayed his stock offering and made it more costly. Alex. Brown and Salomon decline comment.

Ticketmaster denies it used strong-arm tactics with the bankers. Moreover, it says MovieFone is using the litigation to prevent Ticketmaster from expanding its movie-ticket business. "Their claim is completely without merit," says Barron. "They're making this stuff up."

Still, Ticketmaster has shown tha isn't afraid to take on its most arc foes. The company sued for libel Francisco plaintiff lawyer Joseph M. ioto, who had filed a class action aga Ticketmaster in California in 1992.

And it stated that evi-
could suggest that

Ticketmaster "filed suit primarily to retaliate against Alioto's role in the California litigation rather than to right an independent wrong." Rosen says the company was merely defending itself against a scurrilous accusation.

Ticketmaster seems to be doing a lot of defensive work these days—and it's taking its toll. Last year, Ticketmaster lost the coveted contract to sell tickets to the 1996 Olympics in Atlanta—in part, acknowledges Rosen, because Ticketmaster was too preoccupied with Justice Dept. inquiries to respond to those made by the Atlanta Committee for the Olympic Games (ACOG). "It may have been Ticketmaster's contract to lose, but they lost it," says an ACOG source familiar with the ticketing program. "Ticketmaster did not demonstrate to us that they could do what was needed to be done at a price we could afford." Instead, Milwaukee-based Protix, who linked up with an IBM unit, won the estimated $30 million contract.

While the Olympics fumble is a big loss, Ticketmaster is looking ahead to new ventures. The company is talking to QVC, MTV, and the Home Shopping Network about starting a home-shopping channel to sell merchandise tied to rock concerts and theater shows. This summer, Ticketmaster will begin selling airline tickets through a deal with Reno Air Inc. In January, the ticket vendor will launch *Live!*, a consumer magazine about the live-entertainment industry.

CYBERTIX. And, with Tribune Co., owner of the Chicago Cubs, Ticketmaster is selling 4,400 tickets a month online through a test project with America Online Inc. Allen's online venture, Starwave, helped Ticketmaster launch a web site that offers information about upcoming performances.

Rosen wants to reduce the company's dependence on ticket sales, which make up 95% of revenue. That's particularly true as competitors start to move in on Ticketmaster's turf. Giants Sony Corp. and Blockbuster Entertainment Group have teamed up to enter the ticketing industry. And a smaller rival, ETM Entertainment Network, a startup in Costa Mesa, Calif., is promoting better

BREAKFAST CEREAL

A FROOT LOOP BY ANY OTHER NAME . . .

Ralcorp's private-label cereals are gobbling market share

As golden puffs of corn tumble out of an industrial oven, Ralcorp CEO Richard A. Pearce grabs a warm sample. They look like Kix, one of General Mills Inc.'s top brands. They taste like Kix—sweet on the outside, savory inside. But they sure don't sell like Kix—at least not yet.

With prices as high as $5 for a 20-ounce box, name-brand cereals have long been an obvious target for private-label manufacturers. Yet the supermarket cereal aisle remains a stronghold of national brands. Ralcorp Holdings Inc., a recent Ralston Purina Co. spin-off that dominates the store-brand business, sells its knockoffs for nearly $1 a box less than their branded counterparts—the widest "gouge gap" in the grocery trade. And since cereal is cheap to make, the knockoffs can still offer retailers as much as twice the profits of branded cereals. Yet private labels account for just 6% of cereal sales, half the share of private-label groceries as a whole. The reason: Private-label cereal makers have lacked the skill and wherewithal to sit at the same table as Kellogg Co. and Mills. In quality, packaging, and marketing clout, the breakfast kings have eaten the lunch of their private-label rivals.

That's finally changing. Last year, private-label cereal growth averaged 8%, while branded cereals grew 3%. And analysts expect even more private-label growth as the aggressive Ralcorp pours on new products. This isn't just generic cereal: Ralcorp cheerfully duplicates national brands—usually slapping a retailer's name on the boxes to make them store brands. Pearce plans to launch as many as four new knockoffs a year, aiming at Shredded Wheat, Trix, and a dozen other major brands that lack store-brand counterparts. His upstart stable of challengers, such as Nutty Nuggets (a knockoff of Post Grape Nuts) and Apple Dapples (a Kellogg's Apple Jacks wannabe), will eventually double their share of the cereal category, Pearce predicts. "The cereal aisle is going to look different," he vows between bites at his Sparks (Nev.) plant.

MIXED BAG. Skeptics abound—especially on Wall Street, where Pearce tried to sell investors on the billion-dollar Ralcorp spin-off last year. Analysts suspected Ralston's cagey chairman, William P. Stiritz of unloading a bunch of losers. Cereal accounts for 70% of operating profits, but Ralcorp inherited other disparate businesses from Ralston: private-label crackers, Beech-Nut baby foods, and a pair of ski resorts. Pearce's plain-spoken, regular-guy persona made for a tedious road show. To top it off, Ralcorp carried $380 million in debt, 69% of its capitalization, prompting Moody's Investors Service to slap it with a below-investment-grade rating. The stock opened at $15 per share in April, 1
then sank to $13.50 two weeks late

Still, Pearce had plenty of room t
make improvements. He cut costs
boosted efficiency by replacing comp
owned warehouses with third-party
tribution. He eliminated a direct s
force in favor of brokers who have r
clout with big retail accounts. And
outsourced computer systems, inte
audits, and tax accounting. Ralcorp's
sults surprised the skeptics. Over
six months ended Mar. 31, food pr
soared from $33.9 million to $51.6
lion. And the stock has nearly doub
trading at 24¼ as of June 13.

To make his imitations even m
sincere forms of flattery, Pearce is
vesting in new plant technology
will help Ralcorp more exactly copy
brands. And packaging is growing s
er. Duplicating big-name cereal brand
legal because they're made with s
dard, nonproprietary manufacturing
cesses. But trademarks and names
protected, and disputes over promot
al claims occasionally crop up: Gen
Mills won a 1992 administrative
against Malt-O-Meal Co. over adve
ing that compared the No. 2 privat
bel maker's Toasty O's to Cheerios.

A bigger worry for private-label
reals is the possibility of a Froot L

WHERE DO YOU WANT TO GO TODAY?™

tion the value of additional private label," Sanger told analysts in April. And the big brands are giving the knockoffs less of a window: Kellogg, Mills, Kraft Food's Post, and Quaker Oats Co. have reined in price hikes recently, narrowing the gap between private-label and branded cereals from $1.05 per box at the peak in 1993 to about 95¢ today, counting the impact of coupons.

Still, retailers seem to have a healthy appetite for store-brand cereal and its sweet profit margins. Private-label cereal "hasn't come close to its potential," declares Curt A. Lerew, senior vice-president at Fred Meyer Inc., a $3.2 billion Pacific Northwest supermarket chain. Lerew recently devoted 20% more shelf space to cereal, giving most of it to his store brands and promoting them heavily. The result: Private labels account for more than 10% of cereal sales at his 103 stores.

A GLEAMING EYE. Unlike the highly promoted introductions of cereal brands, private labels tend to build slowly, as cautious retailers add them to the shelves one by one. So while Pearce encroaches on the name brands' turf, he will need more profits from his private-label crackers and Beech-Nut baby foods. He plans to beef up Ralcorp's small branded-cereal business—Chex and Cookie Crisp—with a new premium-priced brand. And Pearce says that he is looking for food-industry acquisitions, getting a gleam in his eye at the mention of privately held Malt-O-Meal.

But Ralcorp could also be the quarry. "If they don't do something great, they'll probably be taken over," declares Trisha L. Reopelle of the Wisconsin Investment Board, Ralcorp's third-largest stockholder. Pearce concedes that Quaker would be a logical buyer, but meantime he's investing for the long term—and munching handfuls of his new Kix knockoff, Silly Spheres. Time will tell if he's been eating too many of them.

HOW ABOUT SUGAR-FROSTED SUGAR?

Ralcorp Holdings Inc. is setting itself a modest goal. It's not trying to make a better Cheerio, or Cocoa Puff, or Grape Nut—just one that's indistinguishable from the original. To see how well it succeeds in its quest to create a parallel universe of breakfast cereals, BUSINESS WEEK conducted a highly unscientific blind tasting among some of the nation's most discriminating cereal eaters: 15 kids aged 4 to 12, all volunteers from a Harlem after-school program. When it comes to crunch, this is where the rubber meets the road.

TASTE EXPERT: *The kids cared only about sweetness*

We asked our experts to compare three Ralcorp knockoffs with the branded originals. The results might give cereal makers on all levels of the grocery-store shelf food for thought.

DAMNING VERDICT. First came cornflakes, and here, Ralcorp succeeded in matching the national brand—for what that's worth. Our tasters were unenthusiastic about both versions, even after we broke out sugar to sprinkle on top. "It tastes like the bark of a tree," said 12-year-old Franklin Felix of Ralcorp's version. But he didn't like Kellogg Co.'s classic cornflake any better. "It tastes like cookies without sugar," was his damning verdict. Most others couldn't detect much difference either, though the ersatz flake appeared slightly smaller and more fragile.

> "Like the bark of a tree."
> "Worse than wheat bread."
> This was one tough room

Froot Loops fared much better. "I love it!" exclaimed Naeemah Rose, age 9½, after sampling the original. And with a sugar content of 14 grams per one-cup serving for the Kellogg prototype, it's not hard to see why. Our experts had little trouble telling apart the two versions of sticky, garishly colored rings—but happily for Ralcorp, its Fruit Rings were preferred by most. Ralcorp's secret? It heaps an astonishing 16 grams of sugar into a one-cup serving. "It's better than the first one," said Naeemah. "It tastes sweeter."

Our panel finished up with a few quick spoonfuls of Cheerios, the mighty General Mills Inc. brand. One again, our tasters had no trouble telling the two cereals apart, this time before they tasted a single "O." The Mills breakfast standar is the result of an expensive "gun-puffing" process that Ralcorp simply cannot match with its existing equipment. As a result, no one would mistake a whiter, lighter, less uniform Tasteeo for one of Big G's little Os. But appearances weren't what bothered our experts. Most disliked the Mills classic only a bit less than they disliked the Ralcorp copy. "It tastes like wheat bread, and they need more sugar," said Whitney Patterson, age 8, after tasting Cheerios. Her comment on the Ralcorp sample "Worse than wheat bread."

Based on our research, cereal makers can save themselves a lot of trouble. Forget fancy shapes and colors. Don't worry about dreaming up a sill name or a cartoon character to adorn the box. Just don't stint on the sugar.

THE NEW 750iL

LOOK WHO'S TALKING TO NEWT

The Speaker pays close attention to a little-known cadre of entrepreneurs

Dawn had just broken over the Washington Monument when Newt Gingrich, then House Minority Whip, and Golden Rule Insurance Chief Executive J. Patrick Rooney rambled by on a "power walk" in 1992. As they stepped swiftly along, Rooney talked about a scholarship program he had created for inner-city children. He also plugged a new product—the medical savings account—designed to lower health-care costs. Individuals would contribute to the plan and be encouraged to hold down medical expenditures because they could get back any unused balances at yearend.

Three years later, the Republicans have gained control of Congress, Representative Gingrich (R-Ga.) has become House Speaker—and Rooney suddenly finds himself cast in an unlikely role as one of the most influential corporate chieftains in Washington. Rooney and his ideas are often cited by Gingrich and Representative Bill Archer (R-Tex.), chairman of the House Ways & Means Committee. And his medical savings account and school initiatives are now part of the GOP legislative agenda. Both proposals are pending before committees. "He took my ideas and ran with them," 67-year-old Rooney beams.

Rooney is typical of the largely unknown cadre of CEOs Gingrich has tapped for advice in crafting key components of the GOP agenda, from regulatory relief and tax policy to welfare and health-care reform. Some, such as Rooney and Richard M. Scrushy, CE
Healthsouth Rehabilitation Corp.
Birmingham, Ala., are longtime Ging
supporters. Others, including CEO H
man Cain of Omaha-based Godfath
Pizza Inc. and James S. Herr, CE
Herr Foods Inc. of Nottingham,
have only recently come to Gingri
attention as he trolls for revolution
ideas. "What I'm doing now is aln
like fishing," Gingrich said in a May
interview with BUSINESS WEEK. "
keep the ones that sound right."

While the impact of their legisla
counsel is just being felt, the ris
prominence of Gingrich's corpo
Kitchen Cabinet has already shake
the pecking order within the Belt
The traditional business elite, domina

Newt's Corporate Kitchen Cabinet

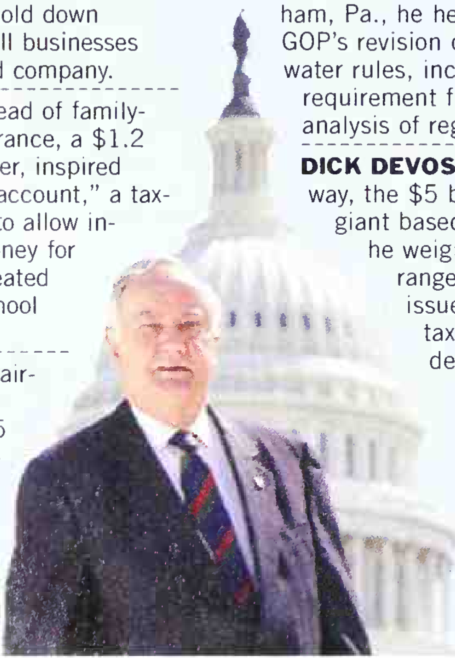
HERMAN CAIN CEO of $250 million Godfather's Pizza chain has helped shape House Republicans' welfare-reform plan that would place a two-year limit on cash benefits. Wants to hold down health-care costs for small businesses such as his Omaha-based company.

J. PATRICK ROONEY Head of family-owned Golden Rule Insurance, a $1.2 billion Indianapolis insurer, inspired GOP's "medical savings account," a tax-deductible savings plan to allow individuals to set aside money for future medical costs. Created model for Gingrich's "school choice" initiative.

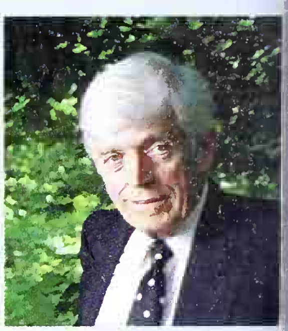
RICHARD SCRUSHY Chairman of Healthsouth in Birmingham, Ala., a $1.5 billion company that provides rehabilitation services. Counsels Gingrich on ways to create incentives to hold down health costs by using new technologies.

JAMES HERR A prominent voice on government deregulation. Founder and CEO of Herr Foods, a $100 million snack-food company in Nottingham, Pa., he helped shape the GOP's revision of federal clean-water rules, including a requirement for cost-benefit analysis of regulations.

DICK DEVOS President of Amway, the $5 billion direct-sales giant based in Ada, Mich., he weighs in on a wide range of conservative issues, particularly tax reform and deregulation.



HERR: AN OUTSPOKEN CRITIC OF ENVIRONMENTAL REGULATIONS



ROONEY: "HE TOOK MY IDEAS AND RAN WITH THEM

DEVOS: ADVISES THE SPEAKER ON TAX POLICY

Wall Street and Rust Belt indus- s, now shares the limelight with a v of corporate newcomers to the cap- . They include small and medium- companies, and a smattering of big s, that are often privately held and ded by entrepreneurs who chafe un- the yoke of federal regulation.

NT LINES. Gingrich's reliance on se new faces doesn't mean he dis- ns old-line corporate titans. As he s for ways to shrink government, Speaker says, he has met n more than 20 CEOs, from n F. Welch of General Elec- Co. to John W. Snow of CSX p., who have transformed bureaucracies. "He wants to w how many of the lessons orporate downsizing, right- g, and reengineering are di- ly applicable to the federal ernment," says Snow. Ging- also scouts out Big Busi- s leaders who have adapted he global market. A case in it: Ford Motor Co., which anced its worldwide compet- eness while trimming its kforce. "He's particularly rested in our emphasis on lity and teamwork over the decade or so," says Ford Alexander J. Trotman.

till, as he champions the rests of Main Street over l Street in fashioning the vt World Order, Gingrich is omfortable with managers se only vantage point has n the executive suite, the aker's advisers say. He pre- to consult business execu- s who have served on the t lines and taken huge risks starting their own business- Many of Gingrich's cor- ate confidants, including ushy and Herr, are self- le millionaires.

odfather's Cain, 48, certain- ts Gingrich's portrait of a New Age orate leader. A former dishwasher a graduate of Morehouse College, n developed a reputation as a trou- hooter after joining Pillsbury Co. in 7 and sorting out problems at ailing s. As president of one, Godfather's a, Cain stemmed a flow of red ink downsizing. After Cain and other managers bought Godfather's for million in 1988, he became CEO of a pany that now reports $250 million ales at 520 outlets nationwide.

ike many businessmen, Gingrich's orate counselors rail against gov- nent interference. After founding a snack-food business in 1946 with nitial investment of $1,750 and expanding it into a $100 million regional business, Herr, 70, says environmental regulations and bureaucratic delays stymied his efforts to build a new warehouse in 1989. It took two years to meet all the federal requirements, he says. Recalling how his young company battled back from a fire that destroyed its headquarters in 1951, Herr says: "If the 1989 regulations had been in place in 1951, we would never have been able to hold our customers and start up again."

Gingrich "thinks more like an entrepreneurial businessman than a megacorporate leader"

GODFATHER'S CEO CAIN WITH HOUSE SPEAKER GINGRICH

DANIEL ROSENBAUM/WASHINGTON TIMES

Gingrich often calls on his advisers for business solutions to fiscal and social problems that don't create more bureaucracy. "He thinks more like an entrepreneurial businessman than a megacorporate leader," says Cain. "He believes in solving problems from the bottom up, using the limited resources available." And given Gingrich's stature, their suggestions carry weight. When lawmakers rewrote the Clean Water Act in May, the proposal contained suggestions endorsed by Herr at an earlier hearing, including a requirement to weigh the costs of imposing federal regulations against the benefits they might achieve. "Those are exactly the kinds of changes that Newt loves," says Dick DeVos, president of the direct sales giant Amway Corp. and an adviser to Gingrich on regulation and tax reform.

Meanwhile, Scrushy, whose $1.5 billion Healthsouth is the nation's largest provider of rehabilitation services, has emerged as a key adviser on health-care issues. The Speaker in January asked the 42-year-old executive to head a task force to develop a strategy to cut the cost of workers compensation.

Sometimes the advice Gingrich receives goes beyond typical corporate concerns. At a Jan. 9 press conference, Cain and Gingrich, who both favor limiting welfare benefits to force recipients to find work, announced that the National Restaurant Assn. had obtained commitments from 250 food-service CEOs and restaurant owners to employ and train current welfare recipients. The so-called Good Start Project is up and running in all 50 states.

Critics say many of the Speaker's corporate allies make big contributions to Gingrich's causes to obtain access and further their own private business agendas. "He who pays the fiddler calls the tune," says Representative Patricia Schroeder (D-Colo.). Many—though not all—of his CEO counselors donate to his campaigns, the Republican Party, or the Progress & Freedom Foundation, a conservative think tank that promotes Gingrichian ideas about the transition to the Information Age. Golden Rule Insurance and its executives, including Rooney, have provided more than $680,000 since 1985 to Gingrich, his former political action committee GOPAC, and the GOP. Healthsouth's Scrushy helped launch Progress & Freedom.

Gingrich denies that such donations win anyone influence. And his corporate donors insist they're not trying to buy access. "Newt Gingrich has never asked me for a dime," says Scrushy. "Newt never said, 'Give me money and I will name you to a task force.' He doesn't do anything for favors."

For Gingrich, talking policy with CEOs is a favorite pastime. "I would rather sit and play intellectually than go to the golf course," he grins. That means his corporate buddies have to meet him in a conference room instead of on the 19th hole. But whatever the venue, the CEOs are getting their chance to help shape a revolution.

His name is Network.
Tell him what you need and
he'll get it for you.

Think about all the different computers in your company. All the different hardware, software, and networks that don't even talk to each other. Now imagine being able to turn that bottled-up power into one worldwide network that makes your whole company more competitive. A network so powerful and so approachable that it becomes almost a living thing. That gets you whatever you want, whenever you want, without asking why. At Sun, we think that's the whole point of network computing. It may seem like a large promise, but it's one we've already delivered on, for some of the world's largest companies. And we can do the same for you. Because we have the hardware, the software, the support and the experience to make it all work. If you'd like to see what network computing can bring you, just contact the people who invented it. Sun. At http://www.sun.com or 1-800-786-0785, Ext. 250.

THE NETWORKED CORPORATION

Linking up is hard to do–but it's a necessity

THE INTERNAL REVENUE service had a great idea a few years ago: Let millions of taxpayers simply phone in their returns. After successfully testing pilot systems, the agency is ready to go live in 1996. Some 26 million taxpayers who use the 1040EZ form will be able to call an 800 number, tell a voice-recognition computer their vital statistics—Social Security number, taxes withheld, and income—and, on the spot, the machine will say how much is owed or due. The system could save millions—and make tax day a bit less gruesome.

Seems like a great example of how the combination of clever computers and advanced networks can speed things up, eliminate hassles, and save money. And it could be. But because Congress requires that all tax forms be signed with a pen, taxpayers who use the new setup will still have to mail in paper returns—which will have to be processed the old way.

So you're probably thinking: That's the government for you—so mired in red tape that it can't begin to make use of high-tech networking. But think about your own company. Does your legal department let you accept a contract that has been sent by electronic mail? Can your employees fill out their expense forms on PCs, then get them approved and filed electronically? Does information flow freely throughout your organization to wherever it's needed, rather than up and down the hiera chy? Can customers dial into your computers to check the status of orders—instead of playing phone tag with somebody in your sales department? Is your company saving money by electronically linking up with a dozen suppliers in a just-in-time inventory network?

The answer is probably: Not yet. And it isn't because the telecommunications world hasn't dream up enough products and services. There are LANs and WANs, routers and brouters. There's SONET an ISDN and TCP/IP and ATM—a jumble of jargon repr senting huge advances in technology to move info mation anywhere it needs to go. The Electronic I dustries Assn. estimates that U.S. manufacturers will ship $64 billion worth of communications gea this year, a 24% gain over 1994, while shares of 3Com and Bay Networks, makers of internetwor ing gear, are surging. Giant IBM believes its custo ers want groupware technology for networks so badly that it's spending $3.5 billion on Lotus Development Corp. to get it (page 96).

IBM is playing a costly but essential game of catch-up. From making widgets to posting electro ic ads to collecting payments, businesses are goin electronic, or trying to. That's why BUSINESS WEE is devoting its first Annual Report on Informatio Technology to the Networked Corporation.

Even though networks are pervasive, the benefits y promise are maddeningly elusive. “The tech- ogy is here,” says Daniel Shubert, director of nt/server technical services for Electronic Data stems Corp. “The problem is not with the tech- ogy, but with the corporate processes. Compa- s must fundamentally change the way they do siness, and that’s hard.” In other words, you ’t run a 21st-century networked corporation h 1950s rules.

utdated management schemes aren’t the only nan factor holding things up. Around the world, itics has slowed attempts to liberalize outdated ecommunications regulations, leaving most coun- s with regulatory restraints that phone compa- s say restrict their ability to offer the most ad- iced services, such as video dial tone. And since st of the world’s phone companies have yet to loy modern digital transmission schemes, it’s l tough to cobble together a high-speed network r large distances. Within uilding, a local-area net- rk (LAN) transfers data at oadband” speeds—10 mil- bits, or 10 megabits, per ond or more. Then the a hits the local and long- tance nets, and speed ps quickly, to 2 megabits best.

nd though digital tech- ogy has cut transmission ts, in the absence of real npetition, local phone npanies haven’t passed on savings, customers com- in. “There has been a to 30% reduction in network costs, but there has n no big decline in thecost to the customer,” says drew Grove, CEO of Intel Corp. “Intel constantly lgers the phone companies to lower prices.”

ongress is currently debating a deregulation bill t would allow competition among local and long- tance companies and cable-TV systems, as well as ious and sundry new entrants. But several pre- us bills have been killed by gridlock (page 110).

usinesses can’t afford to wait. In the 1980s, a dful of cutting-edge corporations such as Wal- rt Stores Inc. and Federal Express Corp. wed how networks—when used to support novel siness approaches—can change the competitive dscape. Now, getting wired to speed up internal cesses and reach out to others electronically is imperative. “The ability to do more and more nmerce over a network is at the forefront of everybody’s thinking,” says George T. Shaheen, managing partner of Andersen Consulting. “What’s going to happen—because we want it to—is that the network is going to take time, distance, and space out of the equation.”

For those that don’t get it, the future could be grim, warns Robert M. Curtice, director of Arthur D. Little Inc.’s North American Management Consulting Group. “Whole industries will restructure or disappear,” he says. “For some companies, such as banks, if they haven’t started doing [electronic commerce], it may already be too late.”

In industry after industry, though, you’ll find companies that are starting to reap big benefits from networking. BP America Inc., for example, the U.S. subsidiary of British Petroleum Co., is setting up a system that will process at least 40% of the 440,000 invoices it receives each year electronically. The switch will do more than save on man-hours and paperwork: BP expects to be able to eliminate duplicate purchases and negotiate bulk rates.

LANs and WANs do not an efficient workplace make: “You can’t assume people will share information,” says a consultant, “just because the network allows them to”

A networked corporation can do business anywhere, anytime, getting a jump on competitors that still conduct business the old-fashioned way. And it no longer matters where your best and brightest talent resides: Sweden’s L. M. Ericsson has 17,000 engineers in 40 research centers located in 20 countries around the world, all linked into one network. Development teams in Australia and England work together on the same design, then zip off the final blueprint to a factory in China.

In many businesses, networks allow companies to vacate expensive office space because employees can get their work done wherever they roam (page 104). Andersen’s Shaheen runs the Chicago-based consulting firm from his office in Palo Alto, Calif., and doesn’t much care where his employees are—as long as they’re connected to the network. ISDN (integrated services digital network), a high-capacity digital service available to residential phone customers, could be a boon to telecommuting.

Still, the biggest payoff from networking comes when companies use it to do better by their customers. Two years ago, Del Monte Corp. started

ALAN BASEDEN

getting daily inventory reports electronically from grocers. When stocks fall to a predetermined minimum level, the Del Monte network immediately issues a restocking order. Retailers need only keep some 1½ weeks of inventory on hand as a result, compared with the four weeks' worth they used to warehouse to avoid shortages. "One week of inventory in a warehouse costs a retailer some $250,000 a year," says R. Vincent Livingston, manager of efficient consumer response for Del Monte. "The biggest thing a customer wants is to not have to invest as much in inventory."

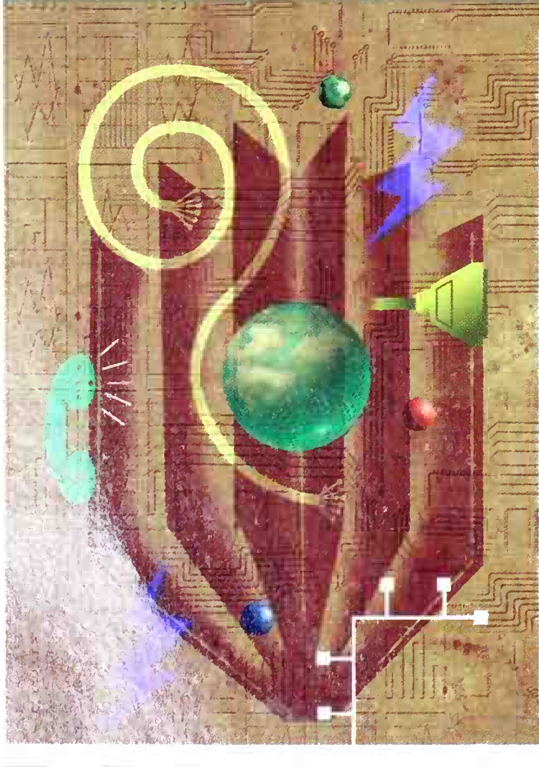
Most corporations have taken the first steps toward such digital nirvana by installing LANs to connect their ubiquitous desktop computers. A decade after they started linking PCs, LANs are the central nervous systems of offices. They carry everything from E-mail to desktop videoconferencing. At their best, LANs support sophisticated client/server computing setups that not only supplant older mainframes and minicomputers but also allow staffers to do things the old setups couldn't, such as working on the same document simultaneously.

Getting to that stage is not easy. The complexity of putting all the technology together is enough to send managers screaming for pencil, paper, and stamps. For the network to operate smoothly, everything on it must adhere to consistent hardware and software standards and communication protocols. This goes beyond whether to buy IBM Apple, Windows or OS/2. You have to worry abo bridges and routers that connect LANs in differen departments, modems and gateway computers th move data to the outside world, and the PBX tha routes phone calls. All of these decisions are affe ed by how much capacity, or bandwidth, you wa and the number of employees using the network.

The more cutting-edge the technology, the dici the decision-making. For example, a new set of superfast digital-transmission technologies is appearing for wide-area networks (WANs). Asynchr nous transfer mode (ATM) is particularly good at mixing voice, data, and video traffic at high spee Frame relay can send large files quickly by temporarily seizing extra bandwidth, and SONET, a technique that sends signals simultaneously over two different paths, raises the reliability of the n Together, these three promise WANs that can hit speeds as high as 1 billion bits per second.

But mixing these technologies with existing ne

Communications Jargon That You Should Kn



ASYNCHRONOUS TRANSFER MODE (ATM) A high-speed digital switching and transmission technology that allows voice, video, and data signals to be sent over a single line at speeds ranging from 25 million to 1 billion bits per second (bps). An analog phone line transmits at about 2 million bps—at most.

BRIDGE A device that links two local-area networks together so they can share data.

BROADBAND Refers to any transmission at a speed higher than 2 million bps. A broadband network can carry voice, data, and video signals simultaneously. Remember: You can't be too thin, too rich, or have too much transmission capacity.

CLIENT/SERVER A meth computing in which one c puter acts as a central rep tory for files and programs can be shared by a numb "client" PCs connected b network. Replaces a main frame-centric setup.

ELECTRONIC DATA INT CHANGE (EDI) A series o standards that allows com er-to-computer exchange business documents, such invoices, shipping orders, ments, etc., between diffe companies.

ETHERNET A set of local network (LAN) standards allows networking product from different vendors to municate. Introduced som years ago, it is the most w used LAN technology.

rks means dealing with a host of vendors, each
erpreting so-called industry standards its own
y. A dozen suppliers offer gear built on the ATM
ndard, but it's rare to find two exactly alike.
d, warns Howard Anderson, managing director
Boston-based consultant Yankee Group Research
c.: "If you build it wrong, you'll be chasing your
l trying to correct it well into the next century."

There are a couple of ways around the complex-
. One is "middleware," software that acts as a
nslator for all the different devices and pro-
ams that make up a net (page 92). The beauty of
ddleware is that it provides a way to bring older
mputers in on the scheme. "Green-field opportu-
ies are very, very scarce today. You always have
deal with legacy systems," says Krish A. Prabhu,
ef technical officer for Alcatel Network Systems.

Another option is to adopt the communications
otocol of the Internet. TCP/IP, the shorthand way
saying transmission control protocol/Internet pro-
col, is now being worked into everything from
inframes to LAN equipment. Its near-universal
e is making it the lingua franca of electronic com-
rce. And the World Wide Web, which provides
orderly way to go from one Internet computer
another, is rapidly turning into a virtual commer-
l district (page 100).

Or you can just sidestep the complexity altogether by leaving it up to somebody else. The network muddle is a boon to consultants and "outsourcers"—companies such as EDS that take over a company's entire network operation for an annual fee. Market researcher Dataquest Inc. estimates that the computer-services business will grow from $33.3 billion in 1993 to $65.2 billion in 1998, with the network-management portion increasing from 26% to 31%. Gregory M. Jacobsen, executive vice-president for outsourcing services at SHL Systemhouse Inc., points out that bringing in a third party also makes it easier for the chief information officer to rein in all those PCs. "The modern CIO is starting to recognize that outsourcing...is a way to win back control," says Jacobsen.

In the end, however, getting the most out of the network means giving up control. A key difference between companies that make the net work for them and those that don't is their approach to information. "You can't assume that people will share information on a peer-to-peer basis just because the network allows them to," says Yankee Group's Anderson. But until a company is willing to share information with workers at the sales counter or the shop floor, the most sophisticated network technology won't help the bottom line.

are some of the key technologies and standards that go into making a modern
rate network. Drop a few of these at parties and impress your friends.

ME RELAY A transmission
dard for sending data over
ic or private leased phone
. Data is broken down and
ed in frames, each the
e size, for relaying.

EGRATED SERVICES DIGI-
NETWORKS (ISDN) Of-
d by local phone compa-
, this protocol turns a
dard copper phone line into
gh-speed digital link that
send voice and data simul-
ously. With an ISDN line at
e, you can pretend you're
e office using the LAN.

AL-AREA NETWORK
) A network within a build-
r a limited distance that
computers and peripheral
ces, allowing them to share
mation and programs.

PACKET SWITCHING An efficient way of moving data through a network. A file is broken up into little packages that are sent by different routes through a network and then reassembled at the receiving end.

PRIVATE BRANCH EXCHANGE (PBX) An automatic telephone switch for an internal phone system. It replaces the old-fashioned office switchboard and manages the voice-mail system.

ROUTER A device that connects LANs that use different standards; essentially a more sophisticated type of bridge. What do you get when you cross a bridge and a router? A brouter, of course.

SONET Stands for synchronous optical network technology, but don't worry, no one ever uses the full name. A high-speed transmission architecture meant to exploit the huge bandwidth available on fiber-optic networks.

T1 A standard for digital transmission over phone lines. In North America, it can handle at least 24 voice channels at once using copper wires and transmits at a rate of 1.5 million bps.

WIDE-AREA NETWORK (WAN) An enterprise-wide communications network that allows signals to be transmitted from a LAN via a public or private line to other LANs in distant locations.

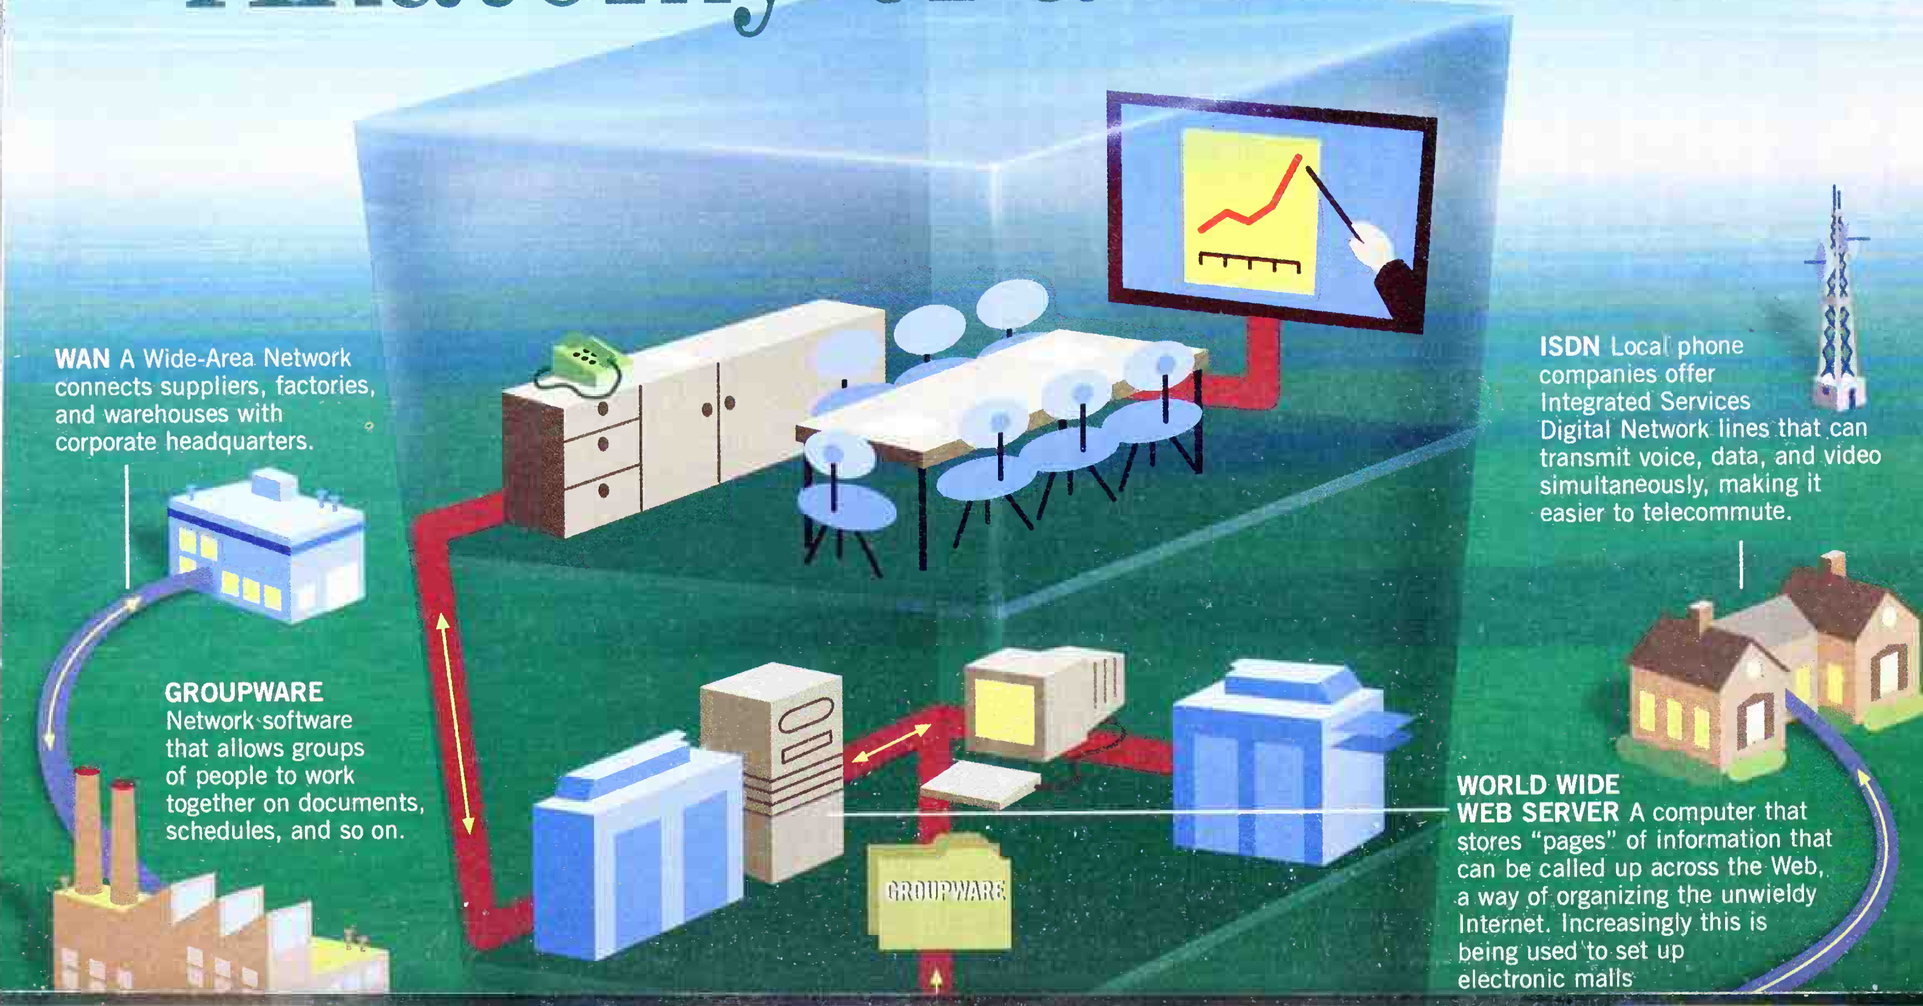
INFORMATION TECHNOLOGY ANNUAL REPORT

Anatomy of a Network

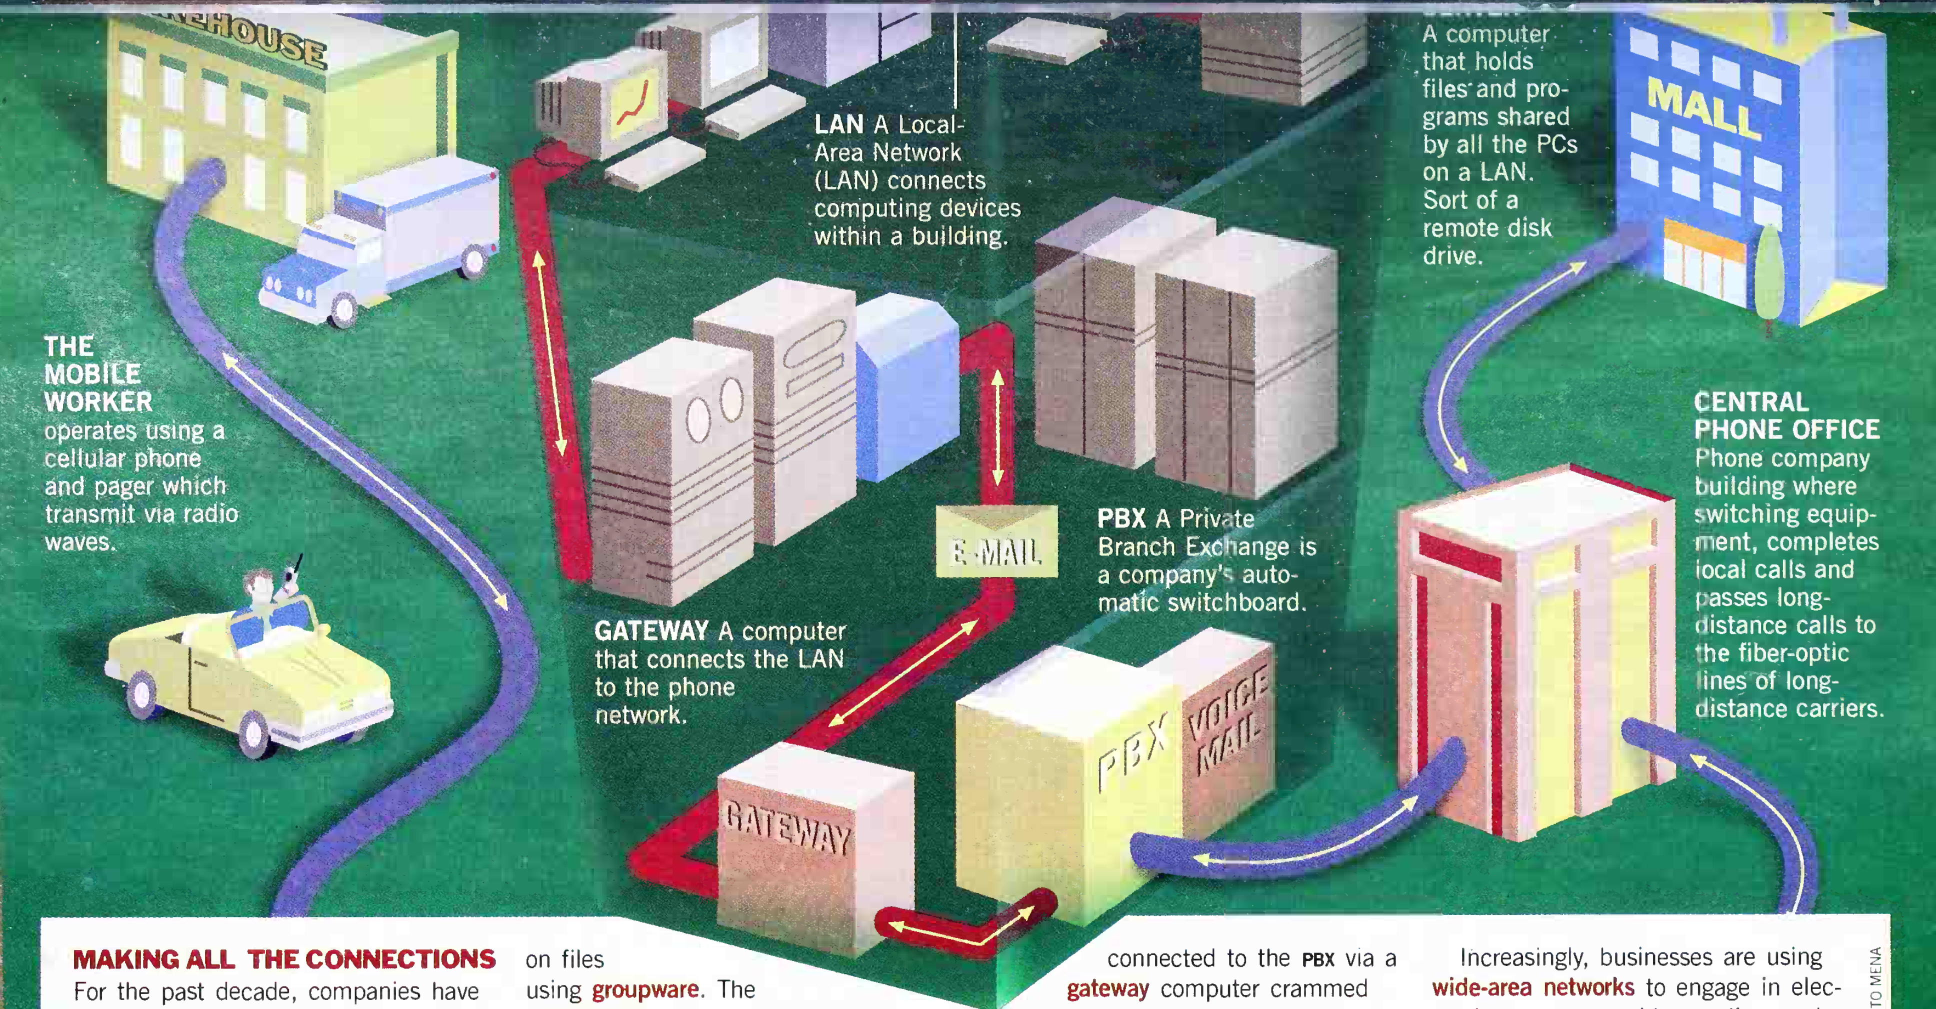


WAN A Wide-Area Network connects suppliers, factories, and warehouses with corporate headquarters.

GROUPWARE Network software that allows groups of people to work together on documents, schedules, and so on.

ISDN Local phone companies offer Integrated Services Digital Network lines that can transmit voice, data, and video simultaneously, making it easier to telecommute.

WORLD WIDE WEB SERVER A computer that stores "pages" of information that can be called up across the Web, a way of organizing the unwieldy Internet. Increasingly this is being used to set up electronic malls



THE MOBILE WORKER operates using a cellular phone and pager which transmit via radio waves.

LAN A Local-Area Network (LAN) connects computing devices within a building.

A computer that holds files and programs shared by all the PCs on a LAN. Sort of a remote disk drive.

CENTRAL PHONE OFFICE Phone company building where switching equipment, completes local calls and passes long-distance calls to the fiber-optic lines of long-distance carriers.

PBX A Private Branch Exchange is a company's automatic switchboard.

GATEWAY A computer that connects the LAN to the phone network.

DIAGRAM BY JAIME BEAUCHAMP AND ALBERTO MENA

MAKING ALL THE CONNECTIONS

For the past decade, companies have been moving away from large mainframe computers to networks of personal computers, a setup known as client/server computing. The heart of this model is the local-area network, or **LAN**, a pipeline connecting computers and peripheral devices so they can share data. Employees use the LAN to send **E-mail** and call up files stored in a communal **server**, and to collaborate on files using **groupware**. The **mainframe** still has a big role—performing heavy-duty jobs and acting as a repository for large databases.

To exchange information with computers outside the building—at a factory in another state, say—the **PBX** funnels calls and data to local and long-distance services. It also manages all internal voice traffic and a company's **voice mail** system. The LAN is connected to the PBX via a **gateway** computer crammed with modems.

Fiber-optic cables provide high-speed links in and out of the local phone company's **central office**. This is where calls are routed between local subscribers, long-distance networks, and wireless services such as cellular phones. **ISDN** speeds data over ordinary residential phone lines used by telecommuters.

Increasingly, businesses are using **wide-area networks** to engage in electronic commerce with suppliers and customers. The Internet, a worldwide network of computers linked by phone lines, has emerged as a means for low-cost business networking. And there's a flurry of activity on the Net's **World Wide Web**, an engaging way to post information and electronic advertising that reaches a potential 25 million Internauts.

CYBER-NETWORKS NEED A LOT OF SPACKLE

The golden opportunity in software: Paving over myriad incompatibilities

At the heart of every network is the acre of coding that is software—the stuff that makes the bytes run on time. As corporate computing evolves from the mainframe-centric to the client/server model, the software running it all has had to become an extremely clever jack-of-all-trades, operating on machines from a variety of vendors and processing everything from huge data files to optically scanned images to video presentations. Getting the software right is one of the most important challenges for companies hoping to live the networked life. Here are three kinds of software—middleware, groupware, and security programs—that make it all happen.

BROKERING BABEL:
Programs that give networks one voice

The great promise of computer networks has always been flexibility—that they would provide easy access to all sorts of information and electronic services—both within companies and, increasingly, across corporate boundaries. But that very flexibility creates monumental problems for programmers. And where there's a problem, there's an opportunity to create a whole new category of software—or at least a buzzword.

In this case, it's called middleware. The nebulous name relates to its role as a critical middleman, mediating among the many kinds of hardware and software now found on large networks. It is a creature born of chaos, for most corporations today have built, without quite meaning to, what the folks in computing call "heterogeneous networks"—sprawling setups containing all sizes and brands of computers and software. In the past, a billing application, say, would have been run on a single mainframe computer and would have relied on software supplied mainly by a single company, most likely IBM. Today, the networked version of that application may need to call on software from a dozen suppliers, whose products may or may not be compatible with one another.

Middleware aims to give this hodgepodge at least the appearance of harmony, even as its individual components change and expand in number over time. That looks to be the main programming challenge of the '90s. Without middleware's ability to pave over the incompatibilities among computers and
to accommodate the shifting comple
ities of big networks, client-server co
puting networks would grind to a ha
So middleware is hot: Market researc

billion by 2000.

GLOBAL COHABITATION. The more co
plex the network, the greater the ne
for middleware. By now, getting a sa
department's two-dozen PCs to sha
files on a small server is practically
no-brainer. All the software one nee
can be found at the local comput
store. But try getting more than 2,0
computers, ranging from mainframes
all sorts of desktop workstations, to
habit on a worldwide network—its
made up of numerous subnetworks.

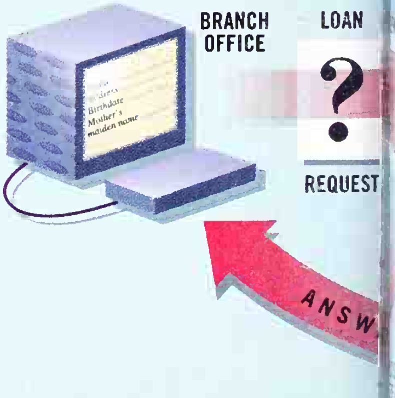
Middleware on the Job

A set of software dubbed middleware oversees the many interactions between disparate computers, both inside and outside of the bank, that help process a loan application. The middleware lets each computer—at a credit reporting agency or at a branch—continue operating independently yet, without reprogramming, cooperate intimately with the others.



DATA: EARLY, CLOUD & CO.

if possible. If historical data can

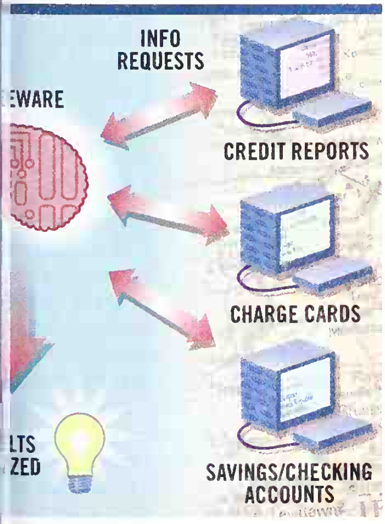
t's more, these programs can help
cations survive network failures by
ring that important messages don't
lost and—of particular interest to
s processing cash-machine withdraw-
don't get delivered more than once.



Middleware becomes even more crucial as corporate networks start interacting with one another. In building a system to collect clinical health data electronically from thousands of independent doctors, hospitals, laboratories, and pharmacies, for instance, Kaiser Permanente has turned to IBM's MQ Series software. Based on work originally done by New York-based Apertus Technologies Inc., MQ creates a sort of postal system that can move messages and coordinate tasks between 18 incompatible types of computers—including those from IBM's major competitors. At the Chicago Mercantile Exchange, MQ helps some 75 member firms, using a variety of computers, exchange trading information with one another.

In fact, many different software products are coming out under the middleware sobriquet. These range from so-called screen scrapers, which let PCs pretend to be mainframe terminals, to AT&T's Top End. That program, a so-called transaction monitor, keeps track of transactions between computers to make sure they are completed the way they are supposed to be.

All of these programs try to marry the old to the new, the near to the distant, and the proprietary to the open—and, of course, to make networks easier to program. If a network starts delivering on that promise of easy access to any information anywhere at anytime, you can bet middleware is on the case.

By John W. Verity in New York

GROUP THERAPY:

Why IBM paid all that loot for Lotus

How much is it worth to own the software that really lets groups of workers take advantage of computer networks—to collaborate as easily across the globe as down the hall? Try $3.5 billion. That's what IBM is shelling out for Lotus Development Corp., the roughly $1 billion software maker best known for its popular 1-2-3 spreadsheet. The prize is Lotus Notes, the defining product in an emerging category of software known as "groupware," so called because it's designed for sharing information among members of a group.

What's the big deal? IBM Chairman Louis V. Gerstner Jr., a devout Notes user himself, sees an opportunity to turn the competitive focus away from operating systems—where IBM has had little luck slugging it out against Microsoft Corp.—to building the computer industry's next generation of networked information systems.

SEAMLESS PACKAGE. Groupware is actually a catch-all term encompassing products ranging from fancy E-mail systems to scheduling programs to electronic bulletin-board software. The most sophisticated groupware packages have advanced features for automating the flow of work, routing documents, or allowing far-flung people to collaborate on a single document at the same time.

So what makes Lotus Notes stand out in the world of groupware? While many products tackle pieces of the puzzle—scheduling or shared databases, say—Notes is a comprehensive, seamless package. It can also be customized and used

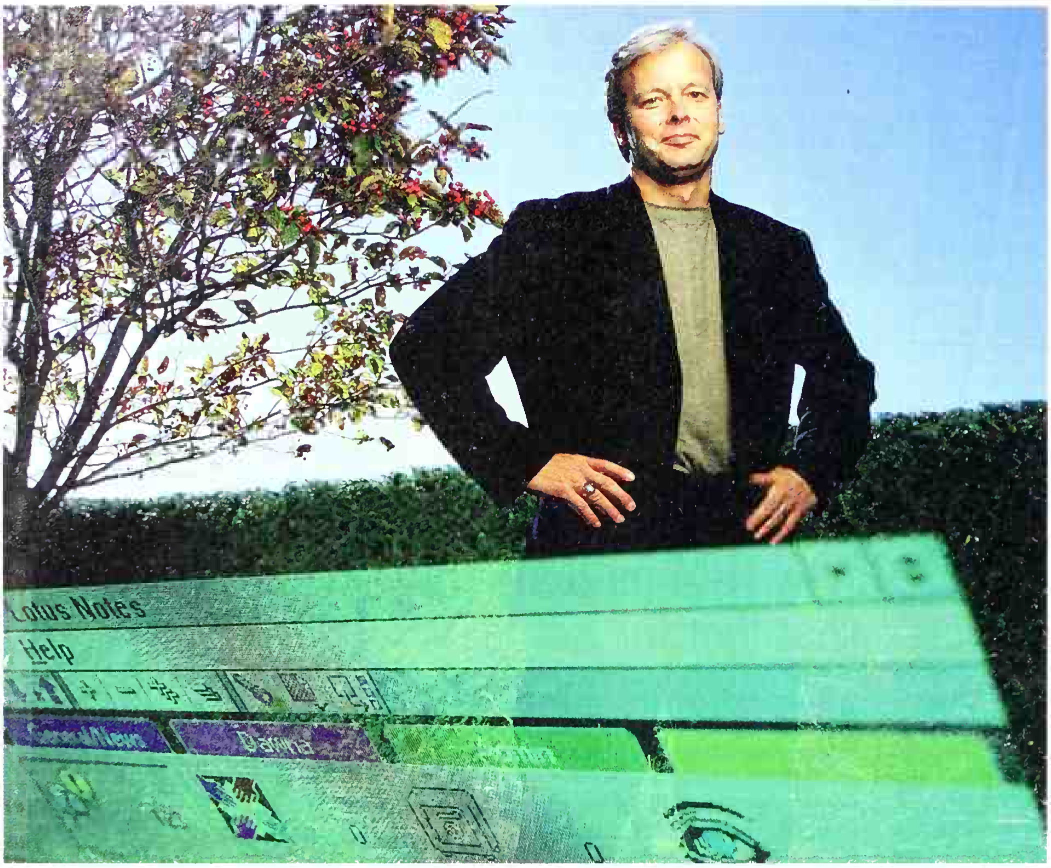
Groping For Groupware

IBM After years of trying to create its own groupware programs, Big Blue is purchasing the king of groupware: Lotus Development. Notes, Lotus' crown jewel, is now used by 1.5 million customers,making it the clear leader.

MICROSOFT The PC software powerhouse is still struggling with the development of its own groupware contender, Exchange.

NOVELL Leveraging its strength in networking, Novell is building programs, such as Groupwise, to work over networks.

ILLUSTRATION BY MATSU



MAN IN THE MIDDLE: *Lotus Notes creator Raymond Ozzie spawned an entire industry*

as a “platform” upon which to build additional applications—for managing a remote sales force, for instance. That has attracted many large organizations—such as Price Waterhouse, General Motors, and Compaq Computer—that need to connect widely dispersed workers but want a system tailored to their needs.

Take Andersen Consulting. The $3.45 billion consulting firm built a system based on Notes called Knowledge Exchange, which serves some 20,000 consultants around the world. When Andersen had only a few people working in a particular area, it was easy to know which one of them to call for advice, explains Charles M. Paulk, Andersen's chief information officer. Today, Andersen has over 30,000 employees worldwide, and the Notes system, says Paulk, “is how we keep up with ideas and developments around the world.”

QUICK SOLUTIONS. Knowledge Exchange, which Andersen launched three years ago, now consists of over 2,000 databases that consultants can tap into. Each specialized group has a database on the system and a “page” summarizing its contents and any relevant news. As employees add to their database, they build a library to store the group's collective experience and knowledge. So when a question relating to a project arises, consultants can check the Notes database to find an answer quickly. Employees can also use Notes for electronic consultations with each other. The result: Problems that once took two weeks and thousands of dollars to figure out are solved overnight, says Paulk.

Groupware on steroids: Notes could get a big lift from a version being adapted to work across AT&T's long-distance network

No wonder sales of groupware programs are taking off. Workgroup Technologies Inc., a Hampton (N. H.) researcher, predicts that sales of groupware packages of all types will more than double, to $4.2 billion by 1999, from just over $2 billion in 1994. Why? Because “ networked PC,” is tential customer, Raymond E. Ozzi programmer who ed Notes and the dent of Lotus’ unit Associates. So, groupware gold ru on. Startups like bra Software and Group, as well as Novell, Oracle, an crosoft are jumpi Microsoft’s Exch groupware packa due out by yearen

Notes, on the m since 1990, has the A whole industry velopers, consultant systems integrator evolved to help cust and install the pro for some 1.5 millio ers. And IBM is pre to back the product its global sales forc legions of consultan

In theory, that propel Notes into a tral role in thousan corporate networks- ing it greater stra importance than an operating system. In reality, for N to compete with the Windows ju naut, it must become a standard. N Version 4.0, due later this year, help. The upgrade will give No sleeker user interface and make it er for network administrators to age. But important, it be better s for sharing i mation be one comp whether ove Internet or private netw The new ve will be abl serve thous of users make it easier for one company to another access to its Notes server

The big boost, however, could from Network Notes, a version adapted to work across AT&T’s long tance network. Call it groupwar steroids. Already, companies suc Compaq and Egghead Software testing Network Notes to share i mation with customers, partners,

Beyond news. Intelligence.

field offices. IBM plans a similar system, pairing Notes with the IBM Global Network, which serves 25,000 corporations.

The lure of Notes on these private networks, says Lotus, is that it will provide the far-flung access of the Internet without the chaos or risk. Like the Internet itself, Notes is now mainly a means for disseminating information—say, product and pricing data to customers. But in its beefed-up, long-distance version, it could be used for electronic commerce—for buying and selling everything from industrial goods to the latest fashions.

The biggest competition from Notes may not be other groupware programs, but the Internet. The Net's World Wide Web is already being used as a sort of poor man's Notes. "The World Wide Web will do more than Notes," says Robert D. Kutnick, chief technology officer at Quarterdeck Office Systems Inc., which is developing Web-server software. And it's cheap. For less than $500, he says, you can set up a Web server for an entire corporate network—much less than $275 per workstation it would cost with Notes.

Still, no Internet setup has yet matched all the useful features of Notes. One of the most difficult to duplicate is replication, which ensures that eve there are thousands of users, they have the latest version of a docum or database. And like everybody els the high-tech world, Lotus has figu that the only way to beat the Interne to join it. Notes 4.0 will tap into the and convert Notes databases into Web format known as HTML (hypert markup language). The payoff of c bining groupware and the Internet— of the hottest technologies around—c even be worth a $3.5 billion bet.

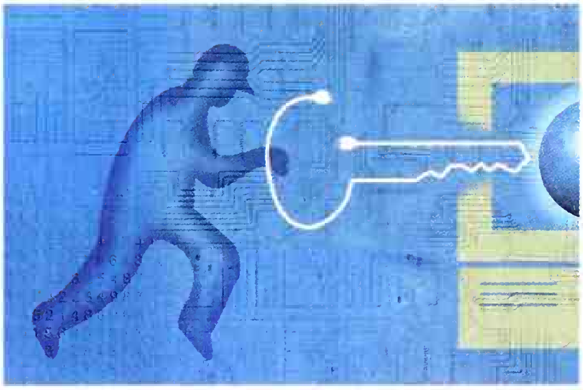
HACKER HEAVEN: So many computers, so few safeguards

Ever since armed men guarded the "electronic brains" that cracked Nazi codes, securing data against theft and tampering has been a concern in computing. With today's distributed computing networks, though, it's enormously more difficult to keep unauthorized users out and data secure. Networks, as the Office of Technology Assessment reported to Congress last year, "can make every user essentially an 'insider' " with the potential to clobber vital information systems.

It's enough to make you want to yank out those network wires. But that won't be necessary, experts say, if businesses adopt a new approach to network security. With so many modems and local-area network (LAN) connections installed on so many PCs, and with private and corporate connections to the Internet proliferating, companies must take it for granted that every computer on the planet can now reach and possibly meddle with any other—and will, if appropriate protection isn't in place. "We assume that everyone is a hacker," says Carmine Villani, vice-president of information management at McKesson Corp., a drug wholesaler. "That's the only way."

The range of security measures for PCs and LANs is expanding daily. Devices originally designed for spy agencies are now standard corporate issue. Security Dynamics Technologies Inc. and LeeMah Datacom Security Corp., among others, supply pocket-size cards that generate a brand new password every minute. Biometric devices can now identify people by the size of their hands, patterns in retinal blood vessels, or the dynamics of their voice or handwriting.

Connecting your network to the hugely popular Internet opens it to potentially millions of largely unidentifiable visitors—of whom, you can be sure, at least a few are malicious, and even criminal, hackers. To keep the bad guys out while still allowing insiders full access to the Internet, many organizations are setting up "firewalls"—gateway computers programmed to block unwanted traffic arriving from the Net. "It's like having a big bouncer at the door," says Rick Tinsley, assistant vice-president at the Vivid Business Unit of Newbridge Networks Inc., a maker of networking hardware.



"Firewalls" block unwanted traffic–"It's like having a big bouncer at the door"

To keep information away from prying eyes as it moves beyond the local network, companies are also encrypt their traffic with secret codes, or k This raises a new issue: When milli of individuals and corporate enti are doing business in cyberspace, e using a unique key, who will manage of those keys? Who'll keep offi record of them? A government age perhaps, such as the post office, o private company? "No one's done for 100,000 people, much less a lion," says Geoffrey Baehr, chief work officer at workstation maker Microsystems Inc. "It smells like opportunity to me."

One company that seized the opportunit Northern Telecom I The phone-equipm maker now sells a gram called Entrust t besides helping man large numbers of k and protecting netw traffic against sno makes sure messages rive intact and veri that senders are they say they are.

Indeed, network curity is a field rife opportunity—and knowns. Baehr and colleagues at Sun working on strategies countering so-called nial-of-service atta Using a powerful c puter, an adversary c effectively shut dow company's Internet server by bomb ing it with false messages. One s tion: a new breed of firewall sys programmed to continuously look for and then block such threats. It shows: For every solution in cy space, there's always another prob to solve.

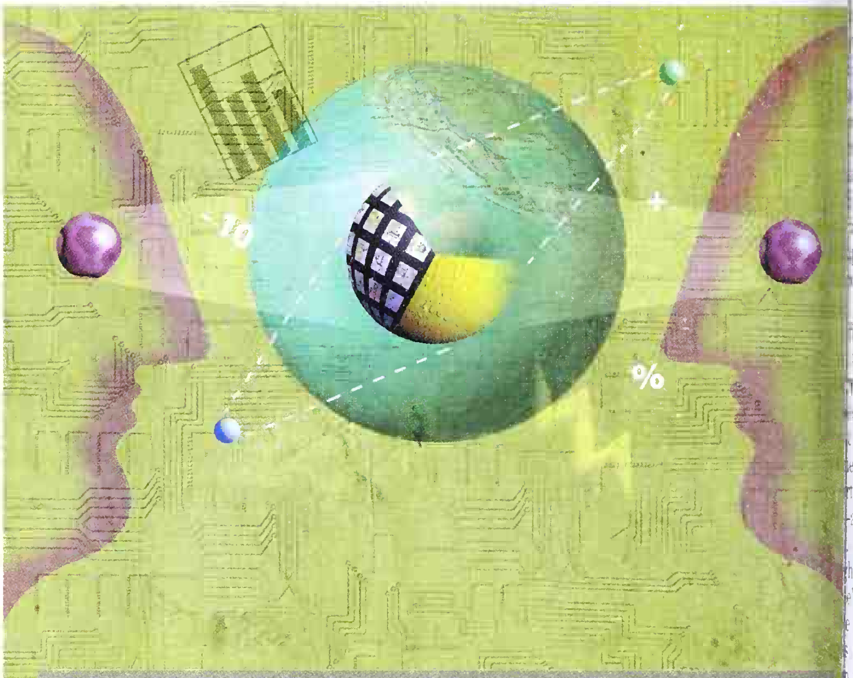
BIG BUSINESS ON THE NET? NOT YET

Everyone's interested, but little real action is likely until security tightens

For millions of PC owners, there is only one network that really matters, and that's the Internet. This vast collection of interconnected computers is the fastest-growing network around: More than 25 million people will have access to the Internet by the end of this year, a more than tenfold increase from 1990, says Boston-based market researcher Yankee Group. The primary driver of this explosion of Net surfers is not interest in the Internet's educational offerings or even its famous (and infamous) chat areas. Today, the Net is being overrun by the business world. Yankee estimates that more than 21,000 businesses—up from just over 1,000 in 1990—are connected to the Internet. Today, more than 75% of all new users are logging on via corporate connections.

Even in the midst of this rush, however, business executives and information systems managers keep asking the same question: What exactly will the Internet do for me? "Right now, companies are pretty much still kicking the tires of the Internet," says Stephen Franco, a Yankee Group consultant. "They're not completely comfortable with it." The companies that have gotten around to hooking up to the Net are using it primarily for communications (table). Just as an internal local-area network (LAN) allows workers to share project data within the office and schedule meetings via E-mail, the Internet is emerging as a convenient way to approximate the same interconnectivity with staffers around the world.

MAJOR SAVINGS. IBM, for example, has a project aimed at supplanting its 20-year-old worldwide PROFs network, a mainframe-based E-mail system, with the Internet. Code-named Apollo, it provides 140,000 employees with access to corporate news, colleagues' telephone numbers, and other internal data. This setup can also provide access to people outside the corporate network. "The biggest productivity gain is not in keystrokes or



How the Net Can Fit In

In a recent survey of companies, market researcher Yankee Group found these functions are what corporations are currently using or planning to use the vast Internet for:

FUNCTION	DESCRIPTION	CURRENTLY DOING	PLANNING TO
INTERNAL COMMUNICATIONS	Keeping distant offices aware, with E-mail, of changes at headquarters	30%	14%
EXTERNAL COMMUNICATIONS	Suppliers and contractors can track inventory or project schedules	49%	27%
ADVERTISING	A Web page is an information-rich way to advertise	8%	33%
SELLING PRODUCTS	Cut out the middleman and sell directly to the public	5%	35%

DATA: YANKEE GROUP, BUSINESS WEEK

things faster," says John R. Pat- BM's vice-president for Internet ap- ons, "but the ability to reach out bserve firsthand what customers nd competitors are doing."

Sterling Software Inc., a $434 Dallas software maker, the Inter- as been a great way to keep its employees in 75 worldwide offices ch with headquarters and custom- he company uses the Net to dis- e E-mail, keep its various sales connected with far-flung research evelopment labs, and to perform ctive demonstrations of software ents.

t important for Sterling, the Inter- a whole lot cheaper than other rks. Geno P. Tolari, president of stems group, says that just to hook the mainframe computers in its with dedicated phone lines would ost $500,000. And since the compa- ows by acquiring smaller software nies—each of which uses a differ- -mail system—there would have arge recurring charges for licenses pgrades of the various programs ostly high-speed phone lines. By the Internet for day-to-day busi- unctions, "we estimate we save $10 million per year," says Tolari.

Y PLATES. For many companies, st thing about the Net is that it's step on the road to "electronic erce," which means carrying out ts of transactions between compa- and consumers—across the net- To do business on the Net, , a company must first have an " customers can visit. That's the World Wide Web (WWW) in. This graphics-based network the vast Internet contains thou- of "home pages" created by one from neophytes coming in via ercial services, such as Prodigy, e multinationals.

this point, though, a Web page e little more than an electronic plate on the Information Super- ay. The best Web sites offer key ation about a company, such as , how, and why to buy products. e majority are little more than ech ads. "No one can say what eed to do there. Companies have themselves: 'Does it really help do your job better?'" says Daniel rt, director of the client/server cal-services group for Electronic Systems Corp.

ile companies clearly see a future ectronic commerce across the et, few are prepared to take the e now. They're waiting until the an offer the same level of con- d security that they can achieve heir internal LANs. "Right now, the large commercial customers that I deal with have great reservations about the Internet for any mission-critical applications," says John T. Losier, president of Bell Atlantic Corp.'s large business-services unit. "There are security issues, network-access issues, control issues."

ONE BIG LAN. The good news is that these questions are being addressed. Novell Inc. and AT&T, for example, will introduce a secure alternative to the Internet later this year called AT&T NetWare Connect Services. The network will be run by AT&T, with Novell supplying software technology it has developed to make the worldwide network seem like one big LAN. Using its 12 years of LAN-software experience, Novell says it can provide a central directory that offers information on all resources on the network and keeps track of a network user's access rights to those resources—just like an internal corporate LAN. Others are also working on providing so-called secure-transaction schemes (page 96).

Finally, before corporations can seriously consider doing business on the Net, they need to make sure consumer and business transactions will be secure. Analysts estimate that it will take 12 to 18 months for a widely accepted method of encrypting transaction messages to take root on the Internet. Until then, the Net is likely to remain an interesting byway on the road map of corporate networks.

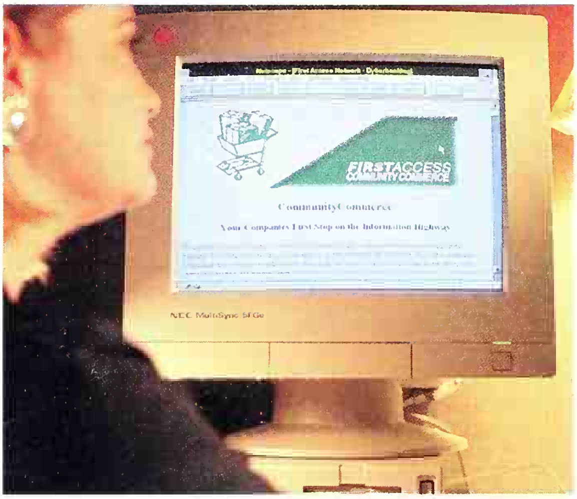
closeup

WHAT EVERY VIRTUAL MALL NEEDS: A VIRTUAL BANK

Think that only Silicon Valley technoids and new media hipsters are setting up shop on the Internet? Think again. First Union Corp., a superregional bank in Charlotte, N.C., is about to launch the Internet's first bank-sponsored electronic marketplace.

When CommunityCommerce opens for business this summer, it will operate as an electronic mall, with virtual tenants such as Naturally Fresh Co., a gourmet food producer, and the Durham (N.C.) Bulls, a minor league baseball team. Just "outside" the mall on another screen will be electronic banking offerings from First Union. Banks "have always been a central part of a community," says Bill Farris, First Union's senior vice-president for marketing and strategic planning. This, he says, is "just a natural extension."

COMPETITION ABOUNDS. CommunityCommerce was the brainchild of First Union CEO Edward E. Crutchfield. Worried about inroads into his businesses by nonbanks operating with lower costs, he wanted to build a service-delivery system that would cost less to operate than a branch and still be easy for customers to use. To make transactions secure, the system encrypts credit card numbers before they hit the Internet.

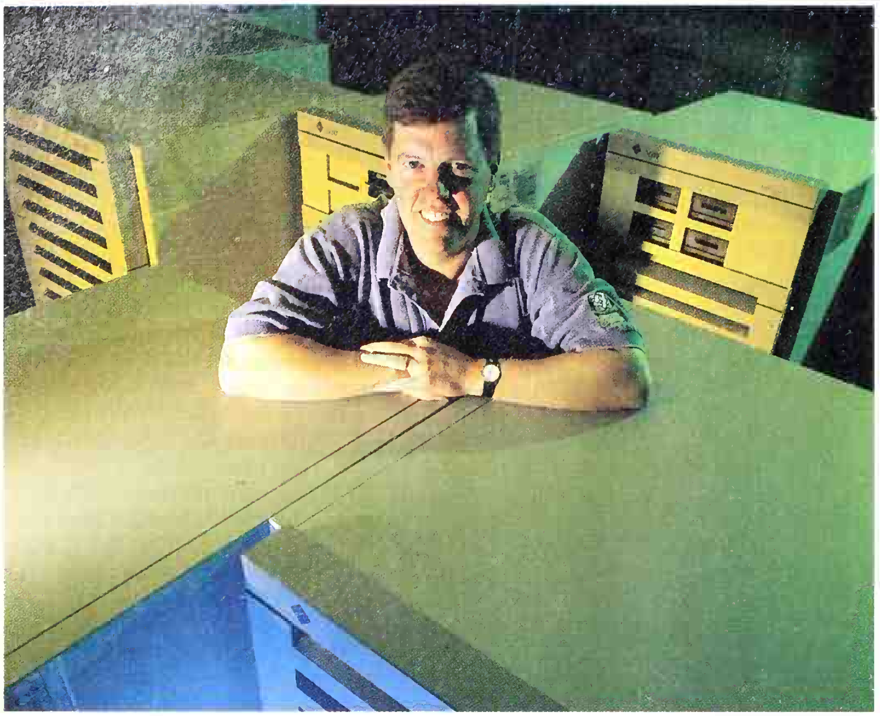


SHOP TILL IT CRASHES: *Prototype of the E-mall*

TERRY PARKE

So far, only about 1% of banking transactions are conducted from home. Meanwhile, First Union already has plenty of competition in electronic commerce on the Internet from the likes of MCI Communications Corp. But the bank is determined to establish a big presence before rivals do. "The train's coming down the track," says Edgar D. Brown, senior vice-president for alternative delivery. "You can either throw the switch and try to have it come your way, or watch it go by."

By Kelley Holland in New York



CEO McNEALY: *To "run Sun on Sun" would show others it could be done*

PHOTOGRAPH BY ROBERT HOLMGREN

HOW TO KICK THE MAINFRAME HABIT

At Sun, the network finally is the computer

If Chief Executive Scott McNealy had gotten his way back in 1987, Sun Microsystems Inc. would never have purchased the mainframe computer that still runs its manufacturing. As the booming workstation maker outgrew its minicomputer systems from Hewlett-Packard Co., McNealy insisted the company should "run Sun on Sun." If Sun did everything strictly on a network of its own workstations and servers, he reckoned, it would prove that customers could do the same. But he lost: The board outvoted him 11 to 1 and went with Amdahl mainframes.

McNealy has finally prevailed: His dream of running a multibillion-dollar business entirely on a network is about to come true. Two years ago, Sun shoved its mainframe out the door, hiring Computer Sciences Corp. to haul it away to a CSC computer center in San Diego. Now, Sun is ready to cut the connection altogether. Vows McNealy: "Early next year, we're pulling the plug."

It will be little more than a formality. Thanks to advances in the powers of Sun's workstations, servers, and the software that binds them, the company is already living by its trademarked corporate slogan: "The network is the computer." The lone mainframe is merely one of 230 servers feeding 22,000 workstations on the Sun network. And it's already a persuasive sales tool. Says
Dennis W. Walsh, chief information of
cer at Entergy Corp., a $6 billion utili

THE STRENGTH OF EXPERIENCE

and user of the Internet, it's adopting the Net's World Wide Web format to make company data more easily available. Employees can simply click on a word or phrase, and they're instantly connected to more detailed information on that subject. And Sun is at the forefront of using the Net for electronic commerce—forging digital links with suppliers, resellers, customers, and software companies. Raduchel is also setting up a Web server for the chief information officers of Sun's top 10 customers to exchange tips. Says Raduchel: "We're moving from a computing castle to a computing community."

PROMISES KEPT. The toughest transition, though, still looms—moving manufacturing support off the mainframe and onto the network. Sun had hoped to unplug the mainframe last year. But Oracle Corp. was late with its customized networked program for manufacturing resource planning. Also, to ease transition to the network, Sun decided first to simplify its manufacturing operation by consolidating distribution warehouses, reducing its supplier list, and farming out packaging and delivery. With the reorganization mostly complete, Sun hopes to move the last manufacturing operations off the mainframe by February in the U.S. and by August, 1996, elsewhere. By then, it will be able to make production changes daily or even hourly instead of biweekly, says John C. Shoemaker, vice-president for worldwide operations. The final step, due to start in August, is a data-sharing scheme that will end the need to write complex middleware software between every program. Sun will "broadcast" every key transaction over the network, and each operation will receive only the data it needs, translated automatically for their programs.

Network computing hasn't been nirvana. It often requires spending more on computer equipment and staff in each location. "At the end of the day, this might not be cheaper than mainframe computing," says Sun Controller George Reyes. But there's the benefit of increased overall efficiency (chart, page 102).

Perhaps more valuable, the network has become Sun's chief selling tool. Says James Stikeleather, a partner with Tampa computer consultant Technical Resources Connection: "They've been able to do what they promised." Indeed, Sun has literally written the book on networked computing: *Rightsizing the New Enterprise*, by Kern and Johnson. Now, Sun has to keep living up to its claims.

By Robert D. Hof in Palo Alto, Calif.

WELCOME TO THE OFFICELESS OFFICE

Telecommuting may finally be out of the experimental stag

It doesn't matter much that Mia Daniel, a sales manager for American Express Co. who lives in West Palm Beach, Fla., rarely sees her supervisor or spends little meaningful face-time in the office—she's still in the loop. She even gets a daily cheerleading missive from her boss via AmEx's private network to her laptop, wherever she is working. "Let's end this year with a massive finish," reads one. "THINK BIG. THINK GIGANTIC. THINK HUMONGOUS. THINK ABSOLUTELY ASTRONOMICAL. DON'T STOP AT NOTHIN'."

ON A SALES CALL: *AmEx' Daniel*

Most of all, don't stop at headquarters. Daniel and the entire 240-member core sales staff at American Express Travel Related Services Co. are telecommuters, members of the labor force who have chosen to, or have been told to, work anywhere, anytime—as long as it's not in the office.

With groupware, digital phone lines, and wide-ranging cellular networks, wherever these workers are can be a node on the corporate computer network. Market researcher Link Resources says the 8.4 million telecommuters out there today represent the fastest-growing portion of the work-at-home set. It expects the number to exceed 13 mill by 1998.

The push to telecommute has gai momentum through federal incenti to reduce air pollution, corporate effo to cut office space, and the need to h key talent. Take Northern Telecom Lt Tennessee-based service operation: wanted to hire W liam G. Holtz l year as vice-pre dent for global terprise services, the former Uni Corp. executive fused to leave Ph delphia. North Tel got him anyw and Holtz n supervises a staf 1,000, including Nashville-based s retary, from home in Ph "There's nothin can do in an of that I can't do home," says Ho "And you elimir the cost of hav an office just drive to and sit i

saving roughly $25 million a year.

But the mobile concept of work does not come easily to all. For now, it's mostly salespeople and other travel-intensive staffers who are moving out of the office, on the theory that they weren't around much to begin with. Many companies still like to keep an eye on the troops. "This isn't the same workforce we had even 20 years ago," says Joel Kugelmass, author of *Telecommuting: A Manager's Guide to Flexible Work Arrangements*. "But we're managing the same way we did 100 years ago."

New technology could help. Affordable desktop videoconferencing means that more home-office workers can beam in as needed. Vivo Software Inc. just launched TeleWork-5, a $1,495 software-based package that lets telecommuters use video, share documents, and surf the Internet. In April, AT&T, Intel, and Lotus teamed up to develop new videoconferencing products that exploit AT&T's WorldWorx Network Services, Intel's ProShare videoconferencing system, and Lotus' Notes software. "The last bastion of defense for reluctant managers is 'How can I supervise them if I can't see them?'" says Jack M. Nilles, president of JALA International, a Los Angeles consulting firm. With videoconferencing, he says, "that goes away."

FANCY PHONES. Local phone companies are also waking up to a huge market in the making. All seven Baby Bells are rolling out integrated services digital network (ISDN), speedy phone lines that can carry voice, video, and data simultaneously. ISDN had been hampered by spotty availability, installation headaches, and high prices, but the Bells started improving their offerings last year. ISDN is now available in about 80% of the country, at fast-dropping prices—Pacific Bell offers it for as little as $23 a month.

But fancy phone lines will not a telecommuter make. Many of the companies that allow telecommuting on an ad hoc basis provide home workers with out-of-date laptops and slow modems. David Goodtree, an analyst with consulting group Forrester Research, contends that companies need to turbocharge the home office with speedier equipment. The cost of outfitting a telecommuter with the right gear is about $4,500 for the initial setup and $2,150 in annual upkeep. The corporate infrastructure also needs a makeover, with modern remote-access computer servers and toll-free phone support to use when at-home setups have problems. With all the pieces in place, more companies can then follow the lead of American Express and THINK HUMONGOUS.

WIRELESS DATA: STILL TRAPPED IN THE OZONE

It must overcome glitches, cost, and cultural resistance

Wireless data was supposed to be the next big thing in networking: Over nothing but thin air, mobile workers could relay E-mail, purchase orders, and inventory reports as if they were deskbound. The idea is as good as ever, but the reality hasn't caught up. At General Electric Co., for instance, only 5% to 10% of the wireless communications budget goes for data; the rest is for voice. Jerry W. King, GE's manager of telecommunication technology, says that most workers do need moment-to-moment access anyw Asks King: "How does the salesm really work, as opposed to this ide the technologists have of checking yo E-mail every 15 seconds?"

King and others say wireless da networks cost too much, don't offer u versal coverage, and don't mesh w with their wired data networks. The r sult: Yankee Group Research Inc. Boston consulting firm, estimated l

Moving Data Over the Airwaves

Some Promising Approaches

TECHNOLOGY	DESCRIPTION	USES	ADVANTAGES	DISADVANTAGES
CELLULAR NETWORKS	Radio modems in laptops use cellular voice channels	Transferring files	Available over existing network	Expensive
CELLULAR DIGITAL PACKET DATA	Packets of data fill idle gaps in cellular network	Short bursts of data such as messages	Price, speed, reliability	U.S. rollouts behind schedule
PRIVATE PACKET RADIO	Private radio networks that transmit packets of data	Bursts of data	Nearly nationwide coverage	Expensive for large transfers

year that only 1.2 million Americans used any form of mobile data network. "We were naive to expect that it would take off immediately," says Roberta C. Wiggins, Yankee's research director on wireless mobile communications.

There's hope in the air, though. Suppliers of wireless data networks realize the deficiencies of today's systems and are working hard to eliminate them. Wiggins predicts that in two years improved wireless data offerings will begin to reach a mass market. In fact, Yankee forecasts that the number of U.S. customers will rise to 7.3 million by 1998.

OLD HABITS. Still, venturing forth with wireless data today requires careful planning. Wilson Sporting Goods won high-tech brownie points and even made a magazine cover for equipping its sales reps with laptops that linked up with Chicago headquarters via Motorola Inc.'s Ardis Co. wireless data network. But around six months ago, it went back to wired connections. The problem: It never persuaded most sales reps to enter orders from the road.

For now, the wireless data market remains dominated by traditional uses such as field service and fleet dispatch. Slightly more than half the customers use private, special-purpose networks run by the trucking companies, government agencies, and shippers, Yankee Group says. One third use cellular, either by hooking modems to conventional voice channels or sending on the cellular industry's new piggyback service, called CDPD, for Cellular Digital Packet Data. Satellite services come in next with 8%, dominated by Qualcomm Inc.'s data and vehicle-location service for long-haul truckers. Just 5% use the specialized data networks run by Ardis and Ram Mobile Data USA, a company affiliated with BellSouth.

Cutting prices is the first prerequisite to expanding wireless data's niche. Ardis and Ram charge about 15¢ for 600 characters, or more than 1,000 times the per-character rate for a wired transmission with a 14.4 kilobit-per-second modem. Hardware prices are stiff as well: IBM charges about $800 for its new line of radio modem cards for Ardis, Ram, or CDPD systems.

Network availability is another deficiency, though Ardis, Ram, and others continue to expand their coverage. The CDPD standard will eventually take wireless data services wherever cellular-phone networks reach. As yet, though, it's available in only a handful of markets. Ditto for Nextel Communications Inc.'s data network that uses mobile-radio (fleet dispatch) frequencies.

Finally, there's software. Applications that are designed for office-standard 10 megabit-per-second local-area networks aren't practical for wireless connections, which run about one thousand times slower. More than a dozen companies, including Motorola, are trying to solve that with middleware that sits in the wireless device and in a special network server and smooths the interaction between them.

Even as suppliers continue to tackle these bugs, there are plenty of happy wireless pioneers. Marcia G. Kadanoff, a principal in Miller/Kadanoff Direc
San Francisco direct-marketing fi

KISS THAT OLD PATIENT LOGBOOK GOODBYE

For the staff at River Hills West Healthcare Center in Pewaukee, Wis., the most dreaded chore used to be the paperwork. Each of the center's 245 residents was receiving multiple doses of up to 15 different medications a day. Every time a doctor wrote a new order, it had to be transcribed by a secretary to a phone order, a pharmacy sheet, and several other patient forms. These all had to be checked by nurses and then entered into a three-ring binder. Each month, nurses and secretaries spent about 64 worker-hours transferring records to new logbooks.

ELECTRONIC RECORDS: *A nurse with her notepad*

Since January, however, the whole routine has changed for about half the center's staff. Instead of transcribing orders, nurses write the fir

FASTER PHONE NETWORKS? ANY DECADE NOW...

Upgrading local service is hampered by 60-year-old laws–but Congress may take actior

It's amazing what you can do with a corporate network these days. Fiber-optic cables and state-of-the-art digital switches can whiz data, video, and voice transmissions around an office in any combination. Everything works great—until an employee wants to reach somebody beyond the building. That's the moment when the Information Superhighway turns into a two-lane back road—otherwise known as the public phone system.

On many local lines, transmission speed drops from 10 million bits per second to 56,000 bits. You can increase that only if you're prepared to drop a bundle for leased private lines. Either way, your transmission costs go up. Public networks are not only slow, they're often expensive, too.

OBSTRUCTIONIST. This is one problem you can truly blame on Washington, where political in-fighting has gummed up efforts to deregulate the communications industry for years. If you doubt that deregulation will make a difference, consider the gulf between the U. S. long-distance market, where competition is fierce, and the tightly regulated local calling monopolies. AT&T, MCI Communications, and Sprint all offer state-of-the-art asynchronous transfer mode (ATM) switching, fiber networks, and high-speed Sonet transmission. Sprint has just completed a network upgrade and now guarantees all-digital service without interruption, even if a cable is cut.

Then, look at what local phone companies are doing. Of the seven Baby Bells, only U S West Inc. offers ATM service—to business customers only—throughout its 14-state region. Pacific Telesis Group is seeking regulatory approval to offer a similar service in California. But none of the seven plans widespread ATM deployment. They cite the morass of regulatory approvals and the heavy investment and reengineering of aging networks required as reasons for not pushing the new technology.

This is no time to go slow, however. "Technology is changing rapidly," says Daniel J. Miglio, CEO of Southern New England Telephone Co. "Public policy is trying its hardest to keep up with all this, but increasingly, public policy is becoming outmoded."

Worse than outmoded, telecom regulations can be downright obstructionist. Take the efforts by two local phone companies to upgrade their networks to carry video signals over phone lines—so-called video dial tone—enabling them to offer videoconferencing as well as compete in cable TV. This requires spending billions of dollars to replace copper networks with some sort of broadband technology. But before the Bells can even build a trial network to test the technology, they need approval from the Federal Communications Commission. In 1992, both Bell Atlantic Corp. and U S West applied for permission to build small trial networks combining fiber o tics and coaxial cable. This April, wi no decision in sight, the companies su pended their applications, saying t technology had advanced so much th they wanted to reconsider their optio

DISTANT GLEAM. But any new approa will have to go through the same app cation process, starting from scrat "We've had these permit proceedin held up literally for years," says B Atlantic General Counsel James Young. "And getting the constructi permit is only the first step in the p cess." Even after they built a video- pable network, the Bells would still ha to win approval for the channels th would offer and the rates they co charge.

With the Information Superhighw still just a distant gleam in the eyes media moguls, some critics s the FCC may ha

What a rollback of the rules won't do for phone carriers is erase generations of monopoly thinking

carriers from making a technology ke. But most analysts figure the and their customers would be bet-f if they could just go ahead, take k, and build something—the way ulated companies do. "The video one process at the FCC is a total " says Scott Cleland, an analyst ishington Research Group. "If the could get out from under all this, would be willing to invest much ."

is could be the year that happens. ressional leaders pledged in Janu-hat they would overhaul the na-60-year-old telecommunications by July 4. Right now, Washing-atchers give such a bill a 60%-to-chance of passing this year. Of e, that's what they said in —and legislation that seemed n to pass last summer died in enate in October over differenc-tween long-distance and local companies.

is time around, with the anti-ation Republicans in charge, the e is expected to pass a bill this 1. A draft is slated to reach the floor for a vote by late June or July. If it passes, and if differ-between the Senate and House ons can be ironed out in a joint nittee, President Clinton is al-sure to sign it. But those are s: This legislation affects long-nce and local carriers, cable-TV tors, broadcasters, and cellular-companies—industries represent-ne-sixth of the U.S. economy. With kind of money at stake, it is one of nost heavily lobbied bills Washing-as ever debated.

FOR-ALL? For corporate custom-he proposed legislation offers what want most: choice. If the bill pass-cal phone companies will suddenly competition from cable companies ong-distance carriers. Corporations h those industries are planning or already started building state-of-t local networks in key cities. With CC's powers greatly reduced, how-the Bells would find it far easier to back with new technology of their

nat deregulation won't do for local anies is erase decades of monopoly ing. Bell Atlantic's Young acknowl-that the phone companies deserve of the blame for not introducing r services sooner. "I don't want to the impression that, if it weren't he regulatory hurdles], we would done all this three years ago." The dragged their feet for years, for nce, on the rollout of integrated ces digital network (ISDN) lines, n can transmit voice and data 27 times as fast as regular phone lines. After all, why roll out new technology when customers have no choice but to keep buying the old? It still takes months to get ISDN installed in some regions, but the Bells are moving to meet rising demand from home-based workers and Internet cruisers.

But nothing is easy in public phone land. In March, the FCC decided that ISDN subscribers must be charged for each channel within the service as though it were a separate line. Since ISDN can have anywhere from 3 to 24 channels, the ruling could have raised ISDN costs by 40% or more. The Bells protested, and the FCC tabled the idea, but it's still looking at the issue.

If Congress passes the proposed legislation, the Bells will be freed from such oversight. Federal law would require that rates everywhere be pegged to actual costs rather than capped at a predetermined profit level, as about half the states do now. Not that callers need worry about prices soaring—the competition will see to that. Just look at California, where intrastate toll calling was thrown open to competition on Jan. 1. PacTel immediately cut its rates by 40%. "There is no question that the unit cost is going to come down," says Nynex Chairman Ivan G. Seidenberg. "That has been the case in all segments of the communications business." Such sentiments must be music to American industry's ears.

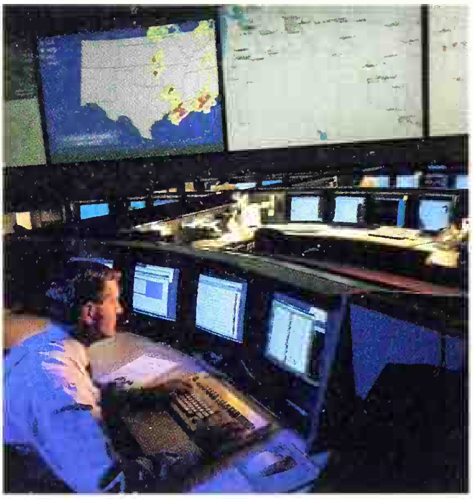
A RAILROAD FINDS A HIGH-TECH GUARDIAN ANGEL

When Charles S. Feld signed up as Burlington Northern Railroad Co.'s chief information officer in 1992, he found a networking nightmare at the Fort Worth-based freight railroad. There were incompatible systems for dispatching locomotives, cars, and crews, and no central oversight for a rail empire that stretches from Mexico to Seattle. If a flood or broken switch forced changes in traffic, isolated dispatchers in places like Alliance, Neb., and Springfield, Mo., simply had to adapt when extra trains unexpectedly poured into their regions.



COMMUNICATIONS CENTER: *Casey Jones now gets to see trouble ahead*

DOUG MILNER

The company is now two years into a four-year reengineering plan meant to change all that. The centerpiece is a $120 million state-of-the-art communications center opened in April. There, dispatchers can view up-to-the-minute status reports of the entire rail system and national weather maps on massive 18-foot screens. When trouble crops up, a wireless phone system lets them roam the 183,000 square foot compound at will. To get the information flowing into one central place, Feld installed computer hubs in eight cities that give dispatchers in Fort Worth direct control over the trains.

CARGO LOCATORS. Gains should be evident soon. In May, Burlington Northern published its first service schedule; before, customers had to wait for a train to become available. Burlington Northern expects to improve on-time delivery from 60% in 1994 to 90% by yearend. When its 70,000 cars are outfitted with radio ID tags this autumn, customers—some with their own in-house terminals—will be able to track their cargo 24 hours a day.

The former Frito-Lay Inc. CIO still has a lot left to do: Burlington Northern's network makeover is only 30% done. Once it's completed, the company should double its asset utilization. "The goal is to have all our trains moving all the time," Feld says. "If it works, it will mean the renaissance of rail." And replacing the iron horse with a cyber-horse?

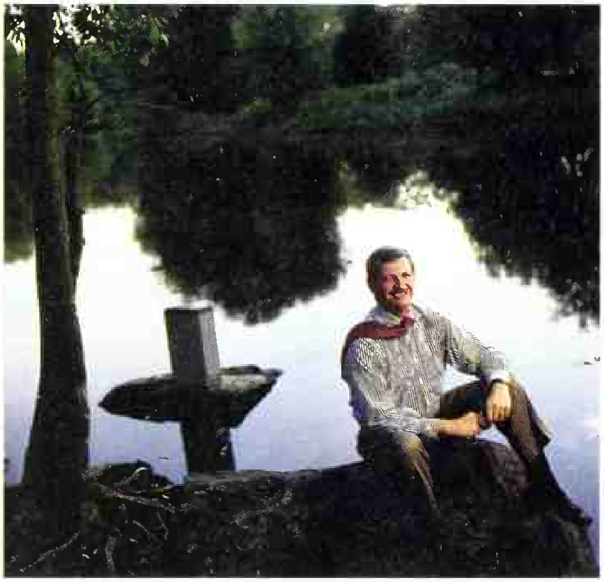
THE NEW SULTANS OF CYBERSPACE

It's virgin territory, and these upstarts are staking their claims



SEIFERT: *His "smart" LANs break up network jams*

Making computer networks live up to their promise is no mean feat. But entrepreneurs who tackle the problem stand to make a fortune. Take Cisco Systems Inc. A decade ago, it came up with a way to make local-area networks (LANs) talk to one another. In 1987, veteran Silicon Valley investor Don Valentine of Sequoia Capital plunked down $2.5 million on the outfit and the investment grew more than a thousandfold.

That rocket ride may be hard to match. Still, analysts and venture capitalists see roaring growth for companies that can upgrade the existing generation of network equipment. Hot groupware programs along the lines of Lotus Development Corp.'s Notes could also be a gold mine. And nearly everyone is romancing the Internet. "The party isn't over," says Valentine.

The most obvious plays are companies that can unsnarl digital traffic jams on LANs. Each year, as desktop computers get more powerful, the files they exchange get bigger and gobble up more bandwidth. To prevent bottlenecks, network companies are pushing a new generation of switching gear that breaks LANs into segments and then moves packets of data from one to the next.

HIGH-SPEED SWITCHING. So-called Ethernet switches speed things up. So does a newer approach called "asynchronous transfer mode" (ATM), which can switch up to 622 million bits of data per second. Dozens of companies are selling such upgrades. "Switching is the hot word in the LAN area," says venture capitalist Geoffrey Y. Yang at Institutional Venture Partners in Menlo Park, Calif. Network Peripherals in Milpitas, Calif., which makes such gear, went public last June and has since grown over 100% each quarter. Yang also likes Grand Junction Networks Inc. over in Fremont, which may go public by yearend.

Another opportunity: "smart" LANS that analyze traffic to break up jams. Agile Networks in Boxborough, Mass., has combined Ethernet LAN technology and ATM switching in one box, along with software "that automatically connects groups of users, wherever they are," says founder William M. Seifert.

One reason analysts like Agile is Seifert's track record. The 45-year-old CEO developed the first routers sold by Wellfleet Communications Systems, which
later merged with SynOptics to form

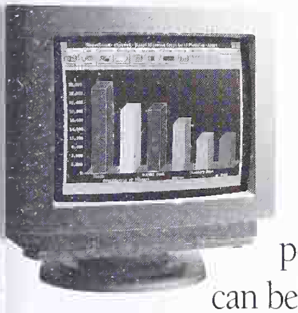
Schwab's New StreetSmart® Takes Online Investing To A New Level. And Now You Can Get It At No Cost.

StreetSmart.
omplete securities, research and portfolio management

Now, Schwab's widely-acclaimed StreetSmart investment software for Windows® does more to help you manage your investments than ever before.

Manage Your Portfolio Any Time You Want. StreetSmart lets you buy and sell stocks, bonds, options or mutual funds using your own computer. Also, you can track your account balances, check quotes and enter orders–24 hours a day.

Exciting New Features. Now you can get online access to current investment information like personalized news clipping services, research databases and forecasts from independent analysts. We've also added historical price graphing as well as two-way e-mail.



Online Mutual Fund Information. For mutual fund investors, StreetSmart 2.0 now includes Schwab's Mutual Funds *Performance Guide*® which tracks the performance of more than 900 mutual funds and can be used effectively to help you select the funds that may be best for you.

Save on Commissions, Too. As a bonus for placing trades with StreetSmart, you'll save an additional 10% off Schwab's everyday low commissions.* Let StreetSmart for Windows take your online investing to a new level. For more information about new StreetSmart 2.0, just stop by one of our more than 200 offices nationwide or call Schwab today. Offer valid between May 1 and August 31, 1995. Limit one per customer.

Charles Schwab

TravelMate 5000
Texas Instruments

The New Texas Instruments TravelMate™ 5000

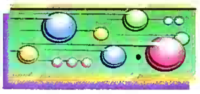
• 75 MHz Pentium processor • Two Lithium ion battery packs • Serial infrared port • 10.4" Active Matrix or 10.5" Dual Scan displays • 524 million bytes (=500MB) or 810 million bytes (=772MB) Hard Disk Drives* • 8MB RAM, expandable to 32MB • 1MB Video memory • Multimedia package: Built-in 16-bit sound, internal speaker & dual mode microphone

Introducing The First Notebook To Maximize The Pentium's Full Potential.

When the rush was on to introduce a notebook with a Pentium™ processor, Texas Instruments decided to do what others thought couldn't be done.

We created a notebook that maximizes Pentium performance by integrating *full PCI bus architecture in our TravelMate 5000.*

And for flexible connectivity, we designed a way to allow external access from the PCI bus to the latest peripherals.



It was a challenge we addressed for two simple reasons: to give users true desktop Pentium performance for *faster running software and expansion capabilities* for investment protection.

So now you have a notebook with smoother full-motion video and enhanced 3-D graphics. In addition, we designed the TravelMate 5000 to take advantage of the "plug and play" capabilities of Windows 95® when it becomes available.

But our engineers didn't stop there. *We added a second lithium ion battery* without sacrificing size, weight or eliminating a floppy drive.

In addition, wireless communication with other notebooks and desktops is very quick and easy with our integrated infrared capabilities.

The TI TravelMate 5000. For more information on what others thought you couldn't do with a notebook, simply call 1-800-TI-TEXAS (e-mail: 2ti@msg.ti.com).

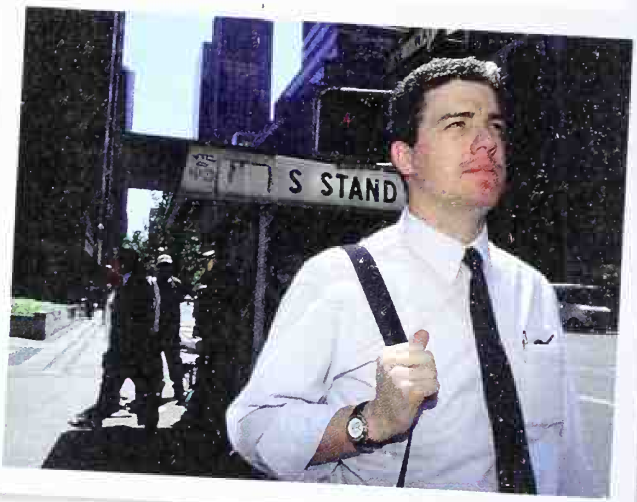
① **WELCOME TO THE WORKING WEEK:** *O'Brien looks for signs of life in an ad agency's disk drive.*



② **TAXI!:** *No cabs in sight, he starts hotfooting it across town.*

DEAD DISKS. FROZEN FILES. WHO YA GONNA CALL?

A day in the life of network triage specialist Mike O'Brien

Michael G. O'Brien is trying to save a life—the life of a 500-megabyte file-server disk drive. It failed yesterday at an ad agency in Midtown Manhattan. Working until 10 last night, O'Brien, his boss, and a colleague tried to master the disaster. They were back at 6 a.m. O'Brien is operating on four hours' sleep and his workshop's air-conditioning is broken. It's 8:45 a.m., and he's trying to download files he needs to test the drive. But for 20 minutes there has been no answer at two bulletin boards that have them. The phone rings: his boss. The client is asking whether the data can be saved....

Welcome to a day in the life of a computer technician. When a PC displays a strange error message or a network crashes, it's people like O'Brien who get the call. They're the ambulance crews, triage doctors, and heart surgeons of data. Without them, networks would blink out like dead bulbs on a Christmas tree. Understandably, it's a job with a future: The U. S. Bureau of Labor Statistics projects that the ranks of data-processing equipment repairers will rise to 120,000 in 2005, from 83,000 in 1992.

O'Brien, 30 and married with a child on the way, ended up in the career by chance. The Queens native studied programming at Bernard M. Baruch College (part of the City University of New York), but couldn't find a programming job after graduation. So he went into repairs. He has spent the seven years since working with Richard C. Nathan, majority partner of Tailored Technologies Co., a computer sales, installation, and maintenance company with six employees and 10 subcontractors. O'Brien, now a partner himself, describes the job as "20% maddening" but it's clear he loves it. "I'm like a detective every day."

Today's case began at 12:30 yester afternoon, when clients at Milton Sa els Advertising Agency Inc. started l ing trouble opening files stored on t L: drive. O'Brien went over immedi ly, got the users to log off, and rep edly ran a Novell Inc. utility prog called VRepair that corrects disk rors by moving data from bad spot good ones. No luck: By the time he started the network, the drive dropped out completely.

DATA PANIC. Well, no great loss, he ured. All the data was automatic copied onto tape every night at 11 right? Surprise. The procedure had worked properly, so the last good b up tape was nearly three months Even so, if the L: drive had conta only programs, it wouldn't have b too serious: You can always get a program. But it turned out that sev people had been storing data on it.

By this point, then, O'Brien is ho that somehow the drive is actually

There was already a project un-
ay to move those programs onto
dual PCs. Now, the Tailored Tech-
es SWAT team must finish the long-
transition in a few hours. Further
icating matters, many of the PCs
have undersized hard drives, so Nathan has to order and install six new ones. The priority list is on the back of an envelope. One woman—blissfully unaware of the crisis—complains that she's missing her favorite screen saver.

With all the new hardware, this is getting to be a costly job, but Nathan doesn't discuss billing with the agency's chief financial officer, Michael Spano. Spano is having a bad day of his own. Last night, a truck rammed his brand-new sports car. And this system crash has happened at a bad time: The agency is working on end-of-the-month bills. Says Nathan: "I'd never bring up money at a time like this. Bad form."

Back at Tailored Technologies, O'Brien's Bugs Bunny watch reads 9:50 a.m. Calls have been coming in from a midtown law firm where all the computers on the network are frozen and from a U.N. agency with a screwup that sounds like it might be a cabling problem. He has farmed the jobs out to other colleagues.

POSTMORTEM. Now, the moment of truth: Time to try out the malfunctioning L: drive in the full network setup. Oops. Frankenstein "sees" the drive but can't read anything from it. Anything at all. What's more, the drive is making unpleasant grinding and clicking noises. It appears to be a major, irreversible failure. Says the unflappable O'Brien: "When you hear a hard click when you turn it on, that's not good."

The only thing left to do is ship the dead drive to a computer pathology lab that will dismantle it and try to retrieve the data for hundreds or thousands of dollars. (In the end, the agency cancels the job when most of the files turn out to be unrecoverable.) O'Brien unwraps a new drive and starts loading it with files from the March backup tape. Around 11 a.m., he heads to the ad agency to help Nathan and Johnson with the clients. Though this work is less intriguing than sleuthing for faults, it has its own rewards. After he gets media director Jill Elias on line about noon, she responds: "I'm printing? What a guy!"

By the time they knock off for lunch, Tailored Technologies' crew has done a full day's worth of work. A rescue like this would usually cost $10,000 or more, parts included. Because Milton Samuels has a service contract, Nathan predicts the ad agency will have to lay out only about $4,000. There are still loose ends to tie up there this afternoon. First, though, O'Brien rides the subway to Duke & Co., a fast-growing East Side brokerage and investment banking firm, where there are some computers to move around. After the 90-minute commute home, he should sleep well tonight. Unless his beeper goes off.

and a New York law firm where all the PCs are frozen

MUTUAL FUNDS

VINIK, VIDI, VICI: A TALK WITH MAGELLAN'S GENERAL

What Jeff Vinik sees in store for high tech, the economy, and Wall Street

Three years ago, Jeffrey N. Vinik took the reins at the gargantuan Fidelity Magellan Fund. Since then, Vinik has handily beaten the Standard & Poor's 500-stock index and left most of his competitors in the dust. So far this year, the fund is up 19%. Those returns, however, don't come without risk. Vinik, 36, makes large bets on stocks and industry groups, which could be costly if he's wrong. Right now, Vinik has 46% of the $43 billion portfolio in technology stocks. BUSINESS WEEK Correspondent Geoffrey Smith spoke with Vinik in his Boston office on June 13.

Q: *Are you still putting money into technology? Which tech stocks do you like?*
A: I'm still extremely bullish on the tech sector. Every day I am buying some technology stocks, maybe ones that haven't run up but have good prospects. Every day I am selling some tech stocks, or trimming some that have had good runs.

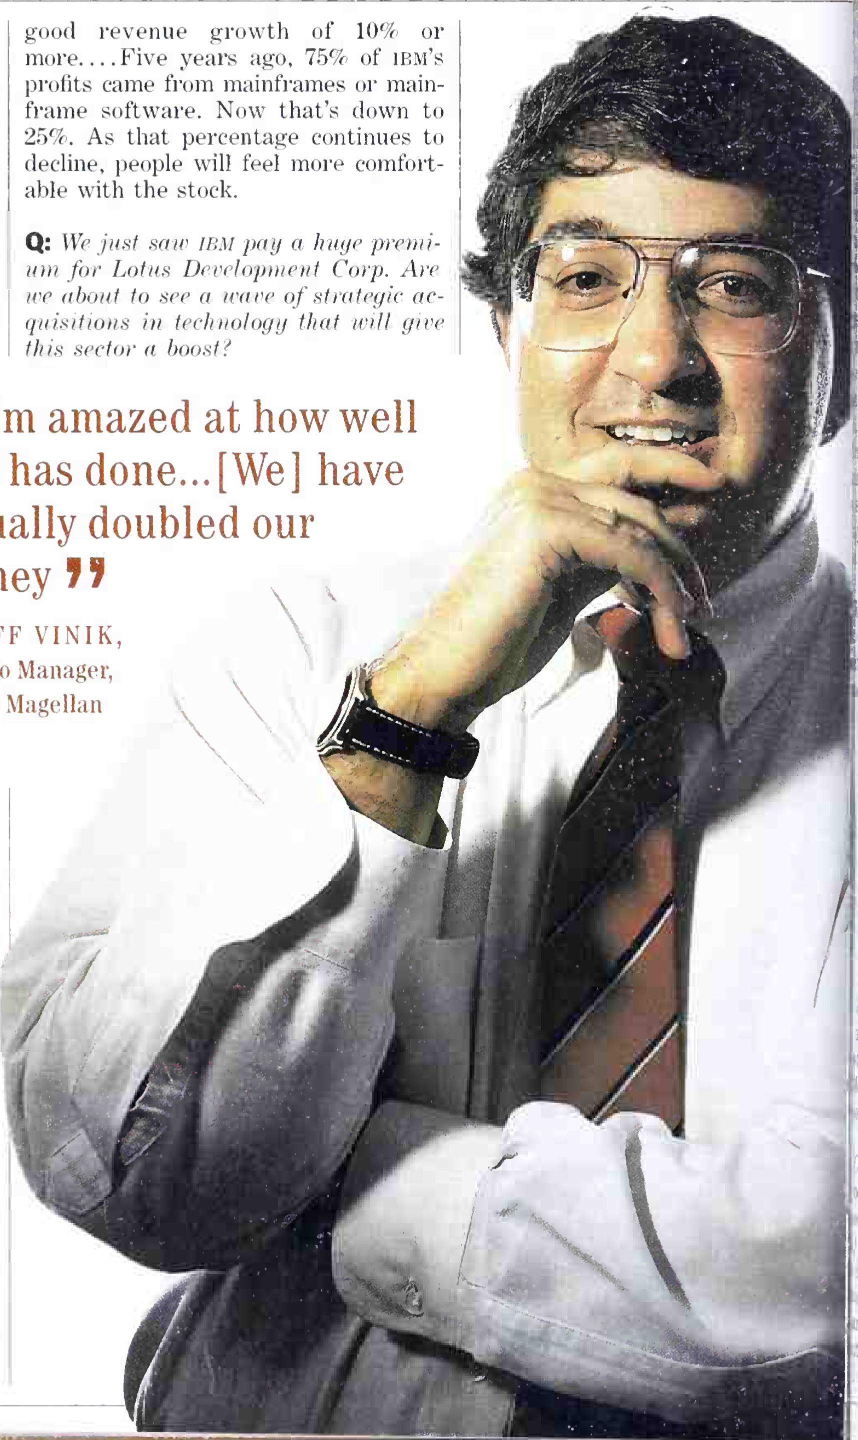
I continue to be very positive on semiconductor companies like Motorola, Intel, and Texas Instruments; software companies like Computer Associates and Oracle; hardware companies like IBM, Digital [Equipment], and Silicon Graphics; and cellular infrastructure companies like L. M. Ericsson.

Q: *Why is IBM your top holding? And are you concerned that a large share of its business is coming from old hardware—mainframes?*
A: I'm amazed at how well IBM has done in the last couple of years. Most of us at Fidelity have virtually doubled our money on the stock over the last two years. But despite its great run, I see a terrific outlook.

I expect IBM to earn over $10 a share this year, perhaps even $11.50 or $12 a share next year, with reasonably good revenue growth of 10% or more.... Five years ago, 75% of IBM's profits came from mainframes or mainframe software. Now that's down to 25%. As that percentage continues to decline, people will feel more comfortable with the stock.

Q: *We just saw IBM pay a huge premium for Lotus Development Corp. Are we about to see a wave of strategic acquisitions in technology that will give this sector a boost?*

> “I'm amazed at how well IBM has done...[We] have virtually doubled our money”
>
> — JEFF VINIK, Portfolio Manager, Fidelity Magellan Fund



RICHARD

lon't know if we are in the midst wave of strategic acquisitions in ology. I can't think of any technol- stocks that I own because I ex- hem to be taken over.

Q: *otorola, one of your top holdings, 't been a barn burner. In fact, Fidelity managers have been sell- e stock. What is your assessment?*
A: s good news, bad news. The bad is that it's gone nowhere for the 8 months. The good news is that arnings have continued to trend rd over that period so that the tion on the company has declined icantly.

ere are a lot of negatives. ompany has had an excess tory of analog phones in the it's had to recall some dig- hones overseas; it hasn't as active in [personal com- ations services] licenses as s. Earnings estimates have cut somewhat due to some se problems.

hink for the next two or quarters, earnings will be e with Wall Street esti- , which potentially sets up to beat the estimates in Right now, you can buy ola at 15 times next year's ngs while two years ago it elling at 25 times earnings. mind, the Motorola fran- is as good as it ever was.

e average diversified equity is running about four per- age points behind the mar- et, but Magellan is one of the few that's ahead. How come?
A: Obviously, a heavy exposure in technology has helped, especially the semiconductor stocks. Many of those stocks are up 30%, 40%, 50% this year. In addition, the cyclical and financial stocks that I own have done very well. Cyclicals like Cat [Caterpillar] and General Motors have had reasonably good moves. And brokerage stocks like Morgan Stanley and Ierrill Lynch have had very good oves.

One of the strongest sectors in the part of the year has been consumer rables (like beverages, foods, and) and you haven't owned those in a long time. Are you beginning ink consumer nondurables?
am not particularly optimistic on itlooks for most of these compa- I still see slowing earnings gains, increasing competition, margin pressure, and high valuations in the stocks.

Q: *What's your scenario for the economy, interest rates, and the market?*
A: I think the economy is going to remain soft for a while and then pick up next year and in 1997. I don't base the fund on predicting the direction of interest rates. But my guess is, given low inflation and a slow economy, long rates can come down some more, and short rates will also come down, which means the Fed probably will ease some over the next several months. I'm definitely bullish over the long term on the stock market, given the very competitive position of American industry and declining budget deficits in Washington and trade deficits overall. Low inflation, good productivity, gaining market share on a worldwide basis—these are all factors that make me very bullish long-term. I think the conditions are in place for a good market environment over the next six to 12 months.

Q: *Given your bullishness on rates, how do you view financial stocks?*
A: I like financial stocks a lot [but] not only because my guess is that rates will come down. I see good fundamentals, good earnings growth, and reasonable valuations because a lot of the stocks have corrected over the last 18 months. I like Merrill Lynch, Morgan Stanley, and Travelers, all selling at 7 to 8 times earnings. There's a real trend in this country toward people investing and saving rather than consuming, and that should drive their earnings for several years. I also like Fannie Mae and Freddie Mac in the financial-services area—good 13% to 15% earnings growth selling at 9 to 10 times earnings. In insurance, I like Equitable Cos. and SunAmerica.

Q: *What other sectors do you like now?*
A: I continue to be very positive on a host of cyclical sectors. The cyclical part of the U.S. economy, which was boom and bust in the 1980s, will be more like boom-boom in the 1990s. I expect continued prosperity from companies like Caterpillar....I'm also bullish on the auto companies, like General Motors, which is gaining share from the Japanese, and is getting its costs under control. I also own railroad stocks like CSX and Conrail. Railroads, at 10 to 11 times earnings, are priced as if this is the peak of the earnings cycle, but their earnings are likely to grow for several more years. Investors don't fully appreciate that.

Q: *Since the U.S. market has moved up so much relative to foreign stocks, are there now opportunities abroad?*
A: It's no accident that U.S. stocks have outperformed most markets around the world both in 1994 and 1995. It reflects the very good fundamentals of this country. While I do own a handful of companies overseas like Ericsson, Nokia, KLM Airlines and Philips, the vast preponderance of the best ideas are here. I also own some Canadian natural gas stocks.

Q: *You have enormous holdings in many companies, some worth over $1 billion. Do you worry about your ability to unwind large positions in a bear market?*
A: I worry about bull markets, bear markets, corrections. I try to envision every possible scenario. If there were a correction in the market or a bear market, I would expect that Magellan would go down more than the S&P 500, given its aggressive position. It has done so in probably every market correction over the last 15 years. Last year we had a correction, and I used the time to improve the positioning of the fund for the next better market environment.

BONDS

FLOATING A BOND, NOT PASSING THE HAT

Charities are rushing to use tax-exempt finance. Good idea?

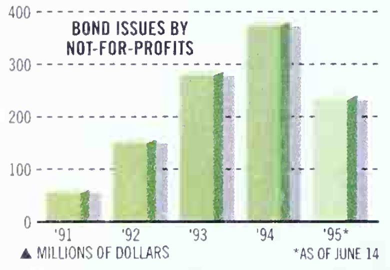
RAZING CAPITAL: *Bonds are building a new Museum of Contemporary Art in Chicago*

In late May, construction equipment began rolling onto the grounds of the Norton Gallery and School of Art, tearing out a street and bulldozing a small building at the museum in tony West Palm Beach, Fla. Housing a collection of Impressionist and 20th-century American art, the Norton is commencing a major expansion. Although it boasts a respected array of philanthropic and corporate board members, it's no more flush with cash than most other cultural institutions these days.

So, to finance the Norton's $16.7 million expansion and renovation, directors organized a fund-raising campaign. But they also turned to a source of funding long tapped by cities, universities, and health-care institutions—tax-exempt bonds. The projected savings on the 30-year deal: a handsome $1.2 million in interest costs over a traditional bank loan. The debt will be serviced with income from a bolstered endowment.

Caught between reduced funding from federal and local governments as well as overburdened private sector sources and the need to spruce up old buildings or construct new ones, a wide array of not-for-profit organizations like the Norton are raising tax-exempt money at a sharp clip (chart). From the Western Washington Fair Assn., which runs a state fair, and the Father Flanagan's Boys' Homes in Nebraska to the Art Institute of Chicago and the Phillips Academy prep school in Massachusetts, financial executives are discovering the special allure of the tax exempt-market: It allows them to shave as much as 300 basis points from their borrowing costs. "It's kind of a gift to public in tutions, a much-needed one right n" says John D. Cartland, who heads not-for-profit practice at Arthur An sen & Co.

NOT-FOR-PROFITS HIT THE MARKET



DATA STANDARD & POOR'S CORP., MOODY'S INVESTORS SERVICE INC., BW

Found money, though, often conta hidden or unexpected costs. Cheap c it has caused some less-than-financia astute institutions to get in over th heads and some bankers warn of f ther problems ahead. "There is an i nite number of causes and a fi amount of donor money," c tions Mark E. McCarthy, sen vice-president at Chicago's Salle National Bank, which provided letters of credit to n profits. "The more people v add debt to the equation, closer you will get to the bre ing point, and the greater risk some will fail."

NUANCES. Most of the bon which are underwritten by s investment banks, are pla with mutual funds, insura companies, and other instituti al buyers. But some small sues are sold to unsophistica retail investors. "You don't w widows and orphans holding to them," says Kenneth Kerzner, managing director First Chicago Capital Mark one of the most active not- profit underwriters. "There's way you can explain the nua es to them."

Nuance, indeed, abounds in scruti ing not-for-profit bonds. The finan performance of many issuers can be v volatile, for instance. And collateral s as art collections is usually off lim Investors thus usually demand that d receive a credit agency rating, insura or letters of credit. "These issues quire special analysis," says Paul C. liams, head of investment strategies research at John Nuveen & Co., a ma tax-exempt investor.

Consider what rating agencies banks look at when assessing the ri of not-for-profits. For museums symphony orchestras, it's everyth from local competition to the comp tion of the board of trustees, which, pinch, might be called upon to rus up more endowment money. Standar Poor's, which rated the Art Institute Chicago's $25.5 million issue in Febru A/A-1, offset its concerns about stream of operating deficits and mou ing debt with the comfort of a $222 lion endowment. Professional organi tions, including such recent issuers the Association of American Medi

Colleges, are scrutinized for the stability of their memberships. MBIA Inc., the largest insurer of municipal bonds, which has backed deals from the New York Public Libary and the Choate Rosemary Hall School in Connecticut, won't even consider a bond unless there are unrestricted funds on the balance sheet greater than the total debt level.

The major mistake not-for-profits make is to get "seduced" by cheap financing, as First Chicago's Kerzner puts it, and overbuild. Take the Fernbank Museum of Natural History in Atlanta. Though it lacked an endowment or a permanent collection, it was able to raise $20 million in tax-exempts in 1990 to put up a new building. But it badly overestimated admission revenues. On May 1, Fernbank missed an interest payment of $1.3 million and is now trying to restructure its debt and raise contributions.

SECONDARY EFFECT. The venerable Boston Museum of Fine Art is finding that the interest burden from $33 million in bonds issued in the 1980s for renovation and new construction is compounding the institute's operating problems; it's now five years in the red. "When you issue debt, you have to be very cautious and remember you need a plan to pay it back," notes Thomas W. Fitzgerald, director of finance. The MFA, which had simply hoped to repay the interest out of operating income, is cutting staff and programs.

Fortunately, not-for-profits are finding that shiny new bond-financed buildings beget scads of new contributions. Take Chicago's Museum of Contemporary Art, whose headquarters just off Michigan Avenue was constructed with a $50 million tax-exempt bond issued last year. The new building, five times the size of its old facility, was a big spur toward a $55 million endowment campaign, most of it now pledged, says Kathleen A. Hechinger, finance manager for the project. To pay off the debt, the museum plans to use income from the endowment. Hechinger says the process of planning the bond issue imposed a useful financial discipline on the museum. What about the risks? "I would be concerned if the curators were running the museum, which they aren't," she adds.

For not-for-profits that can hew to such financial discipline, tax-free bonds can be a useful tool to meet mounting budgetary pressures. For those that can't, tax-free bonds could be a bargain with the debt devil.

MERGERS

A NEW GIANT STALKS THE BACK OFFICE

But is First Data big enough to beat back MCI and AT&T?

At first glance, it looks like a field day for antitrust lawyers. On June 13, First Data Corp. agreed to merge with archrival First Financial Management Corp. The two companies are major players in the enormous but little-watched market for transaction services—the authentication, transfer, and recording of electronic payments for merchants and credit-card-issuing banks. The merged entity, which will be known as First Data and will have revenues of more than $4 billion, will dwarf other independent transaction processors (table). "The combination is going to be phenomenal," says Richard K. Weingarten, an analyst at Montgomery Securities. Among independent transaction processors, "there is no one positioned like them. I'm pumped."

DUQUES: *"We're . . . making cash [into] roadkill"*

The Justice Dept. is likely to scrutinize the deal, especially since both companies own large money-transfer operations. First Financial bought Western Union Financial Services Inc. last September—by outbidding First Data and other contenders. And First Data could control more than 30% of the market for processing Visa and MasterCard transactions, according to David Robertson, president of credit-card newsletter *The Nilson Report.*

BUILDING A MONOPOLY?

REVENUES OF SELECTED TRANSACTION PROCESSORS FOR THE PAST 12 MONTHS

	MILLIONS
FIRST DATA*	$4,170
EQUIFAX	1,487
MEGAPHIS	300
SPS TRANSACTOR SVCES.	277
NATIONAL DATA	231
TOTAL SYSTEM SERVICES	200

* Assumes combination of First Data and First Financial Management

DATA: BROADVIEW ASSOCIATES

CROWDED FIELD. In fact, the market for electronic transaction processing is becoming more competitive each day. In the past two years, MCI Communications, AT&T, and IBM have all joined the fray. MCI in April announced the launch of MCI TransAction, a service to handle every piece of business involved in processing an electronic payment, from the moment a customer's card touches an electronic re er to the closing of the sale. And June 6, AT&T cut a deal with Checkf Corp. to handle electronic bill payme over AT&T distribution channels.

The flurry of interest in transact services isn't hard to understand. W the exponential grov of the Internet and acceptance of credit debit cards everywhe from ballparks to stations, electronic c merce is expanding rapid clip, says F Data Chairman and Henry C. (Ric) Duqu

SHOPPING TIPS. W electronic payments count for just 14% the $5.5 trillion in t payments today, he s that proportion expa ing, even as total p ments reach $8.5 tril by 2000. Duques s the combined comp will have only 16% or so of the elect ic-payments market, adding that deal will give him the scale to comp effectively.

First Data is already on track tc fer some nifty new electronic-comm services. It will take over a First nancial deal to provide transaction- cessing services for Microsoft Co new online service, Microsoft Netw First Data has also launched U$av program to give merchants proprie data on their tomers' buying ha so they can marke them more effecti And it is striving shift the market f cash to plastic. "W going to win by n ing cash [into] roa on the Informa Superhighway," Du says.

Sounds good. Bu had better watch for all the traffic.

SELECT EDITION
PRE-OWNED AUTOMOBILES

*ur dealer for a copy of the limited warranty and complete details on Roadside Assistance. **Only 1992–1994 model-year cars with 50,000 miles or less are available in this program. Enjoy tomorrow. Buckle up today*

BY GENE G. MARCIAL

HAS RON PERELMAN SPOTTED A PEARL?

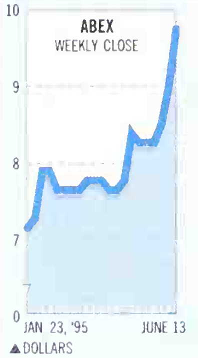
If you're a Ron Perelman fan who wants to get in on one of his stock plays, you may want to ape what some pros are doing: snapping up the shares of Abex (ABE), now at 9¾. This little-known maker of flight- and engine-control systems and hydraulic pumps for aircraft is being swallowed up by Perelman's MacAndrews & Forbes.

PERELMAN: *One security becomes three*

Under an agreement, Abex is merging with two other Perelman businesses: Consolidated Cigar, America's largest stogie maker, and Mafco Worldwide, the leading producer of licorice extract, a flavoring agent used in tobacco and confectionery products. The combined company will be called Mafco Consolidated Group, which will be 80%-owned by Perelman.

As part of the merger arrangement, for each share of Abex, shareholders will receive three securities: one share of Abex' aerospace company, which will be renamed Power Control Technologies and will trade on the Big Board; one quarter of a share of common stock in Mafco Consolidated, also on the Big Board; and one "value support right," which is designed to ensure that within a stated period the combined market value of the package received will be at least $10.

LINKS WITH CIGARS AND LICORICE



DATA: BLOOMBERG FINANCIAL MARKETS

"Even before Perelman is halfway to where he wants to take Mafco, the combined value of the stocks should be twice the current price of Abex," says the head of an investment-and-research boutique in San Francisco who started accumulating Abex shares when it was at 7. Abex has some $200 million in cash, besides the aerospace unit's assets.

This investment pro believes Perelman wants to sell the aerospace division as quickly as possible. He estimates this operation alone is worth "north of 7 a share."

"Buying Abex shares at this point is a smart bet on Perelman," says Stuart Rudick of Mindful Partners in San Francisco, who likes to play Perelman's forays into different stocks. "His strategic moves into Revlon, Coleman, and Marvel Entertainment, to name some of them, have made me big bucks," says Rudick.

Rudick believes Perelman will use Abex as a vehicle to make additional lucrative acquisitions, possibly including a casino in either Atlantic City or Las Vegas.

A ROCKET MAKER SET TO BLAST OFF

For nearly two years, shares of rocket maker Orbital Sciences (ORBI) have been hovering between 16 and 18. But that may be about to change. Joan Lappin, president of Gramercy Capital Management, says: "Orbital's management is doing an excellent job of building value, and one of these days, the stock will explode to the upside." She sees it hitting 30 in 12 months and 50 in 24 months.

What's fueling her optimism? This time it's isn't just the brightening fundamentals. Along with Prudential Securities aerospace analyst Gary Reich, she's convinced Orbital has become buyout bait.

"Orbital is succeeding amazingly well in trying to commercialize space on a shoestring budget," says Lappin. The company builds low-cost rockets, satellites, earth stations, and handheld "global positioning communicators." NASA recently placed a $70 million order for Orbital to build, with Rockwell International's help, a reusable, low-cost launch vehicle.

Lappin thinks Rockwell may try to buy Orbital, at 40 a share. Reich agrees, although he thinks the buyout price could be closer to 50. If Rockwell buys Orbital, Rockwell "would again capture the leadership in space it once had," says Reich. Rockwell was the leading producer of manned space systems, such as Apollo and the Space Shuttle. "It now finds itself in the embarrassing position of having to go to Orbital to build the [low-cost] X-34 shuttle, because NASA feels Orbital has the inside track," says Reic

Another possible suitor, according Reich is McDonnell Douglas, which al found a need to team up with Orbit When NASA asked for bids for its ne "Medlite" launch system, he recal McDonnell needed Orbital's skill make bid. Rockwell and McDonnell d clined comment as a matter of polic

SPICY TALK ABOUT TELEMUNDO

A funny thing happened to Telemun Group (TLMD) after it emerged fr 18 months in bankruptcy on Jan. 3: stock, then at 7, shot up to 15⅝ June 13. What's going on?

The cast of characters who are involved in the company may have a lot to do with the impressive climb. Telemundo is a Spanish-language TV network based in Miami that reaches 86% of U.S. Hispanic households. The person who guided Telemundo out of bankruptcy was Leon Black, who a runs Apollo Advisors, a "vulture fu that scoops up depressed shares of d tressed companies. Using Apollo's 1 stake, Black took over as chairman a crafted Telemundo's recovery. It's cl to many pros that Black isn't enthu astic about running a TV network, they reckon he'll rejuvenate Telemu and then sell it.

TWO STAKEHOLDE ARE STOCKING U

Another big stakeholder (10%) is thur Goldberg, president and CEO Bally Entertainment, which owns ca nos. He is still buying and some th he will make a run for the compan

Some investors believe Telemun new president and CEO, 37-year- Ronald Hernandez, also wants to the company. He founded and ov Interspan Communications, wh formed KFWD-TV, a Telemundo affil in Dallas-Fort Worth. Hernandez ov about 5% of the stock, and rumors he has been buying more. A New Y hedge-fund manager says Hernan wants to take the company priv Goldberg declined comment. Her dez didn't return calls.

OM BLOCH'S NO. 1 REASON OR LEAVING THE FOLD

H&R Block heir is seeking fulfillment beyond taxes and high tech

LY MAN: *Bloch prefers spending time with his wife and two sons*

ELI REICHMAN

n a chilly Thursday morning last April, Tom Bloch decided to break the news. For 20 years, the 41-year-old scion of H&R Block Inc. centered his life on the tax busi- Twenty years, heck—taxes had al- seemed his destiny. He was a year when his father and uncle, Henry Richard Bloch, founded the compa- hey would build into the world's st tax-preparation service and ulti- ly into a diversified holding compa- ith annual revenues of $1.2 billion. Thomas M., the only one of the ers' seven children with an interest siness, the path to the company's er office had been as straight as a er column.

t three years after taking over as Tom Bloch stepped into his father's with what felt like a confession. "I want to do this anymore," he told y, who, at 72, still serves as chairman. "I want a different kind of fulfillment. I've decided to resign."

For Tom Bloch, the decision ended an agonizing two-year internal debate that had led to a fundamental conviction: He wanted more time with his family and more gratification from his work. In particular, he liked the idea of teaching in an inner-city grade school. For Henry Bloch, it was the end of a dream. In announcing Tom's 1992 ascension as CEO, the elder Bloch had declared: "I have worked for this my entire career." For H&R Block, it marked the first time the company would be run by someone outside the family.

H&R Block today is a very different company from the one Tom Bloch went to work for as a tax preparer in 1976. Once focused solely on taxes, over the years H&R Block had diversified into such areas as temporary personnel, legal clinics, and online services (table, page 128).

Indeed, if Tom Bloch is at a crossroads, so is H&R Block. While the tax-preparation business generates lots of cash, the company's most aggressive growth comes from CompuServe Inc., the granddaddy of online services, purchased in 1980 for $23 million. But CompuServe, which has 1.9 million subscribers worldwide, is facing increasing competition from other online services, including Prodigy, America Online—which has overtaken CompuServe in subscribers—and, soon, Microsoft Network. Meanwhile, Block's core business is under assault. For only the second time in the company's publicly traded history, tax earnings this year are expected to fall, owing to a new Internal Revenue Service rule that lets fewer people qualify for Bloch's profitable refund-anticipation loans.

"VERY GOOD JOB." On the news of Tom's resignation, effective Aug. 31, H&R Bloch's stock price shot up 10%, to 46¼. Alexander Paris, an analyst with Barrington Research Associates Inc., says investors hoped "that a technology manager would come in and more aggressively manage CompuServe, which is the key to success." The stock later settled in the mid-30s, presumably because of the anticipated poor year for the tax unit.

Still, by most accounts, Tom has delivered a strong, if not exceptional, performance. He "has done a very good job and has kept the company as successful as it had always been," according to Jonathan Braatz, an analyst with Fahnestock & Co. Since Tom became president in 1989, earnings have doubled, from $100.2 million to $200.5 million last year. Much of that growth came from the electronic-filing and Rapid Refund programs he pioneered.

There's no evidence Tom's resignation was anything but voluntary, and he's part of the committee searching for a new CEO. Despite analysts' interest in technology, company insiders want to see a wide net cast. Says William Andersen, senior vice-president and chief financial officer: "I'd like to know what kind of person I'm going to be working for, and I'm not sure that a technology person is that critical."

In the weeks since he told his dad he was leaving, Tom has grown more definite about his next career. He has been consulting teachers and administrators about everything from earning a teaching certificate to problems in public schools. Recently, he sat in on classes at Westport High School, in a poor, rough section of Kansas City.

Inner-city schools are hungry for qualified teachers, Bloch notes. "I've had a life full of opportunity, and I'd like to make a difference in the lives of people who haven't." He is fortunate, he adds, "to be able to do something where the reward is not financial." At the current stock price, Tom's 0.34% stake in H&R Block is worth some $13 million.

TOO TAXING. Bloch also quit, he says, because "my family is the most important thing in the world to me, but that wasn't reflected in the way I was living my life." Even during evenings and weekends with his wife, Mary, and two sons, aged 7 and 10, he had difficulty focusing. "Part of me was [illegible] the office."

[illegible] attributes [illegible] disen[illegible] lack of [illegible] other ex[illegible] second of four siblings, he grew up in the affluent Kansas City suburb of Shawnee Mission. Henry Bloch wasted little time introducing his sons, Tom and Robert L. Bloch, to the business world. But while Bob—who now works for the family's charitable foundation—showed little interest, Tom relished skipping school to travel with his dad on business. As a teenager, he could knowledgeably discuss taxes and other financial matters. His soft-spoken demeanor belies a competitive nature that helped him graduate as valedictorian from Shawnee Mission East High School and as an honors student from Claremont Men's College in Claremont, Calif.

Tom joined H&R Block right after college as a tax preparer in a Kansas City office. By 27, he was president of the tax business. He held several other executive positions before becoming president in 1989 and CEO in 1992. The pressure to succeed, he says, was unremitting, partly because of others' expectations and partly because of his fear of failure and of embarrassing his father: "I always wanted to prove to myself and others that I was earning my success at the company." Henry Bloch says Tom was too hard on himself. "People don't inherit [positions] in our company," he says. "Tom was a good leader, and I'm sorry he won't be at the helm anymore."

Henry Bloch admits he has trouble relating to Tom's desire to leave his $764,000-a-year post. "For his sake, I'm happy. But it's not something that I would do." About Tom's alienation and stress, his father seems genuinely surprised. "I always thought Tom was happy doing what he was doing," he laments. "It is disappointing and sad that he wasn't." But he acknowledges that he was concerned by a basic difference in their personalities. Tom, he s "took his worries home with him. I c take mine home with me." Then ag Henry was bound to be surprised. F long time, Tom says, he feigned satis tion rather than disappoint his fath

NO GOLF. As time passed, Tom fo himself meeting each professional c lenge more mechanically and less sionately. The further he rose, the w it got. "Being the CEO of a holding pany like this puts you fairly far the action," he says. "My most satisf job was as a tax preparer, helping ple with that annual burden and, h fully, saving them money by findi deduction they didn't make, and wa ing that person leave happy about decision to come to H&R Block. was great."

Over the past two years, Tom begun consciously putting his family fore his work. He has given up Some weekends, he and his sons groceries at a food bank. At other ti the family unwinds at their new f house a few miles from Kansas Cit

Nonetheless, he's now growing i tient to get his successor in place move on, even as others try to to grips with his departure. Recen longtime employee pulled Tom asid expressed shock at his resignation. always thought there were three tainties in life," the employee told "Death, taxes, and that a Bloch w run this company." Henry Bloch, fo part, hasn't quite given up on his coming back to the family busines would like that to happen," he s "He could prepare taxes if that's he wants to do."

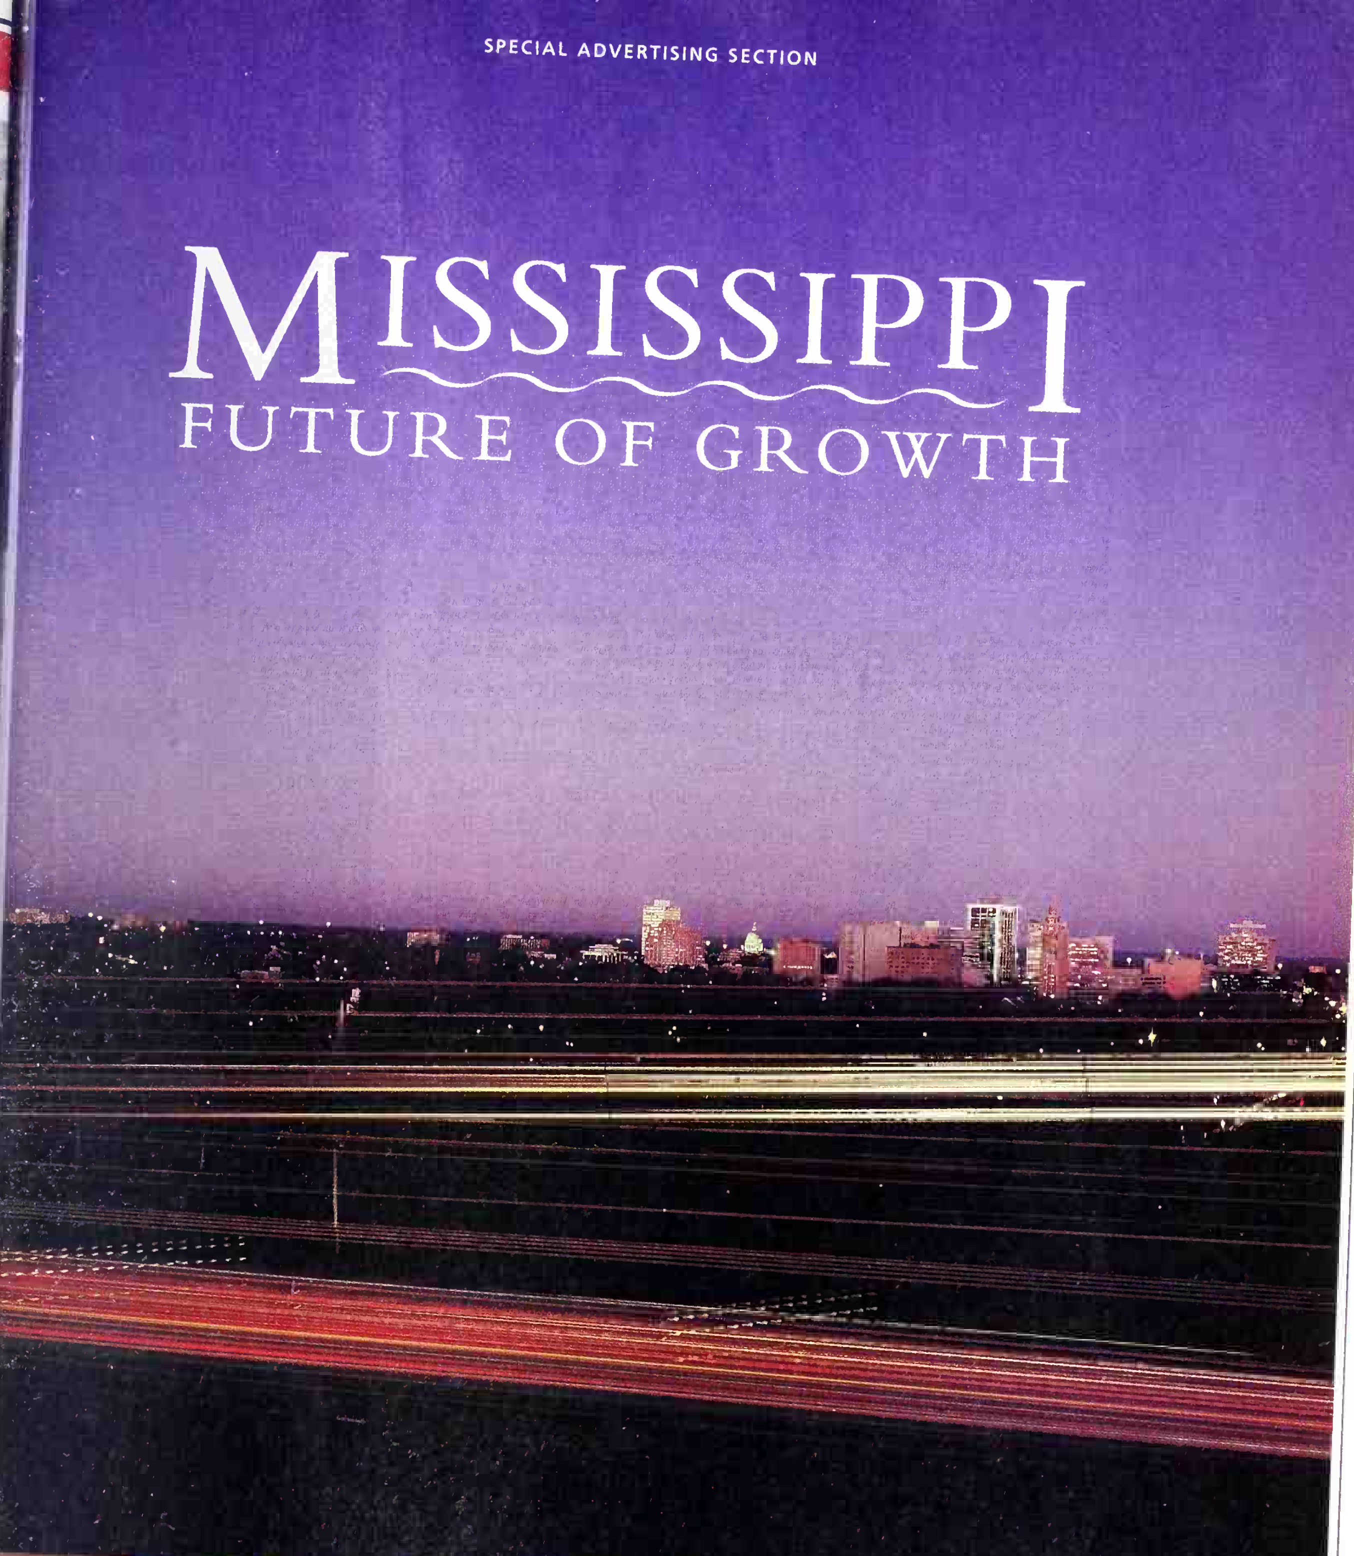
Says the elder Bloch: "I alw thought Tom was happy"

MISSISSIPPI

FUTURE OF GROWTH



MISSISSIPPI
FUTURE OF GROWTH

EFFICIENT TRANSPORTATION NETWORK

Mississippi is within a day's drive of 55% of the U.S. population, an important feature for companies that manufacture or distribute consumer goods. Mississippi's efficient transportation system includes the Mississippi River, two deep-water ports, the Tennessee-Tombigbee Waterway, airports, railroads, and interstate highways. The state is the gateway to all major U.S., Canadian, Central American, Asian, and European markets.

The state has five U.S. Customs ports of entry and three Foreign Trade Zones, which facilitate low-duty or duty-free products. Nearly 3,000 miles of railroad track crisscross the state and connect it with the national railway network. More than 30 national truck carriers operate here, including Mississippi-headquartered KLLM Transport Services, Inc., the nation's largest temperature controlled carrier, and Miller Transport, the nation's sixth largest bulk carrier.

These and other carriers find that interstates and a four-lane highway system provide convenient and reliable access to major markets, making the cost of getting products to market among the lowest in the nation.

Two recent developments: Weyerhaeuser is moving its 100-employee box manufacturing operation from Memphis to a DeSoto County industrial neighborhood that also includes Mazda, and, Thomas & Betts Corp. is building a 1 million square foot distribution center in Mississippi to replace a smaller warehouse.

Mississippi is emerging from the shadows of economic obscurity with an intensity rich in both symbolism and reality.

The players in this new adventure are not fictional characters sprung from the imaginations of such best-selling Mississippi writers as John Grisham, Willie Morris, Eudora Welty, or William Faulkner.

They are real – 1.2 million Mississippi workers with real jobs, earning real money, in a state whose economy has been rejuvenated by an interesting mix of manufacturing, services, and entertainment: particularly casino gaming which was legalized in 1992 and has grown to a $1.5 billion business with 30 gaming facilities currently operating along the Mississippi River and Gulf Coast.

ECONOMIC RENAISSANCE

In survey after survey, Mississippi's economic renaissance has been well-documented:

- In 1993, US News & World Report named Mississippi number one in economic recovery from the recession. Last year, the state's economy was again named one of the 10 strongest in the nation.
- Whirlpool Corp. – which operates a manufacturing plant in the north Mississippi town of Oxford – found the state's business climate tops among 23 states with home appliance manufacturing operations.

Last year, 651 facilities expanded or launched first-time operations in Mississippi, creating an estimated 44,300 new jobs at a capital investment of nearly $2.8 billion.

Business expansions were across the board – from furniture, apparel, and industrial machinery to food, wood products, chemicals and plastics, to

Mississippi Power

MISSISSIPPI
FUTURE OF GROWTH

PIONEERING SPIRIT TOUTED IN TELECOMMUNICATIONS

In Mississippi, a cadre of pioneers moves confidently into the still-emerging, ultra high-tech field of telecommunications.

LDDS WorldCom, launched by a small group of Mississippi investors, has employed an aggressive acquisition strategy and built a highly-advanced digital network to become the fourth largest long distance carrier in the country. The company acquired WilTel Network Services, Inc., in January 1995, after having merged with IDB Communications Group in 1994.

Mississippi's concentration of telecommunications firms extends onto the very leading edge of the industry – wireless paging. MobileComm, the Jackson, Mississippi based paging subsidiary of BellSouth, is a strong example: It is the second largest of the national paging carriers, serving with its affiliates about 1.4 million subscribers.

And, SkyTel, a true pioneer in the two-way wireless paging field and a subsidiary of Mobile Telecommunication Technologies Corp. (Mtel), has laid claim to a series of "firsts:" first to introduce wireless messaging services on a nationwide basis, first to introduce regional messaging services, first to introduce alpha-numeric messaging services across the U.S. and first to offer up-to-the-minute information from the ticker and the Dow wire through its SkyQuote service.

The Mississippi telecommunications connection includes state-of-the-art companies, investors, employees, and suppliers, resulting in a rich diversity of people who eagerly embrace new technology.

GOOD COMPANY

Such new plants are further enhanced by expansions of companies already doing business in Mississippi:

- Tecumseh Products Corp. is investing $100 million in its refrigerator compressor plant;
- Levi Strauss & Co. is engaged in a $59 million expansion of its state-of-the-art distribution facility;
- Kimberly-Clark Corp. will expand its distribution plant with about $50 million in new investments;
- Toro Company, citing increased consumer demand for its two-cycle lawn mowers, is reopening a plant;
- Poultry processor Sanderson Farms, Inc. opened new processing lines;
- Action Industries, Inc., one of the world's largest manufacturers of upholstered furniture, announced expansions to its huge facility in the northeast Mississippi city of Tupelo.
- And, Ceco Building Systems, founded in Columbus, in 1947, has grown to national prominence in the manufacture of metal buildings. Ceco President J. Terrell Landrum says Mississippi's "building climate is conducive to growth and expansion." Ceco buildings are marketed through a national network of general contractors who furnish turnkey construction projects to meet a variety of building needs. "Obviously, Mississippi has suited us well," says Landrum.

WHY MISSISSIPPI? WHY NOW?

World-class companies are discovering Mississippi's strategic location – right in the heart of the U.S. growth market.

Says Bryan Foods' George Bryan: "It's a great geographic location for us to ship fresh, perishable products and reach the stores and the consumer, which is very important."

But its geographic location is onl one of Mississippi's attributes. It als has a business climate that undersc its pro-business government. Mississippi has one of the lowest rates of union activity. Last year, just 17 uni elections were held in Mississippi, t lowest number in a decade. Unions lost 11.

Many companies coming into Mississippi for the first time find a generous package of at least 20 business incentives that can ease th cost of relocating, including:

- The Mississippi Rural Economic Development Assistance Program allows corporate income tax credits toward debt retirement on plants and equipment financed by Industrial Development Bonds;
- Five-year state income tax credit of $500 to $2,000 for each new j created by new businesses;

State-of-the-art fiber optics put Mississ telecommunications industry on the leading edge of the information age

- Five-year state income tax credit $500 for each new job created b companies transferring regional national headquarters to Mississip
- State income tax credit equal to 25% of basic skills training and j re-training expenses for employe

PUSHING FOR BALANCE

Pushing for a common sense balance between economic development and environmental protection, the 1995 legislature passed an environmental self-evaluation privilege which allows industries to conduct voluntary self-audits to assess environmental compliance. With the signature of Governor Kirk Fordice, Mississippi became only the 11th state in the country to pass environmental self-evaluation privilege legislation and only the 4th state to enact provisions mandating a substantial reduction in penalties – if a penalty is to be levied at all – for voluntary self-disclosure.

Even steam-powered paddlewheelers draw inspiration from the legendary waters of the Mississippi River

The offering of such a wide range of business incentives is not unusual in Mississippi, which in 1936 pioneered a radical appeal to industrial prospects called Balance Agriculture with Industry (BAWI).

That same attitude – nearly 60 ye later–has evolved into an attractive option for companies looking for a escape from the pollution and crin of other places.

LITTON EXAMPLE OF OPEN ARMS POLICY

This open arms policy toward busi helped convince Litton Industries, multi-billion dollar Beverly Hills, Calif.-based company, to find a ho in Mississippi. In 1961, Litton boug a small shipyard which had been in business since 1938 in the Mississip Coast town of Pascagoula and beg to build ships for the U.S. Navy.

Today, Ingalls Shipbuilding divisi of Litton Industries is the state's la private employer with more than 13,000 workers in an 800-acre stat of-the-art production facility.

"The worldwide reputation achi by Litton's Ingalls Shipbuilding div sion here can be directly attributed three major elements," says Ingalls President Jerry St. Pé. "First, the exceptional work ethic of the peo of South Mississippi; second, an ed cational system that sends us poten employees well prepared to acquir the on-site job training skills and certifications necessary in the con struction of modern warships; and third, the outstanding business clin developed over the years among s and local government leaders thro their support of measures designed enhance the expansion and growt business and industry in Mississip

SOPHISTICATED TELECOMMUNICATIONS

Litton, an early soldier in Mississip economic renaissance, has been jo

MAZDA FINDS CENTRAL LOCATION

One major automotive company, Mazda, reviewed 40 potential sites before settling on a 600,000 square foot auto parts distribution facility in north Mississippi's DeSoto County, just south of Memphis. The $20 million facility is expected to be up and running by early 1996.

Mazda North America President Yoji Toyama said projected population growth in the southeast part of the U.S. prompted Mazda to re-evaluate how it will service customers in the area. Mazda's Mississippi facility will replace two leased distribution facilities in Michigan in the company's efforts to cut costs and become more efficient and competitive.

"When we looked at supplier and customer locations, and total distribution costs, we realized that locating our parts distribution operations to a central location such as DeSoto County made sense," Toyama said.

The automotive industry demands tight distribution deadlines and the site's proximity to a multitude of transportation – rail, air, and major interstate arteries – were all helpful.

"Many factors go into a decision like this – construction, transportation, physical location, distribution to customers," he said. "But the major factor in locating the facility here was the people." Toyama said the local labor pool was ideal for Mazda's needs, including the capability of handling at least 200 trucks per day.

Mazda was also able to take advantage of innovative state and local partnerships that are helping to promote an abundance of economic growth in Mississippi.

The Metro Economic Development Alliance invites you to **look** at the Jackson Metropolitan Area consisting of Hinds, Madison, and Rankin Counties. Just **look** and you will find a few of our many Metro advantages including:

- A strategic location near the center of Mississippi, at the "Crossroads of the South", and within 500 miles of 76 metropolitan areas;

- All modes of transportation, including two intersecting interstates, two intersecting main railroads, and an international airport which is a U.S. Customs port of entry and foreign-trade zone;

- The business, financial, medical, governmental, educational, and cultural center for Mississippi; and

- Mississippi's capital city, **Jackson**, the central city of the Metro Area.

Department of Economic and Community Development
MISSISSIPPI

This project is partially funded through a grant by the Mississippi Department of Economic and Community Development

For more information or help on any expansion\relocation matter, please contact the Metro Economic Development Alliance at P. 0. Box 3318, Jackson, MS 39207-3318 or call **1-800-LOOK-2-MS** (1-800-566-5267).

We **look** forward to hearing from you.

Power of innovation helps in the quest to balance economy and environment

by a bevy of first-rate companies headquartered in Mississippi and competing on the world stage in a still emerging field – telecommunications. They share the same sort of pioneering spirit that moved Mississippi in the past, but that's as close as they get to the past because telecommunications – Mississippi style – is about as futuristic and high tech as high tech gets.

One company, LDDS WorldCom, reported total 1994 revenues of more than $2.2 billion, up 51% from 1993.

Many are surprised to discover that some giants of global telecommunications originated and remain based in Mississippi. MobileComm, the paging subsidiary of BellSouth, serves about 1.4 million subscribers in the U.S., and the Caribbean. Mobile Telecommunication Technologies Corp. (Mtel) was recently cited as one of the 75 fastest growing companies in Ameri Sales of its wireless paging unit, SkyTel, are growing at the rate of more than 40% per year.

The telecommunications industry in Mississippi rates as one of the m sophisticated in the world.

FURNITURE INDUSTRY GROWING

Forests cover more than half of Mississippi's land mass, gracing the state with an abundance of wood resources. Are these precious resour dwindling? Hardly.

A recent U.S. Forest Service surve indicated that forest resources are a ually increasing at a rate of 184.2 m lion cubic feet annually. That could because companies like Internation Paper, which has invested heavily i Mississippi, plant three seedlings fo every mature tree harvested.

Attractive, Affordable, Available: Ceco Pre-Engineered Buildings

For nearly five decades we have specialized in providing attractive pre-engineered buildings with quality metal roofs, all at predictable prices and construction schedules. We are Ceco Building Systems, recognized nationally by many of the Fortune 500 companies and available locally through authorized Ceco builders. Dial 1-800-474-CECO.

For a copy of "The Construction Guidebook," give us a call.

Ceco Building Systems 1-800-474-CECO

You're not supposed to talk about a lot of subjects in a single ad,

We have no crowds. No congestion. And no long commutes to work. We have more trees than cars. Oak trees. Pine trees. Palm trees. Magnolias, too. There are natural woodlands, lots of deer, mighty rivers, tranquil lakes and beaches on the Gulf of Mexico. There are brick homes, wooden homes and yes, stucco, too. Some homes have porches. You'll probably want one. To relax. To ponder how you could have such a big house, with such a big yard, for such small money. We have museums. Concerts. We have libraries. And bookstores, too. With writers like William Faulkner and John Grisham, it's sort of a must. It might even surprise you that the American host city for the very "big deal" International Ballet Competition is in Mississippi. Also, we bet we have more fairs, festivals and community events than any other state in America. We do so much talking and getting together that you occasionally have to take time out and rest.

but heck, we'd like to get our money's worth.

But what's it like for business and industry here? Well, it's sort of like the housing thing, you get a lot more for your money. The cost of doing business is lower. Lower construction costs. Lower land costs. And a lot of pro-business incentives like job credits, training credits and this new program we call the RED Act. (We'd have to buy another ad to talk about the Rural Economic Development Act, so if you want to learn more, just call.)

Yes, there's a lot to say about Mississippi. Like how the economy is booming (ranked tops in the South and number eight in the nation), and how housing starts are up 35 percent over last year, and how strong the state is financially. But the most important thing to remember if you're considering moving your business and family to our state is this: We'd like you to come.

(800) 340-3323

MOVE IT TO

MISSISSIPPI

MISSISSIPPI
FUTURE OF GROWTH

In Mississippi classrooms, the drive to excel means starting early with computers

Wood-related industries such as northeast Mississippi's rapidly-growing furniture industry find a special home. The mild climate contributes heavily to an annual growth rate of trees that is twice the national average.

POLYMER INSTITUTE PARTNERS WITH BUSINESS

In the chemicals and plastics category, some 22,000 production workers average about $10 per hour in a business growing by 20% per year, so fast that in 1993 Mississippi opened a Polymer Institute affiliated with the University of Southern Mississippi. The programs in engineering and chemistry have already been recognized as among the nation's best.

"We work with companies as partnerships in developing new innovations, new technologies," says Dr. Robert Lochhead, who heads the institute. The state is home to companies like GE Plastics, Armstrong, Hercules, DuPont, Kerr-McGee, Mississippi Chemical, Calgon Carbon, and Chevron.

Chevron operates a large, efficient refinery in the industrial city of Pascagoula and has been investing—and making—money in Mississippi for three decades. Its manager, Graham Somerville, cites the low cost of production, a central market location, efficient market transportation, and access to raw materials as ideal.

COMPREHENSIVE EDUCATION STARTS EARLY

In Mississippi's advanced school districts, the lessons start early.

In 1994, the Community College Network, a comprehensive statewide teaching and learning system, was activated to connect 18 community colleges with the Cooperative Extension Service at Mississippi State University and the University of Mississippi Medical Center. The system gives all locations total interactive audio and video transmission, and one teacher can teach simultaneously to students in 20 classrooms.

Mississippi's most progressive public school district, the Tupelo Public School District, has developed an aggressive approach using technology to prepare students for the next century.

"Schools of the 21st Century" seek to develop a "world class" kindergarten through grade 12 curriculum. By the 11th grade, students are studying integrated computer assisted design (supporting geometry), advanced electronics (supporting physics), biomedical technology, and audio-visual production and design (supporting the arts).

Superintendent Mike Walters believes technology is a tool for learning and teaching. Says Walters: "Serious science students cannot be relegated to the unreal, drab world of the textbook disconnected from the technologies of science."

Having become actively engaged in the project, Tupelo area businesses stand to benefit from its results.

HEALTHY BUSINESS ATTITUDE

Such is the attitude that underpins Mississippi's remarkable progress on the economic development front. It is a new Mississippi that has captured the attention of companies looking for more efficient production at less cost—usually with a substantial gain in quality of life for employees.

James L. (Buddy) Bynum is a well-known Mississippi journalist who writes extensively on business, politics, and other current affairs. Design by Parham Santana, Inc

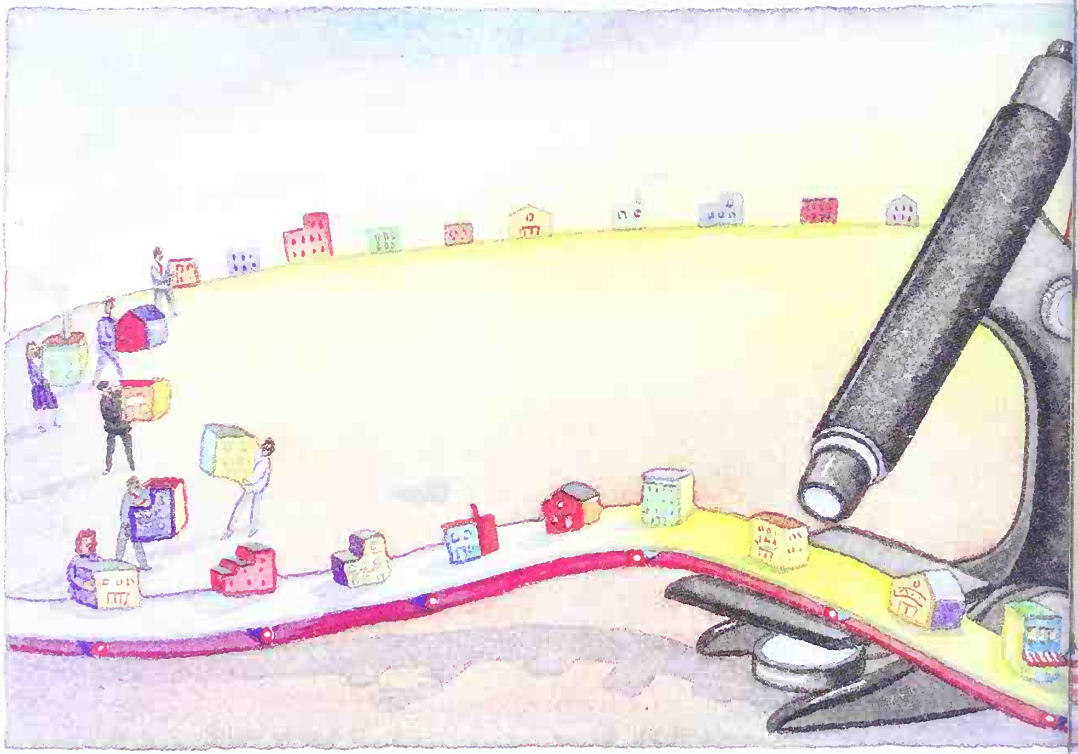
SCOPING OUT STOCKS 'BELOW THE RADAR SCREEN'



Less is definitely more, according to mutual funds that are concentrating in microcap shares. While only a handful of funds can actually be called microcap, the ranks of those that invest predominantly in companies with a median market capitalization of $200 million or less have doubled, to 40, in the past three years. That's still a drop in the bucket of more than 3,000 stock funds. But in time, you're likely to see more of these wee funds, which are exploiting the uncharted territory at the bottom of the equity bin.

Microcap stocks add diversity and higher returns to a portfolio. Under-researched, they represent a less efficient and potentially more profitable market than even the traditional small-cap class, which falls in the $200 to $700 million range. Of course, with greater reward comes greater risk and higher trading costs. That's why mutual funds may be the best way to ride little stocks to bigger gains.

BIG BANG. Most microcap companies escape the scrutiny of Wall Street analysts because it's not economical to follow them. That leaves plenty of funds for diligent stock-pickers. "The world has adopted small-cap as a real genre," says Charles Royce, manager of Royce Micro-Cap. "What's remaining is below the radar screen, and it's a large area for opportunity." About 3,000 tiny companies fit the definition of microcap, compared with 420 large-cap stocks—those with a minimum market cap of $2.4 billion.

Another draw of micros is that the smaller you go, the heftier your return over time. "Historically, this is the group that has given you the biggest bang for the buck," says Claudia Mott, quantitative analyst at Prudential Securities Inc. Over the past 20 years, the smallest companies have produced average annual returns of 21% for those with a market cap of $60 million or less, vs. 17% for small-cap stocks and 13% for large-cap, according to Merrill Lynch senior quantitative analyst Satya Pradhuman.

Most microcap funds take a value approach, buying on dips in a company's stock price, because "when you get this small, it's a dig-them-up, buy-and-hold style," says Morningstar analyst Laura Lallos. One reason Montgomery Asset Management Limited Partnership opened a
crocap fund is that w
Montgomery Growth mar
er Roger Honour scree
companies to buy, he fo

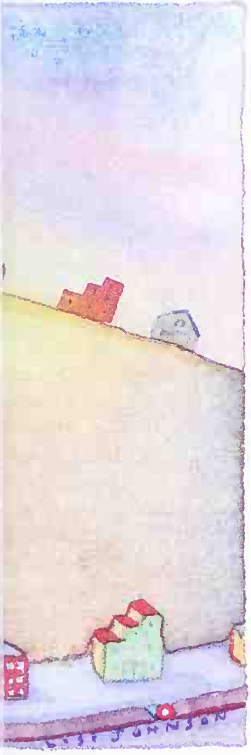
It's hard to know how

INVESTING Most microcaps escape the scrutiny of Wall Street analysts, leaving plenty of room for diligent stock-pickers

funds will fare, but a
at their older compatri-
ıdged best by Morning-
gives you a glimpse of
ıicro scope. Warren Isa-
who scored an average
ıl return of 19% in the
hree years for Pioneer
al Growth, sees four
to make money in this
et. One is turnarounds:



g micros that are so
valued, it looks like cur-
when their stocks fall.
erception is often much
than the reality. "Peo-
e looking for these com-
; to go bankrupt," says
lle, "so even if they re-
to average, you can
money."
second strategy is rid-
clical stocks out of their
hs. For example, Isa-
ɔicked up NL Industries,
ker of titanium dioxide
a market cap at the
of $200 million, as low
a share in late 1992,
from its peak of $50.
the stock sells for $16.
u know an industry and
it can do at its peak
rough," he says, "you
history on your side to
nine the value as you
ach the peak of the cycle." The other strategies are buying companies that are creating new businesses or have potential breakthrough products. For example, Isabelle owns $39 million Alkermes, a Cambridge (Mass.) biotech company that is developing products to penetrate the blood-brain barrier, which screens out molecules that could treat illnesses arising in the brain.

DFA U.S. 9-10 Small Company takes a different approach from Pioneer. Essentially a passive index fund, DFA generated an average annual yield of 11% over the past 10 years. The fund buys companies that fall into the smallest one-tenth of stocks listed on the New York Stock Exchange—figuring in over-the-counter and American Stock Echange issues. DFA holds 2,000 stocks at a time and updates its list each quarter. It requires a minimum investment of $100,000. Like most index funds, DFA usually fares well when small companies in general do well, but other funds will "beat us when small companies do poorly," says manager Rex Sinquefield.

An emphasis not on size but bargain-hunting puts Franklin Balance Sheet Investment in the micro category. "We buy below book value, and frequently that leads us to small companies," says co-manager Bill Lippman. Like other microcap managers, his five-year annualized 16% return is partly due to the fact that micros are often bought out. He paid $21 a share—$16 below book value—for Trico Products, a $119 million maker of windshield wipers. A year later, the stock was inching up when the company was sold for $85 a share. A $250 million cigarmaker, Colbro, was another success. Spain's state-run tobacco company bought a 49% stake a month ago, causing the stock to jump 50%.

Still, there are plenty of losers at the bottom of the heap. "The biggest problem is that most companies which are very small deserve to be," says Montgomery's Honour. "They're often family-run and have only one good product." He searches for companies that are willing and able to grow.

UPWARD DRIFT. Another problem is that because the stocks are illiquid, trading costs can run as high as 3% to 5%. That's because smaller companies have wider bid-ask spreads, says Prudential's Mott. Most fund managers deal with illiquidity by buying very small stakes in many companies. But you'll want to know how a fund handles trading expenses to avoid wiping out the microcap premium on returns.

DFA keeps costs down by using a basic buy-and-hold strategy. Royce Micro-Cap relies on an elaborate infrastructure of electronic markets to deal "between the spreads," which "would be impossible for the individual investor to do," says Royce. Preston Athey, who manages the T. Rowe Price Small Cap Value Investment fund, controls costs with a low annual turnover of about 20%.

If you're interested in buying a microcap fund for diversification, you'll also want to know how strictly the fund adheres to size limitations. DFA, T. Rowe Price, Royce, and Heartland insist on selling companies that have grown beyond the funds' size parameters. But you may want to monitor funds such as Franklin and Pioneer, which hold some larger-cap companies, because small-cap funds tend to drift up in size as their successful picks grow. "You have to actively manage to make sure the small stock fund stays small," says Minneapolis financial planner Ross Levin.

The stabilizing effect of diversifying into many asset classes means you can put 5% to 10% of your assets into micros without increasing your risk over strictly large-cap holdings, says Merrill's Pradhuman. Although it may not sound like much, he says, "from a long-term investment perspective, that's powerful."

You may have to act fast to get into a microcap fund. Such funds can't accommodate vast amounts of assets and still invest in lilliputian companies. A top performer, Heartland Value, which has boasted returns of 16% over 10 years, is closing its doors on July 1, after growing to $800 million in assets. And Montgomery Micro Cap, which reopened on June 1, plans to close when assets hit $200 million. Still, as money continues returning to U.S. stocks from overseas and as fund companies try to generate more business, microcaps may continue to proliferate. Hopefully, there won't be so many that managers can't still pluck up plenty of bargains with tweezers. *Pam Black*

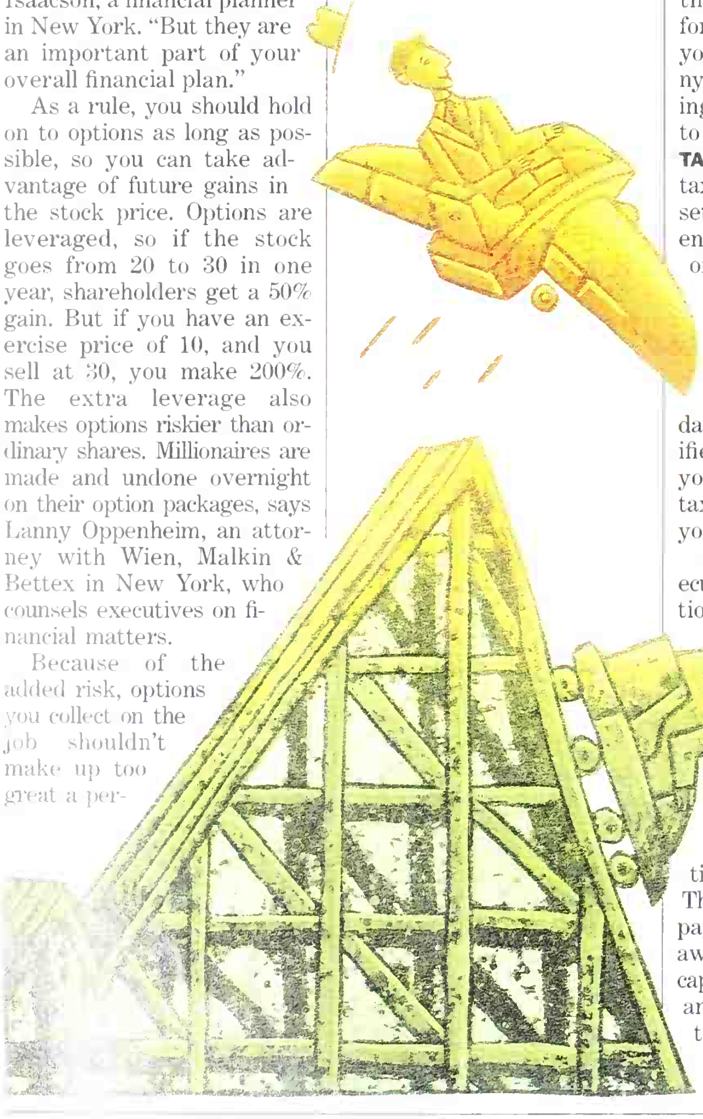
SMART MONEY

WHAT ARE YOUR OPTIONS ON STOCK OPTIONS?

If you are lucky enough to receive stock options as part of your pay package—and luckier still to be watching their market price hit new highs—you may be wondering if it's time to cash in. It just may be. But before you rush to your broker, take a few moments to, well, consider your options. "People think of stock options as found money," says Joel Isaacson, a financial planner in New York. "But they are an important part of your overall financial plan."

As a rule, you should hold on to options as long as possible, so you can take advantage of future gains in the stock price. Options are leveraged, so if the stock goes from 20 to 30 in one year, shareholders get a 50% gain. But if you have an exercise price of 10, and you sell at 30, you make 200%. The extra leverage also makes options riskier than ordinary shares. Millionaires are made and undone overnight on their option packages, says Lanny Oppenheim, an attorney with Wien, Malkin & Bettex in New York, who counsels executives on financial matters.

Because of the added risk, options you collect on the job shouldn't make up too great a percentage of your assets. Generally, you should have no more than 40% of your assets in your company's stock, including options, common shares, and 401(k) holdings, says Jane King, president of Fairfield Financial in Wellesley, Mass. If you exceed the limit, pare back your options and diversify into other sectors. Even if your portfolio is essentially well-rounded, you may want to lock in profits if you have a substantial gain on your options.



You can hold on to options for too long. A common plan is for companies to issue executives options that expire in 10 years but may be exercised in 25% installments over four years. If you ignore them until the expiration date, you could be forced into exercising options when the company is at a trough in the business cycle and its stock price is low. The same could happen if you leave the company or are fired, since you get only a short window until you have to exercise. When you have only three years left before the option expires, or if you plan to leave the company in a few years, start looking for the best opportunity to act.

TAX FACTS. Also, consider the tax ramifications. Companies set up their programs differently. Most choose between offering incentive stock options (ISOs), which have certain restrictions but usually aren't taxed on the spread between the exercise price and the market price at the date of exercise, and nonqualified options, which require you to pay ordinary income tax on the spread as soon as you convert.

For tax reasons, some executives with nonqualified options look for periods when the stock pulls back temporarily to exercise, says Robert Gabele, president of CDA/Investnet Technologies Inc., a Fort Lauderdale (Fla.) firm that analyzes stock activity of corporate insiders. That way, they don't have to pay as much in tax right away and can benefit from capital-gains treatment on the anticipated rise in price if they hold the stock for a year. This strategy is especially good with high-dividend stocks. That way, get the added income w you hold the shares. should also think about e cising nonqualifieds ove few years to avoid b pushed into a higher marg tax rate. With ISOs, there built-in incentive to hold shares for a year after exercise: That way, when sell, you only have to pay capital-gains tax. But w out: Exercising ISOs subject you to the alte tive-minimum tax.

Most people exercise sell options for reasons have nothing to do with versifying, reducing risk alleviating taxes. They ply want to buy a new or fund a child's educa notes Oppenheim. If work at a company w the CEO frowns on se management selling s you may want to con your options but hold stock. If you are an ins always check with you house official who mon Securities & Exchange mission reporting req ments before selling. Co nies often give little guid on managing options— they want you to own stock, says King. So it to you to figure out your best options. *Amey*

When It's Time to Exercise

- When your company's stock represents more than 40% of you total portfolio
- If you expect to leave the company within three years, and the stock price seems at a peak
- If you could use the extra income from the stock's dividend
- If exercising all your options a once will push you into a higher tax bracket or the AMT
- If you hold nonqualified optio and the stock falls, allowing you to save on taxes

THE CASE. Science
ıs, a new series of CD-
ıysteries, is my current
te. The first volume has
puzzles that can be
at six levels of difficul-
ke a real science experiment, you start with a hunch, gleaned from the newspaper or video interviews with witnesses and experts, do a bit of reading on the subject, and gather and analyze the evidence. It takes thought, planning, and perhaps a gas chromatograph. Good thing they threw one in.

SOFTWARE

In Mystery of the Exploding Lawnmowers, I used the gas chromatograph to analyze the air in the lawn's sprinkler system. There I found thiol, which the program's encyclopedia told me was a smelly chemical added to natural gas to alert the human nose to leaks. A quick check of the gas company's schematic told me more natural gas was going into the neighborhood than the nine houses were using. So as the mower went over a sprinkler head, the heat from the engine would ignite the leaking gas. Mystery solved. (You're on your own for levels two through six.)

Almost as enticing is Widget Workshop. Using a library of mathematical, mechanical, and electrical and electronic parts, you can build your own inventions and create your own widgets to solve problems. The program also includes its own puzzles to solve. But if it's puzzles you want, a better bet is Sierra On-Line's Incredible Machine 2 ($50). It's less educational but has the same idea: You use mechanical and electric devices to construct a Rube Goldberg-like apparatus to turn on a toaster or sink an 8-ball.

There are lots of anatomy programs on the market. For older kids, I think the best is A.D.A.M.: The Inside Story. It's built around a model originally designed for medical students and reminds you of those glassine pages in textbooks that systematically dissect a human body by layers as you turn the pages. An animated storybook has Adam and Eve answering common questions, such as how a cut heals and why a bee sting hurts. Parents can control the optional fig leaves.

Also from A.D.A.M. Software is a delightful CD-ROM, Nine Month Miracle ($40). It uses the same anatomical illustrations, but features an animated question-and-answer section for teens and adults on pregnancy, a storybook for 3- to-9-year-olds called *Emily's New Sister*, and games that teach, for example, rudimentary genetics.

Another new anatomy program, Virtual Body from IVI Publishing, is a bargain at $20. It's adapted from the Time-Life Science and Nature book series, with added audio and video. Similarly, Dorling-Kindersly's Eyewitness Encyclopedia of Science ($50) has the look and feel of an elegant book. But neither title has enough interactivity to engage a teenager for long. And you must work through lots of screens to get information.

ACTION PICTURES. For the junior astronomy buff, Red Shift, a two-year-old CD-ROM, is still by far the most complete program of its kind. You can visit the past, going back 15,000 years to replay animations of eclipses, for example. My only hesitation about recommending it: A new version is scheduled to come out this fall, which will have sound, animated tutorials, and more video.

By and large, these are rich, powerful programs that go well beyond the "look it up" approach of earlier educational CD-ROMS. One warning: The latest titles usually require a computer with eight megabytes of RAM. But the best are every bit as compelling as the shoot-'em-up video games that teenagers have traditionally preferred. Even better, they exercise the mind instead of the thumbs. *Larry Armstrong*

Four of the top trading houses on Wall Street use MOUSE-TRAK.

Productivity and reliability persuaded these businesses to replace hundreds of free mice that came with their workstations with $199 MOUSE-TRAK™ trackballs.

Productivity: Laboratory testing has shown that only 4 hours of continuous mouse usage can result in as much as 60% loss of hand strength. A trader in that condition is simply not going to make as many trades per hour in the second half of the day as in the first. The same tests show no signs of physical fatigue when using a MOUSE-TRAK.

Reliability: MOUSE-TRAK is constructed using a hardened and polished stainless steel roller mechanism and the same type of ball bearing used in hard drives.

Call, Fax, or email today to order or receive more information about MOUSE-TRAK.

THE WEEK AHEAD

SING STARTS

day, June 20, 8:30 a.m. ▶ Housing s likely stood at an annual rate of 1.23 on in May, a bit less than their 1.24 on pace in April, according to the an forecast of economists surveyed by International, one of the McGraw-Hill The drop is suggested by the decline nstruction jobs and hours worked in Because of the recent fall in mortgage , housing starts may rebound in com- nonths.

RNATIONAL TRADE

nesday, June 21, 8:30 a.m. ▶ The for- trade deficit for goods and services narrowed slightly in April, to $9 billion, down from $9.1 billion in March. The MMS survey expects little change in either exports or imports. In March, exports rose 5%, to hit a record $65.3 billion, but imports also jumped, by 4.3%, to set a high of $74.5 billion. The trade deficit could have worsened in April, however: Japan has already reported that its trade surplus with the U.S. widened by 3% for the month. The April report will also include revisions to historical trade data.

FEDERAL BUDGET

Wednesday, June 21 ▶ The federal government is likely to report a deficit of $37.5 billion in May, wider than the $32.1 billion of May, 1994. In April, Washington posted a record surplus of $49.7 billion. The deficit for fiscal 1995, which began last October, is on track to total far less than last year's $203 billion. In fact, the deficit could slip to about $165 billion, the smallest budget deficit in six years.

DURABLE GOODS ORDERS

Friday, June 23, 8:30 a.m. ▶ New orders taken by durable-goods manufacturers probably rose a small 0.2% in May, forecasts the MMS report. If so, that would be the first increase since January. Orders in April fell a steep 4%, led by declining motor-vehicle demand. The backlog of unfilled orders probably fell by about 0.4% in May, the same drop as in April.

Index to Companies

This index gives the starting page for a story or feature with a significant reference to a company. Most subsidiaries are indexed under their own names. Companies listed only in tables are not included.

GROUPWARE REQUIRES A GROUP EFFORT

In an era of increasing specialization and complexity, groupware is becoming the essential work tool for Corporate America. At its best, Lotus Notes and other forms of groupware can encourage creative collaboration among dozens, if not thousands, of people, anywhere, anytime. But used poorly, groupware can simply become the latest indulgence in techno-narcissism—an expensive high-tech fix that doesn't deliver the real goods in the marketplace.

It all depends on implementation (page 92). IBM just paid $3.5 billion for Lotus Development Corp. because it believes that the Notes software is the strategic building block of the computer industry's next leap forward—into networking information systems. It is the perfect software for the global era. By allowing companies' workforces in the U.S., Asia, and Europe to work together in real time, groupware could revolutionize management. In a global economy, groupware eliminates the physical constraints of time, distance, and space.

Technology, however, is simply a tool. Groupware is one of the most powerful collaborative technologies ever developed. But its potential is unleashed only if an organization is structured to take advantage of group work. Drop Notes into a company with a culture of individual competition and it's a waste of time and money. "Me-now" hotshots and "take charge" bosses are anathema to its success. If groupware is inserted into a flat, horizontal organization, it can boost productivity sharply. To make this new technology work, organization and culture are as important as PCs and software.

Take incentives. Preaching collaboration is not enough. It as important for companies to create incentives for people share as it is for them to buy the latest groupware. Buildi cross-functional teams can work wonders in developing n products, but only if people are rewarded as members the team. Right now, most individuals are still evaluated their functional manager. That's one major reason why m teams fail to produce.

In the end, groupware is a technology for managing re tionships, not just information. In the book *No M Teams!—Mastering the Dynamics of Creative Collaborati* Michael Schrage suggests that successful collaborations the past, among such people as James D. Watson and Fran H. Crick, involved at least five components: equal com tence among members; shared goals; mutual respect; shar space (blackboard, piano keyboard, or, now, groupware); a continual, not continuous, communication.

Companies must design collaborative organizations for t tools of collaboration. Once they do, the power of groupw manifests itself. If Dorothy Leonard-Barton, of the Harv business school, is right in saying that innovation comes at joining of two planes of thought, then groupware is poised generate the greatest burst of productivity in modern his ry. In fact, U.S. productivity growth for the first quarter just revised up to 2.7% from 0.7%. Manufacturing product ity is now higher in the U.S. than in Japan or Germa Groupware may already be working.

JAPAN NEEDS MORE THAN A BAILOUT

Japan's financial sector is a basket case. The Nikkei has plummeted 62% from its airy 1989 high, while prices of commercial property have tumbled more than 50%. There have been runs on credit co-ops, and housing loan corporations are virtually insolvent. The upshot: Japan's financial lenders, from commercial banks to agricultural banks, have nearly $1 trillion in bad loans on their books—about 20% of the country's annual economic output. Even at the height of the savings and loan crisis in the U.S., sour loans never amounted to more than 9% of America's gross national product. The Japanese economy, and with it the global trading system, is skating on very thin financial ice.

Wrongheaded bureaucrats, shortsighted central bankers, and weak politicians are to blame. For nearly five years, the mandarins at Japan's Ministry of Finance actively collaborated with the banks in cloaking the magnitude of the crisis. MOF bureaucrats allowed banks to hide their tattered balance sheets and juiced up the stock market with public money to give banks time to clean up their act. It didn't work. Markets never got a chance to clear at lower prices, and government manipulation prolonged the financial and economic pain.

Japanese politicians are no better. A divided conservati socialist government is unable to lead. Worse, politicians of parties have received huge campaign contributions from the nancial sector. The only time the politicians and MOF tried organize a bailout, it was to help two corrupt Tokyo cre cooperatives with political ties. The ensuing scandal ero public support for bailing out the banks.

But that is precisely what must be done. An expensive massive makeover of the banking system is inevitable. The cent emergency bailout plan is timid fare. What's nee next is an honest accounting of how bad the banking cr truly is, a mark-to-market of bad loans, and a hard-nosed sessment of how much the public will have to shell out clean up the mess. Lower interest rates will be needed t nance the restructuring of the banking system.

Time is running out. Deflation is killing off growth and in Japan. Gold prices in yen are falling, real interest rates rising, and the yen is grossly overvalued. MOF bureaucrats on a financial suicide run, battling inflationary demons tha not exist while hiding banking problems that really do. Thi a scenario that has disaster written all over it.

How Frito-Lay Handles the Decision Making CRUNCH

With Its Zone Workbench System Created With SAS Institute Software

Doritos® and Tostitos brand Tortilla Chips, Lay's® and Ruffles® brand Potato Chips, and Rold Gold brand Pretzels

t's hard to imagine any company that understands consumer tastes etter than Frito-Lay, a leader in the U.S. salty snack category with nnual revenues of more than $5 billion. Yet Frito-Lay is determined o get even closer to its 400,000 retail customers.

In fact, a decentralization effort begun in 1990 has, in the last five ears, brought a renewed sense of ownership and empowerment to the 0,000 Frito-Lay employees. As part of this ownership, Frito-Lay's nformation/Technology Systems department (I/TS) has created a tactical, market-driven decision support system—the Zone Workbench System—designed to get timely information in the hands of front-line managers.

It's an application built from the customer up, and the SAS® System of software has been there every step of the way.

"The Zone Manager is the first line of communication with our Route Sales force," says Tom Nealon, Director of I/TS for Frito-Lay, whose department spearheaded development of the decision support system. "We knew from the start that the Zone Workbench had to provide information that was 'actionable'. It also had to be portable across client/server, workstation, or laptop environments. Equally important was the ability to integrate multiple data sources."

Delivering More than Software Alone

"Given the tight schedule, the software company we chose had to provide superior applications development tools—as well as comprehensive training, consulting services, and documentation," adds Nealon. "SAS Institute came through on every count, proving time and again the value of having a software vendor that's as interested as we are in completing projects on time and on target."

Nealon calls the Zone Workbench "a tremendously versatile business tool proving user-friendliness, power, and portability between platforms can all operate in one package. The old-style EIS systems are antiques. The game today is to provide information that can impact the marketplace each day, for each of our customers. For Frito-Lay, SAS Institute is making sure we have the tools to make an impact."

To receive a SAS System Executive Summary, give us a call or send us e-mail at bw@sas.sas.com
